S. 3336. To repeal titles I and II of the National Prohibition Act, to reenact certain provisions of title II thereof, to amend or repeal various liquor laws, and for other purposes.

Approved August 27, 1935. Public Law No. 347.

S. 3433. Limiting the operation of sections 109 and 113 of the Criminal Code and section 190 of the Revised Statutes of the United States with respect to counsel in certain cases.

Approved August 29, 1935. Public Law No. 394.

S. 2421. To amend the act entitled "An act forbidding the transportation of any person in interstate or foreign commerce kidnaped or otherwise unlawfully detained, and making such act a felony," as amended.

Approved January 24, 1936. Public Law No. 424.

S. 3120. To authorize and direct the Secretary of the Treasury to transfer certain moneys to "Funds of Federal prisoners."

Approved January 27, 1936. Public Law No. 379.

S. 3328. To provide an official seal for the United States Veterans' Administration, and for other purposes.

Approved January 27, 1936. Public Law No. 430.

S. 2603. To authorize the Attorney General to determine and pay certain claims against the Government for damage to person or property in sum not exceeding $500 in any one case.

Approved March 20, 1936. Public Law No. 481.

S. 1379. To amend section 103 of the Code of Criminal Procedure for the Canal Zone and section 542 of the Code of Civil Procedure for the Canal Zone.

Approved May 13, 1936. Public Law No. 578.

S. Con. Res. 28 and S. Con. Res. 35. To print additional copies of the revised annotated Constitution, and further to revise the same.

Approved May 14, 1936.

S. 4594. To supplement the act of June 25, 1929 (ch. 41, 46 Stat. L. 41), which authorized and directed the Attorney General to institute suit against the Northern Pacific Railway Co. and others.

Approved May 22, 1936. Public Law No. 610.

S. 3841. To amend an act entitled "An act to establish a uniform system of bankruptcy throughout the United States." approved July 1, 1898, and acts amendatory thereof and supplementary thereto.

Approved June 26, 1936. Public Law No. 818.

S. 2897. For the relief of Lt. Robert A. J. English, United States Navy.

Approved February 11, 1936. Private Law No. 381.

IN THE SEVENTY-FIFTH CONGRESS

S. 1242. A bill for the relief of Stanley A. Jerman, receiver for A. J. Peters Co., Inc.

Approved May 24, 1938. Private Law No. 530.

S. 1431. A bill limiting the operation of sections 109 and 113 of the Criminal Code and section 190 of the Revised Statutes of the United States with respect to counsel in certain cases.

Approved August 25, 1937. Public Law No. 366.

S. 1724. A bill to authorize the transfer to the Attorney General of a portion of the Fort Reno Quartermaster Depot Military Reservation, Okla., as a permanent site for the United States Southwestern Reformatory.

Approved May 24, 1937. Public Law No. 103.

S. 2381. A bill to amend the Criminal Code by providing punishment for impersonation of officers and employees of Government-owned and Government-controlled corporations.

Approved February 28, 1938. Public Law No. 437.

S. 2383. A bill to amend the act authorizing the Attorney General to compromise suits on certain contracts of insurance.

Approved February 24, 1938. Public Law No. 434.

S. 2387. A bill to authorize certain officers and employees of Federal penal and correctional institutions to administer oaths.

Approved February 11, 1938. Public Law No. 426.

S. 3691. A bill to provide for the appointment of additional judges in certain United States courts. (Introduced by Senator ASHURST and Senator HATCH.)

Approved May 31, 1938. Public Law No. 555.

S. 3820. A bill to authorize membership on behalf of the United States in the International Criminal Police Commission.

Approved June 8, 1938. Public Law No. 587.

S. 4090. A bill to provide for the care and treatment of juvenile delinquents.

Approved June 16, 1938.

In the Senate, Monday, March 13, 1939

"BUGBANE"

Mr. ASHURST. Mr. President, I do not rise to discuss in particular detail the item under consideration, because my knowledge of the grasshopper pest is limited. I arise to say that in this world we are not settlers but pilgrims, and mankind in this pilgrimage is confronted with a constant battle to overcome things which seem to seek to exterminate the human race. It is still an open question as to whether mankind or insects shall ultimately inherit the earth.

It is my opinion that mankind in his contest with the insect world has about a 50-50 chance to survive.

Those who make an intimate study of the insect world are amazed at that minute life. There are over 4,000,000 different kinds of insects in the world; most of them are open enemies to mankind and they all are our competitors for the world's food supply. Most classes of insects can breed, if, as, and when they choose, in such numbers as they choose, and they can breed either sex they wish at any time they choose, or can breed neuters.

The insect world is not only able to breed with selectivity, but to estimate in advance the numbers they seem to require. Insects are of inexhaustible fecundity. There are more ants in the world than any other living creature, and it is mathematically possible for a pair of houseflies to have 2,000,000,000,000 descendants in one season. Any movement taken in this Congress, or in any parliament anywhere, looking toward exterminating insect pests, should have zealous support, because, while it seems bizarre in this prosaic, commonplace world to say that mankind might be exterminated by insect pests, yet if we consult those who know this subject, they will show that mankind is in more danger from bugbane than from any other thing which may seem to threaten man's existence in the future.

THE AMERICAN COWBOY—TRIBUTE TO THE LATE SENATOR JOHN B. KENDRICK BY SENATOR ASHURST

Romance and emprise clustered around him, and although his lips have now partaken of the sacraments of the dust, the influence of his character survives and is treasured by his relatives, his friends, and his proud State.

Senator Kendrick possessed that heaven-born attribute which the English call a cool head and the Americans call judgment; hence, in sharp parliamentary contests and stormy convention, he held true to the main purpose, was master of himself and the business at hand.

He was a practical idealist. Nature in one of her prodigal moods stamped upon him her royal seal.

Even when he viewed the swelling dome and the fluted pilasters of the Nation's Capitol he wistfully yearned for the far-away rim of the prairie.

Amidst the din and sensation of politics in Washington he longed for his shining Tetons and his gorgeous Yellowstone. His nostrils were always eager for the pungent odor of the wild sage, and his kindly eyes ever sought to descry the scarlet glory of the blossoming cactus.

In public office he trod the paths of his feet with marvelous circumspection, and he was inspired by an ardent enthusiasm for the public good. He was a competent Governor, a successful and influential United States Senator. He was a real cowboy, and he became the most distinguished of all of those excellent and racy spirits who, 50 years ago, drove the thundering herds.

The cowboy's work, like a particolored robe, is so woven about Senator Kendrick that a word describing the cowboy he so truly typified may not be out of place here.

No belted knight in chivalry on heath or strand ever appealed with such allurement and glamour as did the American knights of the remuda.

Among the cowboys there were varying degrees of sophistication, for they were drawn from the different walks of life. The majority, however, were drawn from pioneer stock. The nature of the cowboy's occupation afforded him scant opportunity for extended reading, for he must needs constantly attend the cattle.

If his cow range was on the desert, he must grind its bitter dust between his teeth, endure its flail of heat, and ride on and on. If his range was on the mountain, he must, in winter, ride hard beneath the cold stars. The cowboy's life was one of severe isolation, but his work was not only made endurable but was even rendered pleasurable as well when he took refuge, as many, if not most of them, did, during their lonely rides, by entering into the realm of imagination, where ideal experiences are possible without objective restraint—a realm where images form and fall; where glittering towers upthrust themselves and globes of gold expand and float; a domain peopled with a viewless throng, invisible to all but the eye of the imaginer, and in this way a high percentage of the American cowboys became endowed with intellect and grace, fascination, and tremendous personal charm.

Senator Kendrick symbolized the American cowboy—calm, steady, generous, fair, adaptable, industrious, and firmly devoted to the rugged old virtues which made our Nation great and strong.

(By Will C. Barnes in Arizona Republic)

This is the story of a young Arizona cowboy who discarded a worn pair of chaps and his favorite $14 cowboy boots to become one of the Nation's best known and most eloquent lawmakers, Senator HENRY F. ASHURST, "a master of genteel sarcasm, of consummate courtesy in debate, and the exponent of humor which sparkles like a flawless white diamond."

But he never has forgotten Arizona, with its great deserts, mountains, farms, ranches, and range lands. Even such a gift as a mere sprig of desert sage is enough to bring a tribute.

It was back in the year 1892, on the general range round-up, when there were no "chuck wagons" and cranky cooks of later years, but everyone came with a pack outfit or "greasy sack."

"Generally we all threw in together and cooked over one fire, borrowed from one another the necessary salt, sugar, and other edibles, and had a general good time," says Mr. Barnes, widely known as an Arizona historian, who relates this incident.

"We were over on the Mogollon Plateau near Mormon Lake. The round-up was to start the next day. The sound of a cowbell, the clatter of shod hoofs on the rocky trail came to our ears through the pines. Into the camp surged a remuda of six of eight saddle horses led by an old gray mare, her neck decorated with a heavy 6-inch cowbell.

"Each horse had a home-made rawhide hobble tied around its neck. On the mare's back was bedding, held in place by the regular 'diamond hitch.' Behind her trailed a long-legged, slab-sided colt. The instant his dam stopped, the colt lost no time in gathering in an evening meal, for which he had been making heartbreaking nickerings for some time.

"The cowboy behind the horses swung 'round and bunched them up under a big pine near the camp.

"He was a youngster of about 18 years, perhaps 6 feet tall, and weighed probably 125 pounds. His long legs were encased in an old pair of leather chaps showing signs of long use on a rough, busy range. When he stood up they struck him just at the ankles.

"On his feet was a pair of $14 boots—pride of his young life—from the favorite cowboy boot builder of those days, back in Coffeyville, Kans. The boots had slender, 3-inch 'underslug' heels, a silver 'two bit' piece screwed to the bottom of each. We sure were proud of ourselves in those days.

"'Old Bill Ashurst's kid,' someone remarked. Quickly the youth loosened the ropes that held the pack in place and dumped it on the ground. Then he joined the crowd about the fire. It was my first meeting with the youngster who later, through his own determination and will, was to become the Honorable HENRY F. ASHURST, senior United States Senator from Arizona.

"Recently I received a letter from a friend, enclosing some desert sage. Its fragrance fairly filled the room. Recalling the early range days, I sent the bit of desert sage on its travels once again; this time to Senator ASHURST in Washington.

"It must have reminded him of the old days on the western range, of a sagebrush campfire, the smell of burning hair around a branding fire, a Dutch oven full of 'sour dough' biscuits done to a turn, a huge pot of black coffee filling the air with enticing fragrance. He wrote:

"'DEAR OLD FRIEND: Surely you had the heart of a poet when you divined how much the sage means to me, and took time in this feverish world to send me a sprig of the same. It revived memories of a fascinating long ago, when we drove the thundering herds.'"

Small wonder he is referred to today as "a word embroiderer of the highest type; a master of word painting."

In the Senate, Thursday, March 17, 1938

Mr. ASHURST. Mr. President, he would be a rash man who could claim that he approved and endorsed all the so-called New Deal policies, but it is my opinion that when we shall have left these seats forever, history's iron pen will be writing it down that when fear and doubt, twin spectral forms of evil, descended upon our people during the depression, it was Franklin Delano Roosevelt who was the infrangible diamond pivot on whom the progress of the American people safely revolved.

Dr. Charles A. Beard, an authentic historian, recently published an article entitled "Roosevelt's Place in History." Some of Dr. Beard's strictures are extremely unflattering regarding Franklin D. Roosevelt. It is obvious from the article that Dr. Beard mistrusts President Roosevelt's peace protestations. Yet Dr. Beard, erudite historian, in concluding his article pays the following tribute to Franklin D. Roosevelt: "In one respect he is unique"—this is Dr. Beard speaking of Franklin D. Roosevelt.

"In one respect he is unique among the Presidents of the United States. * * * Even when his most severe Republican critics have finished their indictments, it remains a fact that President Roosevelt has penetrated deeper into the aspirations and tragedy of American life than any of their heroes, even Lincoln himself. Whatever else may happen," says Dr. Beard, "it seems safe to say that President Roosevelt has made a more profound impression upon the political, social, and economic thought of America than any or all of his predecessors."

This is the deliberate conclusion of an authoritative historian contemporaneous with our times.

I now read from the London Economist, as follows:

"The people will forgive the gold experimentalist his occasional errors in gratitude for his strenuous good intentions. They will never tolerate the cautious pedant who awaits before moving to be sure that every last detail of his plan is approved by the orthodox, and consequently seems never to move at all. * * * Politics is the art of the possible, not the science of the ideal. It is the Roosevelts who, with all their faults and inconsistencies, become, and deserve to become, the great statesmen."

Mr. President, fame is jealous, frugal, and cautious of her words; and when the Muse of History shall fold up the next millennium, she will distribute not more than one word to each of certain American characters whose renown we now believe will centuries hence crowd the columns of history, but in each case that one word will be sufficient. For example: Washington, independence; Jefferson, equality; Hamilton, finance; Ben Franklin, philosophy; Patrick Henry, eloquence; Daniel Webster, Constitution; Andrew Jackson, courage; Lincoln, emancipation; Mark Twain, humor.

We are inclined to overlook the fact that humor is necessary if we are to live a graceful life. Mark Twain's contribution to America was tremendously great. His vivid genius on many occasions prevented his countrymen from slipping into a mordant, dull, and prosaic existence.

The English people are no greater than any other race; they are not as great as the Irish race. They are not as great as our own race, but the fact that John Bull has always been able to laugh at himself helps to explain why a nation of shopkeepers was able to produce Shakespeare, Milton, Alexander Pope, Byron, and Kipling, and why a people of ideals were yet practical enough to acquire one-quarter of the earth.

Until about 30 years ago Americans could laugh at themselves, but we seem lately unable to do so, and, in my opinion, if we should grow more cachinnatory, or at least more truly capable of laughing at ourselves, our burdens would be borne more easily.

To resume a roll call of names: Theodore Roosevelt, energy; Wilson, peace; Edison, light; Franklin D. Roosevelt, justice, one of the greatest of words, for what is peace, independence, eloquence, Constitution, finance; indeed, what are all these and other words without "justice," the word which fame will allot to Franklin D. Roosevelt.

I conclude by referring to Richelieu's vindication, when called to an accounting for what he had done in restoring France:

* * * I found France rent asunder,
The rich men despots and the poor banditti;
Sloth in the mart and schism within the temple;
Brawls festering to rebellion, and weak laws
Rotting away with rust in antique sheaths.
I have recreated France; and, from the ashes
Of the old feudal and decrepit carcass,
Civilization, on her luminous wings,
Soars, phoenix-like, to Jove! What was my art?
"Genius," some say; some, "Fortune"; "Witchcraft," some.
Not so; my art was Justice.

The art of Franklin Roosevelt was justice.

In the Senate, March 18, 1936

FOURTH AND FIFTH AMENDMENTS TO THE FEDERAL CONSTITUTION

Mr. ASHURST. Mr. President, in our Constitution there is probably no feature around which clusters more romance or the memorials of which give us more fascinating glimpses of bygone days than the fourth and fifth amendments. In all our jurisprudence there is no other principle that has been more definitely put into position or more joyously accepted by Americans than the principle of the fourth and fifth amendments. They are intimately related; each lends strength to the other, and, notwithstanding their apparent nonchalance, they sustain and protect the very essence of constitutional liberty and security. They guarantee repose and the privacies of life.

These noble amendments are as follows:

"ARTICLE IV

"The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated, and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons or things to be seized.

"ARTICLE V

"No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation."

A gentleman calling upon me once asked, "Did you ever read Lord Coke's famous maxim in Semayne's case?" to wit, "The house of everyone is to him as his castle and fortress, as well for his defense against injury and violence as for his repose." I said, "I am familiar with Coke, but that was law 1,000 years before my Lord Coke adorned the bench."

Before the English conquest of Britain the English people lived in a country now called Schleswig, a district in the heart of the peninsula that separates the Baltic from the northern seas.

The dwellers in this particular locality were an outlying fragment of what was called the Engle or English folk, the bulk of whom probably dwelt in what was later called Lower Hanover and Eastphalia and Westphalia. These Engles in the heart of this peninsula set up their forms of government; they met in the forests, and with their loud and gutteral yeas and nays, and sometimes by clashing their spears against their shields as a substitute for a viva voce vote, they adopted their laws.

One of the principles they set into positive law and adopted before Hengist and Horsa, two of their warrior leaders, landed in Britain in A. D. 449 was the provision that "a man's house was his castle" and that therein he was and ought to be secure and free from unreasonable searches and seizures. So we perceive that when the Engles migrated to Britain they took with them those English fundamentals of the liberty of the citizen or subject, and they planted them deep and strong in the island of Britain.

English history may, therefore, with some degree of accuracy be said to have begun with the landing of this war band, led by Hengist and Horsa; at least this event marks the close of Roman influence in the island of Britain and the commencement of that of the Saxons, and from the very inception of Saxon or Angle influence the domicile was secured against searches and seizures.

The years glided into the centuries, and this civil polity guaranteeing personal freedom from the encroachments of tyranny was observed by most English monarchs until King John so outraged and violated the laws of his country that there occurred his quarrel with his barons. This quarrel led to one of the

most famous of all conferences in the annals of English liberty, but it was really a diplomatic face saving for King John, a mere cloak to cover John's unconditional submission.

An island in the Thames River between Staines and Windsor was selected as the place of conference. The King camped on one bank whilst the barons occupied a marsh or meadow on the opposite bank called Running Mede or "Runnymede," which at various times theretofore had been a place for national assemblies. Their respective delegates met on this island, and on June 15, 1215, the Great Charter (Magna Carta) was written, adopted, engrossed, and signed.

The Great Charter in and of itself did not establish many new constitutional principles, but did distinctly mark the transition from the epoch of traditional rights, observed in the nation's memory, to the age of muniments of liberty, of written legislation, of parliaments, and statutes which were soon to come. The great reforms of past reigns were thus recognized; for example, the court of common pleas was no longer to follow the King in his meanderings over the realm, but was to sit in a fixed place.

But, say the pundits, Magna Carta says nothing about freedom from unreasonable searches and seizures. Let us examine this statement and see how much thereof is accurate.

The original and individual articles of Magna Carta, as they were prepared and offered seriatim, were written in Latin; but when the entire Carta was adopted and engrossed and was ready for the King's signature, it was written in Norman-French, and we must read it in the light of what its words meant 721 years ago.

I read paragraph 24 of Magna Carta:

"No sheriff, constable, coroner, or other our bailiffs shall hold 'pleas of the Crown'."

We must view that language in the light of what it then meant. At that time sheriffs, coroners, constables, bailiffs, and King's minions, in the guise of "holding court," had been in the habit of going to the thatched cottage of the peasant and to the castle of the baron as well, to invade that cottage or castle; and these officers and minions would command that the householder open the strong box, the larder, or the pantry; they would pry open the chest in which he kept his relics, his heirlooms, his private papers, and his title deeds and muniments showing his right to occupy the premises; the penalties which these officers, sheriffs, bailiffs, and King's minions inflicted were degrading and painful and were contrary to law.

By section 24 of Magna Carta sheriffs, constables, coroners, and other bailiffs were not allowed to "hold court."

Some years after the granting of the Great Charter a doubt arose as to the precise meaning of some of its sections although it was pointed out by the lawyers of that day that the guaranties in Magna Carta were sufficient to secure the liberty of freemen; nevertheless, in the reign of Edward I, in 1297, the Confirmatio Chartarum was promulgated.

The Great Charter signed in 1215 and the Confirmatio Chartarum which was signed in 1297 must be read together; the one dealt particularly with the citizen's personal liberty and the other dealt especially with his property rights. No man since that time has succeeded in the English-speaking world, or wherever it has been pretended there was a government of law instead of a government of men, in questioning the rights of freemen as set out in these two documents.

The leading English case on searches and seizures is that of Entick against Carrington and Three Other King's Messengers, reported at length in Howell's State Trials. In this case officers of the law had broken in and seized books and papers belonging to the plaintiff under color of a warrant issued by the Secretary of State. Action was brought for trespass against the officers making the seizure. The defendants attempted to justify under the warrant. It was conceded that such warrants had been issued for many years and executed without question. The case was argued before a full bench, and Lord Camden, at the Michaelmas term in 1765, delivered the decision, holding that such a seizure could not be justified except by a warrant issued by a court upon proper proof, and that even on a warrant issued by the secretary of state it was utterly in violation of the English common law.

This was, therefore, the law of England when our Federal Convention met in 1787 to form the Constitution of the United States.

It was understood by all the Colonies to be the law.

The makers of our Federal Constitution and the framers of the first 10 amendments were never tired of quoting the immortal words of the elder Pitt, used in his speech on The Excise:

"The poorest man may in his cottage bid defiance to all the force of the Crown. It may be frail; its roof may shake; the wind may blow through it; the storms may enter; the rain may enter—but the King of England cannot enter. All his forces dare not cross the threshold of the ruined tenement."

When the ratification of the Federal Constitution was pending before the Virginia Convention, called to pass upon that momentous question, Virginia was a pivotal State—a diamond pivot—on which mighty events turned. Patrick Henry, whom Lord Byron said was "the forest-born Demosthenes who shook the Phillip of the seas," was a delegate to the Virginia Convention; and although the proposed Federal Constitution had come forth with the sanction of the revered name of General Washington and therefore justly carried with it the vast prestige which the name of Washington could not fail to attach to any proposition, Patrick Henry did not approve the Constitution and, to use his own expression, he was "most awfully alarmed," as he considered the document to be threatening to the liberties of his country—amongst other reasons because it lacked a bill of rights—and Mr. Henry challenged the view of Mr. James Madison, he of the superb intellect; Mr. Henry challenged the Wythes, the Pendletons, and the Innesses, and that splendid galaxy of scholars and statesmen who enriched the annals not only of Virginia but all America; and he demanded to know why a bill of rights, guaranteeing the privileges and immunities of the citizen, had been omitted from the Federal Constitution. The Virginia State convention, after a prolonged debate, was able to ratify the Federal Constitution by a majority of only 10 votes, so ably did Patrick Henry argue against it because it did not contain the Bill of Rights which English liberty had affirmed for centuries.

James Madison pledged his word that at the earliest opportunity he would use his energy toward placing into the Federal Constitution the requisite amendments guaranteeing the citizens' rights, privileges, and immunities, and as soon as the Virginia convention had finished the work of ratification it adopted resolutions expressing its desire for the Bill of Rights, demanded by Patrick Henry. These resolutions were forwarded to the Governors of the various States, and as far as men could be bound in faith and honor, as far as men could be bound in statesmanship and in politics, the amendments guaranteeing the citizen's individual rights and his liberties were by common consent agreed to, and it was generally understood that these amendments would be proposed to the States by the First Congress.

The first bill to be considered by the First Congress under the Constitution was quite naturally a bill to raise revenue to pay the expenses of the Government; but on July 21, 1789, James Madison, who was a Member of the House, arose and asked the House "to indulge him in further consideration of amendments to the Constitution," and he pointed out that the faith and honor of Congress were pledged; that the faith and honor of public men everywhere were pledged to amendments securing to the citizens such guaranties as were comprehended within the first 10 amendments.

The Bill of Rights amendments were then proposed to the States, including, of course, the fourth and fifth, and were ratified within 2 years and 15 days. Thereafter, as far as Americans are concerned, as far as the Constitution itself is concerned, they were and are a part and parcel of the original Constitution, as much so as if they were signed on the 17th of September 1787, when the main instrument itself was signed.

In the case of *Boyd* v. *The United States* (116 U. S. 616), the opinion of Mr. Justice Bradley reviewed Lord Camden's opinion and gave a history of the fourth and fifth amendments.

I read from the syllabus:

"It does not require actual entry upon premises and search for and seizure of papers to constitute an unreasonable search and seizure within the meaning of the fourth amendment; a compulsory production of a party's private books and papers to be used later against himself or his property in a criminal or penal proceeding or for forfeiture is within the spirit and meaning of the amendment.

"It is equivalent to a compulsory production of papers to make nonproduction of them a confession of the allegations which it is pretended they will prove."

I call attention to the case of *Gould* v. *United States* (255 U. S. 298–307). In that case a man was suspected of acts which concerned his loyalty. In such circumstances the temptation to obtain evidence by any means was great. Likewise the temptation to a court to sustain the legality of the seizure was great. Officers of the United States Army succeeded in placing a man in the defendant's establishment who purloined certain of his papers.

The Court states:

"It was objected on the trial, and is here insisted upon, that it was error to admit these papers in evidence, because possession of them was obtained by violating the rights secured to the defendant by the fourth and fifth amendments to the Constitution of the United States. The fourth amendment reads:

" 'The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated, and no warrant shall issue but upon probable cause supported by oath or affirmation, and particularly describing the place to be searched and persons or things to be seized.'

"The part of the fifth amendment here involved reads:

" 'No person * * * shall be compelled in any criminal case to be a witness against himself.' "

The Court comments:

"It would not be possible to add to the emphasis with which the framers of our Constitution and this Court in *Boyd* v. *United States* (116 U. S.), *The Silver Thorn Lumber Co.* v. *United States* (251 U. S.), *Weeks* v. *United States* (and various other cases cited), have declared the importance to political liberty and to the welfare of our country of the due observance of the rights guaranteed under the Constitution by these two amendments.

"The effect of the decision cited is: That such rights are declared to be indispensable to the 'full enjoyment of personal security, personal liberty, and private property'; that they are to be regarded as of the very essence of constitutional liberty; and that the guaranty of them is as important and as imperative as are the guaranties of the other fundamental rights of the individual citizen—the right to trial by jury, to the writ of habeas corpus, and to due process of law. It has been repeatedly decided that these amendments should receive a liberal construction so as to prevent stealthy encroachments upon or 'gradual depreciation' of the rights secured by them, by imperceptible practice of courts, or by well-intentioned but mistakenly overzealous executive officers."

I conclude this address by remarking that one of the choicest fruits of our American civilization is its unlimited valuation of individual liberty and its respect for the natural immunities that accompany freemen.

The plan, purpose, and object of the fourth and fifth amendments (indeed, of the first 10 amendments comprising our Bill of Rights) is that they preserve the liberty of the citizen against the assaults of opportunism, and the expediencies to which men resort in an hour of impatience.

Sheltered and defended by the radiant standards of the fourth and fifth amendments, American liberty becomes visible and vocal, audible and actual.

[From the Washington Times]

THE HUMAN SIDE OF THE NEWS

(By Edwin C. Hill)

CONGRESSIONAL ORATORY

There are a lot of studious, well-behaved young newcomers this second session of the Seventy-fourth Congress. They work harder and talk less than many of the old-timers, and that is, of course, as it should be. But connoisseurs of old-style congressional oratory will find things pretty dull in the Senate and House compared to what they used to be.

The rip-roaring orators are passing. There is a whole lot less fireworks around Washington than in the old days. One of the best of this traditional American school is still on the job. He is Senator HENRY FOUNTAIN ASHURST, of Arizona, most melodious and courtly of Senators, and the most Chesterfieldian, too, as Victorian as Spencerian penmanship in these days of the decline of manners.

I wish he and Senator James Hamilton Lewis, of Illinois, would get out the CONGRESSIONAL RECORD, rehearse a day or two, and put on again that Shakespearian word tourney of theirs which came off in the opening session of this Congress. Senator Lewis, as the world knows, is also of that passing school of fastidious dress and ornate manners. Their eloquent encounter had to do with the construction of a certain line of Shakespeare.

Profoundly informed were the two Senators as they engaged in eloquent tierce and riposte in their two-octave range of throbbing oratory in which each was trying in his own way to square the Bard of Avon with the fate of the Republic.

Senator ASHURST was born in Nevada to the piping of the silver-tongued Winnemucca coyote in the days when his family was crossing the desert from California into Arizona. He was a cowboy in his youth. He still knows endless verses, such as Little Dan, the Wrangler, and the Chisholm Trail.

He was, of course, a deputy sheriff, later a member of the Territorial legislature, and prosecuting attorney. He has been in the Senate since 1912.

He learned his letters from branding irons, and the interesting thing is that he learned them better than many Congressmen with a score of years of fancy schooling behind them. His syntax is flawless, and he is ready and apt in drawing on his resources, built by years of wide reading in the law and the classics.

The Honorable W. P. Geary presented him to a campaign audience as follows:

"I am proud to introduce to you * * * the silver-tongued sunbeam of the painted desert."

As a Senator, Mr. ASHURST made good as advertised. He was all that and more. The CONGRESSIONAL RECORD is fairly gem-studded with his eloquent outgivings, such as this one about Arizona:

"The rich purple tones in the distant hills, the pearl-gray touches, the deep, translucent azures in the arching heavens make up myriad glints of lights and colors."

With his right forearm athwart his vest, Senator ASHURST drops easily into discourse about the "Barmecidal feast":

"An occult gem which glistens with 'ophidian eye,' or announces that 'I do not rise to chant any jeremiads.'"

His is the longest and most imposing frock coat and the most sensitive and adjustable vocal chords in Congress. It doesn't matter what he is talking about, he'll sink it to a deep diapason, flute it up to a poignant skylark pitch, and invest it with a panopoly of stately iambics.

The tall, impressive Senator wears a wide black ribbon on his eyeglasses with which he likes to gesture. He has a way of bowing deeply from the waist on the slightest provocation with that flowery but seemingly innate and instinctive courtesy which the old West used to nurture.

Don't get the mistaken idea that he's just a dulcet-toned word accordion. He is a chairman of the important and powerful Senate Judiciary Committee, and before this committee will come the various proposals by which Congressmen will seek to enlarge their authority against the recent devastating decisions of the Supreme Court.

He is deeply informed on the Constitution and constitutional law; and while he is known as a man of liberal tendencies, there are no indications that he will aid in furthering extremist measures.

In the Senate, May 29, 1928

BOULDER DAM BILL

Mr. ASHURST said in part as follows:

Mr. President, the region known as the Colorado River Basin, drained by the Colorado River and its tributaries, embraces over 242,000 square miles.

The following table shows an interesting comparison of areas:

COMPARABLE TABLE

Gross area in Colorado River Basin—square miles

Wyoming furnishes to basin	19,000
Colorado furnishes to basin	39,000
Utah furnishes to basin	40,000
New Mexico furnishes to basin	23,000
Nevada furnishes to basin	12,000
California furnishes to basin	6,000
Arizona furnishes to basin	103,000
Total area of Colorado River Basin	242,000

This area compares with the gross area of—

Maine	33,040
New Hampshire	9,341
Vermont	9,564
Massachusetts	8,266
Connecticut	4,965
Rhode Island	1,248
New York	49,204
New Jersey	8,224
Pennsylvania	45,126
Delaware	2,370
Maryland	12,327
South Carolina	30,989
West Virginia	24,170
Total	238,834

The Colorado River proper is formed by the junction of the Green and the Grand; the name of the Grand was by act of Congress approved the 25th day of July 1921, changed to the Colorado. Green River from its source to its junction with the Grand is 700 miles long. The Grand River from its source to its junction with the Green is about 450 miles long.

Green River heads near Fremont Park in the Wind River Mountains, Wyo., in a group of alpine lakes fed by perpetual snows. The source of the Grand is in Colorado. Like the Green, it is fed by small alpine lakes that receive their waters directly from snow banks. Including the Green, the Colorado River is about 1,700 miles long and empties into the Gulf of California in latitude 31°53′ and longitude 115°.

The Colorado River Basin—that is to say, the region traversed by the Colorado River and drained by its tributaries—is a land which embraces all the various diversities of topography and geology; it is a land of extreme variations in rainfall, in elevation, and in the character of the country. The northerly part of the basin is a land of cold winters, of deep snowfall, a region that stores up the snows of winter and pours them forth in the summer.

The middle section of the Colorado Basin is a territory of low rainfall, of high plateaus, and vast canyons. In no other place in the world are there such deep, marvelously colored, and beautiful gorges and canyons.

The southern portion of the basin is relatively low in elevation, with a scanty rainfall and of tremendous summer heat, 115° to 120° being not unusual temperatures over much of this southern area in the months of June, July, and August. The normal annual flow of the Colorado River is about 17,000,000 acre-feet, extreme years ranging from 9,000,000 to 25,000,000 acre-feet. Storage of water is therefore vitally essential, as irrigation is of tremendous importance to the proper development of the basin.

The Colorado River Basin contains mountains reaching to a height of 13,500 feet, belted at the base by forests of vivid green, and capped with gleaming snow; it contains playas and inland lakes below the level of the sea; it contains vast plateaus of rugged, black scoria; immense forests of pine, cedar, and pinion, and in these forests are hundreds of small parks, bowllike gems of exquisite scenery; it contains the largest area of recent volcanic action to be found on the continent, "recent" being employed in its geological sense.

In the southwestern portion of the basin there is a real desert where the raw and scorching sun comes down as a pitiless flail, where the sand reflects the heat and glare and distresses the eye of the traveler, and where little dew or moisture is deposited, but where a wind, hot as a furnace blast, sometimes blows from the south.

Before a railroad was built through it a journey over this desert was at times dangerous and always fraught with discomfort. Day after day nothing was to be seen but an expanse of hot sand, with now and then a cactus lifting its thorny arms into the brazen heat. The loneliness of the pioneer pilgrim there seemed to sever him from human things and to remove him an infinite distance from the world, with its interests and its occupations, but nature, in one of her capricious moods, also placed in this same basin the richest agricultural lands in the Western Hemisphere.

In some parts of this basin, which were populous before the pyramids were built, ancient peoples builded cities not wholly lacking in grandeur. These peoples of antiquity wove and spun cotton and flax into gaudy tapestries before Romulus and Remus were suckled. They melted gold and silver into chieftain's ornaments and queens' girdles before Caesar's legions brought tribute back to imperial Rome.

Centuries before the Knickerbocker set foot on Manhattan Island tribes of men now vanished irrigated the fertile sands of

the lower basin of the Colorado River from canals and reservoirs finished with hard linings of tamped or burnt clay which in some degree possessed the endurance of our modern concrete. The origin of this people is enwrapped in the mists of antiquity. Nothing has been found of sufficient distinctiveness to enable us to do more than speculate and form ingenious theories as to whence they came, how long they enjoyed their tolerable civilization, and whither and why they went.

Within this basin and in Arizona is the Petrified Forest, whose trees lived their green millenniums and put on immortality in Triassic time, 7,000,000 years ago. The trees were of several kinds, most of them being related to the Norfolk Island pines. A small amount of iron oxide is distributed through the logs, which gives them their beautiful yellow, brown, and red tints.

Within the region traversed by the Colorado River and drained by its tributaries is the Painted Desert, in which at a distance you perceive the "sea of jasper" and the face of cliffs that gleam like jewels; you seem to descry fortifications with flags flying on their ramparts, and walled towers on conical hills amidst an admixture of light and shade.

Within this basin and in Arizona is the Grand Canyon, of wondrous colors, of bold escarpments, pyramids, swelling domes, mosques, minarets, and isolated mesas through which rolls and tumbles the Colorado River.

On the 5th day of January 1886, in the Forty-ninth Congress, the first bill to make the Grand Canyon a national park was introduced in the Senate by Benjamin Harrison, then a Senator from Indiana, and subsequently President of the United States. This bill failed to become a law, and the project was presented to the Congress from time to time.

In the Sixty-fifth Congress I introduced a bill to make the Grand Canyon a national park.

The bill passed both houses of Congress and was approved by President Wilson on the 26th day of February 1919.

FUTURE OF THE COLORADO RIVER BASIN

What is to be the future of the Colorado River Basin, a country larger in area than the tract of land which Virginia, with princely liberality, ceded to the General Government in 1787, out of which five States were erected?

Of course, its forests will be utilized, its mineral wealth will be sought, its scenic beauties will be unfolded; but its greatest development, however, must come from its water resources, upon which the development of its other resources must largely depend. Without the water afforded by Colorado River and its tributaries, vast tracts of its land would remain unproductive and practically useless; but the hand that formed this land, cleft its mountains in twain, filled their caverns with precious metals, painted its landscapes in colors warranted never to fade, and that replenishes this river, left it feasible for man not only to construct large irrigation systems and to build towns, cities, and prosperous agricultural communities within this basin, but to generate hydroelectric power for lighting, heating, industrial uses, and the transportation of freight and passengers.

I know the generosity of Senators will pardon me if I now presume to solicit their attention while I make a reference personal to myself. My forbears were members of that bold advance guard of pioneers who 50 years or more ago explored the Colorado River Basin. From the time of my youth to the present day I have wielded ceaselessly what strength was mine, which was modest and small enough, to bring about the development of the potentialities of the Colorado River. If the voice of justice and truth and the accuracies of science instead of greed and partisanship were to control, there would ultimately be brought forth within the United States the inland empire of the Colorado River Basin, an empire wealthier than that which Pizarro added to the dominions of Charles V and more splendid and more durable than that of the Caesars.

In discussing the broader possibilities and problems of the Colorado River Basin there are hundreds, even thousands, of minor yet important possibilities of expansion that I necessarily must leave unmentioned, although these future minor auxiliary developments will have much local importance and in the aggregate true national significance. In general such minor or auxiliary projects do not preclude the large use of the river but must be undertaken as part of that larger use.

Irrigation has enriched the American people. Irrigation projects charm the imagination with their wizardry. Their power to transform barren deserts into grain and cotton fields, into orchards and vegetable and flower gardens, makes the lamp of Aladdin and the purse of Fortunatus seem tame and prosaic. The wildest hyperbole would not overestimate the strength, wealth, beauty, comfort, and public order that would be added to this Nation were all the potentialities of the Colorado River scientifically utilized with scrupulous regard for and observance of the legal rights of each State within the Colorado River Basin.

It is a thousand pities that this bill, so devastating to Arizona in its results, has failed to rise to the grand opportunity of the hour, but I do not despair; I realize that the active protagonists of this bill have fallen victims to that imponderable which inheres in those public men who surrender the good of the future to the expediency of the hour.

The alluring temptation to bring to existing constituents some temporary advantage; to placate those who can vote today; to achieve something immediate and tangible, which apparently is beneficial, although it be at the cost of sacrificing durable benefits and vital rights which could easily be preserved if justice instead of expediency were made the guide, has always been the Circean spell that has, down through the ages, distracted the mind, deflected the purpose, and weakened the fiber of statesmen.

REMARKS OF SENATOR ASHURST ON THE STEAMSHIP "PRESIDENT GRANT" ON SATURDAY, OCTOBER 26, 1935, PRESENTING TO VICE PRESIDENT GARNER A PAIR OF SOCKS TO BE WORN WHEN HE HAS AN AUDIENCE WITH THE EMPEROR OF JAPAN

This is an enjoyable occasion. It is always a delight to me to air my views upon a subject of which I know nothing—and, as I know nothing of the Orient or its habits and culture, you have the right to expect from me an extended speech upon the Orient.

The custom of removing one's footwear upon certain occasions is so old that its beginnings are lost in the twilight of antiquity. We do know, however, that no matter with what particular tribe or for what peculiar reason such habit may have originated, all tribes of men have at some time honored and followed the custom.

Moses, keeping the flocks of his father-in-law, heard a great voice saying, "Put off thy shoes from off thy feet." The cowboy on the Southwestern Plains, when mortally injured in an encounter with another, asked his comrades to see to it that he did not "die with his boots on."

Mr. Vice President, you will soon comply with a beautiful custom and observe an ancient symbol by removing your shoes out of respect to a powerful ruler.

To aid you in the performance of your important duty, proper footwear has been provided for you by the Senators and Representatives of the congressional party to the inauguration of the Philippine Commonwealth.

These socks—I shall not descend to billingsgate and slang by calling them hose but shall adopt the more patrician nomenclature and call them socks—are made, both woof and warp, from Texas cotton, which grew amidst the horned toads of the Big Bend country.

"These socks sell for $2 a pair;
They never rip and they never tear;
If you put them in water, they'll never get wet,
And the longer you wear them the stronger they'll get."

Mr. Vice President, logical and inquiring mind that you possess, I am sure that all on shipboard know that the significance of "socking" you will not be lost upon you. Indeed, I have heard the Vice President called "Old Sox."

These socks are particolored. The scarlet in them is the red badge of the courage of your career; the purple stripe denotes that thread of royal good fellowship and frankness so manifest in yourself.

The yellow stripe in them seems out of place—somewhat macabre—as there is no yellow streak in your make-up. Indeed, I have reason to know your courage—courage to the point of temerity, for your kindly face is never flushed—even when you are confronted with a full house. You play a straight oftener than almost any other man I know.

When you return to your august post in Washington, should political or parliamentary shoes begin to pinch your feet, do not hesitate to remove the shoes, even in the Senate, provided you are wearing these sox. The Senate is firm for precedent; Senator Wilkinson Call, of Florida, wore socks as gorgeous as a Persian sunset, and often removed his shoes in the Senate. Jerry Simpson's fame would have rivaled that of the scholarly William Allen White, of Kansas, if Jerry had worn eloquent socks.

Oh, what slender threads turn the currents of this world.

[From the New York American of Feb. 25, 1937]

HENRY FOUNTAIN ASHURST, of Arizona, chairman of the Senate Judiciary Committee, is a great orator, but some of his colleagues insist his championship of the President's judiciary program is inconsistent with his past views.

Senator BAILEY, in debate, fetched up a newspaper article pointing out the same and bearing the happy caption "Henry, Thou Art a Jewel."

CONFESSES ALL

To fellow Senators and galleries the Arizona statesman made humble confession:

"My faults are obvious. There can be no doubt I have my full share. I suffer from cacoethes loquendi—a mania or itch for talking—from vanity, and morbidity, and, as is obvious to everyone who knows me, an inborn, an inveterate flair for histrionics."

Having confessed, the one-time Arizona cowpuncher rallied to his own defense and said:

"But there never has been superadded to these vices of mine the withering, embalming vice of consistency. Whoever in his public service is handcuffed and shackled by the vice of consistency will be a man not free to act as various questions come before him from time to time; he will be a statesman locked in a prison house the keys to which are in the keeping of days and events that are dead. Let me quote Emerson: 'A foolish consistency is the hobgoblin of little minds, adored by little statesmen.' "

BLASTS "CARPENDI"

"I spoke of my vice, cacoethes loquendi. There is another vice called cacoethes carpendi—the mania to find fault, to carp against everything that somebody else proposes but never suggesting a

remedy yourself. Such is cacoethes carpendi, a vice not wholly unknown in the Senate Chamber."

From his hecklers Henry drew cheers.

BY CAL TINNEY IN NEW YORK EVENING POST

Folks, if any of you are going to Washington between now and July and want to know what shows to see, don't miss the "Ashurst Revue."

This Capitol Hill offering, having for its theme the enlargement of the Supreme Court, and featuring stars of the professorial, the official, and everything but the tonsorial field, is decidedly the spring hit.

Big names in a talent way—names like Homer Cummings, Burton Wheeler—have helped to pack in big crowds. HENRY FOUNTAIN ASHURST is the master of ceremonies; so, from top to bottom, the show is one stellar attraction.

I say "stellar," but the show could dispense with the guest artists and only retain the master of ceremonies and still have a dose of entertainment that would knock your eyes out.

This fellow ASHURST has talent and showmanship of a high order. Tall, sleek, and black-haired, attired in morning coat and pin-point-striped trousers, he looks like something left over in Washington by a visiting Shakespearean stock company.

Though from Arizona, a State more noted for turning out two-gun men than orators, thespian ASHURST can intone his lines like a finished actor (and not quite as finished as some last year's actors are).

ASHURST works under his own name, though frequently he gets billing under such titles as "The War Eagle of the San Francisco Crags," "The Silver-Tongued Sunbeam of the Painted Desert," and "Lord Asbestos."

LORD ASBESTOS

The last-named billing was thought up by Senator BARKLEY, of Kentucky. Asked why ASHURST should be called Lord Asbestos, BARKLEY replied: "Because he gets hot but never burns."

The 62-year-old Arizona Senator shies from serious roles and prefers comic parts. Years before he interrupted one of the late Huey Long's filibusters to ask if the Louisiana Senator's popularity wasn't "about as great as that of a cuckoo clock in a boys' dormitory at 3 o'clock in the morning." It was known among fellow mimesters that Lord Asbestos could dish it out and "take it" also.

In February they ribbed him for having switched overnight from being an opponent of the Supreme Court enlargement idea to being a proponent of same as soon as he knew the President was for it.

"Did you not," demanded Senator BAILEY, of North Carolina, of the senior Senator from Arizona, "say, after the Supreme Court's N. R. A. decision, that 'among the unjust criticisms leveled at the President was the charge that he intended to enlarge the Court'? Did you not say, 'A more ridiculous, absurd, and unjust criticism of a President was never made'?"

An old Shakespearean trouper is never embarrassed in the face of embarrassing evidence; and even if Mr. ASHURST only looks to have been a former Shakespearean ham, he played his part well.

Said he when Senator BAILEY had asked the question above stated: "It is obvious from the lilt of it that what you quote are my utterances. But"—and he fixed the gaze of his senatorial audience as John Drew hypnotized the customers on the nights he used to play Hamlet—"the man who attempts to be consistent in his public service may end up consistent, indeed, but never accomplish anything else."

THEN HE REALLY GOT GOING

Launching into his subject, he said: "There can be no doubt that I have my full share of faults. I suffer from cacoethes loquendi—a mania or itch for talking—and from vanity, if you please, and morbidity, and, as is obvious to everyone who knows me, an inborn, an inveterate flair for histrionics. But there has never been superadded to these vices of mine the withering and embalming vice of consistency.

"Whoever in the public service is handcuffed and shackled by the vice of consistency will be a statesman locked in a prison house, the keys of which are in the keeping of days and events that are dead."

Obviously, Orator ASHURST was in "fine feather," and he built up to one crashing conclusion. It came as follows:

"I spoke of my vice, a mania to talk. There is another vice of mankind called cacoethes carpendi—the mania to find fault, 'the mania of carping against everything that somebody else proposes, but never suggesting a remedy yourself.' Such is cacoethes carpendi, a vice not wholly unknown in this Chamber."

As you might have guessed from the foregoing, Mr. ASHURST never uses a monosyllable when a polysyllable will do.

His talents are not confined to speech making, however. An ex-cowboy, he still can chant the 89 stanzas of the Chisholm Trail.

Prescott is where he has his home in Arizona, and in Washington he and his wife live in a house on K Street. Mrs. Ashurst is the former Elizabeth McEvoy Renoe.

Outside of wanting to buy Lower California from Mexico for annexation to Arizona, he is a run-of-the-mill Democrat. And he hasn't got in bad in Arizona for wanting to own the Mexican peninsula aforenamed. Arizonians, as a class, think it would be rather nice to have some coast line.

HIS PET HATE

The Senator's pet hate is Who's Who in America, and every time they print his biography it is over his protest.

I wish I could go on about the Bard of Prescott. I haven't even told you where he was born, etc. Well, Winnemucca, Nev., is where that happened. His father was a cattleman.

At 18 young ASHURST got the job of turnkey at the Flagstaff County jail, later becoming a deputy sheriff.

He was admitted to the Arizona bar and the legislature, both on his twenty-first birthday; became district attorney of Coconino County in 1904; pursued the private practice of law from 1909 to 1912, at which time the Arizona State Legislature unanimously elected him the Sunset State's first United States Senator.

So the talented HENRY FOUNTAIN ASHURST has been playing the Senate Chamber in Washington for the last 25 years. It's the longest theatrical engagement on record.

As long as words come to him (and they will) he is going to be a much-seen, much-beloved figure in the shows on Capitol Hill.

In the Senate, Friday, December 23, 1932

Mr. ASHURST. Mr. President, I have received letters discussing prohibition, and I now read to the Senate a letter I have sent in reply to requests for information.

DECEMBER 21, 1932.

Yours received regarding prohibition.

At the election in 1914 the people of Arizona voted dry. I had promised them that as their Senator I would regard their vote at the polls to be an instruction as to how I should vote in the Senate on prohibition, because I was to be their servant, and their vote would constitute a mandate to me.

In 1928, when the prohibition question was again prominent, I state that I had always regarded the referendum votes of the people of Arizona as an instruction to me to vote dry and that I would continue to carry out the will of the people as expressed by their referendum votes and would vote dry until they changed their instructions at the polls.

In 1932 Arizona voted wet. I regard that vote as a mandate to me to vote to submit the eighteenth amendment for repeal. I have made it a rule of my public life to keep to my word with the people. If I refused to keep my pledge to carry out the will of the people of Arizona as expressed at the polls, I would be an unfaithful servant and unworthy of a seat in the Senate. This vote involves a great principle of the American Government, and I cannot and should not override or ignore that principle.

Until the people of Arizona shall change their instructions by another referendum, I am in honor compelled to vote to submit to the States the repeal of the eighteenth amendment and to vote for such liberalization of the Volstead Act as is permissible under the Constitution as it now stands.

Respectfully yours,

HENRY F. ASHURST.

On November 15, 1932, I gave to the press the following statement:

"Honesty and good faith require that platform pledges be kept. The Democrats would make themselves 'embezzlers of power' if they refused to live up to their own political-platform promises.

"The Democratic national platform specifically favors a repeal of the eighteenth amendment and also includes a demand that complete supervision and control of the manufacture and sale of intoxicating liquors be restored to the States. As a Democratic Senator it is, therefore, my duty to vote for a joint resolution proposing a constitutional amendment to be submitted to representative conventions in the States for the repeal of the eighteenth amendment.

"As a Senator from Arizona I have always considered and still consider the constitution of the State of Arizona to be the best indication of the will of the people respecting how I should vote on modification or retention of the national prohibition laws. The people of Arizona at the recent election having changed their organic law and having repealed State prohibition, my plain duty requires that I vote to carry out their mandate on this subject.

"HENRY F. ASHURST."

In the Senate, Thursday, March 16, 1939

THE PALESTINE MANDATE AND THE BALFOUR DECLARATION

Mr. ASHURST. Mr. President, in the nature of a petition, I ask unanimous consent that the Secretary read at the desk a telegram I sent to the Secretary of State in October of last year.

The VICE PRESIDENT. Is there objection to the reading of the telegram? The Chair hears none, and the clerk will read, as requested.

The legislative clerk read as follows:

PHOENIX, ARIZ., *October 13, 1938.*

Hon. CORDELL HULL,

Secretary of State, Washington, D. C.

DEAR MR. SECRETARY: The services to our country which the President and yourself rendered recently in the Central Europe crisis are of surpassing importance and are valuable beyond the range of eulogy. In the present crisis now approaching because of the rumor that Great Britain may consider withdrawing from her mandate over Palestine which mandate she assumed by the Balfour declaration, leads me to believe that the President and

yourself may perform an equally important service if you would suggest to Great Britain's chancelries that any recession from or abandonment of the Palestine mandate created by the Balfour declaration would bring catastrophic results that might shatter the orderly process of nations. No event could make a more important contribution to peace and tranquillity than the faithful observance of the Balfour declaration. You are probably more familiar than am I with the events that led to the promulgation of the Balfour declaration. The Jews down through the stream of human history have been faithful to their engagements and to their commitments. They have for centuries developed their culture. Their spiritual potentiality has always been manifest and most admirable. The Jewry of the world accepted the Balfour declaration in good faith and relying upon the good faith of Great Britain the world's Jewry have proceeded for more than 20 years to develop Palestine and to contribute to movements looking toward peace, progress, and serenity throughout our troubled world. Pardon me if I appear to be too insistent, but I am zealously of the opinion that it would be a distressingly cruel wrongdoing were this Balfour declaration abandoned. With gratitude for the polite attention you have always given my communications, and with esteem.

Senator ASHURST.

ARIZONA STATE MEMORIAL STONE

Extract from proceedings held in the Washington Monument, Washington, D. C., at the dedication of a memorial stone placed in the Monument by the State of Arizona, April 15, 1924

ADDRESS OF HON. HENRY F. ASHURST

(As Senator ASHURST was called away from the city on account of the death of his mother, his address was read by Mr. John C. Crockett, reading clerk of the United States Senate.)

This monument of dignity, beauty, and simplicity, erected as a symbol of the veneration in which America holds the immortal name of George Washington, is the embodiment of the struggles and aspirations of our race. No matter what robes of glory may be woven for our Nation in the days that are to come, the future cannot give a blessing richer or more ample than the liberty which Washington's valor and wisdom bequeathed to us.

Within the past decade science has given us steeds with lungs of steel and wings of silk, and with them we have made the highways of the eagle the highways of our commerce, but science can never give to us anything more valuable than our American system of government.

Neither iron quill, neither music's myriad voices, nor eloquent lips ardent with truth and opulent with images of splendor can give adequate utterance to the pageantry of the memories and the hopes that rise before us when we reflect upon what this monument signifies.

Liberty is like unto a coral island, built from the deeps; built by the dying of the builders, until finally its truths greet the surface and the sun. Millions of men have suffered and died in order that freedom, typified by this monument, might live.

The stone set by Arizona into this monument is chalcedony—petrified wood—that which St. John the Divine, in describing the foundations of the walls of the city, called a "precious stone," and this stone dedicated today is a section of tree which lived its green millennium millions of years ago. It is the section of a tree whose structure has resisted the gnawing tooth of time and whose beauty has not been corrupted by the moths of eternity—so may it be with the American Government.

ADDRESS DELIVERED BY SENATOR ASHURST, OF ARIZONA, AT THE TESTIMONIAL DINNER IN WASHINGTON, D. C., IN HONOR OF HON. HOMER CUMMINGS, ON JANUARY 11, 1939

Mr. ASHURST said:

Mr. Toastmaster, ladies and gentlemen, the famous English poet Alexander Pope, in his Odyssey of Homer, wrote a couplet:

"True friendship's laws are by this rule express'd,
Welcome the coming, speed the parting guest."

This same poet, in Book II of his Satires, wrote:

"For I, who hold sage Homer's rule the best,
Welcome the coming, speed the going guest."

Had our erudite and affable toastmaster [Mr. Hogan] been permitted to be present when the divine afflatus was inspiring the poet, doubtless our toastmaster would have suggested that it be written:

"Welcome the coming, feed the going guest."

Personally, I am much in favor of postprandial orations, that is, after-dinner speeches. They are islands of relaxation and comradeship anchored in life's wild and wasteful ocean and are pleasant interludes amidst the clashes of the hustings, the court, the forum, and the absorbing pursuits of commercial and industrial life.

Occasions such as this afford a serene atmosphere where delicate fancy, historical allusion, and beautiful words are permitted to form the staple of public utterance, and the speeches are intended neither to threaten, challenge, nor to rebuke.

Although postprandial oratory is generally supposed to be too glamorous to be of substance, the truth is that many of the brightest, wittiest, and wisest sayings of our times have been engendered amid the incense of fragrant cigars and the aroma of café noir. Poets, artists, philosophers, statesmen, scientists, novelists, and men noted for their brilliant wit and delightful humor have given to the world some of their best utterances at public dinners.

If a student of astronomy, whose vigils are devoted to a study of the magnitudes, motions, and distances of stars and planets in celestial space, were asked to describe in a single speech, the relation of the sun to our solar system, the student would stand amazed at the immensity of his task.

Not less immense would be the task of the speaker who in a single speech attempts to describe the relation of the Attorney General's Department to American justice.

Mr. Cummings was inducted into the office of Attorney General with but few days—less than half a dozen—within which to orient himself and adjust his affairs before assuming his duties, and he entered office at a time when doubt and fear, twin specters of evil, had seized millions of persons; but quietly, unobtrusively, capably, he selected a staff for his Department, gave the staff his confidence and support, and in my opinion one of the reasons for his success is that he has always been willing to submit himself to the crucible of self-correction which comes, and comes only, from associating with other men.

This occasion would seem to invite a speaker to discuss, in some detail, the vast and important labors and achievements of Mr. Cummings as Attorney General, but even to enumerate the various reforms and accomplishments of the Department of Justice under his leadership would be to stretch this address beyond the polite limits of a banquet speech.

For the fiscal year ending June 30, 1938, the total expenditures of the Federal Government, including relief, were $7,691,287,108. The expense of the judicial branch of the Government—that is to say, the energies and operations of our Federal courts—was only $9,500,000, which means that the cost of the judicial branch of our Government for that fiscal year was only one-eighth of 1 percent of the cost of our Federal establishment.

Not the least in importance of the arduous labors of Attorney General Cummings was his formulation and advocacy of the anti-gangster or anticrime laws passed during the Seventy-third, Seventy-fourth, and Seventy-fifth Congresses, and I would be wholly lacking in grace if I failed to note the able support given to these bills by Representative SUMNERS of Texas, chairman of the House Committee on the Judiciary.

Superlatives in speech are usually evidences of a weary man or sometimes an indolent man who does not seek a more nearly exact medium of expression. Nevertheless I choose to employ superlatives, because they are required truly to delineate and set forth the achievements of General Cummings and his staff, with particular reference to the energies of the Federal Bureau of Investigation, in coping with professional criminals.

When Mr. Cummings was inducted into the office of Attorney General he made a careful study of the character and attainments of Mr. J. Edgar Hoover, and I say advisedly that Mr. Cummings exhibited courage and foresight in retaining Mr. Hoover as Director of the Federal Bureau of Investigation, that is to say, chief of the G-men, and he gave Mr. Hoover encouragement and assistance. Arguments were made to General Cummings to try to induce him not to retain Mr. Hoover's services, but Mr. Cummings, with a judgment and a foresight almost telepathic, retained Mr. Hoover and the judgment and sagacity of Mr. Cummings have been vindicated.

Many persons have wondered whether Mr. Cummings was a right-winger or a left-winger—but being himself considerable of a philosopher, he probably came to the conclusion that a bird cannot fly with two right wings any more than a bird can fly with two left wings, therefore as a public official, he turned neither to the right nor to the left but went straight forward.

In bygone days there was a prominent pugilist named John L. Sullivan, one of the most successful pugilists America ever produced. Fifty years ago he was one of the most noted men in the world; today his name is nothing but a gorgeous reminiscence. In Mr. Sullivan's decline when the nymphs of his noonday had gone and the shadows of twilight gathered about him, he was asked the question as to what particular feature he ascribed his dazzling success in the prize ring, and he instantly replied, "I never took a backward step."

So Attorney General Cummings turned neither to the right nor to the left and never took a backward step.

Another reason for his success is that he understands the foundations and the framework of the Constitution; realizes that it was written neither on rubber nor on brass and that, while written on parchment, it was also written in the inborn, invincible, ineradicable sentiments and aspirations of men who love liberty under the aegis of the law.

He realized that it was intended to implement and aid the law in protecting and defending the rights and immunities of free men, an instrument to give the law the scope and opportunity to cope with the ruthless cunning of chicanery and, above all, that the Constitution was not written to debilitate or enfeeble the Nation, reject the fruits of the discoveries of science, or to stop or stay America's dramatic march onward and upward for good in the affairs of her citizens.

In an era when vituperation and calumny are largely the stock in trade of political warfare, Mr. Cummings, instead of permitting his temper to become caustically embrittled, carried himself with dignity of demeanor and constant propriety of speech.

No public official in our time ever held the standard of responsibility higher than he. Neither friend nor enemy nor ambition nor praise nor censure could swerve him from the path of duty. He made no bargains.

No Department of Justice existed in our Government prior to the year 1870, although, of course, there had been an Attorney Generalship since 1789, and this Department of Justice has grown from meager and slender facilities and equipment into a department of enormous importance and responsibility, until it stands today the strong citadel and tower of defense of the inviolable rights of a free people, a barrier alike against the frenzied onslaught of faction and the insidious encroachment of privilege.

In conclusion, this occasion affords me the opportunity to say to General Cummings what I believe is in the heart of every person here present, namely, that we have never wavered in our admiration and affection for you, and we all feel that the Fates treated us kindly in making us your contemporaries and your friends.

In the Senate, Monday, March 27, 1939

CONGRESS HAS NO JUDICIAL POWER EXCEPT AS TO IMPEACHMENTS

Mr. ASHURST. Mr. President, intermittently I receive letters chanting a jeremiad, or, with caustic verbiage, inveighing against the Senate Committee on the Judiciary because, forsooth, that committee does not "get busy and report out a constitutional amendment proposing to take from the courts the power to invalidate an act of Congress."

Some of the letters are intemperate in tone and some are written by persons who in good faith seek light upon this question.

No conceivable energy at my command could, by correspondence, furnish to every person making inquiry a dissertation upon the necessity, in a constitutional government, of reposing in the Federal courts the power to declare invalid and void such acts as Congress had no power to enact.

Some of the complainants take the view that since we derived our legal procedure from England and that inasmuch as the British courts did not exercise the power to declare an act of Parliament void, it was, therefore, unprecedented and unauthorized for courts of the United States to explore an act of Congress with a view of ascertaining if such act was within the power of the National Legislature.

It will be remembered that the colonial governments in America were grants from the King and were connected with Great Britain through the medium of the Crown and not through Parliament. The colonial charters were, in fact, constitutions, and the words "our Constitution" in the Declaration of Independence have particular reference to the colonial charters or grants. These charters differed somewhat as to the powers granted or denied, but they all appear to have contained the provision that legislation enacted by the Colonies should not be contrary to the laws of England; hence the colonial laws were frequently tested by the charter or by the law of England, and some acts of colonial assemblages were annulled because they were not in accord with the constitution; that is to say, with the colonial charter—the grant. Thus, the American Colonists became familiar with that system and practice.

The address delivered before the Bar Association of the City of Charleston, W. Va., on January 25, 1936, by the Honorable John H. Hatcher, president of the Supreme Court of Appeals, State of West Viriginia, is one of the clearest expositions of this subject that may be found. It would seem to me that if we are to maintain a constitutional government and protect the inviolable rights, privileges, and immunities that accompany free men, we should not strike down what is called judicial review.

In tyrannical governments the supreme magistracy, or the making, construing, and enforcing the law, is vested in one and the same man or one and the same body of men.

In a government where one and the same magistracy makes, construes, and enforces the laws, whether such magistracy be lodged in one man or in a body of men, there can be no public liberty.

The question of the power of the courts of the United States to declare "unconstitutional" such acts as Congress had no authority to enact was not an issue that divided the framers of the Constitution into opposing political parties.

Thomas Jefferson was not a member of the Constitutional Convention, but Jefferson and his supporters, on this particular question, differed in no essential respect from Alexander Hamilton.

Jefferson and Hamilton each took the view that the courts should have the power to declare void such legislation as Congress had no authority to pass, and Jefferson went further on this subject than did Hamilton. Jefferson's letters indicate he desired that the power be given to the courts to invalidate legislation not only because the legislation was in opposition to the Constitution, but he was content to grant to the courts the power to invalidate laws on questions of policy also. What both Jefferson and Hamilton seemed to fear was the despotism of unchecked majority rule.

Jefferson in his Notes on the State of Virginia, page 195, said, inter alia:

"One hundred and seventy-three despots would surely be as oppressive as one. Let those who doubt it, turn their eyes on the Republic of Venice. As little will it avail us, that they are chosen by ourselves. An elective despotism was not the government we fought for; but one which should not only be founded on free principles, but in which the powers of government should be so divided and balanced among several bodies of magistracy, as that no one could transcend their legal limits, without being effectually checked and restrained by the others."

It is true that in Great Britain the courts at the time of the formation of our Constitution recognized the supremacy of acts of Parliament. Such recognition, however, did not flow from any legislative immunity from review but flowed from the fact that Parliament acted in a double capacity—that is to say, as legislature and as court. Parliament possessed legislative and judicial power. Parliament was a court, the old curia regis or aula regis—a court established in England by William the Conqueror in his own hall—long before Parliament possessed the legislative power. In other words, when our American Government was formed there were reposing in Parliament both legislative and judicial power; hence, an act of Parliament was both supremely legislative and supremely judicial.

In this connection it must be remembered that when our Constitution was formed much care was taken to see to it that the three powers of Government—to wit, the legislative, the executive, and the judicial—should be lodged in different magistracies, different officials, and that these powers should not be permitted to repose in or be exercised by one and the same magistracy.

The Constitution of the United States (art. II, sec. 1) says:

"The executive power shall be vested in a President of the United States of America"—

And (art. III, sec. 1) that—

"the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts"—

Bear in mind that the executive power shall be vested in a President and the judicial power shall be vested in one Supreme Court, etc. The Constitution did not vest in the Congress all legislative power, but only such powers as were granted and enumerated. The Constitution says that:

"All legislative powers herein granted shall be vested in a Congress * * *" (art. I, sec. 1).

Observe the scrupulous phrasing wherein executive power is granted to the President, judicial power to the courts, but that only such legislative power as is granted is lodged with the Congress, and this was done because the makers of the Constitution desired it to be crystal clear that the Congress was to be of limited power and that certain rights and powers of the States were not granted to the National Government but were reserved to the States. The States possess all the rights and powers not denied to them by the Federal Constitution, whereas Congress possesses only such power as was granted to it by the Federal Constitution.

The British Parliament was not a body of men with delegated, limited authority. It was a body of men supremely legislative and supremely judicial. The Congress of the United States is a body of men with delegated, limited authority, with no judicial power except as to impeachments and the qualifications of its own Members, and it is not even supremely legislative, as the States possess the powers that were not granted to the Congress. The belief that Congress possesses absolute and unlimited power is a devastating error into which many well-meaning persons have fallen.

The Constitution makers would have recoiled from the suggestion of granting to Congress the judicial power, and they would have recoiled with repugnance and alarm from the suggestion of granting to the judiciary the legislative power.

It is not a weak joint in our constitutional armor but on the contrary is strong evidence of the wisdom and foresight of the Constitution makers in placing the responsibility upon Congress for taking care that the Supreme Court shall function. Many of the founding fathers were men of ripe scholarship and large experience. Some of them had served in the Continental Congress, officers in the Continental Army, in State legislatures, as State judges, in State constitutional conventions, as Governors, as signers of the Declaration of Independence, and as signers of the draft of the Articles of Confederation. More than 25 of them were from the various colleges; for example, some had studied at Princeton, William and Mary, Harvard, Yale, King's, and Pennsylvania. Eleven of them had been educated either entirely at British universities or had gone there from the American colleges.

One will observe that whilst the Constitution makers lodged the judicial power of the United States in the courts of the United States, these Constitution makers knew the history of the judicial abuses and tyrannies, not only the troublous days of the Tudors and the Stuarts, but the judicial abuses of their own century as well, and they used care to see to it that whilst granting the judicial power to the courts, there should be ample checks and balances in the Constitution to enable Congress to prevent judicial abuses and usurpations should the courts attempt the same.

Legislative power is the power to make laws. Judicial power is the power to declare laws. Executive power is the power to enforce laws.

The power to declare the law, of course, comprises the duty to determine what is the law and what is not the law. Article VI of the Constitution, among other things, says:

"This Constitution and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land * * *."

An act not made in pursuance of the Constitution is, of course, not a law. The judicial power may not make laws, but must declare, when its jurisdiction is invoked, whether an act of Congress is in pursuance of the Constitution; and if not made in pursuance of the Constitution, it is not a law.

A judicial review of acts of Congress is not an offshoot of English law, but is an American development arising from colonial practice out of a wholesome effort to keep separate the legislative power and the judicial power. It would be baleful to public liberty in our country for the legislative and the judicial powers to be centered in one and the same magistracy. Our genius of government is built upon the separation of the legislative, the

executive, and the judicial powers; and I doubt if, upon serious second thought, any enlightened friend to civil liberty will argue that these three powers should be centered in one and the same magistracy.

The legislative powers granted to Congress are enumerated and limited, and such limitation was not by chance, was not fortuitous, was not accidental, but was deliberate. Instead of seeking to acquire the judicial power, we in Congress would more truly serve our country by confining our operations to our legislative power.

It is true that our powers as Members of Congress are limited; but, nevertheless, if properly exercised, they are of sufficient amplitude and grandeur to give scope and opportunity to the most zealous champions of true progress and needful reforms, the most redoubtable defenders of liberty, the most eloquent tribunes of popular government, and to soothe and assuage the most fevered ambition.

In the Senate, Wednesday, April 25, 1934

ARTICLE BY CHARLES BROOKS SMITH IN WHEELING (W. VA.) INTELLIGENCER

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in the Wheeling (W. Va.) Intelligencer on the subject of Senator HENRY F. ASHURST, of Arizona.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wheeling (W. Va.) Intelligencer]

"The press-gallery viewpoint is that veteran Senator HENRY F. ASHURST (D.), of Arizona, is colorful copy. There are two kinds of colorful copy. ASHURST's kind is good taste.

"Poor Sadie Thompson's affectionate salutation to her sailor rescuer and lover (and didn't it rain!) fits ASHURST—'tall and handsome.' He's consummate courtesy in debate; a graceful gesticulator. He is master of a gentle sarcasm, which never scratches skin, and the exponent of a decent humor which sparkles like a flawless white diamond.

"Which goes to prove that you can make a statesman out of an old-time cowboy; rather he can make himself that if he wants to give up cows for college, has the will and the stuff in him to rise.

"The refreshing thing in him is that he does and says things differently. He can be, and inherently is—original; he's no stereotype, no copycat—which is enough in itself to set him apart as 'not like they.' And he can be like this—be himself—within the scope of propriety.

"This strikes us as rare and unusual. We don't know why—we can't make ourselves clear about it—but somehow it does.

"An incident of the Senate proceedings yesterday, typical of the subject of our sketch, gives a key to an understanding of him. It illuminates our struggling picturization of the Arizonian like a klieg light. We quote him:

" 'Mr. President, I fondly believed for some years that I was sterilized and vaccinated against the vicious habit of reading letters into the RECORD, but it now appears that the habit has recurred.

" 'My most constant and most savage critic is a leading Democratic daily newspaper in Arizona, to wit, the Arizona Daily Star. I have received a letter from the editor of that journal; and his arguments in opposing my views on certain public questions are so well stated that I telegraphed to him, securing his permission to have the letter read into the RECORD.

" 'I now read my telegram to the editor:

" 'APRIL 15, 1934.

" 'Mr. W. R. MATHEWS,

" ' *Editor and Publisher, the Arizona Daily Star,*

" ' *Tucson, Ariz.:*

" 'Your letter of April 10 received. You are one of Arizona's leading journalists, and your letter ably argues for your views on seven subjects of legislation now before Congress. Inasmuch as I am at variance with you and do not agree with your conclusions therein expressed, except that I do concur with your opinion that the President should be granted the power to negotiate the reciprocal treaties, I hereby request permission to print your letter in the CONGRESSIONAL RECORD. Please do not be thin-skinned, but imitate me, as I am pachydermatous. If you grant me such permission, I shall, of course, print your letter without any deletion. Please write me. Kind regards.

" 'ASHURST.'

"Request granted, the editor's letter was sent up to the desk, read to the Senate by the Chief Clerk. And a strong constructive criticism of Senator ASHURST's position on seven legislative propositions it was. The Senator delivered no speech in reply.

"And wasn't that a decent, fair, just, and honorable thing to do? If it was ever done before during our two decades' observation here, we missed it.

"Nothing more need be said to explain ASHURST to you. He explains himself fully and clearly by doing unexpected, unconventional but admirable deeds like this one."

Every time Senator ASHURST comes home he has so many requests for a copy of that portion of the speech he delivered here 10 years ago, describing the old Palace Saloon, that he has handed the paragraph to the Courier.

EXTRACT FROM AFTER-DINNER SPEECH BY SENATOR ASHURST ON FRIDAY EVENING, OCTOBER 1, 1926, AT A BANQUET TENDERED TO HIM AT PRESCOTT, ARIZ., BY EX-SERVICE MEN

"I lunched today, here in Prescott, at the Palace Restaurant, which in bygone days, 20 years ago, was the Palace Saloon, then operated by three expert sports, Messrs. Bob Brow, Ben Belcher, and Barney Smith. At that time, at a long mahogany bar defended by a footrail of shining brass, bartenders clad in snowy linen, graceful as Sir Roger de Coverley, served ale, porter, gin, rum, brandy, lager beer, and old whiskies.

"In the cafe in the rear of the saloon were then served Lucullan viands. There Bacchus reigned, and champagnes of choicest flowers, which painted landscapes even in sterile brains, went roaring down thirsty throats. There Venus smiled, and fleet-footed Mercury was often dazzled by the bales of crisp currency and the clink of golden coin at the gambling tables. The whirr of the roulette ball, the thud of the dice at the crap games which were as clods falling upon the coffin lid of fortune, and the rattle of ivory poker chips were then to be heard above the dulcet notes of the wingless angels who warbled all night long in that house of joy and tears.

"The back bar then gleamed like a ledge of jewels as its cut glass and silver and ebony were reflected by huge mirrors. There lawyer, tourist, 'tenderfoot,' merchant prince, public official, wool grower, sportsman, savant, hard-rock miner, cowboy, and remittance man mingled on equal terms. In that house remorse sometimes fastened its fangs into men's souls or fed itself upon the husks of their blighted hopes; there earnings were squandered—diced away in a night—there some noble resolves were broken by those persons who entered into the domain of vice through the beautiful gate of temptation. Like enchanted fruit in the dwelling of a sorcerer, the objects of admiration lost their attraction and value as soon as grasped, and all that remained was regret for the time lost in their pursuit.

"The tear of sympathy welled quickly to the gambler's rayless eyes, and the hands of the proprietors of the palace were horns of plenty, for not only were their hearts warm and their impulses generous, but the fixed principle of their code was that 'jinx' and 'hoodoo' kept away from him who never turned deaf ear to needy persons.

"Now the great hall is tenantless save for the wraiths of frequenters of long ago. Spiders have festooned the back bar with cobwebs; dust now begrimes the tables where once the bets were laid.

"The gambler of that day has 'cashed in' all his chips and has entered that vast realm where aces, kings, and queens alike are counted as deuces. The battalions of Bacchus are shattered, the singers are silent—their songs perished 20 years ago, and the restaurant is now conducted by a Chinaman named Dong."

[From the Arizona Daily Star, Tucson, Ariz., Sept. 2, 1934]

SENATOR ASHURST SPEAKS

If politics could be conducted on the high plane with which Senator HENRY ASHURST conducts his campaigns, there would probably be more intelligent interest in governmental affairs and abler men aspiring to office. Those who heard the distinguished Senator speak Friday night at the armory heard a political campaign speech full of holes if one wanted to criticize, but filled with charm, good humor, and kindliness. And, strangely enough, those who went, expecting to listen for a few minutes soon found themselves staying on and staying on, consumed with interest.

Although Senator ASHURST spoke for over an hour, he said not one unkind or harsh word about any of his opponents, while his brilliant shafts of wit had the audience frequently convulsed with laughter. On the other hand, the serious parts of his address, while filled with kindly but serious political bombast, won him the respect of his audience.

After all, a man can still be radical, yet be a gentleman. A man can win votes and still be a gentleman. The highest tribute that can be paid to Senator ASHURST is that for 41 years he has been in politics, yet he is a gentleman, and as such sets an example that other candidates, and even newspaper editors, might emulate.

Meanwhile, the Senator's opposition is a healthy thing. The opposition has brought him home so that the home folks once more can hear his delightful speeches.

[From the Miami Silver Belt, Nov. 4, 1930]

ASHURST PAYS TRIBUTE TO GOVERNOR HUNT; PORTRAYS ROMANCE OF THE CAREER OF GOVERNOR IN CAMPAIGN SPEECH

There is much romance in the career of George W. P. Hunt, who came into Arizona 50 years ago, during the now vanished days of the burro pack train, the shave-tail mule, and the covered wagon. Most of the men and women who came here during those days have crossed another frontier into the Great Kingdom; whilst for those pioneers who yet remain, the lovely nymphs of noonday are gone and their temples are crowned with silver streaks of the eternal dawn.

The 50 years of Mr. Hunt's residence in Arizona are equal to one-third of the present age of our American Republic and constitute a glorious epoch in the life of the Nation and the State. The purse of Fortunatus and the lamp of Aladdin seem tame and commonplace, when compared to Arizona's progress since Mr. Hunt lighted his first campfire within her borders.

He saw the tepee and the hogan of the Indian give place to stately residences. He saw the railroad trains supplant the stagecoach and the buckboard, which once bounced and jolted over the rough and rudimentary roads. He now sees automobiles whiz over the very hills and valleys where once he saw the cowboy with jingling spurs, haystack hat, and leather chaps ride hard under the summer sun and winter stars for cattle and horses.

The same plains which once he knew as the habitat of wild beasts and upon which he later saw the quiet flocks of sheep feed upon the rich grasses beneath their feet are now covered by diversified agriculture, industrial enterprises, glittering cities and towns, or serve as airports and landing fields for winged cars that cleave the clouds and that skim the cream off the Milky Way.

Some of the landscapes where once he saw the Knights of the Lariat hold their round-ups and rodeos are now covered by churches, schools, colleges, resorts for tourists, dude ranches, and palatial hotels.

Some of the particular spots where once he saw the noon breeze swirl the smoke of the cowboy's branding iron are now midget or Tom Thumb golf courses.

The air spaces which, when he came here 50 years ago, were agitated by the coyote's doleful howl, by the barkings of the prairie dog, the measured thrum of the mustang's hoofs, the war whoop of the ferocious Apache encircling the settler, now by the mystic voice of the radio, pour into our ears the Tales of Hoffman, the dulcet notes of Narcissus, the wild melodies of the Hungarian Rhapsody, and all the joys and inspirations which no other art save music's ethereal rain can give. On some of the deserts where once he swallowed their bitter dust as he plodded forward, he now sees irrigation projects so practical and yet so ideal that they charm the imagination with their wizardry as they spread their living waters upon the thirsty soils. He saw Arizona accomplish that difficult feat in government of fusing reforms with stability. He has earned competence and popular affection, for he aided in building this empire.

[From the Cleveland Plain Dealer, July 6, 1929]

ASHURST, THE WORD WRANGLER

HENRY FOUNTAIN ASHURST, senior Senator for Arizona ever since she has been a sovereign State, was a cowpuncher in his youth.

His dexterity with a lariat gave him the same control over cattle as his present agility and facility as a word wrangler gives him over the English language.

Beginning with a blue-backed speller, in which he wrote in boyish chirography "HENRY FOUNTAIN ASHURST, United States Senator," when he was 10 years old, HANK has studied words. In his relentless pursuit of philology he has paid particular attention to etymology. He has worn the calfskin cover off of one of Webster's well-known dictionaries in tracing each and every word in the English language to its source and prying into its intimate family relations with the Greeks and Romans.

HANK has mercilessly ransacked Roget's Thesaurus from A to Z, until there is not a word between its covers that he has not roped, hog-tied, and branded for his own. If there are any mavericks straying around, it is just a matter of time before he corrals them and sears the nicety of their meaning into his brain.

With all the words in the English tongue mobilized under his command, HANK cracks his intellectual whip and the words trot out and jump through his oratorical hoop to the amazement and admiration of his colleagues and to the complete bewilderment of the gallery gods who have not compiled any dictionaries.

Out of his cyclopedia of words HANK has fashioned a style, which, while partaking somewhat of the courtly diction of the eighteenth century, has a flavor all its own. It is not only filled with polysyllabic words of Latin and Greek derivation but with curt, telling Anglo-Saxon and expressive Americanisms.

"I am a veritable peripatetic bifurcated volcano in behalf of Democratic principles," ASHURST once remarked with becoming modesty.

Beneath all the weight of those 6-foot words, HANK conceals one of the rarest and most delightful senses of humor harbored in the Senate. He is a keen observer, and there is little of the sham and humbuggery that goes on about him that he misses.

CAPITAL BYSTANDER

(By Kirke Simpson)

Whenever HENRY FOUNTAIN ASHURST gets to his feet in the Senate, gallery goers may expect pleasing entertainment.

But what marks ASHURST particularly is his ready wit, a seeming desire never to be personally offensive to his colleagues in the shafts he drives with unerring tongue. He appears to get huge joy out of verbal battling for the sake of the game itself, as well as that of the cause he espouses.

He even gets pleasure out of other Senators' forays. He will sit in his place and nod with sympathetic vigor over somebody else's gusty outbursts, even when he disagrees with what is actually being said. Or he will frown portentously when the speaker frowns; smile engagingly when the words to which he listens would seem to call for smiling delivery. It is the ASHURST actor complex always at work within him.

And now and then, usually most unexpectedly even to himself, the big Arizonian breaks out into a speech that proves him gifted with an eloquence and dramatic power unique among political orators these prosaic days.

Indeed, without intending in the least to disparage Mr. ASHURST'S talents and virtues as a statesman and historian, it is obvious that the stage lost a brilliant star when he took to politics.

Skillful in utterance, uniform in courtesy, rich in grace and fascination, constant in respect for the opinions of others, charged with intellect and fire, he is an actor who never discards his role, is never out of character, and is always attuned to the scene.

SPEECH OF SENATOR ASHURST, OF ARIZONA, AT THE ONE HUNDRED AND FORTY-THIRD ANNIVERSARY DINNER OF THE SOCIETY OF THE FRIENDLY SONS OF ST. PATRICK IN THE CITY OF NEW YORK, MARCH 17, 1927

Gentlemen, I esteem it a privilege to address you. Religious services and social functions in honor of St. Patrick are being held on this, his festival, not only in Dublin, the chief city of the country he evangelized, but also in the cities and towns of the United States, Great Britain, France, Australia, Canada, Spain, Germany, Italy, Austria, and in many outposts of Christianity in the Far East.

It is of singular significance that the name of Patrick has just been placed in the calendar of the Church of England at the very time when other names long on the calendar, such as St. Helen, St. Crispin, and St. Valentine, are being removed therefrom.

I would say nothing in this splendid presence that might savor of invidious distinction, yet how may one eulogize Pericles and not speak of the glories of Athens; how may one commemorate Caesar and be silent concerning the achievements of his legions; how, then, may I speak at a banquet of the Friendly Sons of St. Patrick and omit to say that the Irish race has nobly vindicated the right of mankind to liberty and has taken a conspicuous and important part in establishing and maintaining the independence of the United States?

Agricola, a Roman general, who was born A. D. 37 and lived until about A. D. 93, advised the empire builders of his day that Rome should war down and take possession of Ireland so that freedom might be put out of sight.

Thus in this early Roman reference to Ireland we pick up for the first time the golden thread of Irish militant resistance to imperial exploitation, and this thread of courage and patriotism runs through all Irish history.

On the one side is the "warring down" so that freedom might be put out of sight, and on the other it is the eternal struggle to uphold the rights of freemen.

Contemplating the Europe that existed before the Christian era, in the east we find Greece, in the west we find Ireland, and it is Ireland alone amongst the lands of western Europe that preserves the recorded traditions of its speech, culture, and song that connect the half of Europe with its ancestral past.

It was the Irish race that lit the lamp of genius in the brain of Europe.

Several centuries before the Christian era Phoenician and Carthaginian navigators visited the shores of Britain—then called the Island of Tin—to obtain a supply of that metal.

The inhabitants of Britain were then rude and unlettered, whilst the Irish race was fully acquainted with the use of precious metals, fabrication of fine linens, was fond of music and song, and was enjoying its literature.

When the Druids at Stonehenge, on Salisbury Plain, in England, made their last midnight sacrifice, the triannial council of the Irish people was held at the great hall or court of Tara, where Irish kings and nobles assembled.

King Alfred the Great ascended the English throne in the year 871 A. D., and he was indeed one of the world's wisest men. He ruled for 30 years, and he proved himself to be a valiant warrior and an earnest patron of whatever promised to promote the good of his people, but long before Alfred ascended the English throne the Irish race had scattered throughout Europe manuscripts of priceless masterpieces limned by Irish scribes, such as the Book of Kells in the library of Trinity College at Dublin, acknowledged to be the most beautiful book in the world. Indeed, into its pages is woven such a wealth of ornament and it has such an ecstasy of art that the colors are as lustrous, as fresh, and as soft as though it was the work of yesterday, but the book was made 1,200 years ago.

The polished civilization and military power of the Roman Empire began to decay during the fourth century, and by the year 476 A. D. the dry rot of internal corruption had weakened the national fiber so completely that the western division of the empire crumbled under the invasion of the external barbaric strength of the nations in the north and the Far East, which nations Rome had held at bay for several centuries.

When the western division was thus extinguished, all Europe was engulfed by the westward and southern movement of the barbaric nations.

Ireland was the one country not submerged by these invasions before whose terrific onslaughts the Italian Caesars vanished. Ireland retained her own glittering culture, maintained her commerce, and, with the exception of such learning of antiquity as was kept alive in the monasteries of the church, Ireland was the ark which, for the 590 years intervening between the collapse of the western division of the Roman Empire and the Norman Conquest of England, rode almost alone upon the dark and tempestuous sea and thus safely carried to the so-called early modern period the muniments, manuscripts, and treasures of past ages.

There is a river in the ocean, the Gulf Stream. It is the most important of all the ocean currents. It rises in the Gulf of Mexico,

flows northeasterly until it reaches a point opposite the banks of Newfoundland, when it turns and sweeps across the Atlantic; then, dividing into two portions, it sends one arm downward toward the Azores whilst the other arm passes near the shores of Ireland. As it emerges from the Gulf of Mexico its temperature, which is 84° in summer, is hotter than is the temperature of the ocean at the Equator.

The effect of this Gulf Stream upon the climate of Ireland and the northwestern coast of Europe is to raise the winter temperature in Ireland about 30° above what would be the normal temperature in those latitudes.

There is likewise a mighty river in the ocean of humanity—the Irish race—which for a century and a half has flowed from Ireland to America; and, just as the Gulf Stream is many degrees warmer than the common waters of the ocean, this river of life in the ocean of humanity—the Irish race—is warmer, more loyal, and more fervent than the other waters.

Thus, whilst the American Gulf Stream has ameliorated and softened the climate of Ireland, the Irish race has ameliorated and blessed America by its loyalty and its soft and graceful courtesies.

[From the Philadelphia Public Ledger of April 14, 1934]

THE DAILY MIRROR OF WASHINGTON

(By Robert B. Smith)

A REALIST FROM ARIZONA IN THE UNITED STATES SENATE

Visitors in the Senate galleries often marvel at the Chesterfieldian mannerisms of the Honorable HENRY FOUNTAIN ASHURST, of Arizona. They do not realize that they are viewing a man who is both an ex-cowboy and "a lawyer by profession"—the latter being a quotation from his autobiography in the Congressional Directory.

Also, it is doubtful if the visitors realize that they are gazing upon one of the most consummate realists in modern political life.

Mr. ASHURST himself illustrates the latter characteristic by an anecdote concerning his experience in Arizona on a recent election day when he visited that State for purposes which will be understood by any Federal officeholder.

He was inveigled into attending a meeting of a men's luncheon club. He did not know that members of the club had "conspired" against him before the luncheon. The first speaker after the food had been served was a proment citizen who—apparently unmindful of the Senator's presence—launched into a sonorous lament that Arizona had never produced a real statesman. The speaker rang the changes on this theme, while the Senator's face turned alternately scarlet and white. It did seem to be an ungracious speech to make in the presence of one who has represented Arizona in the Senate since that member of the Union was granted the privileges of statehood.

However, Mr. ASHURST was equal to the occasion. He arose when his turn came and orated as follows:

"My fellow citizens, it is true that Arizona has never produced a statesman. Moreover, I predict that you never will. Let me tell you why.

"You send me to Washington to represent you in the Senate. But you do not send me there because you are interested in grave questions of national or international policy. When I come back to Arizona you never ask me any questions about such policies; instead you ask me: 'What about my pension?' or 'What about that job for my son?'

"I am not in Washington as a statesman. I am there as a very well-paid messenger boy doing your errands. My chief occupation is going around with a forked stick picking up little fragments of patronage for my constituents."

Thus the Senator orated at length. I may have taken some literary license with the direct quotations, but the substance of his remarks is accurate as quoted. When the meeting was over he was told that he had been the victim of a conspiracy—that he had been hoaxed. I don't know whether he was embarrassed or not. I have a suspicion that he was rather glad he had been goaded into telling some truths which many Washington luminaries would like to tell their constituents if they dared.

WASHINGTON, D. C., *February 24, 1935.*

Hon. HENRY F. ASHURST,
Washington, D. C.

DEAR SENATOR: The tribute you paid Mr. Berryman, the cartoonist, in your speech at the University Club last Thursday evening, February 21, was beautiful, and your bantering discussion of the "care and feeding of politicians" was the most brilliant piece of irony and satire I have ever heard.

Faithfully yours,

CHARLES J. KERLEY.

EXTRACT FROM THE ADDRESS DELIVERED BY SENATOR ASHURST AT UNIVERSITY CLUB, WASHINGTON, D. C., FEBRUARY 21, 1935

All classes of corporations, organizations, and persons have lately received generous gifts, gratuities, grants, and bounties from the Public Treasury except that large class of modest citizens, the politicians.

The Government's neglect of the politician is so cruel that I publicly declare that some provision should be made for the care, nurture, feeding, and training of our politicians, and I now set forth the following regimen or economic program to be observed until some law may be passed for the relief of our politicians.

As to diet: The politician just before an election should be allowed, at public expense, all the pork he wishes, and he should use plenty of applesauce, as that is the only commodity of which the supply can never equal the demand.

As to sleep: If the politician should be tormented with insomnia, he should read one of his own speeches or listen to the speech of one of his fellow politicians; then a drowsiness will soon come upon him that could not be produced by all the soothing sirups in the world. After he falls into slumber there should be no anxiety as to the place where he is to sleep, as they all like the same "bunk."

As to exercise: "Fence building" is recommended, but if the lateral muscles of the body require development the politician should take up the practice of dodging. The muscles of his neck may be much strengthened if the politician will become a confirmed head nodder and nod his head in approval of all statements, plans, laws, appropriations, suggestions, resolutions, and reforms brought to his notice.

One of the defects of the American politician is that he is not a graceful auditor. No asset is more valuable to the politician than the art of audition, and he should train his ears by constant usage until they are capable of listening many hours at a stretch.

It will be remembered that the Earl of Beaconsfield, twice Prime Minister of Great Britain, in preparing young gentlemen for the diplomatic service, instructed them that to control their temper was important but that to control their features was more important. Therefore the politician should so control the muscles of his face that he will apparently be listening with rapt attention at all times. No matter how silly, foggy, or befuddling may be the conversation addressed to him the politician should guard against exhibiting inattention or exhaustion.

Neither scantiness of argument, barrenness of fact, nor absurdity nor ribaldry of the speech inflicted upon him should cause the politician to betray impatience. It cannot be too strongly emphasized that the politician must control the muscles of his face to conceal his boredom and disgust no matter how addlepated the bore may be.

It is impossible to teach the politician to save up anything for a rainy day, although during prohibition times politicians were able to save something for a dry day.

If the politician, during a political campaign, should resort to such an outlandish performance as to indulge in flattery, he should spread it on, not in thin layers but he should rather spread it on with a trowel, or, better still, with a shovel.

There has long existed a myth to the effect that politicians should radiate creature comfort, suavity, affability, and sugared cajoleries.

This myth should be exploded; the politician who expects to survive every storm that blows should simulate a flurried, harried demeanor, and a nervous—yes, I shall say irritable—nature, as such persons are generally regarded as sincere.

It should be remembered that the electorate suspects and distrusts men of superb intellect, calmness, and serenity.

Of course, there are some laws that mankind can never repeal, such as the law of reactions, the law of supply and demand, the law of the survival of the fittest, and the law of gravitation, but in a hard-pressed campaign, the politician will become the incarnate symbol of romantic liberalism and will gather many votes if he crusades demanding the repeal of these laws. Above all things, he should not forget that voters never grow weary of illusory promises.

The politicians must tell the people what they want to hear; this, of course, never adds to the strength, firmness, or efficiency of the Government, but it does nourish the politician.

Even if the politician be a fluent speaker, silence is recommended, as silence is the best substitute for brains ever invented.

It is possible that the politician may be afflicted with that devastating malady known as presidentitis, which is a burning, itching desire to become President. This is not a common disease; it usually assails Senators, Governors, Representatives, and Cabinet members, but it has been known to attack now and then even a university president.

When attacked by this ailment, the politician's usefulness to the country, to himself, and to his party is seriously impaired and frequently is destroyed.

The symptoms of "presidentitis" are pronounced and unmistakable and are as follows: The patient's vocabulary is reduced to the personal pronoun "I." There is an acute sensitiveness to newspaper criticism, then come irritability, thirst, unhappiness, loss of sleep, and extreme suspicion of all other statesmen. The earliest symptom, however, is the metamorphosing of the politician's backbone into india rubber.

[Editorial from the Arizona Daily Star of March 17, 1935]

SENATOR ASHURST AND COMMUNISM

The charge made by the notorious William Shearer that Arizona's senior Senator, HENRY F. ASHURST, is a Communist will come as a surprise to those in Arizona who know the Senator intimately. The charge will cause many a smile or laugh, and instead of being taken seriously it will be the cause of some fun-making at HENRY'S expense.

HENRY FOUNTAIN ASHURST, the cowboy and former jail turnkey who became Senator, is not a Communist. Even though he did believe in the Marxian economic principles, he is of the kind that simply could not swallow Marxian governmental principles. In the first place, our beloved HENRY loves to talk, and he likes

to talk as he pleases. For that reason, if for no other, he would be about the last person from Arizona to become a Communist. If a padlock were put on his tongue or if he were told that he had to think along just certain lines, he would be like a caged lion and soon languish and pass away.

Nor could HENRY FOUNTAIN ASHURST tolerate the ruthless course that even Marx admitted that communism must take to succeed. There is no man more kindlier, no man more generous. If he ever carries a hammer it will be clothed with velvet and used only for a soft and friendly touch. As for the sickle, his would be as dull as a butter knife. He would use it only to gather votes. Violence is foreign to his nature. Even when he speaks, although he has a command of words and metaphors that can hypnotize his listeners, he cannot find words to say a real mean thing about anybody.

HENRY FOUNTAIN ASHURST can never be a Communist. It is not his nature. And besides, he knows his history too well. Above all things, he knows his politics too well. He is as full of politics as a dog is of fleas. He is, above everything else, a politician, a delightful politician, who conquers his enemies by disarming them with charming manners, his never-ending interesting stories of the great and near-great, and by his frank confessions that he is just a politician out looking for votes.

EXTRACT FROM A SPEECH DELIVERED BY HON. HENRY F. ASHURST, OF ARIZONA, AT THE ANNUAL BANQUET OF THE ALFALFA CLUB, JANUARY 18, 1930, WASHINGTON, D. C.

Mr. Toastmaster, I have lately received letters, some of them written in a serious vein and some of them written in bitter irony, urging that the Democratic Party abandon the donkey as its emblem and symbol, but I have replied to the letters that I hoped the Democratic Party would never abandon the donkey, for he is a compendium of endurance, patience, fortitude, and stately dignity; he is a seriocomic philosopher whose stamina and stoicism conquered the wilderness and sustained the pioneer; the donkey uncomplainingly bears heavy burdens; he is a sure-footed, trustworthy creature of epicurean taste and gargantuan appetite, but his appetite and taste, happily enough, may be satisfied by a nibble at a desert cactus, and he is then ready for another long and lonely journey.

The donkey is the personification of the sublime virtues of moderation, forbearance, restraint, and rigid economy. From the vibrant chords of his throat there comes zigzag bars of music as thrilling as the midnight minstrel of the nightingale. The donkey must not be abandoned, for upon his back the Democratic hosts ascend the steep acclivity to power, or, to change the figure of speech, he is the pons asinorium over which they march to victory, and we should be ingrates if, in our day of supremacy, we felt abased at the donkey's homely indigence, deserted him, and offered to his lips the cup of neglect and oblivion.

In the Senate, Tuesday, August 24, 1935

Mr. ASHURST. Mr. President, the remarks of the Senator from Kentucky [Mr. BARKLEY] revive pleasant memories, and I am glad to seize this proper opportunity to refer to the able speech I heard the Senator from Kentucky deliver in London upon the occasion of our duties there as American delegates to the Interparliamentary Union. I sat in the audience, and I was moved with admiration because of the precision of his phrases and the care he employed in recognizing the auspices under which he spoke.

I recall distinctly the conference with Mr. Lloyd George, to which the Senator from Kentucky referred. Mr. Lloyd George spoke over an hour and invited us to ask questions. I took down the answers in my own shorthand. It will be remembered by the Senator from Kentucky that someone asked Mr. Lloyd George about Russia. Now that some years have elapsed, I am at liberty to give the reply. Mr. Lloyd George stated, in substance:

"As you leave this hall, go by Trafalgar Square and you will see a statue of Lord Nelson. Remember that when upon a certain occasion a signal was given to Nelson to retreat, he put the telescope to his blind eye and said, 'I do not see any signal.' "

Mr. President, let me paraphrase what Lloyd George said, and say that not only in public life but in private life as well it is necessary frequently to put the telescope to our blind eye. I am not certain that we might not well do so upon this occasion.

A vast deal has been said this morning about the press. As politicians, we are all anxious, one not more than another, to receive favorable mention in the press.

Reporters are seldom to blame for so-called misstatements. In the hurry of public life we sometimes give out interviews—I am probably a sinner in this regard—without due preparation. The reporter must shoot from the hip. He has no time to turn the stylus, polish the phrase, and rub the lamp. He must get his dispatch, his story, to the desk at once. There the authorities controlling the paper may not agree with the story or may slap a headline over it not always supported by the text. The press is the "fourth estate." The press enjoys a poetic license, and it should. It works under difficulties.

Do not forget that the press is entitled to mangle grammar and to misapply syntax. I see one of the distinguished leaders of the "fourth estate," the Senator from Michigan [Mr. VANDENBERG], listening to me and I am proud to have him here. The members of the "fourth estate" are the only persons who are authorized to use the first person plural for the first person singular; in other words, only newspapermen and men with tapeworms are allowed to say "we" instead of "I."

It is not well to be too touchy and thin-skinned about newspaper reports. We are lending altogether too much importance to what might have appeared in the headlines regarding the absent Senator, Mr. Pope. If we are to hold one another accountable or are to be held accountable for what Senators say, then, indeed, our entire time will be taken up in explaining what we say.

Mr. President, I have had a long political career; I have been in office since I was 18 years of age, and I give this word of advice: Never make an explanation. Let your actions speak. Never explain. If you do, the next day you will be explaining your explanation. [Laughter.]

* * * * * * *

The press has a habit, like politicians, of doing what it pleases. The press is as anxious to have the favorable opinion of politicians as we politicians are to have the favorable opinion of the press; and while the press does not require or wish any defense from me, I must say that I marvel at its accuracy, considering the haste under which they must operate and the necessary and unavoidable uncertainty of public men. Our profession, being that of politics, makes it at particular times necessary that we change our opinions and for good reasons reverse our judgments. In view of all these unavoidable elements, I do not think we ought to complain when the press overplays or underplays an incident, unfortunate though it may have been, regarding a Senator.

[From the Washington Daily News, January 14, 1931]

THE ASHURST PURCHASE

The late and eloquent Senator Daniel Webster once said on the Senate floor that he wouldn't give a dollar for the whole of Oregon. The also eloquent Senator HENRY FOUNTAIN ASHURST, of Arizona, has discovered in the far Southwest a treasure trove worth considerably more than a dollar. In a Senate resolution he proposes to instruct the State Department to open negotiations for the purchase of Lower California from Mexico.

A decade ago ASHURST spellbound the Senate on the same proposal. He expatiated pollysyllabically upon the advantages of our owning great Magdelena Harbor, the gaping mouth of "the American Nile," the Colorado River, the now-arid acres that under the hand of our race would make the desert bloom and smile, the mineral, piscatorial, avian, and chelonian resources. Waxing anatomically metaphorical he called this unfortunate land at once "Mexico's vermiform appendix" and Uncle Sam's "Achilles' heel." He left no doubt in anyone's mind that we need Lower California and Lower California needs us.

[From the Santa Rosa (Calif.) Republican, 1931]

WHAT 'TWOULD MEAN

A representative citizen of Santa Rosa, once a resident of southern California, said the other day that if the Government—through Congress—could be induced to adopt Senator ASHURST's plan to purchase Lower California from Mexico, the same as we purchased Alaska from Russia, the State of California, through its close proximity and natural "feeder" position would, within less than 10 years, equal New York State in population—and greatly excel the Empire State in actual agricultural prosperity and financial wealth.

Besides, the ownership of Lower California by the Government would give us the greatest, safest, and best-protected naval and military base anywhere in the entire world. As a matter of national protection and security alone, Lower California would seem to be almost literally "worth its weight in gold."

[From Time, 1931]

APPENDIX AND HEEL

HENRY FOUNTAIN ASHURST has represented Arizona in the United States Senate since that Territory became a State, in 1912. His tall figure, his shiny black hair, his resounding rhetoric, his theatrical byplay with black-corded glasses have caused many an observer to mistake him for a Shakespearean actor. Today he is the senior Senator from the Southwest.

Like many another frontier politician, Senator ASHURST has long fired his imagination with dreams of United States' territorial expansion. Last week he flustered the State Department, set Mexican officials to guffawing, by reviving his 12-year-old proposal that the United States purchase Lower California from Mexico. To the 58,338 desolate square miles thus acquired he would add another 10,000 square miles clipped from the Mexican State of Sonora and tacked on to his own Arizona to straighten its southern boundary. By his resolution the President would be "respectfully requested to open negotiations" for this international deal.

Of his proposal, Senator ASHURST had declared: "The peninsula is a vermiform appendix to Mexico. It is the heel—the Achilles' heel—to the United States."

[From the Washigton Post on Court bill]

The peak of studied elegance of manner, if there is such a thing, is reached by Senator HENRY F. ASHURST, Democrat, of Arizona, the debonair and balm-tongued chairman of the Judiciary Committee.

It is no secret that his genial and patient handling of the President's Court reorganization plan has reduced friction to a minimum at a time when senatorial nerves were exasperated raw.

Thus, with opponents and proponents snarling like bull wolves around the committee table, the sound of his rolling periods as he has gently trumpeted his rulings has served to soothe the near-surface savagery aroused by the President's Court bill.

[From the Washintgon Star on defeat of Court bill]

Mr. ASHURST confined his comment to one of his usual philosophical dissertations.

"Moderation, forbearance, and restraint are the virtues of victory, whilst patience and fortitude are the virtues of disaster," he said. "Almost any American citizen easily endures and quickly forgets disaster, but it requires character and noblesse oblige to endure victory.

"I hope to endure victory with becoming humility.

"Destiny distributes triumphs and defeats with charming nonchalance. Whether she awards victory or prescribes defeat is of little importance, but it is of very great importance how the individual receives and carries that which destiny distributes to him."

[From the Arizona Daily Star, September 4, 1937]

HENRY FOUNTAIN ASHURST promises that he will do plenty of talking as he returns to Arizona. He has always done plenty of talking—and very pleasant and effective talking at that. He talked himself into the United States Senate, where he has remained a seemingly immovable fixture for a great many years.

When he gets back to Arizona he will be asked to talk about his part in the attempt to pack the Supreme Court. And he will probably make many speeches ostensibly dealing with that subject. They will be entertaining addresses. He will carry his audience with him. He will gain the sympathy of hundreds—nay, thousands.

In order to appreciate how empty an ASHURST speech often is, his hearers must go away from the spell of his golden voice and the vigor of his magnetic personality and think about the substance of what he has said. It is revealing to do as a reporter must do—go back to the office and attempt to set down in brief form exactly what he has said. Disillusionment is apt to follow. For such a process reveals that he says very little in these eloquent talks of his.

That, in fact, seems to be the secret of the ASHURST success. He can talk endlessly and delightfully and say nothing. And in spite of the fact that many of us will condemn and oppose him for the stand he took in the last session of Congress, we will listen to him explain and enjoy it.

After all, an amiable eloquence is far from being a vice. Despite the fact that his use of the almost lost art of oratory conceals rather than reveals his thoughts, he is capable of taking a definite stand in a controversy. As one of the leaders in the bitter and losing battle to pack the Supreme Court he revealed himself as a capable fighter despite his amiability.

There was plenty of anger and shouting in the Senate over the Court measure. Wild accusations flew—some of them aimed at ASHURST himself. But it is not on record that he ever lost his temper, said an unkind thing about an opponent—or altered his stand.

Even when opposing him, one must admire that kind of a fighter. The world would be a better place in which to live if all its battles were conducted in the spirit maintained by the Arizona Senator.

[From the Washington News of July 3, 1937]

Ordinarily a filibuster is a pretty nasty affair. And this one has all the makings of a bad-tempered, name-calling row.

But there is one cheering thought that brightens the dark picture. It is that HENRY FOUNTAIN ASHURST, as chairman of the Judiciary Committee, has nominal charge of the legislation. And certainly he is one who measures up to Kipling's standard—one who can keep his head though all about him are losing theirs. Though other debaters hurl bitter invectives, he can be depended upon to remain serene.

This long and purple controversy over the Supreme Court has tried many Senators' souls, but the gentleman from Arizona has not lost an inch of his hide, nor shed a drop of blood, nor a bead of perspiration.

When it is all over, even though he be trampled in the dust of defeat, we expect to see HENRY FOUNTAIN ASHURST rise and, with engaging smile and courtly bow, sigh that he regrets the conclusion of the friendly tête-à-tête, but rejoices in a glorious triumph.

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the brief radio address delivered by me on February 5, 1939, upon the affiliation of station KVOA in Tucson, Ariz., with the Blue Network of the National Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

"The radio has made a whispering gallery of the skies. Its messages fly around the world on wings as swift as lightning.

"Music being the universal language in which mankind expresses emotion, it is quite appropriate that when station KVOA, of Tucson, Ariz., becomes associated with the National Broadcasting Co., the inaugural should be a musical program.

"I welcome this opportunity to salute KVOA and to speak to my invisible audience regarding Arizona whose citizens are patrons of learning, disciples of industry, and apostles of success, and which State, paradoxical as it may seem, is at one and the same time the oldest and the newest of our governmental subdivisions—oldest in ancient occupation and civilization, and the newest and freshest in modern progress.

"The citizens of Arizona celebrate, this year, the four hundredth anniversary of the arrival of Fray Marcos de Niza, the first European to the soil, that is now Arizona.

"Arizona was a populous land before Julius Caesar's shouting legions brought tribute back to imperial Rome; and Arizona peoples of antiquity wove and spun cotton and flax into gaudy tapestries and gay raiments and melted gold, silver, and copper from Arizona's hills, into chieftains' ornaments and queens' girdles, long before the Knickerbocker set foot on Manhattan Island. Sublime as are the glories of art and architecture, Arizona contains natural wonders of scenic grandeur sculptured when the world was young by the Hand that sustains all creation. For example her petrified forests, which lived its green millenniums and put on immortality millions of years ago. No prose poet has ever dipped pen deep enough into the ink of temerity to attempt a complete description of the Grand Canyon with its mosques and minarets, its temples, pyramids, sheer cliffs, and forbidding ramparts and its colors that elude the artist's brush. Arizona has a bracing, cleansing air which heals the throbbing nerves of pain. Her sunshine reddens the bloodless lip and paints the rose upon the invalid's pale cheek. She has irrigation projects so practical and yet so ideal that they charm the imagination with their wizardry. The fertility of Arizona's soil, the salubrity of her climate, the vastness of her mineral wealth make the lamp of Aladdin and the purse of Fortunatus appear tame and commonplace by comparison."

In the Senate, Monday, December 13, 1937

Mr. ASHURST. Mr. President, there is in this world a deadly law of compensation which sooner or later does its perfect work.

It was, I believe, in 1932 that our then Secretary of State, Mr. Stimson, by cable and on the telephone, communicated with Sir John Simon, then Great Britain's Secretary of State for Foreign Affairs, and our Secretary of State then advised Sir John Simon that he, Mr. Stimson, would cooperate with Great Britain in an attempt to stop Japan from overrunning what was then called Manchuria, now Manchukuo. We had very few and scanty vital interests in Asia at that time. Great Britain had enormous vital interests there at that time and the most lamentable breakdown in statesmanship in history was when Sir John Simon, British Secretary of State for Foreign Affairs, failed to support our Secretary of State at that time. While we deplore the damaging and expensive results that may come to Great Britain from the present trouble in Asia, the law of compensation which does its perfect work is now active against British interests because Great Britain refused to support our Secretary of State, Mr. Stimson. Not a gun would have been fired, no expense larger than the cost of a cablegram to Japan to stop would have been necessary and, if Sir John Simon had sent such cablegram, there would have been peace and tranquillity in Asia.

In the Senate, Monday, March 13, 1933

Mr. ASHURST. Mr. President, I have received, as doubtless many Senators have, a large number of telegraphic dispatches respecting Senate bill No. 233, a bill to maintain the credit of the United States Government. One of the dispatches reads as follows:

"I feel it my duty to advise that your future success is in grave danger if you uphold granting Presidential power."

Another reads:

"Your attitude very unsatisfactory. You are taking $6,300,000 annually from Arizona, and are politically dead unless you change your attitude."

Mr. President, some time ago I made the astonishing, and for a while, to myself, the distressing discovery that the perpetuity of the American Government did not absolutely depend upon the reelection of one HENRY FOUNTAIN ASHURST to the Senate of the United States.

When a Senator makes such a discovery, at first the fact appears incredible. It seems as if the stars above his head had faded and the earth had slipped beneath his feet. But as time rolls on such a discovery proves to be a real antidote to megalomania; and the further flight of time brings to the discoverer a serenity and a humility to be envied by the world's greatest philosophers.

It may be, Mr. President, that the perpetuity of the American Republic does not depend upon my reelection to the Senate; but the perpetuity of the Republic may indeed depend upon granting to the President the authority to make the economies called for in his message to Congress.

MAY 29, 1933.

Mr. G. H. BROWN,
Phoenix, Ariz.

DEAR MR. BROWN: Yours of May 25 received advising that you desire a position with the Bureau of Internal Revenue, and you request me to recommend you "to the new collector at Phoenix as soon as he is appointed."

It is my duty to tell you that the district attorney, marshal, collector of internal revenue, collector of customs, and register of the local land office, respectively, will be appointed upon the recommendations of the United States Senators from Arizona.

In my judgment, it would be improper for a Federal Senator to make any suggestion as to whom such persons thus recommended by Federal Senators should appoint. The Federal officials who may

be appointed upon my recommendation shall be left free to select their own assistants, deputies, accountants, and clerks.

On this point I may be—probably am—censurably delicate, but it is my inflexible rule to which I adhered during the Wilson administrations. Quite naturally, I desire to please as many of my constituents as possible and to offend as few of them as possible, but I believe in the principle of absolute noninterference by Federal Senators in the selection of the subordinates of Federal officials appointed upon my recommendation.

Sincerely yours,

HENRY F. ASHURST.

OCTOBER 16, 1933.

Mr. G. A. ROBERD,
Phoenix, Ariz.

MY DEAR FRIEND: Your letter received advising that the chamber of commerce had "denounced" Senator HAYDEN and myself for not securing larger sums of Federal funds for Arizona.

This complaint of the chamber of commerce is not at all unique, for daily from the mail bags there are dumped upon my desk demands that "this, that, or the other" industry be nourished by some gift, bounty, or largess out of the Federal Treasury.

I sympathize somewhat with the impatience of the chamber of commerce and say in reply that I have worked harder since March 4 last than I have ever worked before, but I am not complaining, for when an officeholder complains of overwork he is simply proving that he has a task too big for him.

I have been for years a critic, and hope I am able, without making a wry face, to take a small dose of that medicine—criticism—of which I have given other fellows sizable doses; in other words, I not only "ladle it out" but can also "take it." Pardon my dropping into slang, but it conveys my thought precisely.

I believe you are correct in your conclusion that a number of candidates—all excellent gentlemen—will try to displace me at the next election, but it is beginning to appear as if I shall be reelected, not by reason of any particular merit that I possess or by any political activity on my part but by the folly of my opponents.

Kind regards,

Sincerely yours,

HENRY F. ASHURST.

APRIL 17, 1935.

Mr. R. W. KNAPP,
Phoenix, Ariz.

DEAR FRIEND KNAPP: Your letter received.

It is quite true that many if not most, of the laws passed in the hope of rescuing the country from the depression were experiments. Some of these experiments are successful, whilst frankness and candor compel me to say that some of them are failures. No rational person would admit a belief in the wholesomeness of all of these laws, and he would have been a bold man who would have ventured to prophesy that all of these experiments would be a success.

I share the hope you entertain that we may abandon experiments that are obvious failures and retain such as have been demonstrated to be of value.

In times of grave danger to our country, whether from unemployment, famine, fire, flood, war, pestilence, or depression, a nation, and certainly a first-rate nation, becomes a laboratory to test problems and discover which is the plan of recovery.

I observe your reference to the securities bill, and also your reference to the Rayburn bill. It may come to pass that in order to emerge from the depression our Nation may yet be obliged to resort to those prosaic, unpopular, and age-old remedies that have never failed—economy, hard work, and the other simple virtues that made our Nation.

With kind regards, sincerely yours,

HENRY F. ASHURST.

JANUARY 2, 1934.

Mr. A. L. MOORE,
Route 2, Box 223, Tucson, Ariz.

DEAR FRIEND: Your letter of December 25 received, in which you say, "I ask you to work for and vote for repeal of this Economy Act."

I should be lacking in frankness and deficient in courtesy if I failed to tell you that I shall support President Roosevelt all along the line.

A crisis of terrible proportions, bringing many distressful results, came upon our country and has not lifted its blight from us; hence all citizens must continue to make sacrifices for their country's welfare.

It is often quite true that the only way in which an officeholder may render great service to the Nation, in its day of trouble, is by his willingness to lose his future or at least to lose his present position in political life, if he may thereby aid in bringing national recovery, just as the soldier may for a time give up a part of his civil liberties and may pay with his physical life in order to render service for his country in battle.

Whenever grave danger comes to our Nation, whether from unemployment, famine, fire, flood, war, pestilence, or depression the officeholder must be willing to take action which might be temporarily unpopular if he may thereby aid in the recovery of his country.

I shall follow the President's leadership, and if he should urge that the present law be amended so as to meet your request, I shall support his efforts in that behalf.

Kind regards.

Sincerely yours,

HENRY F. ASHURST.

MAY 18, 1935.

Mr. J. F. MILLARD,
Phoenix, Ariz.

DEAR MR. MILLARD: Your letter of May 11 received in which you request me to recommend a pardon for ———.

In reply, it is my duty to say to you that during my service in the Senate I have never interfered with judicial processes or with pardons or paroles and have always refused to recommend pardons or paroles for the obvious reason that when Senators or Representatives do interfere in such matters they thwart the administration of justice. I shall not recommend pardon for ———.

With kind regards, sincerely yours,

HENRY F. ASHURST.

PHOENIX, ARIZ., *October 26, 1938.*

Mr. RALPH BRADFORD,
371 Beech Street, Arlington, N. J.

DEAR SIR: Your letter of October 18 received, and I should be deficient in candor were I to encourage your coming to Arizona, unless you have, in your own right, a fixed, permanent income, adequate to your support, upon which income you may rely without default or discount.

This State is now chock-a-block with impecunious transients and to subsist them has laid a heavy burden upon Arizona taxpayers.

Moreover, I shall be guilty of disingenuousness if I fail to tell you and Mr. Welch that neither of you could secure employment in Arizona, as we have here thousands of actual bona fide citizens of Arizona who are vainly attempting to secure employment here, and quite properly, bona fide residents of the State will be first considered.

You say that you may consider going into business in Arizona. Undoubtedly any one of our various county assessors would be pleased to add your names to their tax rolls.

A pollyanna reply to your letter could have been sent, but surely you will welcome the truth instead.

Your intimation that you might expect letters of introduction from me to "responsible parties" could not be realized, inasmuch as you are a stranger to me.

Having thus frankly told you of the situation here, it remains only for me to say that Arizona is still, as she has always been, the land of opportunity and hope, where the industrious, competent, honest, and lucky young person of good judgment may have a sporting chance to earn at least the right to live a graceful and useful life.

Yours respectfully,

HENRY F. ASHURST.

In the Senate, March 30, 1938

SEA POWER

Mr. ASHURST. Mr. President, it was sea power that saved Rome from Greece.

It was sea power that saved Greece from Persia.

It was sea power that gave to the Phoenicians the command of the ancient maritime world. Sea power built up the far-flung commercial empire of Carthage. Sea power made Athens ruler of vast terrritories, and it was sea power that made the Rome of antiquity mistress of the civilized world. Rome could not have subsisted without her sea power, because nearly all her wheat came overseas.

When Spain had great sea power she dominated Christendom; and Spain's decline began when storms and British seamanship wrecked her great Armada.

The sea power of the American Colonies with the sea power of France won the American Revolution, and the naval blockade defeated the Confederacy.

During the World War the Allies would have starved had it not been for sea power.

In the Senate, April 8, 1938

TAXES

Mr. ASHURST. Mr. President, doubt and fear, twin spectral forms of evil, have descended upon business. Whether or not business is justified in its fear of Congress is a question I do not now discuss. It is sufficient to know that such fear actually exists.

The person who now addresses you during his youth time believed in ghosts, and was morbidly and frenziedly afraid of any man who was dead. It would be the subject of an interesting homily, if the Senate had the time to hear it, for me to relate the circumstance which permanently eradicated my fear and dread of ghosts and wraiths. I may do so some day, but not at this time.

The country will not recover, nor will it make progress, unless and until Congress gives assurance that when citizens engage in legitimate business enterprises they will not be the subject of unnecessary taxes and amercements. Business now fears that should it launch legitimate enterprises, its activities would be pounced upon by Congress and penalized by unnecessary taxes, and that some sort of invisible radiation, such as a ghost or wraith of the enterprise, would be all that would ever flow from the undertakings.

Congress must dispel this fear and doubt with which it has enshrouded business. Congress should say to labor, "You shall have a fair day's wage for a fair day's work," and should say to business, "You shall not be exploited."

Taxes will be, to say the least, moderately heavy during the lifetime of all persons now in existence. Taxes may be reduced only

by reducing expenditures. The remedy for heavy taxes is somewhat within the hands of the taxpayers themselves. If and when taxpayers quit the practice of telegraphing Congress for more appropriations, and begin instead to telegraph Congress to vote against appropriations, Congress will grant relief from heavy taxes.

But I do not entirely despair. There are in this world some laws that may not be repealed, such as the law of the survival of the fittest, the law of supply and demand, the law of compensation, and the law of reactions. Even if Congress should refuse to grant relief from excessive taxes, the law of reactions would ultimately do its perfect work.

As jealousy is the concomitant of violent love, as Aristides the Just was banished because people grew weary of hearing him called Aristides the Just, as a fiercely raging fire will burn itself out, as a rapidly running river will create obstructions for itself, likewise an era of prodigal expenditures will be followed by economy to the point of parsimony.

I therefore declare to the Senate, as I said last autumn in my addresses to various civic organizations, "You are wise in getting money from Uncle Sam's Treasury 'while the getting is good'; for under the law of reactions this prodigal era in due time will be followed by a regime that will make Calvin Coolidge look like a spendthrift." [Laughter.]

In the Senate, May 26, 1932

THE STAGE IS VISION OF THE ROMANCE INSEPARABLE FROM EVERY HUMAN LIFE

Mr. ASHURST. Mr. President, I invite attention to the fact that the spoken drama in the United States is now almost extinguished. I do not believe we have reached such a deplorable place in our history that we would be willing unfairly to tax or to penalize the spoken drama or the talkie movie.

I am opposed to admission taxes, whether for the spoken drama or the talkie movies. Such taxes are only an irritant—they are like unto a dash of Tabasco sauce in the eye and will be resented by the American people. Some well-informed persons argue that the theaters and talkie movies are luxuries and amusements only. That they are, from one angle, "amusements" is quite true; that they possess facilities for disseminating interesting information of much practical value, especially to those persons who cannot spare the time or money to travel, is none the less true.

It is also true that the theaters and the talkie movies make contributions to art, belles-lettres, literature, music, science, and philosophy, and appeal to and help to gratify that inborn cultural and artistic yearning inherent in every normal person, although in some breasts this yearning is meager and obscure and sometimes is deeply hidden.

The stage artists, the screen artists, and the vaudeville artists hold the mirror up to nature, and only through them do we ever see ourselves as others see us.

On the stage and on the screen we see our own weaknesses, foibles, and pretensions made plain and then corrected. On the stage and on the screen the richness of human experience is laid before us, and all that is beautiful, all that is tragic, and all that is mournful in man's destiny is clearly shown.

The penetrating skill, the Attic salt, and the humor of the screen artist and the stage artist expose the shams and frivolities of a particular epoch, and not infrequently teach a nation the way of truth.

The plays of Aeschylus and Euripides taught the Greeks to meet disaster becomingly and to realize that although Fate spins a strange pattern and motif into every career, such circumstance affords no reason for a refusal to meet life courageously and cheerfully.

The comedies of Shakespeare enriched England, softened the cruelties of his time, and gave seasonable advice and admonition to monarch, to lords, and commons. There would have been no polished Elizabethan England except for Shakespeare, who appeared personally in some of his own plays, notably his Twelfth Night, which he acted in 1602, and from the stage poured gentle satire upon vanity and injustice.

I do not doubt that Schiller and Goethe helped Germany, and I am certain that Molière and Rostand and Bernhardt enriched France. Who can measure the joy and the emotional sympathy that Dion Boucicault gave to the world? He was called the scribe of the American and English stage and had 124 dramas to his credit.

Unnumbered thousands of our own generation have been charmed by the melodious airs and clever rhymes of the Gilbert and Sullivan light operas and the talent of those two gentlemen was so exceptional and their criticisms of official smugness and complacency were so deft and subtle that their productions were given audition and applause by the most prim and rigid of the mid-Victorians.

It would be impossible to estimate the ennobling influence showered upon our Nation by such characters as Edwin Booth and David Belasco.

Amidst the gloom of the depression and out of the darkness of the country's financial and industrial misfortune there suddenly beamed forth last winter, when the clouds were lowering, five stars, five distinguished thespians to tour our country: The superb Maude Adams and well-beloved Otis Skinner revived the Merchant of Venice; William Gillette came back to us in Sherlock Holmes; Ethel Barrymore reproduced Sheridan's School for Scandal; and Walter Hampden gave us again glorious Cyrano de Bergerac, the fascinating yet futile lover, poet, duelist, and hero of seventeenth-century France. How many weary hours these artists beguiled; how many desolate hearts they encouraged; how many of our citizens learned anew from them that moderation, forbearance, and restraint are the virtues of victory and prosperity and that fortitude, patience, and courage are the virtues of disaster and defeat.

The drama is coextensive with the people and of all the arts, save music, it is probably the dearest to the human race. The stage is akin to poetry in that it is a great expression of human emotion. The stage is a vision of the romance inseparable from every human life; it is a magical place, breathing the inspiration of color and sound; a place for high thoughts, splendid truths, and beautiful words, for objects vividly observed and gorgeously imagined.

The stage is art. Art is truth, and in the final sum of wordly things, only art endures; the sculptures outlast the dynasty, the colors outlive Da Vinci, "the coin outlasts Tiberius."

When Hamlet, Prince of Denmark, desired a rehearsal of the play which was to confound his uncle, the king, he said to the players: "Come, give us a taste of your quality." After the players had recited Hamlet turned to Polonius, the lord chamberlain, and said:

Mr. ASHURST. Mr. President, I invite attention to the fact that let them be well used, for they are the abstracts and brief chronicles of the time; after your death you were better have a bad epitaph than their ill report while you lived."

So, Mr. President, when our citizens, after a day devoted to the duties and claims of this fevered life, go to the theater or to the talkie movies, there to renew their exhausted strength, there may-hap to escape for an hour from the specter of their baffled hopes, from their broken ideals or evaporated illusions, so common in this complex machine age, or there to be spared for an evening from the fardels and the clangor of a bewildered world, let them not be met with a Federal admission tax, which, as I said before, is a vexatious, corrosive, pestiferous irritant.

In the Senate, January 6, 1936

CHARLES A. LINDBERGH

Mr. ASHURST. Mr. President, Charles A. Lindbergh, who captured mankind's imagination when he crossed the Atlantic by riding alone the pathway of the stars, has lately been the subject of much discussion because, forsooth, as a discerning gentleman, after performing the duties cast upon him by a tragic occasion, he properly withdrew himself and his family from the house of his woe and sorrow until the conclusion of the case which affects himself and his family so poignantly.

Of course, no one except Colonel Lindbergh and his family knows the precise reason for his sojourn in England; but in view of his well-known habit of observing the proprieties and amenities of life, it would not be a rash guess to say that he and Mrs. Lindbergh quite naturally preferred to be absent during the climax of the case.

It may be, indeed, that the Lindberghs are temporary refugees from the tyranny of curiosity. He and his family have been the victims of ruthless, reckless, and relentless espionage. If they wished to go shopping, attend a theater, a picture show, or go to a restaurant, they must needs disguise themselves or be pestered, annoyed, insulted, jostled, intimidated, and manhandled by cranks, potential gangsters, gaping sensation mongers, and other unrecorded, unidentified, and unauthorized individuals.

To some persons one of the truest joys that can come is to live serenely in obscurity the life of a private citizen; but, unfortunately, such a vast number of persons with a prurient, itching curiosity have been so constantly invading Colonel Lindbergh's right to privacy that he and his family for some months have been required practically to reside within a fortress.

This deplorable status of affairs may not be cured by any law or by any action that the Department of Justice may take. It can and will be remedied only and when those citizens who represent the good repute of our Nation, and who live courageously, shall themselves set an example of a refusal to violate the privacy of another citizen and an example of indignant resentment of any intrusion upon their own privacy.

Human beings differ in temperament, habits, and inclinations. A mode or plan of life agreeable to one person may be unpleasant to another. One man desires to be surrounded by gayety, laughter, and song: another prefers to keep company with invisible and inaudible things.

That a man should prefer his own silent and deploying thoughts to bubbling comrades does not indicate that he lacks urbanity or warm-heartedness; it simply indicates that he has chosen companions agreeable to himself.

In the Senate, Tuesday, June 20 (legislative day of Thursday, June 15), 1939

GHOST WRITING, ITS ORIGIN AND DEVELOPMENT

(By HENRY FOUNTAIN ASHURST, United States Senator from Arizona)

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by myself entitled "Ghost Writing, Its Origin and Development."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"Fortunately it is not always absolutely essential, although it is always desirable, to define words and terms with precision, otherwise, notwithstanding the richness of the English language in synonyms, it would be difficult to define 'ghost writing' although

that term is now an accepted locution. Usage has given it a standing over any protest etymology may make.

"'Ghost writing' may be said to be a speech, address, or article written by one person but delivered or signed by another.

"When we say 'the ghost talks today,' we do not mean that some wraith, without a body, is squeaking and gibbering, but we do mean that some person is delivering a speech or is 'by-lining' an article written by some person other than the one by whom authorship is impliedly asserted. In many, if not most, 'ghost speeches' and 'ghost articles' the ghost's style of expression betrays his anonymity.

"When we say 'the ghost walks today,' we refer to a declaration that has come down to us by tradition from the times in London when Shakespeare, who often played the part of the ghost in his tragedy Hamlet, was also paymaster to the players. Thus the saying whereby early English actors linked salaries with ghosts came to mean 'pay day,' and this same saying is today frequently heard in the House of Thespis and in the House of Printing and means pay day.

"Recently an article appeared in a current magazine which went on to say that ghost writing had its origin about the beginning of the twentieth century, but the fact is that ghost writing has been practiced for many centuries.

"It was among the Greeks that public speaking as an art had its development. In its flower, it produced the models of eloquence for all succeeding orators.

"In the days of remote antiquity the theory prevailed that every citizen should be his own advocate in settling his disputes. The theory seemed to be sound, but, like many theories, it was difficult of practical application inasmuch as many citizens who were drawn into litigation had justice on their side but lacked the knowledge, ability, or the voice to defend their causes.

"For this reason one Corax, in the Greek city of Syracuse in the fifth century B. C., set up a school to instruct or coach private citizens how to urge their rights and claims before magistrates and juries and thus assist those persons lacking in forensic skill.

"It is interesting to observe that the principles of oratory enunciated by this pioneer instructor Corax have prevailed in one form or another in all forensic oratory; that is to say, beginning, narrative, argument, subsidiary remarks, and peroration.

"Through all the subsequent and troubled centuries, embracing the rise and decline of the Greek culture, the Athenian cities, the Roman and Byzantine empires, down to this day, the principles of oratory as taught by Corax have guided many, if not most, of the world's greatest orators.

"After Corax there flourished in Athens a speech writer, one Lysias, who adapted his compositions to the character and station in life of the man or client who was to deliver them, and he wrote the speeches according to the terminology required by the particular nature of each case.

"Then came Isocrates, who, unfitted by weakness of voice to speak in public, devoted his talent for eloquence to instructing pupils who came to his school at Athens. He did not to any great extent write speeches for others; his school trained his pupils to write their own speeches. Isocrates earned enormous sums of money; some authorities declare that his earnings were to the money value of about $50,000 a year from tuition paid to him by students.

"It was from this group, or from this school, rather, sprang Demosthenes, born 384 B. C., died 322 B. C., in whom was combined all that was excellent in the grand art of public discourse.

"Demosthenes' father, who was well-to-do, in fact opulent, was a manufacturer of cutlery and furniture and died when Demosthenes was 6 years old, leaving to his son what then was an enormous estate.

"It would seem that young Demosthenes received shabby treatment from his guardians, for when he attained his majority, which was at the age of 16 years, he found that the greater part of his inheritance had been wasted or stolen by his guardians and he brought suit against them and obtained a verdict, but it is not known whether the money was ever paid to him. At least he secured more reputation than money out of his lawsuit.

"He had, however, been carefully educated for the profession of rhetorician or, as we would say, advocate, and in not a few instances this literary training in preparing speeches for others was worth more to him than the inheritance he should have received. Demosthenes managed, notwithstanding a weak voice, delicate constitution, and a defective articulation, to build up a renown as the most famous orator of antiquity.

"The important duty of the Athenian advocate was to prepare pleas for his client who would commit the plea to memory and deliver it to the jury.

"The usual membership of an Athenian jury was 500 citizens, and some juries were composed of 1,500 citizens. A skillful rhetorician or advocate would prepare a plea so that it might be supposed to come from the client himself. There are extant about 30 pleas of this sort written by Demosthenes, and from them we may learn some of the lights and shadows of life in the Athens of that day.

"Among the Greeks eloquence was an end in itself, but among the Romans eloquence took a more practical turn. Gaius Gracchus, whose eloquence was much praised by the ancients, was charged by his opponent as having employed a ghost writer to compose his speeches.

"It seems to be definitely established that the speeches delivered by the Roman Emperior Nero were written by his Prime Minister, Seneca.

"Dr. Samuel Johnson contributed nine lines to Oliver Goldsmith's poem, The Traveler, and contributed four lines to Goldsmith's poem, The Deserted Village.

"Senator ARTHUR H. VANDENBERG, an authentic historian, is of opinion that Alexander Hamilton wrote all but four lines of General Washington's Farewell Address.

"Daniel Webster prepared an inaugural address to be read by William Henry Harrison when General Harrison was inaugurated as President, but General Harrison disregarded the ghost speech and preferred his own composition.

"One of the most tragic episodes flowing from ghost writing in the United States occurred when a ghost writer who was employed to write a farewell address for Hon. John White, Speaker of the House of Representatives in the Twenty-seventh Congress, in preparing the address for Speaker White, copied copiously from the language of the farewell address delivered by Vice President Aaron Burr to the United States Senate in 1805. Speaker White delivered the address as it was written for him, and when it was discovered that much of the address was from that of Vice President Burr, Mr. White, being unable to laugh at the comic position into which the ghost writer had placed him, was, on the contrary, so overcome with mortification and disgust that he committed suicide.

"Abraham Lincoln, after composing alone and unaided at Springfield his inaugural address containing the closing passages of exquisite grace and tenderness, forwarded a copy to Senator William H. Seward, his intended Secretary of State, inviting Senator Seward's comments, and Seward smoothed out a few quaint phrases.

"President Andrew Johnson's first message to Congress was a masterpiece of statesmanship and literature, and, notwithstanding the fact that President Johnson possessed a lofty range of statesmanlike talents and was a skilful rhetorician, James G. Blaine refused to give Johnson credit for its authorship and declared that Seward had written it; but Blaine was wrong, for Johnson indeed wrote it, and George Bancroft's pen—not Seward's—gave the message its high-grade, literary polish.

"Press dispatches have just announced the discovery of the tomb of great Caesar's ghost writer, one Aulus Hirtius, who was born 90 B. C. and died 43 B. C. and who throughout his entire lifetime was the personal and political friend of Julius Caesar. Hirtius, although politically opposed to Cicero, took lessons in oratory from Cicero and in return Hirtius, who was a capable cook, imparted to the famous orator's household lessons in preparing delights of the table. Hirtius was a distinguished historian and, while it cannot be affirmed with absolute certainty, it is more than probable that Hirtius wrote some portion of Caesar's Commentaries, dividing with Oppius, another ghost writer of that day, the credit for authorship of the eighth book of the Gallic Wars.

"Hirtius was killed at the Battle of Mutina while leading an assault against the enemy. The body of Hirtius, together with the bodies of some of his comrades slain in the same battle, was sent to Rome with a large escort, where with highest honor it was buried in the Field of Mars. Hirtius was held in such great esteem and was so generally respected for his valor, scholarship, and genius as a ghost writer that the mortician refused to accept compensation for the interment of Hirtius' body.

"These recent press dispatches further announce that his tomb will be restored to its ancient grandeur, and it is the opinion of this writer that unless the beautiful flower of gratitude has withered and perished the American ghost writers of the present day, who are 'thick as autumnal leaves that strow the brooks in Vallombrosa,' will remember Hirtius' name with thankfulness for having modestly furnished so excellent a pattern of ghost writing. Moreover, it is reasonably certain that ghost writers in the days that are to come, with a friendly sentiment for his memory, will take care that the restored tomb shall not fall into obscurity and decay."

Rising Government Debt and Some of Its Consequences

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

ARTICLE FROM THE GUARANTY SURVEY

Mr. LELAND M. FORD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statement from the Guaranty Trust Co. of New York:

[From the Guaranty Survey of June 26, 1939]

RISING GOVERNMENT DEBT AND SOME OF ITS CONSEQUENCES

To a superficial view it would appear that business had become unconditionally dependent upon Government spending. But several vital facts point to a different conclusion. One is that business in the United States, in spite of the vast amounts of public funds that have been spent to stimulate it, has been found to have shown less net progress toward recovery since the low point of the

depression than business in any other large country for which reasonably satisfactory data are available.

The end of this month will mark the close of the ninth successive year of deficit financing by the Federal Government. During these 9 years the national debt has increased by nearly $25,000,000,000, or more than it did during the 3-year period 1917–19, marking our participation in the World War. The expenditures of the Government in the last 9 years have been $30,000,000,000 larger than they were during the war period, and an even greater increase in the debt has been prevented only by the rise in taxes to almost record levels.

At present the outlook is for an indefinite prolongation of the policy of borrowing, spending, and lending by the Government, with some signs that it will be intensified, rather than moderated, as time goes on. While, as this is written, it appears that Congress may vote a relief appropriation for the coming fiscal year smaller than that for this year, the agricultural appropriation bill provides for expenditures far in excess of earlier estimates; the cost of national defense is at a level without precedent in times of peace; changes in the social-security program are contemplated that will temporarily reduce the pay-roll taxes but will raise the cost of old-age benefits in the next few years, and recent press reports indicate that there is under consideration a new and far-reaching plan for Government "investment" in business.

The Mead bill providing for Government insurance of 90 percent of bank loans up to $1,000,000 to industry, which has been discussed at hearings before the Senate Banking Subcommittee, appears to be generally regarded as the first step in this new "investment" plan. The main purpose of the bill—to make caiptal more readily available to small businesses through loan insurance—is in line with one of the three proposals for a revision of our financial system offered last month to the temporary national economic committee by A. A. Berle, Jr., Assistant Secretary of State. The other two features of the plan are much more far reaching. One calls for legislation providing for capital credit banks to make long-term loans either to business enterprises or to Federal and local Governments for public works.

The other advocates the establishment of a public-works finance corporation with rediscount privileges at the Federal Reserve banks. Testimony of public officials at hearings on the Mead bill seems to indicate that the measure is considered merely one feature of a much more comprehensive plan drawn up on these general lines.

The public reaction to these proposals has been formed against the background of President Roosevelt's address last month before the Retailers' National Forum, in which the President defended the use of borrowed funds by the Government to provide purchasing power and promote business recovery, and belittled the dangers inherent in the mounting national debt. The new program, in other words, is viewed as a phase of the broad policy of Government spending or "investment" as a means of increasing the national income.

This policy has been responsible for most of the rise in the tax burden and the national debt in the last 9 years—and yet there are in excess of 10,000,000 workers unemployed and about 20,000,000 individuals wholly or partially dependent on governmental relief payments and industrial production and national income are at 77 percent of their respective 1929 levels.

TEMPORARY STIMULATING EFFECTS

The persistence with which Government spending is advocated as a recovery device is probably due in part to the fact that it does appear to stimulate business activity temporarily. A comparison of changes in the amount of Federal expenditures with variations in the general level of business tends to suggest a casual relationship. While the correlation is far from perfect, there is an apparent tendency for variations in spending to be followed, after an interval of some months, by similar fluctuations in business activity. Expenditures increased sharply in the closing months of 1933 and were maintained at a high level in 1934 and 1935. During the same period, business activity rose rather steadily. The veterans' bonus payment in June 1936 was followed by an abrupt drop in expenditures. Business, presumably under the stimulus of the bonus payment, continued to rise until the summer of 1937, when it declined precipitously. Expenditures were increased early in 1938, and business began to advance a few months later.

To a superficial view, therefore, it would appear that business had become unconditionally dependent upon Government spending. But several vital facts point to a different conclusion. One is that business in the United States, in spite of the vast amounts of public funds that have been spent to stimulate it, has been found to have shown less net progress toward recovery since the low point of the depression than business in any other large country for which reasonably satisfactory data are available. Another is that every past depression has been followed by recovery without the aid of Government spending, and never has the expansion been so slow and halting as in the present instance. A third is that many businessmen and other close observers of economic affairs agree in attributing the present lack of business vitality in part to world conditions and in part to adverse factors in the domestic situation that have been created, and can be removed, by governmental action.

INCREASE IN NATIONAL DEBT

Some of these factors are direct results of the spending program itself. The one indisputable consequence of the spending policy is that it has raised the cost of government to a level that has created serious concern on the part of many people regarding the future of taxation, public credit, and currency stability. It is recognized, moreover, that Government payments have become an apparent necessity to large groups of people who will naturally use every possible means of opposing their cessation, and consequently that it will be very much more difficult to reduce the spending than it was to increase it. Even more disquieting than the thought of the cumulative Federal deficit and the resulting increase in the national debt is the reflection that the cost of government may become "frozen" at a level where the Budget cannot be balanced.

The effects of the spending program on the financial position of the Federal Government are indicated by the following figures, which show the totals of receipts, expenditures, and debt for recent fiscal years in millions of dollars:

	Receipts	Expenditures	National debt, end of year
Fiscal year:			
1930	4,178	3,994	16,185
1931	3,190	4,092	16,801
1932	2,006	5,154	19,487
1933	2,080	5,143	22,539
1934	3,116	7,105	27,053
1935	3,800	7 376	28,701
1936	4,116	8,880	33,545
1937	5,294	8,105	36,427
1938	6,242	7,626	37,165
1939 [1]	5,520	9,492	41,132

[1] Estimated.

The most significant fact brought out by these figures is that the debt has continued to rise at an undiminished rate in recent years in spite of the increase in receipts. The revenue of the Government in the last fiscal year was the greatest in its history, except for the fiscal year 1920. Even the reduced receipts for this year were exceeded only in 1920 and 1921. Yet the increase in expenditures has been so great that the debt has risen by approximately $4,000,000,000 during the current fiscal year and now stands at a total about fifteen and one-half billion dollars above the early post-war peak.

In addition to the direct debt, the Government has a contingent indebtedness of approximately $5,400,000,000 in the form of obligations of governmental corporations and credit agencies fully guaranteed by the Treasury. To offset this the Treasury has a "proprietary interest" or partial ownership in such agencies amounting to approximately $3,700,000,000. Under the most favorable supposition the Treasury would not have to meet any part of its contingent liability and would ultimately realize the full amount of its proprietary interest in the governmental agencies, or possibly even more. Under the least favorable supposition the proprietary interest would vanish and the contingent liability would become a direct liability. Other potential offsets to the debt are the Treasury's general cash balance, which amounted to $3,044,000,000 at the end of April, and the unused portion of the $2,000,000,000 gold stabilization fund, amounting to $1,800,000,000.

Items of this kind, however, represent only a minor consideration in an appraisal of the Government's fiscal position. Whether the net indebtedness that will ultimately have to be faced is somewhat more or somewhat less than the amount shown by the currently published totals is of less importance than the fundamental fact that the debt has already far exceeded all past records and, in spite of heavy taxation and large Government revenues, continues to increase as rapidly as ever, with no relief in sight.

MONETARY RESULTS OF SPENDING

The borrowing and spending policy of the Government has had a profound effect on the monetary situation. A large part of the Government obligations issued in the last 9 years has been absorbed by the banks. When the banks buy Government securities they pay for them by placing current funds at the disposal of the Treasury. As fast as the funds are spent they cease to be Treasury deposits and become a part of the general volume of bank deposits. In this way billions of dollars in new bank deposits have been created in recent years. The total deposits of all banks in the United States at the end of last year were almost equal to those at the end of 1929 and were $16,000,000,000 greater than at the middle of 1933.

As a result, bank deposits at present are sufficient to meet the requirements of a much higher level of business activity than actually exists. If the borrowing and spending policy of the Government had had the desired effects, such a level of activity would prevail today. But it has already been seen that the stimulus given to business by public spending has been short lived. As the Treasury deposits acquired through borrowing were spent and thus transformed into individual deposits, they ceased to circulate, or circulated only sluggishly. That is, as deposits increased, their average "velocity" or rate of turn-over declined. The business activity produced by the public spending was of the temporary and artificial sort that would result from the use of any other inflationary device in the absence of the essential bases of sound prosperity. The main driving force of recovery—the spontaneous quickening of private enterprise in the quest of profit—was lacking.

The outlook for balancing the Budget by further increases in taxation is not promising. The tax burden on the people of the United States for the support of the Federal Government alone

increased more than $2,000,000,000 between 1930 (the last year in which the Budget was balanced) and 1938, but a further increase of more than $3,000,000,000 above the 1938 total would be required to balance the Budget at the present level of expenditures. Tax rates are already so high that they appear to be exerting a strong deterrent effect on business. Taxes on business concerns must either raise prices and reduce demand, or diminish profits and discourage expansion. Taxes on individuals diminish their purchasing power and lower their capacity to consume the products of industry and to finance the growth of business. It is a serious question whether the economic life of the country could bear further heavy increases in the tax burden without a disastrous impairment of productivity.

Substantial relief must come, therefore, through reduced expenditures. Of the more than $9,300,000,000 of expenditures in prospect for the coming fiscal year, only about $3,300,000,000 is for the ordinary and indispensable functions of government; and this includes the extraordinarily high figure of $1,400,000,000 for national defense. The remaining $6,000,000,000 is for what may be broadly described as social purposes, including relief and public works, aid to agriculture, social security, and payments to veterans. Any hope of balancing the Budget through substantial savings in the cost of government must lie primarily in these classifications, together with some possible reduction in expenditures for national defense.

Today we face the prospect of an indefinite continuance of debt expansion in the hope that further Government spending will raise the national income to a point where the increased tax yield will balance the Budget. Experience does not encourage this hope. Events of the last few years, like those of more remote inflationary episodes, tend to show that public spending cannot possibly provide an adequate substitute for private spending, and that, once the process is begun, successive doses of the artificial stimulant are required to prevent collapse. Obviously, the process cannot go on forever. The only escape from the vicious circle that does not lead to economic chaos lies in the reestablishment of a sound fiscal policy and the removal of the burdens and restrictions that have deprived business of its incentive to expand.

Monopoly—From the Standpoint of the Lawyer in the Government Service

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

ADDRESS BY HON. CLYDE T. ELLIS, OF ARKANSAS, TO THE FEDERAL BAR ASSOCIATION

Mr. ELLIS. Mr. Speaker, the Federal Bar Association is composed of more than 1,000 lawyers in the Government service. I insert in the RECORD an address which I delivered yesterday at the association's annual luncheon:

You honor me today beyond expression. You represent a profession whose services are indispensable to the operation of a constitutional democracy.

Since the first meeting of the Continental Congress the legal profession has furnished more recognized American statesmen than all others combined. And why not? In school and in practice the lawyer learns the science of living and the science of government and from them the rules—which are the law. If he is not best equipped to represent humanity, he ought to be.

And so to us, to those of us who have elected to represent not the individual but the collective client, whether in the legislative or the executive branches, comes a great heritage, a heritage of self-sacrifice and eternal devotion to unselfish duty.

Of course, we have also inherited some of the public's opinion of us. Way back in II Henry VI (act IV) we find this little dialog:

"DICK. The first thing we do, let's kill all the lawyers.

"CADE. Nay, that I mean to do. Is not this a lamentable thing, that of the skin of an innocent lamb should be made parchment? That parchment, being scribbled o'er, should undo a man? Some say the bee stings, but I say 'tis the bee's wax, for I did but seal once to a thing, and I was never mine own man since."

MONOPOLY

Admitting that there is a wave of unrest gripping the masses and assuming, as I believe we would all agree, that not only in the legislative but in the executive departments there is much room for the lawyer-statesman, I wonder if there are not awaiting us opportunities just as promising as in any period.

RICHEST NATION

Are we not the richest of the nations? With 48 percent of all the oil in the world, 52 percent of all the coal and the major minerals in about the same proportion. In the United States we have 27 out of every 55 radios of the world; we have 33 out of every 47 automobiles in the world; and we have one-half of the telephones.

POOREST NATION

Then how can it be, or, to put it objectively, why must it be, that today the Department of Labor tells us that there are (as of May) 13,017,000 able and red-blooded men and women out of work and looking for work? And this they have been, or others in their places, since the partial collapse of our capitalistic structure 10 years ago this fall.

In much worse condition is the American farmer. With all that has been done for him by the Government during the past 6 years, still, and through no fault of his own, he is seeking out but a bare existence; he is not enjoying the modern conveniences of life. When he produces and sells and starts to buy back his necessities, he runs out far too soon. Even today his produce will buy only 79 percent of what it would buy from 1909 to 1914, the base years of parity. This has reflected itself in many ways. For instance, today the farm homes of France, Germany, of Norway, Sweden, and Denmark are 90 percent electrified, and those of Holland and Switzerland are practically 100 percent electrified. In New Zealand, a sparsely settled country, they are 65 percent electrified. But in the United States, this paradise of resources and wealth, the farm homes are only 15 percent electrified.

CAUSES

I submit that through the endless network of American monopolies the functionings of once-recognized economic laws have been stifled, prices have been fixed on both the raw and the finished products, and profits that once found their way to the producing masses have been diverted and hoarded by the captains of the game.

A $1 SHIRT

Many examples might be given, but let us suppose, for instance, that a cotton farmer walks into his village store to buy himself a $1 cotton shirt. Who gets the dollar? Well, the merchant gets a little of it, an estimated 10 cents. The jobber gets a nickel. For hauling both the cotton and the shirt the railroads get another nickel. Labor gets 20 cents. But that still leaves 60 cents to be divided, principally between the manufacturer and the farmer. But the poor, helpless farmer has nothing to say about how much he gets, so, according to the Bureau of Agricultural Economics, he gets 6 cents. The manufacturer gets most of the 54 cents over and above his labor bill.

What does he do with all this profit? He can't reinvest it, or he is afraid to, because the American purchasing power is largely gone, and times are hard. So he hoards it.

Today there is more idle money, and except for Government expenditures there would be more hungry people than at any other time in our history.

POWER TRUST

Monopolies operate to no good end in various other ways. Some choose to flagrantly disregard all economic laws and exact exorbitant rates and prices. One notable example is the Power Trust, with all of its pyramided holding companies. Thanks to the Tennessee Valley Authority and to many cities like Tacoma and to P. W. A. projects, we are at long last learning the cost of electricity. We are learning that by comparison with the T. V. A. yardstick or the Tacoma rate or the Ontario rate, American consumers are being overcharged for this most vital necessity—all because their lines are in no danger of competitors building down the other side of the road—more than $1,000,000,000 annually.

In my humble opinion, one of the noblest efforts of this administration is reflected in the dual-purpose dams and reservoirs now under construction throughout the country, designed to control the floods, aid navigation, provide irrigation and recreation, and to turn into channels of human happiness our almost unlimited sources of water power that down through the centuries has been wasting itself to the sea.

FREIGHT RATES

Monopoly may even discriminate against one section of the country and in favor of another. For instance, today, if a farmer at my home town of Bentonville, Ark., orders a turning plow from, let us say, South Bend, Ind., and the freight on it is $2, and when it comes he discovers it isn't what he wants and he is forced to return it, he finds that it costs him to return it over the same road, not $2 but $3.50. Freight rates on commodities originating in the southwestern zone are 75 percent higher than on those originating in the eastern or official zone; and thus the natural industrial development outside the favored official zone is retarded.

HISTORY

Monopoly may be either political or economic. Its history is the history of the law, dating back to the 282 paragraphs of the code of Hammurabi, 2350 B. C. Its tendency has been to destroy equality and to foster class favoritism. The concentration and freezing of American wealth is breeding a new generation of peons.

You may have noticed in the last few days the high scaffold extending from the steps of the Supreme Court Building to the top of the huge marble columns, to the words deeply engraved there, "Equal justice under law." The story is going around that two little neighbor boys chanced to meet out front the other morning and stood watching the workmen. One of them, the son of a comparatively wealthy citizen, remarked, "I wonder what they are fixing to do?" The other, the son of a day laborer—when there is

labor—replied, "I don't know, unless they are fixing to remove the word 'equal'."

Exact justice is impossible, but more equal opportunity is inevitable. For us of this generation there lies ahead a great rich field of opportunity as we strive for more of equality and less of favoritism "under law."

John Marshall was perhaps our greatest jurist, and yet historians say that as such jurist he was an even greater statesman. There are those of our profession and of our generation, some of them no doubt members of this Federal bar of Government employees, who will recognize and seize this opportunity to champion the cause of man and on that issue will win, and thus will much of the good work already begun be continued. As counsel for this most humanitarian of all administrations, as first lieutenants in this age-old battle of the centuries, may each of you in the end deserve to take your places alongside the lawyer-statesmen of the day.

Cotton Bagging, Net Weight, the Mode of Sampling, and Better-Packed Cotton Bales for Sale

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

STATEMENT BY L. T. STONE

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by L. T. Stone in Cotton and Cotton Oil Prices of July 24, 1939:

[From the Cotton and Cotton Oil Press of June 24, 1939]

COTTON BAGGING, NET WEIGHT, THE MODE OF SAMPLING, AND BETTER PACKED COTTON BALES FOR SALE

(By L. T. Stone, Tri-States and Southeastern representative, the Cotton and Cotton Oil Press)

The title of this article is more or less confusing, but no more so than has become the reasoning with respect to better packaging of American cotton.

There was a period in history when America was the ranking officer in the field of cotton. Other countries did not dispute her superiority—England, France, Spain, the Netherlands, and all the rest bought from us because there was no place else to buy—we were the only popcorn stand on the midway and business was good.

Those were the days when we paid little heed to the buyer's cry for neater packages. What did we care of the way they looked—the product sold well enough.

But now it is another day. Brazil has come into her own. The fertile valley of the Nile has been broadened. The new China has learned how to grow our cotton. And these competitors realizing that there must be merchandising—some inducement—if they are to gain a place in the world market, answered the buyer's plea and wrapped the cotton in a nice, uniform, wasteless package.

Eventually, of course, we had to become alarmed. Our volume was increasing and our sales decreasing.

It would take volume upon volume to quote here all the plans which were devised to remedy the situation. But, one thing we did know: We shipped the "rattiest" bale of any producer in the world and knew it ought to be stopped.

There is not a single man in the South or in the country who does not admit that the above is true. And there is no one who, passively at least, does not want to see it stopped.

But after we've recognized an ailment, we grow confused as to the cause. The issues are distorted and the fundamentals become lost. It's like the first baby who comes home from the hospital with the new mother. The house is upset with the first home-grown squall. Father says it ought to be spanked; auntie says it didn't get enough to eat; grandma says it's got the colic; the Negro servant says one ought to carry a bag of asafetida to scare off the demons; grandpa says the diaper is too tight; and, finally, everyone has forgotten why the argument started in the first place.

So, after it has been admitted that there is something wrong with the American bale of cotton, let's try to be sane enough to find the cause and then to remove it.

COTTON BAGGING

For some strange reason, the question of cotton bagging always looms up with that of better packages. When it was first mentioned, the idea of cotton bagging took the South by storm. "Certainly, let's wrap cotton in cotton; let's use more of our own product." There was no rhyme or reason in the thought—no stopping to see if the idea was economically sound. It even got into politics, and to this day it still bobs up in the Halls of Congress at the instance of some fellow who wants to make it a law because he lives in the shadow of a cotton mill that can manufacture cotton bagging.

Happily, there were some who stopped to reason—paused to see what it would cost, and, when they had concluded their reasoning, saw that cotton bagging could never be economically used.

First, it was thought that if we used cotton bagging many bales would be consumed. But simple mathematics proved that to be a fallacy. Here's the reason:

Cotton bagging weighs 12 ounces to the yard. It takes 6 yards to wrap a bale. That means that each bale of cotton could consume 4½ pounds. On a 12,000,000-bale crop—providing every bale is wrapped with cotton bagging—108,000 bales would be used. But what about the next year and the next?

Well, it is a common practice for at least two-thirds of the American crop to be wrapped in used and reworked bagging. And, it is logical to expect that two-thirds of the new cotton bagging would be reworked and rewoven after it is first used. So the net annual consumption of cotton would not be over 36,000 bales. Now no one could ever suppose that 36,000 bales could have a measurable influence on the market price of cotton.

Let's go into the problem of costs.

At the present time there are about eight different classifications of jute bagging. They are:

	Cents per yard
2-pound new jute	11
2-pound rewoven jute	10
2¼-pound reworked jute	9½
1¾-pound sugar bagging	8
1½-pound sugar-bag cloth	7
New 12-ounce burlap	6
1-pound sugar-centals cloth	4½
12-ounce sugar bagging	4

For a long time it was difficult to ascertain the price of cotton bagging. Now we have something which we can call the bottom price. One mill, in a bid to the United States Government, said that they could manufacture cotton bagging for 73 cents per pattern, or about 12 cents per yard. That was a bid which applied on a volume of 1,000,000 patterns.

Now, compare this lowest bid of 73 cents per yard with that of the best jute. The 2-pound jute mentioned above costs about 66 cents per pattern as compared with the 73 cents cost for cotton bagging. If the cost of cotton bagging, which weighs 12 ounces to the yard, is compared with the cost of 12-ounce jute, there is a much greater difference—73 cents as against 36 cents, to be exact. So it ought to be evident that the cost of cotton bagging would prohibit its use.

I know of no better way to sum it all up than this: Last year, when the Marketing Division of the A. A. A. agreed to subsidize the manufacture of cotton bagging by paying 28 cents for every pattern made, a man who has been in the bagging business many years, and one who knows that business from A to Z, wrote thus to the Secretary of Agriculture:

"Seventy-two million yards of bagging will be required to wrap a 12,000,000-bale crop. In cotton bagging this would cost $8,640,000. In jute bagging it would cost $4,320,000. This is a saving of $4,320,000. And if cotton bagging is used there would be consumed only 108,000 bales, which, at 6 cents per pound, would be worth only $3,240,000. In other words, more is saved by using jute bagging than the total value of all the cotton possible to consume as bagging. You could buy and burn all the cotton concerned, pay for and use jute bagging, and still be over a million dollars to the good.

"We make this proposition regarding cotton bagging. Determine the quantity of cotton possible to consume as bagging and what this bagging would cost. Pay us this amount. In return, we will destroy the quantity of cotton possible to consume as bagging on the entire crop; we will wrap the crop in a jute bagging identical in style and utility with the proposed cotton bagging, and we will return to the Government an imposing sum as income tax on the profit realized from the transaction."

NET WEIGHT TRADING

Closely alined with the problem of better packing of American cotton has become the plan of selling cotton on net weights or standard tare. It has been argued that, since the cotton buyer and the producer sell the bagging and ties for the same price of cotton, they are interested in tacking on as much of it as possible.

It is agreed that there is some incentive to overwrap American cotton under our system of marketing. But, as we consider the question of net weight, the idea of cotton bagging must be left completely out of the picture. Net weight and cotton bagging are two separate and distinct questions.

As a matter of fact, if we were to awake in the morning with a new system of net weight, wherein the cotton would move as just so much lint, we would find a rush for the cheapest bagging available—not for cotton bagging. The money incentive would be removed; the farmer, who buys the bagging, would no longer believe that his wrapping sold at the same price as lint, and, hence, would just as soon have it wrapped with binder twine, and probably would if it was cheaper.

All of the bills yet introduced into Congress favoring net-weight trading have been aimed at one thing more than just a standard tare, and that is a low tare. Therein lie some dangers. It appears as though there must be some minimum specifications as well as

maximum, if the American bale of cotton is going to profit to the extent of becoming a better package.

In connection with the idea of net-weight trading, another point must be noted. If net-weight bills are passed and become a law, heavier jute—according to all present bills—will be prohibited. The trend will be toward the lighter, more closely woven jute covering. Now, all heavier jute is woven in this country. Only the raw material is imported. The jute-mill business represents an investment of several millions of dollars in the United States. Their pay rolls are said to total more than $4,000,000 annually and they are all manned by citizens of these United States. So, if the heavier type jute is outlawed, these American mills will lose a substantial part of their business; pay rolls will be reduced and production curtailed.

THE MODE OF SAMPLING

After we have reasoned this whole thing out, we come to the final answer which is the real reason why American bales of cotton reach foreign markets in such a deplorable condition. That is the method of sampling.

Selling cotton is a "barrel-head" business. The farmer brings his crop to town this morning and gets his money before he goes back home. The cotton must sell on grade and, to grade it, a sample must be drawn from the bale. The writer has yet to see many bales as they roll from the gin stand that do not look neat as a pin. But when half a dozen prospective buyers whack through the cover and dig into the contents of the bale, who could expect it to retain its smooth complexion?

Cotton is not liquid. You can't pour some of it out a spout and then very nicely replace a cork. It is not bought by the wagon-load, so that you can dip down into it for a sample. You've got to tear it apart, and so long as John Farmer stands with his hand outstretched at the gin yard, that is where damage of the American bale will begin.

No; our problem is not net weight. It is not in the kind of bagging used. It is in our system of sampling. Solve that problem and you have solved all the rest. Then, and then only, will American bales flow to any port in as pretty a package as all the rest.

The most perplexing thing in all this program of better packages for cotton has been the criticism that has been leveled at jute. Why, we ought to thank our stars that the Lord made jute, even if He did plant it in India. Jute, and the men who handle the product, have done a splendid job in the business of cotton, and they deserve praise—not contempt. Note this carefully: Brazil has been complimented for her neat bale of cotton. Egypt has, too. We have said that we ought to do as well with our crops as these two nations do. And we ought. But both the Brazilian and the Egyptian crop are wrapped in jute. The difference is in their method of sampling, and there is where we might learn some lessons.

Let's quit this roaming all over the field and direct our energies toward the cause of all this bad packaging. So much talk about net weight and cotton bagging confuses the issue. We must find a different method of sampling. When that is done we'll have the kind of bale we want.

Democracy Defies Communism

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH IN THE HOUSE OF REPRESENTATIVES, APRIL 8, 1930

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech made by me on April 8, 1930, on the subject of Communism, which was responsible for bringing about the Fish Investigating Committee on Communism. I have received countless letters from all over the United States asking that I have this speech reprinted:

Mr. TILSON. Under the special order of the House the gentleman from New York [Mr. SIROVICH] is recognized for 60 minutes.

Mr. SIROVICH. Mr. Speaker, when we call the roll of all the great governments that have existed in ancient days, and let them march across the stage of time, we find three distinct forms of government that ruled the peoples of antiquity.

The first form is called an oligarchy. Here supreme power is restricted to a few who are self-appointed and self-annointed to look after the welfare of their peoples. Such a form of government was found among the ancient Assyrians, Babylonians, Egyptians, and Persians.

The second form of government, found in the Orient, is the patriarchal type, which is symbolized by the ancient Semitic tribes in Arabia as represented by the fathers of Israel, such as Abraham, Isaac, and Jacob.

The third form of government, hoary from remote antiquity, is represented by the despotic monarchy, which was found among the Chinese, Japanese, and the peoples of India.

These three forms of government—namely, the oligarchic, the despotic, and the patriarchic—lived, thrived, and flourished during their time, and inculcated religion as a part of the government of their day. Each of these forms, furthermore, is characterized by the fact that those who ruled absolutely controlled the religious as well as the political destinies of their subjects. Thus, we find in the early history of the world the union of church and state; spiritual and temporal powers united.

As the years rolled by, sovereign government moved from the Orient to the Occident. Civilization passed from the east to the west.

The dawn of Grecian culture manifests itself in an aristocratic government in its early period of existence. Within a few centuries the golden era of Grecian civilization comes to the fore. Pure democracy has its birth and inception. Solon, the lawgiver, was the founder of democracy, and not many centuries later the greater Periclean Age appears. Such eminent philosophers as Pythagoras, Socrates, Plato, and Aristotle gave their profound wisdom and their intellectual genius as a contribution to the world of yesterday, today, and tomorrow.

In Plato's republic the state is created for the benefit of the individual. The happiness of the individual is supreme. The one exists for the other.

To the south of the Athenian Republic was the great state of Sparta. Sparta was the first communistic government in the world. The individual meant nothing. Men and women were the pawns of the state. Children belonged to the state and not to their parents. And so in time the communistic cradle of Sparta, rocked by its founder and apostle, Lycurgus, crumbled, collapsed, and was consumed in the ashes of time.

Upon the distant horizon the Roman soldiers are marching. Each legion carries upon its flag the three Latin words "Civis Romanus sum" ("I am a Roman citizen"). Woe unto those nations or peoples that would destroy or defile the rights of Roman citizenship. The democracy of Julius Caesar lives and thrives. In militant fashion these Roman soldiers carried the culture and civilization of the Roman Republic to all the known corners of the world. Caesar is assassinated. Democracy falls with him. A benevolent monarchy under Caesar Augustus takes its place. Years pass, and we find a despotic monarchy again in the saddle. Nero fiddles while Rome is in flames.

The tyrant Caligula persecutes and oppresses the Roman citizenship. Militarism and autocracy reign supreme. Prisoners of foreign climes infiltrate all of Rome. Debauchery takes the place of decency and self-respect until in the year A. D. 476 the sun sets upon the civilization and glory of Rome and Rome is destroyed. [Applause.]

From the year A. D. 476 to 1454, when Gutenberg invented and perfected printing by movable type, this period of 1,000 years is known as the Dark Ages. This 1,000-year period witnessed the development of two forms of governmental evolution.

First, the great holy Roman Empire, under the spiritual and temporal protectorate and supervision of the Pope, spread its benevolent influence in preserving the education and culture of ancient times, and bequeathed them through the invention of printing and books to the culture and civilization of modern days.

Second, the feudal period, an economic, social, and political system under which petty lords, dukes, and barons controlled their form of government, and business, which was primarily agriculture. It was a period in which the peasants were the slaves of their overlords and paid them tribute for protection in their hour of need.

This system of governmental racketeering through the feudal lords was destroyed through the instrumentality of a German Catholic monk, whose name was Berthold Schwartz. He lived in the humble town of Pistola, Italy.

Through a mechanical contrivance which the monk called the pistol, naming it after the town in which he lived, he utilized gunpowder, which made the humblest peasant the equal of his most exalted duke, lord, or baron. The bullet in the hand of the serf could penetrate the armor of any overlord. Thus, gunpowder aided in leveling the duke to a parity with the agricultural serf.

Through printing, religious reformations, discovery, and exploration a new period is ushered into the civilization of mankind. This era is called the Renaissance. It is the rebirth and revival of knowledge, education, and culture. This era marks the beginning of the break between church and state and brought about religious differences which still exist throughout the world.

In my humble opinion, the most important, the most vital and outstanding characteristic of this era is the slow trend toward constitutional monarchy which developed in England.

The Anglo-Saxon government began when the barons of England realized that one strong government was to be preferred to many weak ones, and determinedly showed their sentiments at Runnymede in 1215, where they rebelled against the outrageous exactions of King John the First. They compelled King John to sign that great human, immortal document known as the Magna Carta, and since that day this human document has been the basis of English liberty. It marks the beginning of government by the people of England.

In 1295 King Edward the First called the first Parliament together. It was the first meeting of the House of Commons and the House of Lords. This was the beginning of a most important forward step in the democracy of government.

The English, therefore, were united under one strong ruler, and enjoyed a greater measure of participation in their own government long before any of the other peoples of Europe.

The ancient Republics of Athens and of Rome had government controlled only by the citizens of the city. Neither of them ever provided means by which the citizens in distant places could have a share in deciding national policies without making a journey in person to the home city.

This representative principle adopted by the English has made possible the formation of democratic governments covering a wide area, and set up in England the splendid and superb principle of no taxation without representation.

During the reign of Charles the First the House of Commons appealed to His Majesty with a charter of rights, challenging the King's contention to spend the public money without authorization of the House of Commons. This petition was originally introduced in the House of Burgesses in Virginia in 1624 and transmitted to the House of Commons as their petition of rights. Because of his despotism, Charles the First was beheaded.

Twoscore years afterward, during the reign of King William and Mary in 1689, there developed the great Bill of Rights, which is one of the most important documents in the English constitution. This, too, marked a great step in the triumphant march of democracy.

A comparison of the Bill of Rights with the first 10 amendments to the United States Constitution will reveal many interesting similarities.

The cabinet system of government was also inaugurated about this time. The custom of choosing ministers from the party having a majority in the House of Commons grew stronger and more powerful every day. The Prime Minister was invariably the leader of the party in power.

From that time to the present day the British King never vetoes any law. The House of Lords cannot permanently prevent a measure from becoming a law.

Thus the modern cabinet system enables the voters to control both the Parliament that makes the laws and the agencies that carry out the law.

And so we see in a period of five or six centuries the evolution, development, and perfection of constitutional government in England, with their tremendous influence in continental Europe, especially in Germany and France.

During the last quarter of the eighteenth century there took place three great revolutions which transformed every aspect of society and made possible the modern world in which we now live.

The first movement was the intellectual revolution, which gave birth to new points of view in literature, science, art, and philosophy.

In the second category we find the American and the French Revolutions, which proclaimed the democratic principles of government.

The third was the industrial revolution in England, which inaugurated our present economic and capitalistic life.

The intellectual revolution was responsible for the advanced thought of that period. The European philosophers discussed the social, political, and economic conditions of their day in a way unparalleled for its virulence, its audacity, and its uncompromising radicalism.

Voltaire excoriated the church. Montesquieu attacked monarchy. Rousseau pilloried the old political system of the king and his state. He substituted the doctrine of popular democracy for that of the divine right of kings.

Political economy was founded by Turgot in France and by Adam Smith in England. These writers made the people think in terms of their environment from an economic point of view, and taught men to identify progress and the material well-being of the individual.

In the past progress had meant only religious, moral, and intellectual enlightenment.

The great industrial revolution started in England about the same time. This revolution was a silent one. No bullets and no shots were fired. It marked the greatest of all revolutions in the history of the world. It brought medieval civilization to an end. It characterized the beginning of our present state of society.

This revolution was brought about by several extraordinary inventions made by Englishmen, Americans, Germans, and Frenchmen.

These geniuses, through the fertility of their imaginations, subjugated the forces of Nature to serve the will of man. Thus was ushered in the powerful influence of the industrial revolution.

Behold Watt's steam engine, Stevenson's locomotive, Fulton's steamboat, Whitney's cotton-gin, Morse and Bell in telegraph and telephone. These inventions created revolutions in factories, revolutions in transportation, revolutions in communication, and last, but not least, revolutions in manufacture and industry.

Then came the greatest revolution of all. It was the revolution against the despotism of monarchy and all that it stands for.

It was about this time that our colonial forefathers were being persecuted and oppressed. Men like Benjamin Franklin, Thomas Jefferson, Thomas Paine, John Adams, John Hancock, James Madison, James Monroe, Patrick Henry, George Washington, sat in their respective homes, meditating, pondering, and deliberating what free men should do when tyrants persecute and deny to them the rights, privileges, and prerogatives of justice, in the government of their homes.

There in panoramic fashion, as they sat in the libraries of their humble homes, passed before them all the various forms of government that I have enumerated, that existed in ancient, medieval, and in their own times.

Thus inspired by the rights of freemen they assembled in convention and proclaimed before God and man that they challenged the right of any king to rule by divine right. [Applause.] Then and there they enunciated for the first time the philosophy of democracy—that all governments derive their just powers from the consent of the governed. Within a few years they threw off the yoke of King George III, and established a government by the people, founded upon the firm foundation of the Declaration of Independence and the Constitution of the United States. They pledged everything they held near and dear in life; their means, their property, their homes, yea, even their lives, that such a government should and must be established for the benefit of mankind. [Applause.]

These documents boldly proclaimed the philosophy that all men are free and remain equal in rights; that laws and government are expressions of popular will; that the people instead of the king are sovereign. It guaranteed equal opportunity to all and special privileges to none.

It protected the individual, his home, his property, and his life by granting him the freedom of speech, freedom of the press, and freedom of religious worship. It placed democracy in his home, his hearth, his fireside. In schoolhouses, through education, they said to the world: The child is not the mere creature of the State; those who nurture him and direct his destiny have the right coupled with the high duty to recognize and prepare him for additional obligations. Thus it granted to all parents the right to send their children into the temples of the schoolhouse, there to carry along with them the influence and antecedents of their home, and to back all these privileges with the power and prestige of the Government to see that all children might impartially drink deeply from the fountain of education. [Applause.]

It secured democracy in government by having three distinct branches, namely, the executive, the legislative, and the judicial, each independent of the other and all coordinated together for the benefit of all of the people of our Nation.

To the individual it granted every incentive in life to make him climb the ladder of fame and fortune, in the protection of the property rights that he has earned by the sweat of his brow. And above all inculcated into the hearts, into the minds, and into the souls of every freeman of our Republic the belief that in this land of equal opportunity his children might have the privilege of holding the humblest as well as the greatest office at the gift and disposal of the American people, irrespective of class, creed, or color.

Such, Mr. Speaker, ladies and gentlemen of the House, are the ideals, the principles, the philosophy of democracy in the republican form of government that our forefathers granted to all of our citizens in 1789, when George Washington assumed the first Presidency of our great Republic. [Applause.]

The close of the eighteenth and the opening of the nineteenth centuries witnessed manifold changes wrought by the catyclysmic influences of the political, intellectual, and industrial revolutions. Most immediate was the combustion created by the fire of democracy, whose sparks veritably flew eastward across the Atlantic from America to France. Mirabeau, Robespierre, Marat, Danton, Turgot, and Napoleon, these French leaders changed the political, economic, and geographic complexion of all Europe. Crowns have rested most uneasily on the heads of despots and tyrants since the American and French Revolutions. This period ushered in not only new eras in the political and industrial life of the nations of the world but succeeded after many centuries of tireless effort in democratizing all education. Prior to this epoch of "revolution" education was the sole possession of a limited, aristrocratic class, trained for the most part in classical literature. Labor, on the other hand, was found on the farm—tilling the soil. Agriculture was still in a primitive state. The invention of machinery moved the farmer from agriculture to the factory of industry—from the farm in the country to the factory in the city. Thus came the rise of the factory system, with the concomitant movement of millions of men and women from rural to urban communities. This movement revolutionized the education of the masses of mankind seeking equal opportunities of education and culture for their children. Thus arose democracy in education.

Napoleon Bonaparte passed quickly from Waterloo to a lonely exile in St. Helena. A grasping world lasped once more into black reaction. The reign of the despots, however, was destined to be short-lived. Prince Metternich, the Prime Minister of Austria, representing the great monarchies of Austria, Germany, Russia, and Spain, attempted to make the world safe for absolute monarchy through his conception of the Holy Alliance.

The purpose of this alliance was to check the growth of democracy and give back the republics of South America to Spain, from whom they had revolted, as well as to establish a kingdom in Mexico. Metternich was checkmated with remarkable celerity by our own great President James Monroe and his memorable Monroe Doctrine, which said to the monarchs of this Holy Alliance, "So far canst thou go, but no farther"—that

an attempt to further monarchy in South or North America would be considered an overt act, yea, a declaration of war. That move of Monroe challenged the progress of monarchy. A century later the immortal Woodrow Wilson was to reecho Monroe's sentiments in his enunciating the aim of the Allies in the World War to "make the world safe for democracy." That philosophic sentiment of our entrance into the World War will live on through the ages as the challenge of democracy to monarchy to survive and to rule the destinies of the world. [Applause.] Armistice Day, 1918, witnessed the crumbling of three great despotisms, Russia, Germany, and Austria. As a consequence of the great conflagration that engulfed the world in the second decade of the twentieth century the houses of Hohenzollern, Hapsburg, and Romanoff were reduced to ashes and dust. [Applause.] Monarchy was destroyed; democracy triumphed. In monarchies' places stood the new Republics of Poland, Czechoslovakia, Austria, Germany, and Russia. These Republics were warmly welcomed into the society of nations by President Wilson and their sovereignty approved by the Congress of the United States, while the citizens of our Republic granted them material aid and comfort in their great hour of need. [Applause.]

Let us pause at this juncture to examine briefly the growth and development of the most noteworthy product of the industrial revolution, namely, the economic system of capitalism. Capitalism is purely an individualistic view of the economic categories of production, distribution, exchange, and consumption of wealth, just as political democracy guarantees the complete separation of the legislative, executive, and judicial functions of the state.

The philosophy of capitalism insures free, economic competition among all human beings and equal economic opportunities regardless of heredity, race, or religion. Theoretically it is the finest economic system ever devised by the mind of man. It judges all human beings wholly impersonally and, aided by political democracy, safeguards for all men and women the fruits of their economic toil. The keystone of the arch of the capitalistic system is composed of the trilogy of private property, individual labor, and human liberty in all its aspects.

Of all the great nations of Europe, Russia was the only one prior to the World War which had been almost wholly untouched by the industrial revolution and had not been subjected to the economic benefits of capitalism. Under the czars, the great Russian Empire was politically a despotic monarchy and economically a feudal relic of the Middle Ages. The Bolsheviks, or Communists, therefore, found fertile soil for their economic and political doctrines when they overthrew the Kerensky government in November of 1917 and established the Union of Socialist Soviet Republics under the leadership of Nikolai Lenin and Leon Trotsky. With one fell swoop they overthrew the system of capitalism and substituted policies which had frequently been contemplated in theory by several of the great intellects of the world, but which had never before been subjected to practical experimentation in a large country.

What is this great Russian experiment? Just as capitalism and democracy rest on a trilogy of private property, individual labor, and human liberty, so communism, their direct antithesis, also rests on a trilogy—first, all land, property, and capital belong to the state.

Second, all labor is employed and directed by the state at rates of compensation rigidly fixed by the state.

Third, human liberty in all its aspects, such as freedom of the press, freedom of lawful assemblage, freedom of speech, and freedom of religion, are expressly and unreservedly denied to all individuals and are the exclusive privileges of the state. Thus, for the first time since the feudal system swayed the world, a Spartan state has arisen which fearlessly and cynically challenges the rule of democracy and capitalism.

Mr. Speaker, communism advocates a rigid economy in a rigid state, for it presupposes a lazy and indolent people from whom the state can exact work only by means of purges, threats, and imprisonment. Russia under the czars had become a second sleeping China, passive, supine, and indifferent. Hence when the crisis came the land fell a relatively easy prey to communism, which put every last Russian to work. In the western countries man has been trained to be industrious and energetic, and on that account needs no lash of the whip to compel him to work. In the west there had developed a joy in work; in Russia under the czars there had developed a joy in laziness. Hence in this one sense, at least, it may be said that communism has not been altogether an unmixed disaster for Russia, as it has forced the Russians to work and to develop their country.

Ladies and gentlemen of the House, this despotic, autocratic oligarchy, under the name of communism, constitutes to my way of thinking the first serious challenge to the dominant ideals of democracy which have heretofore been triumphant in the western world.

Communism is fundamentally a new religion. It is a great state and secular denomination. It substitutes the attributes, the virtues, and qualities of God to the state itself. The state instead of God is supreme. Through the system of starvation of any minister, priest, or rabbi who does not conform to their religious policies, they exile them to Siberia and ruthlessly suppress and destroy every other form of worship of God. Communism believes in the here instead of the hereafter. It relegates the belief in a divine Providence to the realm of fiction and superstition.

This new religion has Karl Marx as god of the state. Its Jesus of Nazareth is Lenin. Its Saint Peter is Stalin. Its Saint Paul is Trotsky. Its ideals in philosophy, economics, and government is its new creed. In the union of the church and state as one it has perfected a new bible. In this bible it excoriates democracy. It pillories capitalism. It weeps over an industrial system that exploits labor. In clarion tones it cries aloud for world revolution.

Overproduction one year and underproduction the next year dislocate the markets of the world and bring in their wake chaos, wastefulness, panics, unemployment, war, and, finally, revolt. Communism challenges the institutions known as the family, religion, property, marriage—yes, even patriotism. It seeks their destruction. The communistic bible of the state is a bitter indictment against the present social order.

It is a philosophy of life. It is a program of action. It is a promise of a future goal. It preaches a new declaration of authority. The dictatorship of the proletariat—a dictatorship that will forever abolish poverty, misery, hunger, and want. It will inaugurate the golden age of a happy humanity that will bring into realization true Christianity founded upon the ideal Utopia, from each according to his capacity, to each according to his need, thus bringing about through communism the supremacy of the state and the brotherhood of man. This is the creed. This is the bible. This is the philosophy. This is the religion of communism.

But, lofty as are these ideals and splendid as are these dreams of an Utopia, there arise occasions in the life of an individual, as well as in that of a nation, when the end does not justify the means.

In Russia it is the bullet; in the United States it is the ballot [Applause.] But granting that these Utopian ideals could be realized by the ballot, I am still opposed to the principles of communism. Why? Because deep within each individual is ingrained the cry of the soul for liberty, of the heart for freedom, and of the mind for self-expression. [Applause.] Rather than be a bird in a gilded cage surrounded by all the material comforts that make for happiness, I, for one, would prefer the liberty of thought, conscience, and action. [Applause.]

Communism deprives an individual of the incentive to live. It robs him of individual hope, faith, and ambition. It makes him a mechanical automaton or robot in the realm of life. The herd selfishness is substituted for the individual happiness.

Communism says to you and me: "Sell me that birthright which you have attained after so many centuries of struggle. Give up your liberty. Give up your freedom. Give up your democracy. Give up your aspirations to immortality; your inspirations of divinity. Give up all these cherished traditions. In return we will afford you a modicum of comfort and material possessions."

But, Mr. Speaker, ladies and gentlemen, my answer to them is in the immortal words of that great Virginian, the Old Dominion's illustrious patriot, Patrick Henry, whose clarion voice electrified the House of Burgesses when he said: "Give me liberty or give me death." [Applause.]

Communism scoffs at our democratic parliamentary form of government. It ignores the individual entirely. It is frankly skeptical of either his willingness or ability to govern himself. The state is all important in politics as it is in religion.

Economically, to complete the final plans of the communistic triology, the Soviet state is perhaps on its strongest ground. It is, therefore, the most dangerous as far as our form of civilization and democracy is concerned. In Russia the state controls all commerce, whether industrial or agricultural in character. Private enterprise is denied any right to exist. Mindful of the fact that under the Czars the industrial revolution had not reached Russia, the Soviet leaders are attempting an ambitious scheme. To me it is the most enterprising plan in the entire history of economic life.

It will attempt to mechanize and socialize Russia both in urban and rural life in a period of 5 years. It will organize industry and agriculture so powerfully as an armed unit in 5 years as to challenge any nation in times of peace or in times of war. The torch of communism must undermine all nations of the world. It must spread the gospel of discord, dissension, strife, and strike to all the workers of the world. It must plan and plot rebellion and revolution everywhere.

To meet the threat of a proletarian revolution under Communist auspices, a counter revolution, in the form of fascism, has developed during the past decade. Fascism is the middle classes' answer to communism, but in practice it has proved to be as despotic, autocratic, and intolerant of the rights of men as is the dark force of which it complains so bitterly. By force and fraud Italian fascism has suppressed freedom of speech, press, and assembly; it has demolished all opposition parties; it has abolished all labor unions and has rigidly regimented the whole of Italian economic life. In the end, Fascist despotism has become every bit as vicious, evil, and mischievous as Communist dictatorship.

Both communism and fascism are imperialistic in their motives, for each realizes that so long as its activity is confined to a single major state, so long does its very future remain uncertain. Hence, each of them is forever dispatching missionaries to every continent on earth in search of new worlds to conquer for its particular brand of ideology. In the democratic nations, and in the United States especially, these missionaries are particularly active. The coming decade will witness a bitter propaganda war waged by these sinister forces in an effort to make the democratic nations safe for their special "isms."

Fascism is the exploitation of labor by capital. Communism is the exploitation of capital by labor. Democracy strives to establish a harmony and balance between capital and labor, to the end that the greatest good be brought to the greatest number. Hence, mark my prediction: In the bitter end communism and fascism both will be destroyed, while democracy will enjoy a glorious triumph. [Applause.]

It took capitalistic and democratic systems 150 years to bring the industrial revolution to fruition—through individual effort. Communism expects to accomplish the same purpose in 5 years through state effort, through conscripting capital and mass labor to accomplish the result and conquer the world to its ideal.

Thus we behold Soviet Russia challenging the western world on all three battle fronts—religious, political, and economic. How shall we of the west meet this octopus of the east?

Externally, we must guard ourselves against the infiltration of Soviet propaganda. Their paid propagandists must be deported. [Applause.] However, as long as Soviet Russia is content to conduct its experiment within its own borders and does not attempt to proselytize the rest of the world, its sovereignty should be respected by other nations, including our own.

Internally, we must apply a medical curative. We should immunize ourselves, so that even if the contagious germs of communistic bacteria do infect our body politic we shall be able to resist them and throw them off. [Applause.] I do not believe that the imprisonment of those who advocate Communist doctrine in this country would be beneficial. You may imprison an individual but you cannot effectively imprison an ideal. You cannot chain a political concept. You cannot shackle or enslave an economic philosophy.

We must set our own house in order, and treat the causes rather than the symptoms or effects of economic ills. To meet the dangers of communistic propaganda we must improve the temple of democracy in the United States. Four great constructive economic changes must be wrought in our country.

Firstly, the abolition of child labor. Children under 16 years of age should never be compelled through the force of economic circumstances to work in the mill, the mine, the loom, or the factory. Their frail bodies belong to the schoolhouse [applause], there to receive the education and the culture that will develop a sound mind in a healthy body. [Applause.] Capital has no right to offer their humble bodies in the quarries of industry to compete with labor that justly and rightfully belongs to the older men. [Applause.]

Secondly, the scientific treatment of the unemployment condition. In a land of plenty and prosperity, 5,000,000 people without employment is a tragedy. It is a sad commentary upon the civilization of our day that men and women with families and children dependent upon them, willing to work, should be unable to find employment. Unemployment brings about a subnormal standard of living, untold anxiety, bitter discouragement, and disappointment; and unless corrected leads to poverty, penury, and pauperism.

Labor is the producer of capital. It should, therefore, be entitled to a fair share of the distribution of the wealth it creates. With progress that democracy constantly advocates, perhaps the day is not far distant when unemployment insurance, workingmen's compensation, collective bargaining, minimum wages, and maximum hours will provide the necessary means to provide for the worker when unemployment knocks upon his door. Prosperity by Presidential proclamation is a myth. Prosperity through the scientific solution of unemployment can be made a realization. [Applause.]

Thirdly, the establishment of Nation-wide old-age pensions. Modern society pensions, in the name of patriotism, the soldier who bares his breast to shot and shell to defend his nation's honor upon the field of battle in times of war. Why not pension, in the name of humanity, the old fathers and mothers who in old age find themselves bereft of support and have to join the last great pilgrimage whose caravan is sadly marching over the hill to the poorhouse and almshouse? If patriotism inspires us to pension the soldier, how much more patriotic is it to pension the old fathers and mothers who have given up their lives upon the industrial field of peace and honor to make our Republic the greatest in all the world. [Applause.]

Fourthly, and most important, we must counteract the effects of mergers, concentrations, and combinations of big business which are threatening to exterminate the middle class, the backbone of our individualistic, capitalistic, and democratic system, with frightful celerity. The great Governor of New York Franklin D. Roosevelt last Fourth of July in an address declared the mergers of big business are creating a system of economic feudalism in which all property will be in a few hands and the rest of us will be economic serfs. [Applause.]

Such a view is borne out by the trend of recent events. The mergers of big business have been so great as to veritably beggar description. They create uneasiness and discontent. They are false to the fundamental philosophy of economic capitalism. [Applause.] They tend inevitably to concentrate the separate functions of the production, distribution, exchange, and consumption of wealth in a few hands and usurp all those powers by completely destroying all competition and reducing the middle class to penury and want. [Applause.] Paradoxical as it may seem, the best friends of the Communists in this country are the promoters of these giant mergers.

They are preparing fertile soil for Soviet propaganda. They are weakening our national resistance in the inevitable conflict that will have to come between communism and sovietism on one side and political democracy, capitalism, and individual liberty on the other.

Mr. Speaker, ladies, and gentlemen, before we make the world safe for democracy let us make the United States safe for democracy. Lest we forget, let us always remember that monarchies have been destroyed by poverty, republics through wealth, and that communism will be destroyed by democracy, because it denies to every human being the inalienable right to the pursuit of life, liberty, and happiness by denying to its people freedom of speech, freedom of assembly, freedom of the press, and above all, freedom to worship God in conformity with a man's own conscience. [Applause.]

Mr. Speaker, I shall be glad to yield to any of the Members who might like to ask questions.

Mr. WAINWRIGHT. Will the gentleman yield?

Mr. SIROVICH. I will be glad to yield to the gentleman.

Mr. WAINWRIGHT. I thought perhaps the gentleman from New York [Mr. SIROVICH] might refer to the fact that the Legislature of the State of New York has just passed an old-age pension act.

Mr. SIROVICH. I am proud to inform the distinguished gentleman from New York [Mr. Wainwright] that a speech that I made 2 years ago on the floor of the House was quite helpful in passing that old-age pension law, that has since been adopted by 9 or 10 States of the Union and by 4 more throughout our Republic in the next year. [Applause.]

I would like to see the Rules Committee and the Labor Committee report out the bill that I have introduced providing for old-age pensions, which will help this great Republic do what all of the other nations of the world have done.

For the benefit of you ladies and gentlemen, let me tell you that every civilized nation of the world has already adopted the principle of old-age pensions with the exception of China, India, and the United States, and I am waging this battle to see the United States leave the company of China and India before they surpass us in that field. [Applause.]

Mr. LOZIER. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Missouri.

Mr. LOZIER. Much has been said in the last year or two about the English dole system. I understand that practically 60 or 70 percent of all the money paid out in England in the form of doles represents funds or relief which has been purchased by a system of workmen's insurance and does not represent a bounty or gift from the Government.

Has the gentleman taken into consideration or given any considerable thought to the question as to how far a system of workmen's insurance would assist in alleviating the conditions to which the gentleman has referred with reference to unemployment?

Mr. SIROVICH. I would be pleased to answer the question of the distinguished gentleman from Missouri [Mr. Lozier]. Twenty-eight governments of the world, Mr. Speaker and ladies and gentlemen, have adopted the principle of contributory compulsory old-age pensions. That means individual contributions of from 3 to 5 percent of the salary every week by the employee, the employer contributing an equal amount, and the state a third amount. This compulsory contributory form of old-age pension was put into operation first by Bismarck in 1881 in order to show the great social democracies of the world that Germany was willing to help its working people through the instrumentality of the state. In 1909 that great Englishman, Lord Asquith, introduced the principle in England, and it was introduced in 1912 in France. So that Germany today takes care of 20,000,000 of its working people, England 16,000,000; and France 7,500,000, who, under the influence of old-age pensions, workmen's compensation, employers' liability, social insurance, sickness insurance, and unemployment insurance, receive the benefit that the gentleman from Missouri has spoken of. There are 10 governments of the world who have what we call the noncontributory form of old-age pensions, which is a straight pension system. When a man arrives at the age of 65, irrespective of contribution to funds, he is pensioned. Such forms of pension are found in Austria, Canada, New Zealand, and Denmark. Two countries that have the voluntary-saving plan are Japan and Spain, in which the workman has permission to take off a certain amount of his money every week, and the government applies the same amount, and when the man arrives at the age of 65 that is given to him yearly as a pension, and he is looked after during sickness.

So all the governments of the world have provided for some form of old-age dependency, with the exception of China, India, and the United States.

Mr. JONES of Texas. Will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. JONES of Texas. I am very much interested in the gentleman's discussion and appreciate his investigation in the different nations that have tried the contributory method of pensions to which the gentleman has referred. Has any plan been devised to take care of the agricultural sections, for instance, which do not have a pay roll or provision for such contribution? I am asking that historically. I would like to know how that is taken care of.

Mr. SIROVICH. Every workman—and that includes agriculturists—is included in the pension system.

Mr. JONES of Texas. But the farmers do not have a regular form of income. I am not asking this for the purpose of embarrassing the gentleman, but I am wondering if there is provision made to take care of that class of workers.

Mr. SIROVICH. Every individual who works at physical labor or mental labor, irrespective of where he works, is provided for in this old-age pension.

Mr. JONES of Texas. But I was speaking of the historic connection, where the gentleman from New York said there were certain countries in which old-age pensions were permitted, where the worker contributed part and the state contributed part.

Mr. SIROVICH. They contribute it through the medium of taxation. That is how the agricultural class takes care of it.

Mr. MOORE of Virginia. Will the gentleman yield?

Mr. SIROVICH. I yield gladly.

Mr. MOORE of Virginia. I would not inject myself into the speech of the gentleman except for his fine allusion to the history of Virginia. I would like to ask the gentleman whether he believes that the effort to eliminate religion from the life of the people of Russia will be successful, considering the failure of any such effort that has ever been made in any other country?

Mr. SIROVICH. My concept is that there never has been a war in any nation of the world in which that nation tried to destroy religion but that in the end the nation was ultimately destroyed itself.

In the French Revolution, during the triumvirate of Robespierre, Marat, and Mirabeau, they did exactly as Russia is doing at the present time. They placed upon the pedestal of the Lord Almighty the goddess of reason. So in time the goddess of reason crumbled. I am sure the distinguished and lovable Chaplain of the House, Rev. James Shera Montgomery, who sits before me, will agree with me that when reason ends, there is where faith begins, and that is why religion can never be destroyed. [Applause.]

Mr. MOORE of Virginia. The gentleman, of course, remembers that not only did the French Revolutionists make the goddess of reason the only deity they would worship, but that they abolished Sunday and any day of rest and closed the churches. Nevertheless, after awhile the antireligious adventure upon which they had entered proved to be an absolute failure.

Mr. SIROVICH. Let me answer the distinguished gentleman from Virginia. That in order to destroy religion in Russia, the Soviet Government has perfected the continuous working week. This adoption of a continuous working week means the elimination of Sunday as a general holiday, thereby taking away from the remnant of the church in the Soviet Union one of its last and strongest footholds.

By doing away with Sunday as a general religious holy day, the churches find themselves deprived of those who would want to worship God in conformity with their traditions.

A minister is not given the permission to vote in the Soviet Government. He is not permitted to raise any funds. The Soviets do not permit parents to give religious education to their children until they arrive at the age of 18. So, in conformity with the philosophy of Richelieu, who was the Prime Minister of Louis the Fourteenth, the Soviets say in Russia, "Give me the children up to the years of 18, when we can fertilize their minds with our dogmas and teachings, and saturate their hearts and souls with our philosophy and our atheism, and we do not care who makes the laws." They are starving the ministers, priests, and rabbis. If a minister should arise in a pulpit and give vent to a sentiment which was in conformity with the teachings of Christ, he would be sent to Siberia or be silently executed.

Mr. O'CONNOR of New York. Will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. O'CONNOR of New York. I thought when the gentleman started to talk, he was going to devote more time to the religious situation in Russia. I was interested to hear whether or not he thought the philosophy of communism was any form of religion. Most people call it atheism. I was interested also in following that up to see if the gentleman had any reason for the alleged growth of atheism in this country. Many people say that a big majority of those who come out of our colleges today are atheists or agnostics. Would the gentleman attribute that to the wave of communism that is transporting itself from Russia to America?

Mr. SIROVICH. Mr. Speaker, ladies, and gentlemen, when our Government was founded we had as many atheists then as we have today. I think the greatest atheist of his time was Thomas Paine, one of the men who helped to frame the Declaration of Independence. It was men of his stamp who kept the word "God" out of the Constitution of the United States, and the reason, I understand, that God was kept out at that time was the thought that if King George III ruled by the divine right of God and persecuted our Colonial forbears they did not care to have that God in the Constitution of the United States. However, in this great democracy the most beautiful thing I love about it is that when a man, be he Catholic, Protestant, or Jew, goes into his temple the Government of the United States puts all the power of the Government behind him in order to protect him in his right to worship God in conformity with the dictates of his conscience. [Applause.] And what is even more beautiful, we protect the atheist and agnostic in this country just as well. That is the beauty of democracy. On the contrary, in Russia the state is God; the state is supreme; if you do anything against the state it is not only blasphemy but it is treason.

Mr. DICKSTEIN. Will the gentleman yield?

Mr. SIROVICH. Yes.

Mr. DICKSTEIN. Is it not a fact that they want to make Russia, under the Soviet Government, a godless country?

Mr. SIROVICH. The question which the gentleman from New York asks me is whether they want to make it a godless country. They have today almost 3,000,000 men and women who under the philosophy of atheism are preaching their gospel of economic, philosophic, and religious views in the schools and all over the world for the purpose of trying to break down that ingrained tradition which the centuries of religious inculcation has brought into the heart and soul of the Russian. The Communists laugh at the devout peasant; they mock him; they jeer at him, believing that ridicule will destroy his faith in God. Through a process of starvation and denial of the right to vote on the part of a minister as a citizen of the Soviet Government, they are trying to break down his morale in the faith and very existence of God. The Communists have no hesitancy in saying through those who preach their gospel that if God wants to preserve the various religious denominations that are in existence in Russia let Him do so, but the Communists will grant Him no assistance. Let the ministers and priests stand upon their own faith, without any outside help from the Communists.

So if the civilized nations of the world permit the Government of Russia to interfere with the right to freedom of worship, which is the inherent privilege of men upon this earth, then in time religion in Russia may one day disappear. But I have faith in God! I have faith in reason. I am wholeheartedly persuaded that the pure in heart and the humble in spirit will find their way to Him in Russia in spite of all ridicule and oppression. In the end atheism cannot prevail in the face of true religion.

Mr. Speaker, ladies, and gentlemen, czarism is autocracy from above pushing downward, while communism is autocracy from below pushing upward, and the result will be that the people in between them will be crushed. [Applause.]

Mr. O'CONNOR of New York. Will the gentleman yield again?

Mr. SIROVICH. I yield.

Mr. O'CONNOR of New York. Does the gentleman spell out of this philosophy of communism any form of religion at all?

Mr. SIROVICH. I stated that during the development of my speech. Communism is a state religion. The state is substituted for God. The state is supreme. No other religion can take its place.

Mr. O'CONNOR of New York. The reason I ask the question is this: Of course, I feel as deeply and as keenly about what is going on in Russia as anybody, but, historically, other nations have forbidden certain religions.

There stands out in everybody's mind what Turkey always did with respect to the Christian religion, and only the other day I noticed that China refused to permit the exhibition of the moving picture Ben Hur on the ground it portrays Christianity, which, to their mind, is a "superstition." If Russia is abolishing all religions and if there is nothing like religion there, she stands in a peculiar position in the world. If she is only seeking to abolish Christianity, some other nations have done that heretofore and are doing it today.

Mr. SIROVICH. Mr. Speaker, my answer to my distinguished colleague from New York is this: You know that you can get to Washington from any direction. You can come from the north, from the south, or from the west, and you can even come from the east to Washington. So when our forefathers founded our Republic they figuratively or metaphorically said that God was Washington. Many religions have different roads that ultimately lead to God, as different roads lead to Washington.

One road that goes into God's bosom is called the Protestant road, a second road is the Catholic road, a third is the Jewish road, a fourth is the Confucian road, and a fifth is the Mohammedan road. I do not care what road a man takes so long as the road leads directly to God and respects His omnipotent powers. [Applause.] True liberty consists in respecting the rights and freedom of every man's worship, be he theist or atheist. [Aplpause.]

Mr. Speaker, I want to thank the House for the cordial attention they have given me and the gracious mannner in which my remarks have been received by the membership of this historic forum. [Applause.]

Increased Agricultural Imports and Dwindling Exports Are Crushing the American Farmer

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. REED of New York. Mr. Speaker, the reciprocal-trade program of the Roosevelt administration, intended to increase our foreign trade, is playing havoc with American agriculture. It has failed to stimulate foreign markets for our farm products, but it has succeeded in opening our domestic market to an influx of the products of cheap farm labor of foreign countries. Our exports of agricultural products are declining while imports are increasing.

For the 5 months ending May 1939 our agricultural exports were valued at $237,998,000 as compared with $362,936,000 for the same period in 1938, a decrease of $124,938,000, or 34.2 percent, in exports for the 5 months of 1939. While our agricultural imports for the 5 months ended May 1939 amounted to $431,735,000, compared with $404,120,000 for the same period in 1938, an increase of $27,615,000, or 6.8 percent, in imports for the 5 months of 1939.

Thus, our trade balance (excess of imports over exports) jumped from $41,184,000 in the 5 months of 1938 to $193,737,000 in the 5 months of 1939; an increase of $152,553,000, or over 300 percent in favor of farmers of foreign countries.

Our total trade (exports and imports) of agricultural products amounted to $767,056,000 in the 5 months of 1938, and $669,733,000 in the 5 months of 1939; a decrease of $97,323,000, or over 10 percent.

The above figures indicate the general position today of our international trade in agricultural products, while the tables below give details of our import and export items.

No wonder our farmers continue to be dissatisfied with the Hull reciprocal-trade program while foreign markets for their products are fast disappearing. For instance, during the first 5 months of 1939 decreases in our exports of the following farm products were as follows: Corn, $45,839,000; wheat, $19,406,000; cotton, $47,141,000; tobacco, $9,719,000; other agricultural products, $2,833,000; a total of $124,938,000, or 34.2 percent decrease for the first 5 months of 1939 in agricultural exports.

UNITED STATES AGRICULTURAL EXPORTS AND IMPORTS, 5 MONTHS ENDED MAY 1938 AND 1939

TABLE 1.—*Exports of agricultural products*

Export items	5 months ended May—		Increase (+) or decrease (−)
	1938	1939	
Total agricultural exports	$362,936,000	$237,998,000	−$124,938,000
Cotton, unmanufactured	109,448,000	62,307,000	−47,141,000
Tobacco, unmanufactured	46,267,000	36,548,000	−9,719,000
Foodstuffs (total)	196,293,000	129,283,000	−67,010,000
Wheat	44,636,000	25,230,000	−19,406,000
Corn	56,050,000	10,211,000	−45,839,000
Wheat flour	10,613,000	9,843,000	−770,000
Oil cake and meal	4,082,000	3,719,000	−363,000
Vegetables and preparations	5,730,000	6,521,000	+791,000
Fruits:			
Fresh	17,057,000	17,240,000	+183,000
Dried and evaporated	7,312,000	7,286,000	−26,000
Canned	8,088,000	8,483,000	+395,000
Meat products	11,402,000	12,672,000	+1,270,000
Lard, including neutral	8,277,000	8,863,000	+586,000
Dairy products (except fresh milk)	2,334,000	2,587,000	+253,000
Other foodstuffs	20,712,000	16,628,000	−4,084,000
Other agricultural products	10,928,000	9,860,000	−1,068,000

TABLE 2.—*Imports of agricultural products*

Import items	Unit	5 months ended May—		Increase (+) or decrease (−)
		1938	1939	
Cattle (except for breeding)	Head	226,000	461,000	+235,000
Meat products (total)	Pound	61,472,000	65,112,000	+3,640,000
Canned beef	Pound	30,852,000	33,117,000	+2,265,000
Hams, shoulders, and bacon	Pound	19,327,000	20,701,000	+1,374,000
Hides and skins (total)	Pound	51,756,000	142,706,000	+90,950,000
Cattle hides	Pound	15,964,000	60,262,000	+44,298,000
Other (except fur skins)	Pound	35,792,000	82,444,000	+46,652,000
Silver fox fur skins	Number	8,776	33,205	+24,429
Wool and mohair	Pound	19,571,000	102,035,000	+82,464,000
Flax and hemp, unmanufactured	Ton	1,170	3,027	+1,857
Flaxseed	Bushel	6,619,000	8,962,000	+2,343,000
Tobacco, unmanufactured	Pound	26,844,000	30,452,000	+3,608,000
Cotton, unmanufactured	Pound	43,300,000	41,778,000	−1,522,000
Wheat, for milling and export	Bushel	136,000	4,458,000	+4,322,000
Wheat, byproduct feeds	Ton	5,565	146,959	+141,394
Hay	Ton	10,780	21,189	+10,409
Cottonseed cake and meal	Pound	1,957,000	6,378,000	+4,421,000
Cottonseed oil	Pound	20,680,000	23,519,000	+2,839,000
Peanut oil	Pound	354,000	2,846,000	+2,492,000
Oats	Bushel	4,977	753,255	+748,278
Cheese	Pound	20,728,000	21,501,000	+773,000
Eggs in shell	Dozen	88,304	149,424	+61,120
Molasses, inedible	Gallon	82,869,000	82,407,000	−462,000
Maple sugar and sirup	Pound	649,000	6,176,000	+5,527,000
Apples, fresh	Bushel	9	20,734	+20,725
Pineapples, canned	Pound	2,776,000	20,134,000	+17,358,000
Tomatoes, canned	Pound	20,072,000	28,801,000	+8,729,000
Potatoes, white or Irish	Pound	29,323,000	44,448,000	+15,125,000
Potato starch	Pound	2,162,000	4,200,000	+2,038,000
Tapioca	Pound	99,795,000	164,467,000	+64,672,000
Cashew nuts	Pound	8,678,000	11,735,000	+3,057,000

The Man Who Believes We Can

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

AN ARTICLE FROM THE COUNTRY GENTLEMAN

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Country Gentleman on the distinguished minority leader the gentleman from Massachusetts [JOSEPH W. MARTIN, JR.], and entitled "The Man Who Believes We Can."

[From the Country Gentleman for August 1, 1939]

THE MAN WHO BELIEVES WE CAN

(By E. H. Taylor)

"We must get back the winning spirit in this country. When we do we will find this again a land of hope, adventure, and enterprise. I know that we can pull out of the bog we are in now. There are plenty of opportunities left in America if we will work together and apply ourselves to the job."

These heartening words came with particular force from the man who uttered them. His own career personifies the faith they express. Moreover, unless present signs fail, he is due to fill one of the most important positions of leadership in the Nation. So JOSEPH W. MARTIN, JR., is a man worth knowing about.

It has been said that JOE MARTIN attracts notice chiefly by what he does and by what others say and think about him. Typical of the latter is the recent observation by a widely known Washington commentator: "The best job being done by any Republican in office today is by a man with a future—JOE MARTIN, minority leader of the House of Representatives. If the Republicans capture the House next year, he is certain to become Speaker—if he is in the House." Perhaps more significant still was the poll, taken by a national publication, of the opinion of Washington newspaper correspondents as to the most useful Members of Congress. The score card was based on integrity, intelligence, industry, and influence. JOE MARTIN led, with the highest vote given to any man in either House or Senate.

This verdict came as no surprise to his associates, Democrats as well as Republicans, in the House. Neither did it to the folks in North Attleboro, Mass., population 10,202. They have had a chance to observe this stocky dark-haired and blue-eyed fellow townsman of theirs from very early childhood. For JOE MARTIN'S career is in keeping with what was—and, many hope, still is—one of the finest traditions of American life. His father was a horseshoer who, as a neighbor related, rarely made more than $15 a week in his life. With a family of five boys and two girls, that meant economy and it also meant that the boys went to work just as soon as they could.

JOE started to work when he was 5 years old, delivering newspapers. A deprivation or hardship? Well, JOE MARTIN does not regard it that way. Writing a letter to the Boston newsboys' publication, he said: "All during my school days I had a large and profitable newspaper route. It was a fine business training and gave me an advantage over boys who were not obliged to work."

As fast as his brothers became old enough they took over part of the growing newspaper route. That released JOE for other work of various kinds. The Martin family is of Scottish descent on the father's side, Irish on the mother's. In the rather strict atmosphere of the New England home the children were required to be in by 8:30 every evening. But with all these limitations, JOE found time for his one favorite recreation—baseball. It is quite a while back and North Attleboro has seen some good ball players come and go, but the folks there still tell stories of the young shortstop. John L. Tweedy, on whose lots North Attleboro's baseball was long played, recalls many incidents of JOE MARTIN'S ballplaying days.

A LIFELONG AVERSION TO DEBT

"He was a winning player," Tweedy relates. "He had the spirit that just wouldn't accept defeat. I've seen him, as a little fellow, with tears in his eyes when he had made an error. Then he would come to bat and make up for it. Along with that fighting quality he was a really good ballplayer, covering an amazing amount of ground at shortstop. There isn't much doubt that he could have gone on into professional baseball if he had wished."

As a matter of fact, JOE did receive an offer of an athletic scholarship at a leading New England university. He turned it down, although he later sent two of his younger brothers through Dartmouth College. But by the time he graduated from high school, his ambition was fixed on becoming a newspaper man. And he did, first as a reporter and then, when hardly more than of age, as editor and part owner of his home-town paper. The

owner had other interests and was willing to sell. JOE and his next older brother, Charlie, had saved some money. They found no trouble in enlisting local business men in a syndicate willing to back a couple of young fellows with so much enterprise and spirit. That was the way many of the businesses in North Attleboro had started and grown.

JOE MARTIN is still publisher and his brother Charlie is editor of the North Attleboro Chronicle. In thirty-odd years under the Martin management the paper has failed only once to show a profit. It is rated a good small daily, devoted to homey personal news and local civic betterment.

Immediately after his high-school days Joe started something else—a bank account. It has been maintained ever since. He has never been in debt in his life.

"Perhaps it is the Scottish heritage cropping out, but I have always had an aversion to debt," he explained. "Sometimes when I have bought things it has been suggested that I charge them or pay on the installment plan. But when I pay as I go I know what things cost—and there is nothing to come out of the future."

Four years after he became editor he decided to enter politics in more than a local way, becoming a candidate for the lower house of the legislature. Bristol county has always been prominent in Massachusetts State affairs, and some of the local party leaders felt he was too young for so responsible a job. But he ran and won. Two years later he advanced to the State senate, in 1925 to Congress. In politics as well as baseball and business, JOE MARTIN has kept up the winning characteristic. He has never lost a political contest. During the Roosevelt landslides, when the State was going Democratic, he had comfortable majorities.

That record is partly explained by the fact that he has acquainted himself with every interest and a large proportion of the residents of his district. He does not employ sound trucks, billboards, or any of the other showy political devices in his campaign. Instead he relies upon the human approach.

"JOE likes people and has a gift for understanding them," said State Representative Frank Kelley, whose own political experience qualifies him to speak on this angle. "Sometimes during the year he gets around to every part of his district, and he is available to everyone who has anything to take up with him. Whenever he is back from Washington his time is spent seeing and talking with people—workingmen, farmers, and business. They all know they will get the same understanding and consideration. JOE is interested in young fellows too. He remembers his own start. A lot of his best campaign workers are always youngsters just coming along. There is no particular secret about his hold on this district. People just like and trust him."

TEAMWORK AND SPIRIT

Perhaps another reason was supplied by John H. Bronson, music supervisor of the North Attleboro schools. Bronson grew up with JOE, and his grandfather brought the elder Martin to North Attleboro to work in his horseshoeing establishment.

"JOE MARTIN has gone far," remarked Bronson. "But he has done more for others than he has ever done for himself."

It was the sum of these qualities and abilities that made JOE MARTIN'S election as minority leader a certainty last winter. His support was countrywide and especially strong from the Middle West, for reasons that will develop later. It was the same when he was chosen in 1938 to head the Republican congressional campaign. Then, for the first time since the darkening days of 1930, the Republicans registered gains all along the line. And it is a tribute to JOE MARTIN'S political sagacity that his estimate of the number of Republican Senators and Congressmen who would be elected was off only one in each case.

The task of minority leader had no roseate aspects. Not only was MARTIN new at it, but nearly half the Republican Members were also new to Congress, and they had been elected on an assortment of platforms. Overwhelmed by the Democratic majorities of the preceding 6 years, the morale of the older Members was low. It was a situation that called for leadership of more than a common order.

But JOE MARTIN had definite ideas of what was required. One of his first moves was to meet with the Republican delegation from each State—get to know them, learn their interests and their views. He is a good listener. Then he began building a cohesive, effective minority force, equipped with teamwork and a new spirit. Frequent conferences of the whole Republican House membership were held to develop views and lines of action in regard to pending legislation. In the preceding session there had been only one such conference. At the time this was written nine had been held during this session, with more to follow.

At such conferences every member is free to speak his mind. In contrast to the Democratic caucus, where members may be bound by a three-fourths vote, no one is put under any binding agreement at these conferences. The only semblance of direction is to bring out in the discussion the most desirable policies to follow. There is no cracking of the whip in the MARTIN leadership. If a Republican Member feels that the interests of his district or some campaign pledge he has made compels him to depart from the minority attitude, JOE tells him to go ahead.

"Vote for your conscience," he is told. "We realize that you are answerable to your constituents."

But perhaps as a result of this tolerance or democracy, whichever it might be called, whenever JOE MARTIN wants a united minority on any proposition it responds to his call.

One thing especially that he has done has borne useful fruit and is likely to bear much more. He has named House Republican committees, country-wide in membership to study outstanding public issues and to formulate policies regarding them. This has numerous practical values. One prevalent criticism of the Republicans is their lack of coherent policies. They are being supplied by these studies. Furthermore, in this way, Members are getting training and instruction. If the Republicans come into power in 1940 there will be men prepared for the responsibilities they will face.

POLICIES BASED ON FACT

There was a further noteworthy reason. Hit-or-miss action of any kind is not a JOE MARTIN trait.

"We were determined," he explains, "that the minority record would be made on the basis of finding and serving the public interest rather than opposing everything suggested by the administration simply because it was an administration policy. There was only one way to do that—by actually digging into the issues and getting the facts."

The outcome has been that on three important issues—national defense, emergency monetary powers, and governmental debt—the Republicans have been able to present clear-cut policies based on facts. Studies are now being made of two other issues of national interest, agricultural policies and the effects of the reciprocal trade treaties.

Out of it all has developed a spirit of working together among the Republican Members. Their morale has gone up and they have become an organized force that has won the respect of the majority.

"The way JOE MARTIN has those fellows working and on hand at roll calls is something worth seeing," remarked a Democratic Congressman. "Although we have a majority of over 90, we've found the Republicans frequently outvoting or outnumbering us on the floor and in committee meetings."

That explans why those Washington correspondents ranked JOE MARTIN so high on the point of influence. In a Capitol, where there is plenty of dissension, he has a following conspicuous for loyalty and unity.

A CALL FOR GOOD WILL

It is not hard to find explanations of the secret of JOE MARTIN'S leadership. A few minutes' talk with most any Republican Member will develop them. Here is a carefully considered analysis by CLIFFORD R. HOPE, of Kansas, ranking Republican member of the Committee on Agriculture:

"First of all I would put his ability to understand the other fellow's problems and interests from the other fellow's viewpoint. Next his broad national knowledge and understanding. After that, his sound political judgment. The Members know he won't march them uphill and then down again. All these qualities create confidence and trust in his leadership. Besides, we like JOE."

KARL E. MUNDT, of South Dakota, is generally picked as one of the promising new Members of the House. His view sums up those of a number of the new Members.

"JOE MARTIN knows there are 48 States," he said. "I think that was the thing that impressed us new Members the most. We hardly expected so ready an understanding of our interests and our viewpoint. He has been able to arouse loyalty and enthusiasm because we have the feeling that we are working with him, not for him but for the benefit of all of us. You can believe in a leader of that kind."

It is this wide national grasp and understanding that accounted for JOE MARTIN'S country-wide support for minority leader. Partly it is due to observation, for he has traveled over much of the country, and to his gift for getting the other fellow's viewpoint. The rest is due to close and unremitting study. Blended with this understanding is an intense belief in the unity of American interests and in the progress possible through united effort.

"America has the material resources, the skill, the technical equipment, and the manpower to push this Nation to a prosperity and well-being undreamed of in the past," he declared. "If we will develop the spirit of working together in the common interest we can have these things. That spirit is inherent in the American people. It simply needs to be called forth. Instead of preaching dissatisfaction and dissension in America, let us have good will, cooperation, and genuine patriotic effort, and this will be a good country to live in."

He firmly believes that many of our present fears and bogies will disappear once we begin putting the right policies in effect and people regain faith.

"If we could arrest the present tide we would all be surprised how rapidly it would start flowing in the other direction," he said. "Everything will work with it—our common ambition to succeed and to have better things, our native energy and resourcefulness, and the natural rise in the spirit of enterprise when things begin moving forward. We have not lost these assets. They have simply been held dormant by confusion, uncertainty, and devitalizing bureaucratic restraints."

THE GROWING BURDEN OF TAXES

"I am not, never have been, and never will be a pessimist. We have been drifting for a long time, and our problems and fears have grown up like weeds in a field that is not given the proper attention. Communism, fascism, and these other 'isms' will disappear like the mist before the sun when people get back to work. Virtually every other difficulty before us is but a projection of unemployment."

Besides knowing by experience what it means to be both a worker and an employer JOE MARTIN has had plenty of chances to observe what makes for work or the lack of it in his own district. It is a productive farm section, specializing in dairying, fruit growing, truck raising, and poultry. But it is also one of the major manufacturing centers of the country. Naming them off at random, he counted over 30 different types of industry in his district.

"Most of these industries are individually owned," he said. "With few exceptions they began in a small way and grew in size and pay rolls. One in my own city, now producing pocket lighters, compacts, and vanity cases and other articles, started with 10 workers. The men who founded it plowed back into it all the earnings, taking out only enough for their families to live on. It grew in this way until it is now employing 750 workers, with more than 1,200 at peak times.

"Another case is that of two brothers who started an enterprise in their father's barn. Our locality is a jewelry-manufacturing center, and they saw an opportunity in making jewelry boxes. The demand grew and an addition was put on the barn, then they built a plant of their own. In it they now manufacture a number of other allied articles and employ around 450 workers. Their growth was made in the same way—by putting back the earnings. It was the traditional American way.

"But—and this is the vital point—such enterprises could not grow up under the present taxation system. It chokes off the very means of growth, as well as the incentive to venture into such undertakings. The greatest losers are the workers deprived of a means of livelihood and the young fellows coming on who want an opportunity. That is the way this growing tax burden must be brought home to the American people, must be understood by them."

MERE SPENDING IS FUTILE

"Mere spending, which is the only reliance of the New Deal, has proved futile in expanding employment. It only increases debt and the tax load, present and eventual, which simply raise further deterrents to enterprise. We must take the other way, by restoring conditions that encourage the activities which give people employment and a future. We can have a higher national income, more security and more opportunities only by creating more wealth and more sources of earnings. There is no other way."

JOE MARTIN has an engaging smile and a readiness of humor that his Irish friends like to claim for that side of his ancestry. But when he discusses the present plight of this country it is with a seriousness of both manner and words.

The question had been asked whether he thought things really could be straightened out in this country.

"Yes," he replied. "I know they can, if we start soon and apply ourselves resolutely to the job. But I doubt it, if we continue to drift 4 years longer."

"What will be necessary?"

The answer indicated the full consideration he had given to this most important of all present questions.

"Some sacrifices at the start, which will be far more than compensated by the gains all around that will follow," he said. "Both the will and the example in the beginning must be furnished here in Washington. The President himself can literally give the go-ahead signal. So much responsibility and attention has recently been centered in the Executive that he is in a position to rally the sentiment and restore the confidence of the country. Mr. Roosevelt demonstrated that in the first 30 days of his first administration before the muddled experimenting began and set the country back again.

"The American people should be told honestly what is purposed and needs to be done to put the Nation's house in order. They should be appealed to as patriots—all groups and all interests—to cooperate in the task. They will respond willingly, I am sure, if convinced of the sincerity of the intention. And there should be no question of the sincerity or the will to go through with it."

A FAIR DEAL ALL ROUND

"Business should be informed that as many as possible of the present deterrents will be removed, that it can go ahead creating more wealth and employing more workers. But with the understanding that it must be fair in its practices to labor, to the public, and to all concerned. Wages should be safeguarded, because we need all the earned purchasing power we can get to keep production moving.

"The sacrifices have to be made where Government outlays are involved. We must stop riding the merry-go-round of debt and taxes. There should be no exceptions, save where demoralization would result. Farmers who are receiving benefits from the Treasury would, I am confident, much prefer to have the real prosperity which flows from increased purchasing power. This can be realized over the long term only by general economic recovery. Farm people are essentially thrifty and prudent. They want things run right and their Government kept secure from disaster. Besides, it is surely possible that there are better farm policies, which will give farm producers a more equal exchange without depending so much upon Treasury funds.

"But the example should be set here in Washington. We should go right through the Government structure with a resolute purpose to reduce expenditures. They can be reduced, and not an essential service would suffer. For example, no department needs 50 publicly paid propagandists. As our committee that studied the national debt stated:

" 'The Budget cannot be balanced by a mere pruning of expenditures here and there. To accomplish real reductions in Government expenditures it is necessary to evaluate the functions now being performed by the Federal Government and to determine how those functions which are desirable can be most advantageously performed at a more reasonable cost. Some could probably be eliminated, and others performed in a much less expensive manner.'

"We must be thorough about it. The Appropriations Committee of the House should be equipped to sift every department budget and reduce it to the necessities. A large amount of money can be saved that way, for naturally every department is ambitious and will exceed its actual requirements unless curbed by Congress.

"I am under no delusion that the Government's income and outgo could be balanced the first year. But by working in both directions—reducing expenditures and stimulating recovery and employment—we should be on a sound footing by the third year.

"Most important of all will be the effect on the spirit of the American people. I believe that we could arouse a spirit in this country that would sweep aside present fears and difficulties and carry us beyond anything we dream of now. The winning spirit—that is what we must get back. But those who would rally it must set an example of sincerity and unselfishness. We must have a spirit that will never again demand benefits for any special interest at the risk of imperiling the chances of all."

One characteristic of JOE MARTIN'S is his ability to reduce matters to simple terms. It was illustrated by this remark:

"The problems of the Nation are only individual problems multiplied. If we can treat our individual problems successfully we can the national."

And then followed something that could well be read and considered over and over again for its lasting significance.

"The simpler and plainer Government policies are, the better it will be for us," he said. "We have let both our thinking and our Government become too complicated. Government has now become so ramified and involved that the ordinary individual has lost the ability to understand or keep track of it. The remark has been made that even Congress no longer can comprehend it. Yet the only basis for democracy is self-rule by an informed citizenry. When the average citizen throws up his hands in helplessness, then we have come to the end of democracy in its actual operation. What is left is rule by bureaucracy. And liberty has never survived under that type of rule."

Darkness had long since descended on a sweltering Capitol. The minority leader still had some work to do. As the visitor arose to go, JOE MARTIN added one concluding remark.

"It all sums up," he said, "that we have got to get back to common sense and the simple realities of life, so far as Government is concerned."

JOE MARTIN has been variously described as a liberal, a middle-of-the-roader, and a conservative. But anyone who comes to know him, to learn his views, and recalls the road he came up will discard any tags. He is just JOE MARTIN—American.

A Comparison of Power Rates and Tax Income Between Tacoma and Spokane, Wash.

REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. LEAVY. Mr. Speaker, my home city of Spokane, Wash., is located in the northeastern part of the State, about 75 miles distant from Grand Coulee. This city is the metropolis of a vast inland region, reaching from the crest of the Cascade Mountains on the west to the crest of the Rocky Mountains on the east, a distance of almost 400 miles, and from the Canadian border on the north southward across the Oregon-Washington line for a distance of almost 500 miles. The region is one of unusual natural resources and perhaps contains more promise for future development than almost any other section in the United States. Agriculture, mining, and lumbering are the three principal activities of the people living in this region now. Each of these can be greatly expanded and developed, and in addition there are great industrial possibilities, particularly in the mineral field.

NO COAL OR OIL

The region is almost totally devoid of coal and oil. This same region, however, is blessed with the greatest potential possibility for hydroelectric development of any comparable region in the whole world. To be able to utilize this electric power, however, it is highly essential that the electricity developed be freed from the terrific financial overburden

that is now imposed upon the private power companies serving this region. This overburden comes by reason of the fact that these private companies must charge rates sufficiently high to pay dividends to a number of holding companies and super-holding companies. For instance, a part of the rates charged by the Washington Water Power Co. that largely serves my district must go as dividends to its parent company, the American Power & Light, and there must be enough go to this company to permit it to make payments to its parent company, the Electric Bond & Share, which is the grandparent of the Washington Water Power Co. According to official figures furnished me by the Federal Power Commission, the Washington Water Power Co. in the year 1934 paid to its parent, the American Power & Light, in dividends, $1,779,000; in 1935, it paid $1,016,000; in 1936, it paid $1,779,000; in 1937, it paid $1,652,000; in 1938, $1,270,000.

Now every dollar of the above amounts came out of the pockets of the users in the territory served, and went back to Wall Street. It may be that a small portion of this percolated back into the region to the scattered holders of preferred American Power & Light stock, but I am sure investigation would reveal that it was a small portion.

THE FRANCHISE FIGHT IN SPOKANE

The Washington Water Power, in its anxiety to gain additional advantage, has recently precipitated a franchise fight, obtaining for itself by indirection, through a minor subsidiary corporation, a 25-year franchise. This has resulted in the city officials, under the provisions of the city charter and upon demand of the voters of Spokane, calling of a special franchise election. For the purpose of defeating the right of the people to express themselves upon this all-important issue the power company has seen fit to resort to litigation that will delay, doubtless for many months, an election on the franchise issue.

PEOPLE SHOULD KNOW THE FACTS

Mr. Speaker, all of what I have here said establishes the tremendous importance of giving the people of my district a fair, impartial, and full statement of facts in reference to this controversy, in order that they may know whether it would be to their gain or loss to grant or deny a franchise obtained from the city authorities in the manner in which this one was. The primary argument made in support of permitting the power company to continue for the next 25 years in rendering the service it has, is first, that there is no discrimination in rates against our region, and second, that the city of Spokane would lose greatly in its tax revenues if they were being served by a publicly owned distribution system. It is for this reason that I have sought information from governmental sources on these two issues and I am making them available to the public.

SPOKANE RATE AND TAX SITUATION

The Washington Water Power Co. for the calendar year 1938 reported its electric earnings and kilowatt-hour sales, for Spokane and suburbs, to the Department of Public Service, Olympia, with a copy to the Federal Power Commission, Washington, D. C. On pages 510 and 511 of the report the following statistics appear for Spokane and suburbs:

Total electric revenue	$3,534,921
Total kilowatt-hour sales	302,855,706

The similar figures for Tacoma, from the 1938 report of the department of public utilities, are as follows:

Total electric revenue	$2,473,734
Total kilowatt-hour sales	287,860,633

It appears from these statistics that Spokane's kilowatt-hour sales are 5.4 percent greater than Tacoma's, but the collections are 43.2 percent greater. If Spokane's sales and collections were proportioned so as to equal Tacoma's sales, we find that Spokane consumers pay $876,300 annually more than the Tacoma consumers for equal amounts of electricity—or, in other words, Spokane's consumers are annually overcharged this amount when compared with Tacoma.

TEXAS

The Washington Water Power Co. only reports taxes for the company as a whole. These taxes in percent of gross earnings are as follows:

	Percent
State and local taxes (total)	11.32
Federal taxes	7.03

The equalized Spokane earnings for the same kilowatt-hour sales as Tacoma would be about $3,350,000, and on these earnings and the above percentages the Spokane local tax bill would be approximately $379,000. Tacoma paid $280,419 annually in State utility and activities tax, school and city taxes in 1938, and in addition made contributions and rendered service to the city of Tacoma in the amount of $132,627. The total Tacoma tax and contribution amounted to $413,046, or approximately $34,000 more than the equivalent Spokane estimated tax. The Washington Water Power Co. has not for reporting purposes segregated the local taxes, and estimated figures have to be used. Therefore, any doubt would be resolved in favor of the company if it is stated that the equivalent Spokane and Tacoma tax and contribution payment were approximately the same. The Spokane company pays on this equivalent base $235,000 annual Federal taxes that the Tacoma property does not pay, the latter municipality being exempted.

Therefore, compared with Tacoma, the Spokane citizens are overcharged $876,300, after considering State and local taxes. This is the amount which affects the local situation. After deducting $235,000 Federal taxes, the overcharge is $641,000 annually. Granting the franchise to the subsidiary of the Washington Water Power Co. gives the parent company the monopoly to siphon out of the community $876,300 annually in overcharges.

THE OFFER

To continue the right to monopolize, and to practically keep Coulee's cheap power out of Spokane, the Washington Water Power Co. made an offer to the city commissioners. Let us look into this offer.

According to information the Washington Water Power Co. offered the following to the city of Spokane for the new franchise:

(1) One percent gross-income tax of heating and power company's earnings.

(2) Rate for traffic lights reduced from 3 to 2 cents per kilowatt-hour.

(3) Install 425 street lights from 1939 to 1942.

(4) Energy and maintenance rate of all street-intersection lights reduced from $37 to $30 per lamp-year.

(5) Replace without cost to city all center suspension overhead lights. The work to be done in a 4-year period.

(6) Make a survey of curb-lighting system in order to make necessary changes to install 10,000 lumen lights, and company will make a contribution of $20,000 toward this cost. And to furnish reimbursable funds for the remaining cost without interest. Reduce rates from $60 to $55 and $45 per lamp-year. This approximates 1.25-cent current for 4,000 burning hours.

(7) Pumping-service charge.

Let us now evaluate these gifts in terms of yearly approximate costs.

(1) The gross-earning tax will yield $30,000 to $35,000 per year.

(2) Traffic lights use little current. In Washington, D. C., with a much larger number of such lights than usual, the total consumption is 750,000 kilowatt-hours, and the cost is $7,500 annually. Proportioned by population, the reduction offered amounts to about $1,800 per year. Three cents and even 2 cents are high prices for such current. The Government in Washington pays 1 cent for such current, manufactured with coal. Water-power current cost is about 25 percent lower. Therefore, Spokane will still be paying nearly three times as much for such current as it should.

(3) Installation of the 425 additional street lights by the company is good business. It increases load, and the rate will amortize the company's investment in a reasonable period.

(4) Reduction in energy and maintenance rate on 1948 lights represents $13,700 per year. Data are not available on size and burning hours, but average practice would indicate

that the city is still overcharged for the service. Washington, D. C., pays seventy-five one-hundredths of 1 cent per kilowatt-hour for such current.

(5) Replacement of present suspension lights with mast arms, with a 15-year amortization period, should cost the company around $7,000 per year.

(6) The cost of survey, amortization of $20,000 gift, and interest on the balance of the construction cost should run about $3,000 per year.

(7) Pumping service-rate charges will run $10,000 to $15,000 per year.

These seven items approximate $65,000 per year to the company.

It is good business to contribute $65,000 to hold $876,000.

ELECTRIC BILLS—COMPARISON OF TACOMA AND SPOKANE

Residential service

Schedule No. 1 of the Washington water power covers all service in this class except water heating. By schedule No. 1 the top block for 13 kilowatt-hours is 5.4 cents. The next 22 kilowatt-hours is sold for 5 cents. Water-heating service under schedule 19 is sold for eight-tenths of a cent on off peak.

Controlled water heating, available only in connection with electric ranges, is sold on a flat rate, which costs about six-tenths of a cent per kilowatt-hour. Residential suburban rates of Spokane are higher than urban rates.

Comparison of Spokane and Tacoma residential billings

	Kilowatt-hours per month			
	25	40	100	250
Tacoma	$0.95	$1.10	$1.70	$3.20
Spokane urban	$1.30	$1.95	$3.75	$7.15
Spokane suburban	$1.65	$2.45	$4.25	$7.65
Urban rates higher than Tacoma...percent..	37	77	120	124
Suburban rates higher than Tacoma...percent..	74	114	150	139

Comparison of commercial bills

These billings represent the charges to business houses for lighting current.

	Kilowatt-hours per month				
	50	150	375	750	1,500
Tacoma	$1.75	$4.75	$10.38	$17.25	$28.50
Spokane	$2.60	$7.10	$16.10	$27.60	$50.10
Spokane higher than Tacoma..percent..	49	52	55	60	76

These are based on standard demands of Federal Power Commission. Effective January 1, 1939.

POWER COMPANY INCREASES ITS DEBT

In view of what I have here stated, there certainly should be no reason why the Washington Water Power Co. should be compelled to add to its existing indebtedness; however, in the last 2 months, and that based in part upon the procuring of this new 25-year franchise, the power company has come back to the financial interests on Wall Street and not only renewed the mortgage of $19,911,000 that was existing against their properties in the form of a funded debt, but they have increased that debt to $22,000,000, and this in the face of the fact that their statement shows an earned surplus of $4,453,391. It is true that this debt will bear a lower rate of interest, and it is equally true that they paid $440,000 in brokers' fees for the purpose of making this new loan, and $140,000 in attorneys' fees, trustees' fees, and so forth. It is further equally true that every dollar of this new debt, plus the costs incident thereto, is a new burden on power users in my congressional district and throughout that region.

TACOMA REDUCES ITS PLANT DEBT—POWER COMPANY INCREASES ITS PLANT DEBT

While all of this has been going on, the municipal power plant in the city of Tacoma has been constantly reducing its outstanding indebtedness with the assurance that the great advantage in rates that they now enjoy will still be much greater. Why is there any reason in the world, either directly or indirectly, that the people should hurry to grant a new 25-year franchise, in plain violation of the provisions of the city's fundamental law, its charter, 2 years before it is possible, under the terms of that charter, to apply for such franchise?

Members of Congress have already made the statement to me since they have heard of this occurrence in Spokane, that they can see no reason why enormous Federal appropriations should be continued for Grand Coulee, which is the world's greatest hydroelectric power development, when the largest city in the immediate vicinity of that great development has indicated that it is willing to tie its hands for a quarter of a century into the future on the matter of buying electric power. [Applause.]

Proposed Amendments to the Omnibus Transportation Bill

EXTENSION OF REMARKS

OF

HON. WILL M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following amendments which I favor to S. 2009, known as the omnibus transportation bill, to wit:

(1) Page 199, line 8, after the period and before the quotation mark, insert the following: "All of the provisions of this act shall be administered and enforced with a view to carrying out the above declaration of policy."

The purpose of this amendment is to recognize and preserve the inherent advantages of water transportation as declared in the policy of the act. The declaration of policy is not enough. The act should substantially provide for administration and enforcement of the declared policy.

(2) Page 203, line 1, after the word "products" insert "agricultural products and raw materials."

The gentleman from Texas [Mr. SOUTH] has proposed this amendment and I trust he will offer it. I mention the amendment in this connection because I had prepared this amendment before I was aware it was his purpose to offer a similar amendment.

(3) Page 245, line 8, strike out the period and insert a colon and add: "*Provided, however,* This subsection shall also apply to baled cotton."

Contract carriers of bulk commodities meticulously described on page 245 as being without wrappers or containers and without mark or count are exempt from the provisions of the bill. Thus oil is exempt and the Standard Oil is protected. Thus coal is exempt, and the coal corporations are protected. Thus sulfur is exempt, and the sulfur corporations are protected. But not so with cotton. Cotton is baled; it can be carried on barges just as well as oil, coal, and sulfur. Moreover, the textile manufacturers of North Carolina, South Carolina, New England, and the Atlantic seaboard will secure cheaper transportation. They can thus afford to pay more for cotton. The growers and the manufacturers are thus interested. The interests of both the cotton grower and the cotton manufacturer would be promoted.

(4) Page 260, line 8, after the comma, insert the following: "to the recognition and preservation of the inherent advantages of water transportation."

The purpose of this amendment is still further to make good the declaration of policy by substantive law.

(5) Page 260, line 11, after the semicolon, insert the following: "to permitting water carriers to reduce rates so long as such rates maintain a compensatory return to the water carriers after taking into consideration overhead and all other elements entering into the cost to the water carrier for the service rendered."

The purpose of this amendment is to include the real heart of the so-called Miller amendment adopted in the Senate. This amendment is found in section 30 of the Senate bill, on page 111 of the pending bill. Some of the provisions of the Miller amendment have been retained. It is important for the protection of water carriers that all of its provisions be retained. The purpose is to enable the public at large to enjoy the benefits and economies afforded by each type of legislation. It includes, therefore, that part of the Miller amendment not otherwise included in the bill.

The Civil Service in Michigan—A Comparison of Democratic and Republican Administrations

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. VOORHIS of California. Mr. Speaker, in order to keep the record straight I think it important to relate something of the havoc that has been wrought by reactionary forces in Michigan—forces that have torn down and entirely destroyed the fine effort of Attorney General Frank Murphy to establish a career type of civil service and efficient operation of State government during the 2 years that he was chief executive of his native State.

Under the leadership of Gov. Frank Murphy, and only after the exercise of his full personal influence, the State civil-service act was passed through a special session of the legislature and signed on August 5, 1937. It was immediately hailed by experts all over the country, including the National Civil Service Reform League and the Civil Service Assembly, as perhaps the finest piece of civil-service legislation written onto the statute books of any State of the Union. It provided a comprehensive merit system for 98 percent of the employees of the State and vested full control of the employment of these persons in a nonpartisan civil-service department.

ESTABLISHMENT OF THE COMMISSION AND THE DEPARTMENT

The Governor then selected what was probably the strongest commission that the people of Michigan had ever had the good fortune to have in their service. It was rightly named by both Republicans and Democrats as "the all-time, all-American civil-service commission." Even Governor Fitzgerald, in public statements, both before and after the 1938 campaign, said that no finer commission could have been selected. Without regard to partisan politics, the Governor combed the United States for the most able director of personnel available, and selected a native son of Michigan, who, however, had been serving as personnel director of another State for a number of years.

ESTABLISHMENT OF AN EFFECTIVE MERIT SYSTEM

The civil-service law became effective on January 1, 1938, in the second year of Governor Murphy's term. Since the time remaining for the installation of the system was so short, Governor Murphy's administration was placed under a difficult handicap from the standpoint of the time available to make the necessary studies, give the necessary qualifying examinations, and provide the other protections and procedures which the program called for. Nevertheless, all dead lines were met, 17,000 incumbent employees were examined, and approximately 1,000 were found unfit and were discontinued from the service. Examinations were given to about 75,000 candidates for positions, and a large number were employed to replace those found unfit and to staff the newly created unemployment-compensation commission. A complete and detailed survey was made of the duties of every job in the classified service of the State, and salary scales based on costs of living and prevailing wages in industry were put into effect. This system of equal pay for equal work necessitated thousands of salary adjustments. A careful review was made of the need for positions, and unnecessary jobs were eliminated. So much for the record of Democratic Governor Murphy.

LEGISLATIVE INVESTIGATION

Immediately upon accession of the Republican Party to power in Michigan in 1939 dire threats were made against the civil-service system. On the first legislative day of the new administration, a concurrent resolution was adopted in both houses as the first and only order of business to provide for the investigation and conviction of those administering the civil-service system. The new Governor accepted first the resignation of the Republican member of the civil-service commission, and soon thereafter the resignation of the two Democratic members. The new majority members of the Commission were men known to be integral parts of the Republican patronage machinery.

The legislative witch hunt that ensued for the next 30 days turned almost the entire press of the State against the present State administration, which was climaxed by an editorial in the Republican Detroit Free Press entitled "Civil Service Wolves." This search on the part of the legislative committee was so fruitless and so thoroughly discredited itself that the committee ended up with an incoherent report unsubstantiated by any facts, and has so far refused to let even so much as the Democratic members of the committee or the legislature have a copy of the hearings of the commitee.

GOVERNOR LEADS ATTACK

In spite of this fruitless persecution, the Republican Party continued its quest for spoils, and Governor Fitzgerald himself made a blistering attack and gave legislative sanction to the legal undoing of the civil-service system in a speech before the Republican Party's spring convention. Immediately thereafter there was reintroduced into the legislature the original bill prepared by a Governor's civil service study commission, which bill was labeled as the Governor's idea of civil service. This bill was promptly disemboweled by the Republican majority of both houses. In protest against this blind of tearing down the civil-service system under the name of a bill bearing the original study commission's approval, the chairman of the original study commission, a Republican, publicly repudiated in a radio address the program of his party and the efforts to destroy civil service.

THE REPUBLICAN VERSION OF CIVIL SERVICE

The new bill enacted into law provided for such a wholesale exemption of positions from civil service that it was immediately labeled by the entire press of the State and was thereafter so known as the Ripper bill. The bill provided for a salaried part-time civil-service commission for exempting all important professional and administrative positions from civil service, and many that were unimportant, for exorbitant application fees for persons wishing to apply for work with the State and took from the civil service department the authority to audit and verify State pay rolls. An appropriation was included in this bill, and also an immediate-effect clause for the admitted subterfuge of preventing the friends of good government from bringing this matter to the attention of the people on a referendum which would otherwise have been possible under the State constitution.

The crowning action to these various efforts of the Republican administration to use the State government as a spoilsman's paradise came when the State senate refused on the 1st of this month to confirm the appointment of the chairman of the civil service commission on the grounds, as stated in the public press, that the chairman had used his authority as commissioner to secure the appointment of many personal favorites and had ignored the needs of the party to the benefit of his own personal following. And this, despite the fact that this gentleman was appointed under a statute which set as one of his qualifications "who shall be known to be in sympathy with the application of modern personnel practices in the public service * * *." It is hardly necessary to say that this qualification required in Governor Murphy's civil-service law was deleted from the Republican edition.

Neutrality

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 22, 1939

ARTICLE BY FREDERIC WILLIAM WILE

Mr. CELLER. Mr. Speaker, I desire to offer a splendid contribution to the subject of neutrality by my friend, Frederic William Wile, who writes brilliantly and fearlessly under the term "Washington Observations."

CONGRESS' REFUSAL OF NEUTRALITY PROGRAM HELD LIKE INTERFERENCE WITH CONDUCT OF WAR

(By Frederic William Wile)

Refusal of Congress to approve the Roosevelt-Hull peace and neutrality program is not much different, in this column's opinion, from a Capitol attempt to interfere with the Executive's conduct of a war. It is "war," after all, in which the United States is engaged—war against war. In actual wartime it is the American way to trust the administration to conduct the national defense. Politics and partisanship subside to the vanishing point. Congressional support is not always 100 percent unalloyed. George Washington didn't find it so. Lincoln was not immune from snipers. McKinley in 1898 experienced opposition and criticism. Woodrow Wilson, leading the country in its greatest war effort of all time, commanded well-nigh universal support up to the peace conference. By and large, Congress, through our tempestuous national history, has refrained from either stabbing in the back the constitutionally responsible guardians of the Republic's safety or presenting to the world the spectacle of divided counsels at Washington.

CRISIS ALMOST GRAVE AS WAR

This mad world is still at peace. But well-informed men everywhere, who are not victims of wishful thinking, know that since 1914 mankind has not hovered so perilously on the brink of war as it does in midsummer 1939. President Roosevelt and Secretary Hull are reported to believe war is only a matter of weeks. It is in light of "present world conditions" that they consider it "highly advisable that the Congress at this session should take certain much-needed action." Roosevelt and Hull urge action "for the cause of peace and in the interest of American neutrality and security." Lives there a man with soul so dead as to think the President of the United States would address such language to Congress without remeasuring every syllable of his words? To suspect Franklin D. Roosevelt of such irresponsibility is not far, at the worst, from imputing to him high treason. At the least, it is questioning his patriotism. It is to suggest that for some unassigned reason he has the country's well-being less devotedly at heart than Senate isolationists, insurgent Democrats and Republicans in both Houses, who, linked in a bipartisan vendetta, have probably blocked neutrality action for 6 months. When next Capitol Hill sinks its teeth—and its stilettos—into the subject, it may have to enact a war, not a peacetime, measure.

WHO KNOWS BEST?

Uncle Sam maintains West Point and Annapolis, at vast cost, to educate Army and Navy officers for the emergency of national defense. When emergency arrives, it is the American tradition to clothe these trained men, under democratic civilian control, with requisite responsibility. It is also in accord with our tradition, above all, to trust these men and their seasoned judgment once they are vested with the supreme obligation of protecting the United States from attack or invasion and the rights of our citizens from violation. If we were at war this week, military and naval responsibility, under direction of the President, as Commander in Chief, would rest mainly upon the shoulders, respectively, of Maj. Gen. George C. Marshall, Army Chief of Staff, and Admiral William D. Leahy, Chief of Naval Operations. The Nation would strip for action under those leaders in a spirit of justified confidence. It would have that confidence for two sufficient reasons: (1) Because Marshall and Leahy are fitted for their jobs, and (2) because they are in possession of all available information about the military and naval situation. They would know best what to do—or not to do.

CONGRESS WOULD NOT INTERFERE

Does any reader of the Star believe the country would tolerate congressional interference with military and naval operations, except in case of demonstrated inefficiency? If Capitol Hill would and should mind its own business respecting the conduct of war, why isn't there incumbent upon House and Senate an equally urgent duty not to obstruct or instruct the men now trying to prevent war, or, if war be inevitable, are doing their best in advance to avoid our being drawn into conflict between other nations? What evidence is there that Bill Borah, Hiram Johnson, Bennett Clark, Gerald Nye, Arthur Vandenberg, Styles Bridges, and Hamilton Fish are any more jealous of America's welfare than Franklin Roosevelt, Cordell Hull, Sumner Welles, George Messersmith, Key Pittman, Alben Barkley, Speaker Bankhead, Jim Wadsworth, Bruce Barton, Sol Bloom, and Sam Rayburn? What right have the arms-embargo diehards to think they have a monopoly on either patriotism, wisdom, or information?

DO WE FAVOR FRIENDS OR FOES?

Do isolationists possess inside knowledge about the international situation more reliable than the facts at the disposal of the State Department? Do they believe that gentlemen from Idaho, California, Missouri, North Dakota, Michigan, New Hampshire, and the Hudson River Valley are better posted about what the United States ought to do, in its own interest, at this critical international hour, than our wideawake observers in London, Paris, Berlin, Rome, Moscow, and Tokio are? Do arms-embargo zealots seriously suspect that our representatives abroad are in a conspiracy with the State Department and the White House to plunge the United States into direct or indirect war commitments? And, finally, with war threatening, do isolationists think Congress should enact a law to favor the side with which American sympathy lies or do they conceive it to be the duty of Congress to hamstring and handicap our friends? That, after all, is the question—lift the embargo and aid the democracies or retain it and help Hitler!

The Citizens' Appreciation of the Constitution of the United States of America

EXTENSION OF REMARKS
OF
HON. BUTLER B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 22, 1939

ADDRESS BY FLETCHER PADGETT, JR.

Mr. HARE. Mr. Speaker, some time ago Eddie Cantor, radio comedian, offered a scholarship of $4,000 to the high-school student who would deliver the best oration in a contest sponsored by the American Legion. Fletcher Padgett, Jr., a 16-year-old high-school student of my home town, Saluda, S. C., was awarded this prize at Springfield, Ill., on April 14, and I ask unanimous consent to extend my remarks by including therein the speech delivered by young Mr. Padgett:

THE CITIZEN'S APPRECIATION OF THE CONSTITUTION OF THE UNITED STATES OF AMERICA

(By Fletcher Padget, Jr.)

Does the average citizen of the United States of America appreciate the Constitution? Does he know its value and the rights guaranteed to him thereunder? Does he stop to consider the price at which it was purchased? Is he willing to make the necessary sacrifices in order that these rights may be perpetuated for himself and for his posterity?

Upon the answer to these questions depends whether or not the citizenship of America will be lost and engulfed in the "isms" that threaten to destroy the democracies of the world, or whether this Nation will come triumphant through this period of the world's history which is marked by socialistic, communistic, and individualistic trends of thought and action.

The average citizen of the United States, the man that you ordinarily meet upon the street or upon the highway, does not take the time to consider what the Constitution means to him. He does not know that our Constitution is so constructed that it wraps the cloak of protection as securely around the most lowly laborer and peasant farmer as it does for those who have been fortunate enough to be possessed of fabulous wealth, and, not knowing this, he does not fully appreciate this immortal document. He is too engrossed in his business, in the job of making a living for himself and his family, and in facing the common and everyday problems of his life to appreciate fully the protection provided by the Constitution. He takes for granted the rights which he enjoys and which were guaranteed to him under the provisions of the fundamental law of this land. He and his immediate predecessors are too far removed from the time when these rights were secured. He does not read the history of its making and is unacquainted with the trials and difficulties which the founders of this great Republic suffered and endured in order that this great document, with all of its meaning and protection to every citizen, might be made the cornerstone and bedrock upon which this Nation was founded.

The founding fathers of this grand Palladium of Liberty believed and had faith in the ability of the people to rule themselves. They believed that the people were entitled to a form of government which recognized the inalienable rights of its citizens. They

evidenced this thought and ideal by incorporating therein this beautiful sentiment, "We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The keenly intellectual and master minds of those who framed this Constitution were careful to see that the rights of each individual citizen were protected. The right of trial by a jury of his equals, where his life, liberty, or property was at stake, was secured to him in no unmistakable terms. The right to tax him was given only with his consent or the consent of his legally elected representatives. Everything that pertained to his happiness and welfare was left to the voice and consent of him who was governed. There was no place in this instrument for the iron rule of an autocrat or a dictator. What the Constitution has meant to the American citizen since its adoption cannot be estimated. No historian, no economist, and no student of government would even attempt to place a value upon it. It has been a godsend to womanhood, a shelter to the weak, a barrier to the strong, a relief to the oppressed, and a model and pattern for all liberty-loving people.

Standing as we do today in point of time, far distant from the adoption of the Constitution, it is difficult for us to understand and appreciate what it cost. If we could go back across the years and stand by the side of the men who took part in the framing of this great instrument, we would better appreciate its meaning. They were fresh from a conflict that was brought about by misrule; they had seen their property taken away from them by unjust taxes; they had been oppressed by overlords and rulers; they had seen their rights trampled under foot with impunity; they had dared challenge the right of a great and powerful nation to impose unjust rules and taxes; they had banded themselves together in a common cause to resist the injustices which were being heaped upon them. They had marched from Lexington to Concord, to Bunker Hill, Valley Forge, and Yorktown; they willingly endured the hardships of a merciless war in order that liberty might be guaranteed to them and to their posterity. They paid the price in order that man might set up in a new world a new form of government, and time has proven the soundness of their reasoning.

Have the sacrifices of our forefathers been in vain, and will this experiment, which started more than 150 years ago be able to stand through all the vicissitudes which now encompass the nations of the world, or will the historians of future generations have to write that the greatest democracy of the world failed? No; the fight and struggle for self-government and freedom must go on. The citizenship of America have taken upon themselves the responsibility of proving to the world that people are able to govern themselves. The privileges of citizenship in a free country are too priceless a heritage to give up. The history of the past with all of its bloodshed, its heartaches, its sorrows, its toils, and sacrifices in order that man might be free, demand that this generation and those who come after us shall ever keep alive our form of free government. The Constitution of this country must be honored, appreciated, and defended at all cost. The heroes of the past cry out to this generation to save and protect it. Every liberty-loving man the world over is working with hope and faith to the end that this Constitution shall be preserved. It is the duty of every individual citizen, your duty and mine, to learn the meaning of the Constitution, its value, and the things for which it stands, thus showing our appreciation to the founders of the Constitution for guaranteeing to the citizens of the United States of America the freedom and liberty that we now enjoy, and for which many of our forefathers paid the supreme sacrifice.

Founded upon a philosophy of free government that was born in the hearts and minds of free men, tested in the trials of peace and war which it has experienced through the years, and solidified by a faith that shall live, this Nation will endure. Though the rains of discord and dissension may descend, the flood of "isms" may come and the winds of adversity blow, this constitutional form of government will stand, for it is founded not upon sands that shift with the ebb and flow of a tide, but upon an everlasting rock.

Why a Union?

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. HOFFMAN. Mr. Speaker, the purpose of a labor union, like that of every other organization, should be to improve the condition of its members, promote the public welfare.

EACH ONE SHOULD STRIVE FOR MORE

It is well that the woman or the man who works with her or his hands should desire a higher wage, shorter hours, better working conditions, and more friendly relations with the employer. If everyone in days gone by had been content with her or his condition and station in life, with what he had, we all would still be living in caves, clothed in animal skins or not at all, and existing from day to day on roots, plants, and the flesh of animals we were able to kill.

But thank the good Lord who implanted in each one of us a desire to improve not only ourselves but others and to obtain not only for ourselves but for our children more of those things which make life easier, more pleasant, and agreeable.

SOME WILL ALWAYS HAVE MORE THAN OTHERS

Some, either through greater ability, a more constant application to the tasks which confronted them, or through luck or good fortune, or because their ancestors by some means had been able to accumulate a fortune, are placed in a position where they are able to hire others to perform what many consider the more difficult tasks.

As long as some women and some men deny themselves some of the luxuries of life, are more frugal, thrifty, and industrious, that is, work harder and longer hours, there will always be inequality in this world. Whether because of their lack of ability, of inclination to work or to save, or because of misfortune beyond their control, always there will be some who live in hovels, some who live in homes without modern conveniences, some who live in modest homes which have everything that woman or man actually needs, and some who live in mansions; and no one knows where the greater degree of happiness and contentment actually dwells, although quite naturally it should be in the homes of those in moderate circumstances, able to enjoy not only the actual necessities but many of those things which in days gone by have been termed "luxuries."

Neither extreme poverty nor great wealth bring contentment or happiness. So it is that all can probably best serve their own interests and the interests of their fellow men by striving for and being content with that station in life which enables them to live comfortably, enjoy the conveniences, and earn the income which gives time for legitimate pleasure but which does not encourage idleness, waste, and character-destroying pleasures.

SOME GREEDY EMPLOYERS

In the past, some employers, being greedy, overavaricious, unmindful of the welfare of those who were aiding in creating a profit, have denied to the workers a fair share of the income which came from the efforts of all. Hence it is that workers have become dissatisfied; have, in far too many cases, been oppressed, misused, and denied the opportunity to better their station in life.

Out of this has come, first, spontaneous strikes or revolts against the employer, sometimes resulting in violence and the destruction of the plant where the workers were employed; sometimes resulting in the permanent loss of jobs of the workers, in the complete destruction of the property of the employer.

Where the employees were few and knew the employer and the employer knew each of his employees, his family needs and family problems, if the employer was worthy of being called a man, when differences of opinion arose, those differences were usually settled in a friendly, satisfactory manner when the two met and talked things over.

But as industry grew and thousands of men were employed, as capital from other cities or States was used to build and operate factories, it became impossible for those in charge of operations—for those upon whom the responsibility for production, sales, and the meeting of the pay roll rested—to know the individual need of the workers.

WHEN A UNION IS ADVISABLE

It therefore became necessary, if workers were to be protected in those cases where there were justifiable grievances, to form unions, elect representatives of the workers, authorize

and empower them to meet and bargain with representatives of the employer as to wages, hours, and conditions of employment, as to grievances which the individual employees might have to present.

Such a movement was organized, and for almost 50 years, under the wise leadership of Samuel Gompers, the American Federation of Labor, holding aloof from politics, from all legislation except that which affected the interests of labor, was known as the workingman's representative, which obtained for him increases in wages, shorter hours, and vastly improved conditions surrounding his daily toil. That organization in those days was known as being loyal to the interests of the worker. Its officers and representatives were devoted to just one cause. That was the improvement of the workingman's lot in life.

COMMUNISTS IN UNIONS

But back in 1924, from abroad came ideas and a movement which were destructive to the true interests of the woman and the man who earned their bread by their daily toil. In printed Senate Document No. 14 of the Sixty-eighth Congress, first session, there is a report compiled under the direction of John L. Lewis, who was then president of the United Mine Workers of America, in which he described that movement in the following words:

LEWIS SAID COMMUNISTS WOULD DESTROY OUR UNIONS AND OUR GOVERNMENT

Imported revolution is knocking at the door of the United Mine Workers of America and of the American people. The seizure of this union (A. F. of L.) is being attempted as the first step in the realization of a thoroughly organized program of the agencies and forces behind the Communist International at Moscow for the conquest of the American continent.

The overthrow and destruction of this Government, with the establishment of an absolute and arbitrary dictatorship, and the elimination of all forms of popular voice in governmental affairs, is being attempted on a more gigantic scale, with more resolute purpose, and with more crafty design than at any time in the history of this Nation.

C. I. O. ATTEMPTS TO DESTROY A. F. OF L.

In 1935 Lewis quarreled with the leadership of the A. F. of L. and withdrew from that organization and, joining seven others, formed the C. I. O. and began the formation of industrial unions.

At first this group met with considerable success. They, however, took into their organization many Communists, who believed in violence and in the destruction of this Government by force. Among others, Lewis accepted as his aides Powers Hapgood, John Brophy, and Adolph Germer. These three men Lewis had himself, publicly, at the Indianapolis convention in 1930, described as "fakirs, repudiated leaders, traitors to the unions, opportunists, and purveyors of every falsehood, slander, and deception." Nevertheless, knowing them to be such, he permitted them to take an active part in his organizing compaigns.

LAWLESSNESS AND SIT-DOWN STRIKES

Using funds collected from the United Mine Workers, the sit-down strikes were called in Michigan on the last day of 1936. By using armed men brought in from other cities and even from outside the State, the C. I. O., using the tactics and the leaders of the Communists, seized possession of factories, drove thousands of women and men from their jobs, caused a loss to the wage earners alone of $44,000,000, and, in the end, the average wage of the General Motors worker was less than it had been before.

In many other communities the same tactics were followed. Lewis demanded, and by force attempted to make good his demand, that only those women and those men who paid the initiation fee fixed by him, signed his organization card, and later paid the dues and the special assessments determined by his international executive board were to have the privilege of working in certain designated factories.

To end the Flint strikes, General Motors signed a contract with a C. I. O. affiliate, but, notwithstanding that contract, within a year, according to one of Lewis' lieutenants, more than a thousand strikes were called in that industry, and today negotiations are still pending because Lewis is demanding a closed shop.

The larger part of the soft-coal mining industry signed a closed-shop contract with Lewis' United Mine Workers, and today that industry, as everyone knows, is a "sick" industry, with miners out of work much of the time, with the operators of the mines losing money, and with fewer jobs available than in previous years.

UNIONS CLOSE FACTORIES—DESTROY JOBS

In one industry in Pennsylvania the C. I. O. pulled one of its strikes, and as the result a factory costing more than a million dollars was sold and, under the protection of police, dismantled and the machinery sold as second-hand material or as junk.

In the summer of 1937, when the C. I. O. was conducting an organizing campaign at Tupelo, Miss., it was my privilege to visit that town. As a result of the C. I. O. invasion, the cotton mill closed. It was dismantled and several hundred jobs were lost forever to the people of that little town.

At Akron, Ohio, in former years 75,000 men were employed in the rubber industry. The town was prosperous. The wages were high. Then came the C. I. O. and today in many sections of the city stand vacant houses. Instead of 75,000 jobs, there are some 25,000 in that industry and much of the production has been shifted to other communities. Akron sees the error of its ways, for there, in the beginning, the businessmen, because of pressure brought, supported the strikers. Today many of those who condemned the employers, who favored the strikes, are out of business permanently, and worker after worker has been forced to sell his home and move to some other community, while hundreds of others have gone on relief.

But do not take my word for what is happening the country over. Let me quote from an article from the Valley Daily News, of Tarentum, Pa., and which bears the caption, "Coral, Now Ghost Town, Monument to Strike Folly", and which shows what happened July 18, 1939. Look at the date again. This month, on the 18th, at Coral, Indiana County, Pa., not in some unnamed place at some unnamed date, but at what happened at that particular place on that date, a thing which has happened time and time again since the C. I. O. and John Lewis started on their wrecking expeditions, and which will happen in many other towns where employees listen to these agitators. Here is the article. I quote:

C. I. O. CREATES A "GHOST TOWN"

CORAL, July 18.—Miners and their families today are pondering the cost of strikes as their homes go under the hammer. The entire town that once housed 1,500 persons is being sold piece by piece. With it goes the coal properties and mining and coke equipment that coal men say will never again operate.

Labor troubles, 11 strikes in 2 years, the operators say, made it impossible for them to continue. In the 2 years of 1937 and 1938 the Coral Coal & Coke Co. put $100,000 into the mines and ovens, about half of which, they said, resulted from losses directly due to repeated strikes. The mine operated under union contract and at union wages, officials said.

Constant agitation by about 15 leaders caused the troubles, according to the management. Each strike required a concession by the company for settlement and each concession became accepted policy. After 11 costly concessions the operators could no longer operate at a profit, they said.

The company's chief product was foundry coke. It operated 300 ovens and employed 270 men at the time of closing. At one time it employed more than 300. Today the former employees as well as company officials realize fully that the repeated strikes are responsible for them being out of employment and on relief. All the miners retain today is an $18,000 meeting hall recently completed.

The mine was originally opened in 1902 by the Wharton Coal & Coke Co. It represents an investment of more than a million dollars.

ORGANIZERS LEAVE WORKERS IN JAIL

In my own district in Michigan, in the town of Dowagiac, organizers came in from outside and proceeded to organize the workers and to incite them to riot. Following the advice of the organizers, who received approximately $15 a day and their expenses, according to local report, some of the local men injured the factory building, with the result that the local boys were thrown in jail, one of them sentenced to the penitentiary, while the organizers went gaily on their way, seeking other people to fool.

Over at Grand Haven, in the southwest part of Michigan, a strike was called against the Kiddie Kover Manufacturing Co. Again following the advice of outside agitators and organizers, there was violence, interference with officers, and once more two men were sent to the penitentiary and one woman was sentenced to a jail term of 6 months. Again the organizers had left town; local people were left without jobs.

EMPLOYERS MUST MAKE A PROFIT

Not a woman or a man but who knows that no corporation or individual running a factory, mill, or mine can continue to do business unless a profit can be made for the stockholders or owner.

LEWIS LIVES IN LUXURY

Not a single agitator nor the head of a union—no; not John Lewis himself, who enjoys an income of $25,000 per year; who at one time had an expense account of $1,000 a month, all paid out of dues collected from working people; John Lewis, who rides in a limousine with a chauffeur; who attends so many of the official social functions; who calls on foreign ambassadors and counselors; who is welcomed at the White House, in a spike-tailed coat and winged collar and wide, white shirt; who apes many of the customs and habits of those whom he is pleased to denounce as the idle rich—has ever been known to give one industrial job or pay a wage to one industrial worker thrown out of employment.

WORKERS MAY BE ASSESSED BY LEWIS

In 1936, John Lewis' mine workers, after paying enormous campaign and organizing expenses, had a surplus of over $3,000,000, taken right out of the pockets of men who toil with their hands. Those who join his organization, although they may get in in the first instance without charge, are usually later required to pay an initiation fee, monthly dues of as much as $1.50 and—and do not forget this—such special assessments as John Lewis' international executive board may levy. Just recently a special assessment of $1 each was rendered against soft-coal miners for—note this—political purposes.

WORKERS FINED BY UNION

In my files is a letter from a woman asking me to protect her against a local organization of Lewis which fines her 50 cents every time she fails to attend a meeting called by the union. Another letter in my possession is from a girl who was told that she will continue to pay the dues and special assessments levied by the union of a hosiery organization or she will not work in her home town.

UNDER UNION CONTRACT, MINERS PAY HIGHER RENT

On the 10th day of July 1939 I saw a contract at Harlan, Ky., which an operator was forced by Lewis' organization to sign, which in effect raised the rent of the miner's house—now mark you, the miner belonged to this union—from $6 to $9 per month. Is it any wonder that some employers sign?

If you are not being paid what you should receive, if your employer is making an exorbitant profit, if your hours are too long, if the conditions under which you work are not proper, and if you cannot get these things adjusted by talking to foreman or manager, then organize your own union, elect your own representatives, and have them consult with the employer. Learn what the trouble is and find a remedy for the unfair conditions, if there be unfair conditions.

DECIDE FOR YOURSELF

The people of every small community in Michigan should be able to handle their own affairs. They ought to know what is wrong in their particular community. They should know how to remedy it, if there is a remedy. They should learn for themselves before they submit to the dictation of outsiders whether the employer is making money, whether he can afford to pay more, whether working conditions can be changed, and then, if they have complaints, as just stated, meet together and, as our forefathers did in olden times, form their own organization, elect their own representatives, and bargain collectively.

Plans for this purpose can be readily obtained; in fact, I will be glad to furnish samples without charge to any group which believes in independence; which does not desire to permit organizers from other cities and other States to come into a community, levy tribute upon workers, drive employers out of business.

The workers of Michigan need no assistance from foreigners located in New York, Pittsburgh, Philadelphia, Detroit, or any other city. Nor do they need assistance nor advice from those Communists formerly described by Lewis as bent upon the destruction of legitimate labor unions and the overthrow of this government. But into the C. I. O. organization, in the forefront of its battles, went these Communists, using many of their lawless, violent methods to further Lewis' interests.

NEITHER ORGANZIERS NOR UNION OFFICIALS GIVE JOBS OR ISSUE PAY CHECKS

Advice of outside organizers and employees of the Labor Board acting as organizing aids to the C. I. O. may be freely given, but while you are listening to it, remember that none of them will give you a job or a pay check; that, after they have gone, you may have little or nothing or a substantial loss to show as the result of following their advice.

Regulation of Water Carriers in Interstate and Foreign Commerce

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. BLAND. Mr. Speaker, the statement has been made frequently that title II of the pending bill, dealing with regulation of water carriers in interstate and foreign commerce, is the result of the work of what is known as the President's Committee of Fifteen, headed by Dr. Splawn, and the Committee of Six, made up of representatives of railroad companies and representatives of labor.

It cannot be emphasized too strongly or too often that the water carriers were not represented on these commissions, and have never been represented on any of the commissions or on any studies that have been made. They have now been denied the consideration of the bill by any group of men who knew their problems or legislation affecting them.

TONNAGE ON WATERWAYS

A great deal has been said about the tonnage carried by water carriers. Figures taken from the official records of the United States Army engineers show the following:

Trade	Calendar year	Short tons
Coastwise	1937	121,077,781
Intercoastal	1937	7,732,706
Great Lakes	1937	143,355,824
Inland waterways	1937	190,450,102
Total		471,616,413

These figures, of course, include tonnage carried by all kinds of carriers—industrial, common, and contract.

Deducting from the total of 471,616,413 the Great Lakes tonnage of 143,355,824 leaves 328,260,589 tons, but of this only 7,732,706 tons are intercoastal. That tonnage is subject to regulation by the Maritime Commission, and a large part consists of bulk commodities and similar cargoes of which Admiral Land, Chairman of the Maritime Commission, says in his brief submitted to Senator BAILEY, chairman of the Committee on Commerce in the Senate, that much of the traffic in the intercoastal trade consists of bulk commodities which the railroads could only carry at rates unremunerative to them, making up the losses on other traffic. However, if all of the intercoastal traffic were carried by rail, it would not add substantially to their total tonnage. It is shown in that report that a fair comparison of the relative importance of

the rail and water movements may be drawn from the fact that the seven principal western railroads carried 208,000,000 short tons of revenue freight in 1936, whereas both the common and the contract intercoastal carriers by water together carried 7,500,000 short tons. It is shown that if this water traffic had moved by these western railroads it would have increased their revenue tonnage by only 3.6 percent, and by reason of the low rates applicable to most of the commodities their revenue would be increased by an even smaller percentage.

Admiral Land says:

> The problems of the intercoastal carriers are mainly problems existing as between themselves as Congress recognized in passing the Intercoastal Shipping Act, 1933, which gave the Commission a more extended jurisdiction over this class of carriers at that time than in the case of coastwise carriers.

As a member of the committee when the Intercoastal Shipping Act, 1933, was prepared, and also when the Maritime Commission was given jurisdiction over the minimum rates as well as the maximum, I know this statement to be entirely correct.

I quote further from the brief:

> The Commission has completed and recently sent to Congress a careful survey of the intercoastal shipping situation. This is a supplement to former Chairman Kennedy's survey of the American merchant marine and copies are available for the members of this committee. There is presently underway a comprehensive investigation of the rates and practices in this trade. This investigation is a formal proceeding under the provisions of section 22 of the Shipping Act, 1916. In view of the fact that all of the intercoastal carriers are respondents therein, and a vast number of shippers and other interested parties have expressed their desire to offer testimony at hearings now being held in different parts of the country, the Commission is confident that there will be evolved therefrom a rate structure and a body of practices which will improve conditions in this segment of shipping.

It has been said that intercoastal carriers asked for the pending bill. Those advocates were Edward B. Farley, chairman of executive committee, American-Hawaiian Steamship Co., and trustee of Munson Steamship Co., closely connected with Mr. Harriman, railroad magnate, and reported to have large holdings in the American-Hawaiian Steamship Co.

Mr. Farley appears to have been the intercoastal witness and his identity with railroad interests appears to be very certain. Moreover, his company appears to be a carrier of only 24.4 of the cargo for 1938 passing through the Canal, and it is very evident that he is motivated also by the desire to get more business for his steamship company if he can remove his competitors.

As to the coastwise carriers, the tonnage shown above was 121,077,781 short tons. Of this tonnage, there was carried for the year 1937, 10,474,262 tons by common carriers, and by contract carriers 19,856,872.

On this subject of coastwise trade, it is important to note that the portion of the cargo carried by the water lines, such as petroleum, ore, coal, phosphate rock, and sulfur, which is not generally competitive as between the water carriers and the railroads, is even greater than in the intercoastal trade, and that in the general cargo which moves in the coastwise trade, there is included a substantial amount of transshipment cargo originating in or destined for foreign ports.

> The real problems relating to transshipment cargo, are, first, to prevent its diversion to direct ocean carriers, most of whom are foreign-owned, foreign-flag lines; and, second, to further the development of this type of traffic. The proposed bill which makes transshipment cargo subject to the Interstate Commerce Commission as to that part of the movement which is between ports in the United States would in practice preclude domestic carriers from entering into transshipment arrangements with carriers in foreign commerce and therefore would force existing traffic to these direct lines, and prevent any further development of transshipment business.

Surely nothing should be allowed to retard the development of our own American merchant marine, and it should not be hampered or obstructed by the delays, technicalities, and procedure of the Interstate Commerce Commission.

As to those water carriers not now subject to regulation with respect to their rates, and their operating practices, please note:

> The two important classes of carriers are the contract carriers in the coastwise trade and the inland water carriers, both common and contract carriers. Competition between contract carriers in the coastwise trade and the railroads is negligible. Both those operating on the high seas and those operating on the Great Lakes compete, if at all, only with the common carriers by water in those trades. It is these common carriers by water who desire, and would possibly be benefited by, the regulation of contract carriers in these trades to the same extent as the common carriers. Whether it would be desirable to make the regulation of these contract carriers coextensive with that applicable to the common carriers presents many questions which should be given careful consideration. It is sufficient for the purpose of this statement to point out that these problems primarily concern domestic water transportation and have little relationship to the problems of the rail carriers.

INLAND CARRIERS

As to inland carriers, the improvements made on this system indicate the purpose of Congress to provide for transportation, particularly, of our basic commodities at rates which reflect the economies of water transportation. From the earliest days the importance of fostering inland-water improvements in aid of navigation has been recognized. Many of our Presidents have urged upon Congress the development of our inland-waterway system, and principally for the purpose of providing economical water transportation.

It must be admitted that—

> Federal aid in the development of inland waterways was greatly accelerated in the 1920's because by that time the public had come to a greater appreciation of the value of water transportation. Barges and steamboats had virtually disappeared from the inland waters and the country had come to depend almost entirely upon the railroads. Commissioner Splawn, of the Interstate Commerce Commission, stated during the hearings on the Lea bill (H. R. 2531) before the Interstate and Foreign Commerce Committee of the House that the strengthening of the Interstate Commerce Act in 1920 was for the purpose of regulating the railroads on the theory that they had a substantial monopoly of domestic transportation. In addition to more rigid regulation of the monopoly, Congress decided to provide for the extensive development of inland rivers and canals and coastwise water facilities. Waterways were developed and improvements made to meet the requirements of shippers and the general public, and to escape from the virtual monopoly of the railroads. The extent to which this program of developing our inland waterways, which began about 1920, is a matter of history, with which the committee is fully familiar.
>
> The (Maritime) Commission is making a survey of this field of water transportation similar to that which has been undertaken by the Commission in other fields and expects to report to Congress thereon in the near future. Prior to the completion of the survey the Commission is not in a position to state what, if any, regulation of inland waters seems necessary or desirable. I feel that in fairness I should state that nothing has so far been developed in the course of making the survey which indicates that regulation to the extent provided under S. 2009 is either necessary or desirable.

Anyone who has examined the comprehensive and exhaustive surveys of the Maritime Commission on the subject of foreign commerce and coastwise and intercoastal shipping will desire that part III of the pending bill shall be deferred until this report on inland waters shall have been completed.

Advocates of the pending measure allege that the Inland Waterways Corporation, of which Maj. Gen. T. Q. Ashburn is the head, has requested regulation by the Interstate Commerce Commission. That concern represents about 3 percent of the tonnage carried on the inland waterways.

In an editorial which appeared in the January 1939 issue of Marine News on the transportation problem, it was well said:

> The success or failure of our transportation system depends upon the service that they render to the public, and it is pleasing to note that the different transportation systems are coming to realize this more and more.
>
> * * * * * * * * *
>
> There are a number of ways by which, we believe, the railroads could improve their financial situation, without penalizing the water-borne carriers, and which should be carefully investigated. There is one main objective, however, which we believe should be accomplished that will do more to improve the existing situation than any other, and if this main objective is properly developed the other points will take care of themselves.

The objective referred to was described as the bringing of all of the different modes of transportation into a more complete understanding of the transportation needs of the

public, which should be their main aim, and then close cooperation between them in offering joint services to the public. It was said that where they directly compete with each other, the cost of different types of service should be predicated on the service rendered, the facilities offered, and the time consumed in completing the service. The slowest service should charge the lowest rate, with a corresponding higher rate as the type and speed of service increases. It was well said that an honest application of this objective will benefit the country as a whole, and will enable each type of carrier to earn a fair return for the service that it performs.

The proper approach to this transportation problem is through cooperation, and on this subject Admiral Land said:

In considering whether the interests of those shippers and consumers and the water carriers would be adequately protected if regulatory jurisdiction over them were given to the Interstate Commerce Commission, it should be borne in mind that the railroad carriers may be considered as inherent monopolies in their own field of transportation, while the water carriers have no natural monopoly with respect of water transportation. Every effort of this Commission with respect to the water carriers has been to prevent them from becoming monopolies and to retain the greatest freedom of competition consistent with service to the public. A railroad represents a huge investment in fixed properties, and the communities it serves would be, in many instances, greatly injured by its discontinuance. In the case of water carriage, the problem is in maintaining the transportation service, but not necessarily, however, by the particular carrier then in the trade. Consequently, the Commission, in viewing regulatory matters, stresses the adequacy of the service as a whole to the persons employing it and the reasonableness of the carriers' rates with relation to the needs of both the shippers and the consumers. The maintenance of a particular carrier in trade, although not neglected, is not given controlling weight. The Commission feels that of necessity the Interstate Commerce Commission would have to use as a measure in all of its determinations involving the competitive efforts of the railroads and the water carriers to get business the railroads' struggle for existence.

Coordination is a very desirable objective, but it is best obtained by a proper spirit of cooperation between various agencies of the Government, each of which is expert as to the several problems involved, and not through subordination either in theory or in practice of one phase of the problem to the other. The Maritime Commission has always cooperated very closely with the Interstate Commerce Commission as to water rates which in any way affect rail rates. It has recognized the gravity of the railroad problem and in practice given most careful consideration to the effect of any regulatory action which it may take upon the railroad rate structure. More than this cannot justifiably be asked.

Our first objective today should be the promotion of the use of all of the facilities of transportation and to try to solve some of our major economic problems by the greater distribution of farm products and other basic commodities. No good will be accomplished by increasing that cost. It has been repeatedly urged that there is an imperative need for more purchasing power to the end that more products of factory and farm may be consumed. That result cannot and will not be obtained by increasing the cost of distributing those products. The less the expense for this purpose, the more of the products of factory and farm will be consumed, the more will be produced to the advantage of the producers, and the more will be transported to the advantage of all forms of transportation. Strangulation of any one form of transportation increases unemployment, increases expense, and adds other obstacles to the barriers already delaying recovery.

EFFECT OF PART III ON FARM PRODUCTS

Secretary of War Woodring, Secretary of Agriculture Wallace, Admiral Land, Chairman of the United States Maritime Commission, and National Grange, all oppose the regulation of water carriers by the Interstate Commerce Commission.

Admiral Land: As a matter of fact, farm organizations, shippers, and their trade associations, are alarmed at the proposals which it (the bill) contains and sincerely believe that its passage would be detrimental to their interests. The farmers and other shippers in particular are convinced that the effect of the present bill would be to force water transportation rates to levels close to levels approximating those of rail rates and higher than necessary to reflect the reasonable cost of water transportation, and that they, the users of water transportation, would be footing the bill for the sole benefit of the railroads.

Secretary Wallace: Farmers and other shippers should not be required to pay rates based on transportation costs of properties improvidently built, wastefully operated, or partially obsolete. Any effort to improve the condition of the transportation industry should be harmonized with the general welfare. The advocacy of thorough regulation of the minimum rates of motor and water carriers by a centralized agency appears to represent an attempt to use Government power to bring competing transportation agencies into a cartel and, in this manner to share traffic and adjust rates in such a way as to earn a return upon all transportation capital of these agencies. Hence, an umbrella would be held over the inefficient plant, and the present high rail-rate level would be protected from the impact of a vigorous competition. Undoubtedly, such a policy would also result in more rigid rates in times of depression, since the motor carriers and boat lines could no longer play their rate as an effective competitive force in bringing down rail rates on commodities susceptible to rail or truck, and rail or water movement.

Again in the same letter written July 15, 1939, to Speaker BANKHEAD, Secretary Wallace said:

We have for some years been advocating greater flexibility in rail rates, and lower rather than higher rates especially, as an aid in marketing surpluses of farm products and as vital prerequisites to the restoration of economic health to agriculture, to industry, and to transportation itself. As a means of improving the purchasing power of industrial labor and the urban population for surplus farm products, and that of the farmers for industrial (employment-giving) products, the Department of Agriculture is working vigorously on plans and programs to obtain a larger distribution of such surplus farm products as citrus fruits and butter in the consuming centers of the East. The transportation factor is a large element in the cost of distributing these products. Lower rail rates to reduce the great barrier of distance is an essential condition to the success of this effort to bring about a more effective functioning economy.

In the same letter, Secretary Wallace appropriately said:

What then are the remedies for the so-called transportation problem? In the first place, it should be recognized that the transportation problem is only part of a larger problem. In reality, the country faces an economc problem which largely consists of finding ways and means of increasing employment, production, and consumption to the end that our economic system can operate at reasonably full capacity under democratic controls. The railroads and other agencies of transportation are significantly affected by and can contribute measurably to the solution to this all-important social and economic problem. Unfortunately, the railroads seem determined to find a solution for the admittedly difficult financial situation of certain rail carriers without regard for the more general solution; in fact, from their public statements it would seem that they are seeking to solve their difficulties at the expense of agricultural and other shippers, consumers, and taxpayers.

If the proposed bill will not raise water rates, it is meaningless so far as the railroads are concerned. The proportion of water-borne commerce affected as compared with the rail commerce is so small the bill will accomplish nothing for the railroads. On the other hand it will destroy water-borne commerce by strangulation, burdensome requirements, and continuous embarrassment with the result that those who now enjoy benefits by cheap transportation and can survive only by cheap transportation will be destroyed.

REGULATION UNNECESSARY FOR WATER-BORNE COMMERCE EXCEPT AS NOW PROVIDED UNDER THE MARITIME COMMISSION

Regulation of railroads began with granger legislation of the 1870's, and in the act to regulate commerce of 1887. These laws were passed to protect the public against extortionate rail rates, unjust discriminations, rebates, iniquitous preferences, and similar practices. Students of that period will recall how large shippers not only secured rebates and preferences for themselves, but compelled exorbitant rates on their competitors, driving them out of business, and finally pursuing practices as iniquitous as the methods of the highway robber in that they not only compelled exorbitant rates on their competitors, but demanded and received the excess so extorted for themselves.

Secretary of War Woodring in his letter to Chairman LEA regarding this bill, said:

The only disinterested testimony before your committee stressed the unsoundness of relating water rates to the present illogical and inconsistent rail-rate structure, and thus depriving the public of such economies as are made possible through the use of waterways. It insisted on the soundness of regulating water rates to the needs and the potentialities of water transportation, altogether independent of other forms. The advantage of making water transportation still further dependent upon the arbitrary regulation of an outside agency is not apparent. This Department

recommends that the revenue scales of the rail carriers be restored to normal levels, with the large bulk of the country's traffic continuing to travel by rail, but at profitable rates, and that the free flow of specially adapted tonnage be permitted to reach and use the waterways unhampered to the end that commerce may be stimulated to move in increased volume at the lowest possible cost. It is believed that such steps would be in the interests of the taxpayers, the shippers, and the carriers themselves.

NO PUBLIC DEMAND FOR WATERWAY REGULATION

There is no public demand for waterway regulation. The committee presenting the bill shows no public demand. The instances referred to have been answered. The public is satisfied. The committee says that there should be unified control, and yet they have omitted air transportation. The truth is that the right of transportation units to live must be measured by the service they are able to render. The majority of rail, highway, and water carriers are in better condition, if anything, than business in general.

The water carriers must take into consideration interruptions from fog, ice, and flood conditions. These carriers have no backlog of noncompetitive tonnage upon which to shift their burden. They can be starved out. Their only salvation lies in genuine low operating costs. Their competition is really with each other. Once destroyed, the shipping public lose the advantage of waterway transportation and the benefits that flow from it.

There are many of us who feel the gravest apprehension for the future waterways if placed still further under the control of outside agencies. We feel that the railroads should address themselves to economies in their own service. We recall that Commissioner Eastman, former Federal Coordinator of Transportation, found unnecessary and wasteful duplication of rail terminal and exchange facilities and operations to be "one of the greatest items of railroad expense and probably accounting for more than 50 percent of the total expense."

We realize that excessive fixed charges could be readjusted and savings secured by the elimination of expenses involved in traffic solicitations and endless legal controversies carried on for the purpose of harassing and exhausting the resources of their competitors. Why not let the railroads reduce unnecessarily large salaries paid high officials and burdensome expenses of executive associations? Let them make an honest effort to reform themselves rather than direct their efforts to the destruction of their competitors.

Surveys by the War Department indicate that the consequent rise in cost of service is likely to discourage the movement of freight which requires cheap transportation.

The consumer pays the transportation bill. He suffers when it is high. He benefits when it is low. In the interest of the consumer, the waterway sections should be removed from the bill.

R. F. C.—Its New Chairman

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

ARTICLE FROM THE NEW YORK TIMES

Mr. CELLER. Mr. Speaker, one of the most useful and efficient agencies of our Government is the Reconstruction Finance Corporation with its affiliate corporations. I deem its entire staff the most proficient and hard working of any in Washington. I am happy to sing the praises of Jesse H. Jones, its Chairman, and his splendid board of directors—Senator Charles B. Henderson, Carroll B. Merriam, Emil Schram, and Howard J. Klossner—and its excellent legal staff ably headed by Claude E. Hamilton, Jr. I cannot overlook a word of praise for William C. Costello, assistant to the Chairman.

If time would permit, I could easily point out for especial reference many others in the Corporation who have helped make it the least-criticized of governmental bureaus despite the fact that it has handled billions of dollars of the people's money. Unfailing has been the courtesy and consideration I have always received from the gentlemen named, and their assistants, like Messrs. Thalman and Hoover in the loaning division. Many have been the instructive admonitions and advices I have received; earnest has been the consideration I have received from my esteemed friends, Messrs. Henderson, Merriam, and Schram. I say this despite the fact that applications for loans of my constituents have not always been granted. But the rejections have always been fair and proper and justified.

Recently we learned that Jesse Jones was selected to head the great entity set up as a consolidation of all our governmental loaning agencies. That was good news. No man is better fitted than he for such a gigantic job.

Agreeable and happy was the President's selection of his successor, Emil Schram.

In that connection I cannot resist the temptation to insert herein a fine and telling article which the New York Times recently carried to reflect my own views of Emil Schram:

[From the New York Times]

SCHRAM A LINK FOR BUSINESSMEN WITH NEW DEAL AS R. F. C. CHAIRMAN—URGED BY JESSE JONES AS SUCCESSOR, INDIANAN HAS HAD SUCCESS AS A FARMER AND IN MANAGING FEDERAL LOAN AGENCIES

(By Joseph Alsop and Robert Kintner)

WASHINGTON, July 16.—Kipling's line, "East is east and west is west, and never the twain shall meet," rather accurately describes the relations between the new dealers and their rivals, the orthodox Democrats, and old-line Government officials. Casual encounters are rare enough, except when Harry Hopkins plays bridge with Jesse Jones; and it is almost unheard of for any individual to keep a foot in both camps.

However, Emil Schram, slated to be the new chairman of the Reconstruction Finance Corporation, manages to combine a good many of the best qualities of each group of his friends. He is probably the only man in the Government whose work is admired equally warmly by Jesse H. Jones and Thomas Corcoran, and he is certainly the only one whose career has been jointly fostered by this ill-assorted pair.

Mr. Schram's elevation to the R. F. C. chairmanship is significant for that very reason. With regard to general policy, he may be expected to follow the liberal principles dear to New Deal hearts. With regard to specific methods, he will imitate the businesslike habits of his extremely able and successful predecessor in the chairmanship. Meanwhile, lowering of R. F. C. interest rates, which is likely to be carried through by him, will intimately affect all business and particularly banking.

Mr. Schram is a tall, middle-aged, slightly bald man, with a deep voice, a pleasant manner, and a gift for self-containment. He looks like a businessman from a small city, but the truth is that he first made his mark as a farmer.

TURNED SWAMP INTO FARM

He is the third generation in a family of German immigrants. The grandfather, a skilled woodcarver, settled in Peru, a woodworking center. There Emil Schram was born, got his schooling, and after high school went to work in the office of J. O. Cole, coal and timber operator. Mr. Cole was impressed by the boy. First he made him bookkeeper. When young Schram was 21, Mr. Cole chose him to develop a 5,000-acre tract of semiswampland on the banks of the Illinois River.

The land was exceedingly rich, but almost under water. Emil Schram, who knew nothing of farming, had first to get it drained, protected from the river by levees, and prepared for planting. Then he had to make it produce.

In the first year, the land yielded 6,000 bushels of corn; in the second, 13,000, and, in the third, 100,000 bushels. Last year, the yield was 140,000 bushels of corn and 35,000 bushels of wheat. Many of its 20 tenant families had celebrated their thirtieth anniversary on the property, and the land was still making a fair return.

The fact that his farm was on swampland was what brought Emil Schram into the New Deal. Drainage and irrigation districts and their problems are an old story in Washington. During the Hoover administration they got into trouble by the score, and Mr. Schram, who was chairman of the National Drainage Association, used to struggle to get something done for them. His own levee had been "topped" by the turbulent Illinois, and he desperately needed help himself.

GOT LOAN FOR LAND DRAINAGE

The New Deal, always more susceptible to such pleas, gave in to Mr. Schram. Loans for the drainers and irrigators were arranged

at the R. F. C., and Jesse Jones asked Mr. Schram to take charge of the program. It was a difficult job, for many of the districts were broke already, but Mr. Schram carried it through with complete success.

Then the Electric Home and Farm Authority, a T. V. A. subsidiary financing sales of electrical equipment to home owners, got itself into serious difficulties. It was adopted, as a sort of foster-child, by Tommy Corcoran, who still calls it Little Eva. Brought over to the R. F. C., it was put under Mr. Schram, who actually managed to put it on a paying basis. Currently E. H. F. A.'s depleted capital has been restored, electrical appliances are selling like hot cakes, and its $10,000,000 in loans outstanding are in first-class shape.

This second success was quickly noted by Jesse Jones, who had Mr. Schram named to the R. F. C. board some time ago. Last year, managing the R. F. C.'s Business Loan Department as well as E. H. F. A., Mr. Schram doubled the department's previous business.

Thus, when Mr. Jones was promoted to be Federal Loan Administrator, he needed no prompting to tell the President that Emil Schram was "the best man available" to succeed him at the R. F. C. His R. F. C. regime will serve as an immensely interesting test of whether strictly businesslike methods and New Deal policies can be effectively combined.

To Compel Competition

EXTENSION OF REMARKS
OF
HON. ARTHUR B. JENKS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 22, 1939

EDITORIAL FROM THE CHICAGO DAILY NEWS OF JULY 11, 1939

Mr. JENKS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the July 11 edition of the Chicago Daily News:

[From the Chicago Daily News of July 11, 1939]

TO COMPEL COMPETITION

In a recent editorial stress was laid on free competition as a vital part of a free enterprise system. This was designed to be an introduction to a serial discussion of a way out of the 10-year-old depression which began in October 1929.

To an extent little recognized, prices have determined the duration of depressions in the past. When prices were permitted to respond, without interference, to the law of supply and demand, hard times always yielded to the pressure of returning prosperity and the national income began to rise. And in every instance it rose to a peak unequaled in previous experience. The present has been the longest depression in American history. It also has been the depression which saw more futile and costly attempts to maintain prices artificially than any other we have passed through. Again, for emphasis, we repeat:

You cannot maintain a prosperity price level on a depression income.

And yet that is exactly what the first, the second, the third, and now the fourth New Deal, in cooperation with big business leaders, big labor-union leaders, and big farm-organization leaders have been trying to do. Of course, they have been unsuccessful. It has never been done. So long as we retain economic freedom, it never can be done.

This disastrous effort to keep prices up, in a period of enforced liquidation, has usually taken the form of stifling competition. In some cases this has consisted of lending Government funds to overcapitalized businesses which can never be healthy again until they have gone through the wringer of honest reorganization. In other cases it has taken the form of demands for increased hourly wages and shorter work hours by powerful labor leaders, with the support of self-serving politicians. This has raised unit costs in industry, increased the sale price, lessened the volume of production, and increased unemployment. In agriculture it has consisted of Government subsidies for decreased production of foodstuffs, thus maintaining or increasing food prices.

Each of these expedients was expressly designed to shackle competition, though all human experience has taught us that we must compel competition if we are to achieve recovery and retain the free-enterprise system.

How can we compel competition?

Like it or not, one of the ways of compelling competition is to restrict the right of corporations to own, control, or manage other corporations. Please note that nothing is said of the size of corporations, only of their functions. Size will take care of itself. If a corporation gets too big, smaller and more efficiently managed competitors will force it out of business, or break it up. But almost invariably the holding company device, which enables corporations to own, control, and manage other corporations, is resorted to for one of two reasons: (a) for the financial benefit of the insiders who organize the holding company, or (b) for the purpose of avoiding competition. Other advantages of the holding company plan are minor, and can be achieved in other less objectionable ways.

This is one way of compelling competition.

Another method of compelling competition is found in removal of trade barriers, both between the States and between this country and other nations. If we are against monopoly, we must be against any attempt to monopolize our great domestic market, both because we thus deny our consuming public the benefits of a reasonable competition from foreign sources, and because, as a creditor nation, we cannot sell our surplus abroad—necessary to our prosperity—unless we also buy abroad. Our experience with a high protective tariff, when we were a debtor nation, no longer applies. There remains now only one reason for a protective tariff—the protection of the American wage standard—that must be protected. But in cheap and abundant raw materials, in cheap and abundant capital, in cheap and abundant transportation, in skill in management, and in mass production costs, we can meet competition anywhere. The growing tendency to set up barriers to the free exchange of goods between States, in our own country, is wrong. It must be checked.

If we are sincere in our purpose to restore competition, we will unhesitatingly repudiate the use of the Government police power to prevent price cutting, to create milk-control boards, to fix prices for coal by commission, and all the other uniformly unsuccessful schemes to maintain prices artificially.

The right of labor to organize freely and bargain collectively is established. But this does not confer the right on labor to monopolize, any more than the right of capital to organize into corporations confers upon them the right to monopolize. It is contrary to the essentials of a free-enterprise system that unions, by excessively high initiation fees, unreasonable apprentice rules, or arbitrary seniority rules, should close all entry to those who seek employment. It is equally contrary to the successful operation of the competitive system, under free enterprise, for unions to try to raise wages when there is heavy unemployment in their trades. And it is particularly reprehensible and contrary to the national interests for Government to encourage such practices. These things tend to destroy price competition as an economic regulator, and no one suffers more from this than the workingman.

These are some of the ways in which to compel competition—competition which must be preserved if we are to continue to live under a free-enterprise system. It is true that pursuit of such a policy would eliminate Government as a competitor with private business. But it contemplates the restoration of Government to its proper function—that of an umpire, instead of a competitor. If we restore the free-enterprise system, depending on the corrective influence of free competition, we can and should implement Government with ample powers to enforce fair competition. That is what Government is for.

The Kings Canyon National Park

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 22, 1939

ARTICLE FROM FIELD AND STREAM MAGAZINE

Mr. GEARHART. Mr. Speaker, on Tuesday last the House of Representatives sent to the Senate, with its emphatic approval, a bill to create in California a new national park to be known as the Kings Canyon National Park. Because of the widespread interest in this legislation, as well as its impending consideration in the other body of the Congress, I am sure that many will be interested in reading a brief endorsing article which appeared in the August issue of the magazine Field and Stream an article from the very capable pen of one of its editors, Mr. H. L. Betten.

By reason of the unanimous consent of the Members of this body that it may be printed therein, I am privileged to hand to the Public Printer a copy for inclusion in the CONGRESSIONAL RECORD as of this date.

Mr. Betten's brief article follows:

[From Field and Stream]

THE KINGS CANYON NATIONAL PARK

The Gearhart bill, now before Congress, aims to establish a national park of some 350,000 acres in the Kings River Basin in California. It deserves the unqualified support of every recreationist and Congressional Representative in the Nation. The passage of this measure will insure the preservation of a marvelous scenic area in a practically primitive state; it will banish forever all fear of future exploitation and spoliation by power, grazing, and other commercial interests; it will preserve for posterity natural wonders without a parallel in America.

The marvels of the Kings River Basin were first extensively explored and described by that grand old naturalist, John Muir. Its stupendous gorges and weird glacial formations rival, if they do no overawe, those of Yosemite. Within this proposed national-park area are 40 peaks more than 11,000 feet high, 10 of which exceed a height of 14,000 feet. There are nearly 400 lakes in this primitive region. In its entirety it affords a magnificent mountain panorama such as has rarely been exposed to the eye of man.

Almost half a century has passed since John Muir first proposed preservation of the Kings River Canyon as a national park. Through the years the proposition received the hearty endorsement of thousands of representative Americans. It won the enthusiastic approval of President Theodore Roosevelt, of Dr. David Starr Jordan, Stephen T. Mather, Stewart Edward White, Dr. B. W. Evermann, of three former Chiefs of the United States Forest Service—Henry S. Graves, William B. Greeley, and R. Y. Stuart. It has the endorsement of the current national administration, including the President, Secretaries Wallace and Ickes, and the head of the Forest Service. Moreover—and this is important—it has the earnest support of the Sierra Club, outstanding mountaineering association, with some 3,500 active members, and that of more than 150 important civic, public-service, and sportsmen's organizations in California; also, of scores of newspapers in the State. These endorsements have been won as a result of searching inquiry into the merits of the proposition.

Past efforts to establish a national park in the Kings River country were overshadowed by Yosemite; furthermore, these lacked coordinated support. Also, with customary adroitness, lobbyists for certain powerful interests succeeded in killing such congressional bills. Now, however, the carefully drafted Gearhart bill, giving fullest consideration to the rights of every legitimate interest and element, leaves the opposition without a foot to stand on; it places its screened enemies in the unenviable position of battling for special privileges the maintenance of which must prove highly detrimental to the vast recreational army of America.

The ready manner in which natural resources have been and can still be exploited and monopolized on our public lands by designing commercial interests is a matter of grave concern. The ill-advised granting of special privileges thereon in the name of fictitious necessity or of political expediency has been widely practiced. However, such laxity and latitude do not apply to our national parks. Rules and safeguards there are inflexible, and nothing less than a well-publicized act of Congress can change these an iota. Commercial or other manipulation of natural resources is thus made practically impossible. And right here we have the veiled reasons for opposition to another national park.

Summing up the limited opposing elements which seek to prevent establishment of the John Muir National Park, we find principally the water interests, a small number of stockmen, a similar monopolistic element among deer hunters, and a coterie of local Forest Service officials. The reasons for most of the opposition are very transparent and deserve careful attention and critical examination by Congress, as does the propaganda which has emanated from such sources.

The Kings River basin is not an important game field. The annual kill of deer averages less than 175, and no other game is present in quantity. Nevertheless, although California has a greater acreage of accessible deer country than any other State, and the annual kill exceeds 20,000, loud wails are heard over the proposed stoppage of hunting privileges in this area. On the other hand, establishment of the John Muir National Park would automatically insure development of angling resources; thus sport would be provided for thousands. It might be added that the spilling of a surplus from the carefully protected stock of deer within the park onto adjoining national forests would more than compensate for the loss of hunting privileges within the park area.

This important issue of proper administration of the Kings River Basin must be decided, not upon the selfish desires of any bureau, but upon the utmost of service and benefit to the millions of recreationists in the Nation. There are countless thousands who are physically unable or lack the time and means to undertake long and difficult mountaineering jaunts on foot or by packtrain. The Gearhart bill proposes to make approximately 50,000 acres within the vast Kings River Basin reasonably accessible to this very large element of nature lovers, so that they may view at least a fraction of its wonders. Even here the primitive aspects of the region would be carefully maintained, while on the remaining 300,000 acres the age-old natural conditions will prevail. And what is tremendously important, by no trick or device of designing commercial interests or other seekers of special privilege could this magnificent natural arena be exploited after it had been made a national park.

The sportsmen of America who have witnessed time and again the encroachment of commercial and other selfish elements on the natural resources of the public domain have a vital interest in the establishment of the John Muir National Park. It is earnestly hoped they will exert themselves in this connection. Let us hope, too, that Congress will watch carefully for pernicious amendments introduced by a limited but adroit and voluble opposition, and act in accordance with those findings.

H. L. BETTEN.

Need for a Census of Housing

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. McCORMACK. Mr. Speaker, there is an immediate and pressing need for adequate data on housing conditions in the United States. This information is essential to private enterprise and the Federal agencies in planning for that expansion of the home-building industry which is so vital to business recovery.

There is no reliable information for the United States as a whole and for the various localities as to the actual need for housing, and the size and price range of the dwellings which should be built. Without such market information the home-building industry and financial institutions must operate in the dark.

We lack reliable figures on a Nation-wide and local basis on such basically essential facts as the following: (1) The total number of dwellings; (2) the type of structures and their essential facilities; (3) the age, condition, and state of repair of our homes; (4) the overcrowding and doubling up of families; (5) the value of homes, and the rentals of leased dwellings; (6) the present mortgage status of dwelling properties and the cost of home financing.

The coming decennial census to be taken early in 1940 offers a splendid opportunity for the securing of this necessary data. The cost of a housing census if taken in connection with the regular census will be only half what it would be if taken separately. Moreover, the housing information itself will be much more valuable because of the possibility of relating it to the population and other data secured in the regular census.

A bill providing for a census of housing in 1940, S. 2240, has already been passed by the Senate and is now before the Census Committee of the House.

In view of the fact that the present favorable opportunity to secure a census of housing will not recur for 10 years, and since action at the next session of this Congress will be too late to permit the necessary arrangements, I am calling this situation to the attention of the House.

In this connection I wish to present the following list of organizations supporting the proposed census of housing: American Federation of Labor, United States Conference of Mayors, American Federation of Housing Authorities, National Association of Real Estate Boards, American Public Health Association, National Association of Housing Officials, American Home Economics Association, New York State Housing Board, Pennsylvania Housing Board, Citizens Housing Council of New York, Producers Council, American Institute of Architects, Construction League of America, Associated General Contractors of America, National Retail Lumber Dealers Association, National Lumber Manufacturers Association, Portland Cement Association, National Lime Association, Mason Contractors Association, National Sand and Gravel Association, Structural Clay Products Institute, Metal Window Institute, National Association of Master Plumbers, National Paint, Varnish, and Lacquer Association.

I understand, in addition, that the various housing agencies of the Federal Government and the Department of Commerce on behalf of the Bureau of the Census itself are on record in support of this legislation.

Works Progress Administration

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

ARTICLE FROM THE EAST ORANGE (N. J.) RECORD AND LETTER FROM THE RELIEF DIRECTOR OF EAST ORANGE, N. J.

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Works Progress Administration," which appeared in the East Orange Record on April 27, 1939, and a letter this day received from Clarence A. Hastings, relief director of the city of East Orange, N. J.:

[From the East Orange (N. J.) Record]

WORKS PROGRESS ADMINISTRATION

Your Congressman, in a speech on the floor of the House of Representatives, January 13, 1939, during the debate on the deficiency appropriation for the Works Progress Administration, as a suggestion among other things, made the following statement:

"I might say in the outset, having been associated with a municipal government for 9 years, I recognize the desperate financial plight of the average municipality in trying to cope with the crying need of those who are victims of the depression, to keep them from want, and I am heartily in favor of the Federal Government subsidizing the States and municipalities to assist in their burden of relief. Until this country has risen from the depths of depression and once more business and industry can function, I cannot conscientiously stand by and see anyone go hungry or in want for clothing or warm homes. But how can business recover as long as the Government continues to excessively spend money? Under the present form of the legislation now to be considered, and having been introduced, hereinbefore referred to, the appropriation will be allocated and administered in the same manner and method as it was prior to the first of this year, without restrictions as to what amount will actually find its way to the relief and assistance of those in want or what amount will be used for the administration of it.

"In my State, New Jersey—and I believe in a great many other States, if not all—there is in the State Government at the present time a relief administration adequately manned with properly qualified investigators and administrators well versed in the methods of administering relief; and in my city—and I believe in a great many cities in the United States—under the director of relief, there is also an organization composed of experts in the administration of relief and a full and competent staff of investigators, all of whom are competent and better acquainted with the needs of the people to handle the expenditure of public funds than is the present Works Progress Administration. We are all aware of the method used in the appointment of the district employees of the Works Progress Administration, and I speak with complete knowledge of my own district, without presuming to have knowledge of others, and I may be in error as to some districts. I am well aware that in my district the administration of the W. P. A. and the employees, as distinguished from the recipients, have all been appointed because of their political position and not because of their knowledge of relief. The higher a person is in the Democratic political machine, the better the job he has received in the Works Progress Administration office. Also, we are all aware of the fact that a man's voting record indicates, even to the recipients, what classification he is in. Is it not a duplication of effort and an unnecessary expense to maintain a Works Progress Administration when the State is equipped to handle it? Would not it be less expensive to the taxpayer to allow the present State relief administration to administer the funds? Would not a much decreased appropriation through the State render more benefit to the unemployed?

"I would be heartily in favor of an appropriation to care for the needs of those in want, in spite of the fact that the deficiency was caused by wasteful spending in a desperate and vain attempt to carry an election, providing such funds were under the supervision and control of the State relief department and distributed through the municipal relief department and the funds necessary to maintain and keep in office the members of the political machine be stricken from the appropriation. I think an examination of the figures will disclose that adequate relief can be given to the unfortunates deserving it with a far less amount than is intended to be appropriated were the administration directed as I have stated. We are all cognizant of the methods used in October to further the political desires, and many were discharged from the rolls to starve because they refused to be dictated to as to whom they vote for. The exploitation of the misfortune of our people for political purposes is deplorable and despicable and should be stopped."

Credit is not taken because of those remarks for what has developed since. However, in line with the suggestions made, there have been two important measures introduced in Congress. One by our own Senator BARBOUR, S. 222, and one by Representative DITTER, of Pennsylvania. Senator BARBOUR's bill, briefly, abolishes the Works Progress Administration and places under the Social Security Act a new title and gives to the Social Security Commission the right to allocate directly to the States moneys appropriated for direct relief and work relief, to be administered by the State relief agencies subject to the supervision and control of the Social Security Commission.

The amount to each State is to be based upon a report filed by the State estimating the total amount to be expended and stating further the amount to be made available by the State and its political subdivisions, which, after investigation by the Board, the amount arrived at will be forwarded to the State. The Board's further determination shall be based on the population of the State, the area, the number of needy individuals, the character and extent of the assistance, and such other factors as the Board deems relevant. This measure, according to the statements of the Senator and those interested in the legislation, will remove from the political arena the distress of our people.

Congressman DITTER's bill, H. R. 5613, abolishes the Works Progress Administration and establishes a Federal Relief Board, which Board shall have approximately the same powers as Senator BARBOUR's bill grants to the Social Security Commission. However, this measure restricts the payments to the States and bases it upon the following factors: The unemployment, relief costs, population, and financial resources, providing, however, that the amount allocated to the State shall not exceed 75 percent of the total amount to be spent in such State.

It will be seen that both bills introduced are introduced with the sole purpose of relieving the deplorable condition that now exists and the waste of public funds on unnecessary expenditures. It will give the State an opportunity to control its relief problems, and finally places the responsibility of administration to the individual upon the municipal relief officials, so that any violations of the rules and attempt at political coercion can be placed on the local official and immediate action taken.

Either of the above bills is a step in the right direction.

THE CITY OF EAST ORANGE, N. J.,
LOCAL ASSISTANCE BOARD, EMERGENCY RELIEF,
July 21, 1939.

Hon. ALBERT L. VREELAND,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: It begins to look as if W. P. A. was on the way out, and I believe that it might be just the time for a group in Congress who feel that way about it to get busy.

As I have written you before, I believe the W. P. A. should be canned as a Government operation, and that the Government should make direct relief grants to the States. Each State to then decide whether to expend these funds for direct relief or worthwhile State projects or both.

I believe also that the Federal commodities distribution should be stopped at the same time and the moneys so expended turned back to the relief-grant account.

Here in Essex County the W. P. A. has recently decided to centralize all the sewing projects. They have persuaded the State F. A. C. to sponsor a State-wide sewing project to supersede the existing projects. Orange, West Orange, South Orange, and East Orange will be in one sewing room in Orange; Irvington and Newark in another; Bloomfield and Montclair in another; Belleville and Nutley in another, etc.

This is just more centralization. Less control over the projects by the municipalities and more control by the W. P. A.

There seems to be right now more widespread public objection to things of this kind and more objection and disgust over the so-called strike against W. P. A.

In other words, I think the people of the country are becoming fed up with the whole W. P. A. as a Government operation, and that the scrapping of the W. P. A. as a Government function, and in its place direct grants to the States so that they can handle their own relief problem directly, will appeal more strongly to thinking people throughout the country as the days go by.

It is bound to come sometime, and I believe right now is a good time to start it going, if possible.

Sincerely yours,

CLARENCE A. HASTINGS,
Relief Director.

Murphy, Lawlessness, and Violence Versus Dickinson, Law Enforcement, and Peace

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. HOFFMAN. Mr. Speaker, whatever may be our opinion as to Governor Dickinson's views on, and his methods of,

handling the age-old problem of "wine, women, and song," few, if any, will doubt the efficiency of his methods in a recent Michigan strike which secured to strikers the right to picket; to those who wanted to work the opportunity to work; and to property owners the possession of their property. All this without violence or bloodshed and in a minimum of time.

For long, Attorney General Murphy, former Governor Murphy, has been patting himself on the back because of his claim that he has high regard for civil liberties; he has held above his own head a glittering halo of self-esteem, and he has posed as the man who, while Governor of Michigan, settled the sit-down strikes without bloodshed.

As a matter of fact, every person cognizant of the real situation which existed in Flint and in Detroit during January and the early days of February 1937, knows that Murphy's hand was forced; he was compelled by citizens of Flint, who would no longer wink at his official support of lawlessness and violence, to tell his friend, John L. Lewis, for whose benefit Murphy was violating his oath of office as Governor, that the sit-down strikers would have to get out of the factories of Flint.

Sensing an end to his ability to aid Lewis and the sit-down strikers in their violation of Michigan laws, Murphy, according to his own story, told Lewis that he, Murphy, would be forced to make public a letter calling upon Lewis to get the sit-down strikers out of the General Motors plant.

Murphy could as well have done this early in January as waiting until the 9th or 10th day of February, but, of course, earlier action would have interfered with the plans of Lewis and with the plans of the Communists in their attack on industry; hence, Murphy waited.

Ever since he has claimed that he settled the sit-down strikes without bloodshed.

GOVERNOR DICKINSON AND CAPTAIN LYONS

Just a few days ago another strike took place in Michigan and hundreds of pickets blocked the entrance and denied admittance to workers on the way to their jobs in a motor factory. The pickets were loud in their statements as to what they would do. Their leader threatened to "tie up" the city of Pontiac. In short they were going to show the people of Pontiac another Flint.

Unfortunately for them they forgot that Governor Murphy was no longer in office. They overlooked the fact that in the executive mansion in Lansing sat 81-year-old God-fearing Governor Dickinson; a real Christian who believes in practical religion; a man who has read and who has taken to heart and who believes in that admonition of St. Matthew "Ye shall know them by their fruits."

Murphy used the State police, some under Captain Lyons, and 3,700 National Guards to prevent the enforcement of the law and the strikes ran on and on.

After 2 days of violence with their pickets in mass formation, failure by the local police force and deputy sheriffs to restore order Governor Dickinson sent Captain Lyons with less than 200 State police down to Pontiac.

Arriving there with a squad, according to some newspapers, with less than 10 State police, Captain Lyons called the attention of the strikers to Michigan's Riot Act and told them to disperse. They obeyed. He told others who were blocking the entrance to the factory, preventing the workers from going to their jobs, to get out of the way, to picket peacefully, limiting the number of pickets to something like 10 at each entrance.

Again the strikers obeyed. Those who came from Flint and Detroit and who would have brought continued violence to Pontiac were told to go about their business. They went. And, strange as it may seem to Governor Murphy, there was not a black eye nor a bloody nose after the arrival of the State police. So you see the difference between Murphy and Dickinson.

A statement which is concise and accurate and brings out the difference between the present Governor and Governor Murphy, who talks about his piety, about his regard for civil liberty, but who aided in the violation of the law, is found in an editorial written by Stanley Banyon and published in the July 14 issue of the News-Palladium, Benton Harbor, Mich. It reads as follows:

WHEN THE LAW STEPS IN

We have an idea that whatever industrial troubles may develop in Michigan while Luren D. Dickinson is Governor there won't be any open defiance of the law and the courts such as there was when Frank Murphy was Governor. And we base this opinion on what happened at Pontiac this week when a C. I. O. strike at a General Motors plant got out of hand.

The sheriff's officers and local police at Pontiac were being shoved around by the strikers and in the scuffling several men were hurt. It began to look as if another Flint affair were in the making. Despite threats from the leaders of the strikers that there would be called a general walk-out and a lot of talk of what would happen if State police came in and took command of the situation. Governor Dickinson ordered in the troopers. They promptly dispersed milling mobs, reduced picketing to a peaceful status, permitted those who wanted to work to do so, turned back an auto load of Detroit troublemakers, and otherwise let everybody in Pontiac know that there wasn't going to be any rough stuff pulled in that particular strike. In an hour or so quiet reigned, leaving union officials and the plant management to negotiate as they should, without recourse to violence.

Governor Dickinson might have waited for the Pontiac situation to develop further, to get worse before he acted. He might have gone down to Pontiac and pulled some of the grandstand stuff that Frank Murphy engaged in when Flint was in the hands of roughnecks and rowdies and the officers of the law were being laughed at and openly defied. He might have indulged in some grandiloquent rhetoric, a la Murphy, on the sacred subject of human rights versus property rights. But he did none of these things. He simply did his sworn duty when the situation was called to his attention. Local officers at Pontiac were apparently unable to cope with the disorder that was threatening the orderly processes of the law. If left to boil, the situation might have become even more dangerous. He recognized the right of the strikers to police the plant where the strike was in progress, but he also recognized the rights of other employees who wanted to work and also the major rights—which transcend the rights of any minority—of the general public to be protected against violence on the wholesale scale.

There might be other flare-ups along Michigan's industrial front in the months to come, but we have an idea that after what happened at Pontiac this week there won't be any Flint episodes while Dickinson sits in the Governor's chair at Lansing.

From a weekly newspaper so capably edited and published by Don Cochran, in the little town of Hartford, he makes the same point; that editorial is as follows:

Michigan people must have been impressed by the contrast between the automobile strike at Flint in 1937, when former Gov. Frank Murphy palliated lawlessness and disorders, and the automobile strike at Pontiac in 1939 which Gov. Luren D. Dickinson handled fearlessly.

The same rioting and disregard of personal and property rights that held unchecked sway at Flint was rapidly developing at Pontiac last week. Governor Dickinson warned that if Pontiac police could not preserve order, the State police could.

When it became apparent that Pontiac police couldn't, the State police did. A detail of 150 of them quickly dispersed the mobs and quieted the disorders. Governor Murphy said he wanted to avoid bloodshed at Flint, but blood was shed there. There was no bloodshed at Pontiac.

The Flint strike brought disgrace and lingers as a dark page in Michigan's history. No stigma lingers at Pontiac.

The rights of the strikers were not denied at Pontiac. Neither were the rights of nonstrikers nor the rights of the public.

The two methods form one of the most striking contrasts in the records of Michigan industrial disputes. It seems amply assured that there will be no repetition of the Flint disgrace while Luren D. Dickinson is Governor.

Undoubtedly, nine-tenths of the people of Michigan agree with the sentiment expressed in these two editorials.

The Penalty of Politics

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. THORKELSON. Mr. Speaker, I take this occasion to further clarify my position on S. 1871, an act intended to prevent pernicious political activities.

It occurs to me that pernicious political activities may be clearly avoided if candidates for political offices do not engage or involve others in such activities. The best method of discouraging such activities is to stop patronage of all sorts. There is no rhyme or reason why a political candidate should take it upon himself to promise positions to those who might help him to be elected. It is only natural that those who help in the election will be favored if the candidate is successful. Fortunately for myself, during my campaign I promised no positions to anyone, but I did say that I would support the Constitution of the United States and represent all the people equally. I also put myself on record as being bitterly opposed to any attempt to destroy the Government or to involve the United States in war. I denounced all "isms," but particularly communism and anarchism. Mr. Speaker, I have tried to keep these promises to the best of my ability.

Last night, I voted against S. 1871, the so-called Hatch bill. My reason for doing so was, as I said last night, that in my humble opinion the measure was unconstitutional. I, of course, despise the putrid politics and political rot which is constantly going on in the Government. I also abhor fraud, and the pernicious practices going on in relief organizations. No one is more opposed to these practices than I, but they cannot be corrected by a law. This must instead be brought about through a patriotic awakening of political candidates to their duty to the people they represent and to the Government which they must support.

This bill provides:

That it shall be unlawful for any person to intimidate, threaten, or coerce, or to attempt to intimidate, threaten, or coerce, any other person for the purpose of interfering with the right of such other person to vote or to vote as he may choose.

It has always been unlawful to coerce, intimidate, or force people to vote for or against anyone or anything. If the candidate could only realize this, he would not attempt to coerce anyone, and those whom he attempts to coerce should kick him in the creek when he comes around and insists they vote for him.

It is, as I said last night, the constitutional right of all citizens to do as they please in respect to the ballot, and Congress cannot pass any law to prevent a man from expressing his opinion politically, whether he is employed by the Government or not. The fact that he is an employee of the Government does not deprive him of the right of expression.

In section 2, we find that Congress graciously restores the right of any such person to state his preference with respect to political candidates, or to vote as he may choose. The section is ambiguous, because it is difficult to determine what is meant by:

To use his official authority for the purpose of interfering with or affecting the election.

In section 3, we find:

It shall be unlawful for any person, directly or indirectly, to promise any employment * * * or other benefit, * * * to any person as * * * reward for any political activity.

How can anyone prove that a person has been promised employment? One person's word is as good as another, but if anyone should prefer a charge or falsely state that he had been promised a position, it might embarrass the candidate. In my opinion, it leads to greater political confusion than we have ever had before. It may actually bring about suspicion of the innocent, because lies, fraud, and dishonesty have no limitations.

In section 4:

It shall be unlawful for any person to deprive, attempt to deprive, or threaten to deprive * * * any person of employment for support or opposition to any candidate or political party.

This in a certain sense excludes and protects workers on relief, yet they are subjected to subsection b, section 9, and as I read this subsection b, it refers only to section 9:

SEC. 9. (b) Any person violating the provisions of this section shall be immediately removed from the position or office held by him, and thereafter no part of the funds appropriated by any act of Congress for such position or office shall be used to pay the compensation of such person.

Section 5, in brief, says that it shall be unlawful for any person to accept money for any political purpose from a person known to him to be employed on relief. What is to prevent a person from going to a relief worker and saying, "John, place a $5 bill in a box to help Mr. X, who is a candidate for office. I can't take the money, but somebody else may find it"? We have laws on the statute books now which take care of coercion, but those who engage in coercion care nothing about the spirit of the law. So, again, it will help the lawless.

In section 6 we find that it shall be unlawful for any person to furnish, for political purposes, names of persons receiving compensation, and so forth, from public-relief funds to a candidate, and so forth, but is it unlawful to furnish the same lists for other purposes—for informative purposes, for instance? A list was furnished to me recently of salaries of officials, not for political purposes but because I wanted to know how much this organization was costing the taxpayers. Is it possible that anyone is no naive as to believe that one engaged in fraudulent activities will respect the spirit of the law? Certainly not. It is only the law abiding who respect the spirit of the law, and they would not ask for a list for political purposes.

Graft, dishonesty, and political fraud are created by those political candidates whose insatiate desire is to live upon the public pay roll and profit by their official powers. I approve of a law that will forever debar a political candidate from holding office when he has been engaged in bribery or fraud in order to maintain his position.

Section 7 provides that no part of any appropriation for work relief and no authority conferred by the act shall be used for the purpose of "interfering with, restraining, or coercing any individual in the exercise of his right to vote at any election."

It occurs to me that this was already provided for, because it must come under the classification of bribery and the use of public funds for such purpose. Why have it reenacted in this act if it is already in the law? And how is anyone to prove the purpose of an individual who chooses to be wrong instead of right? We have examples of this today in the propaganda now so prominently publicized in our papers. The columnist stalls us off by shouting "Nazi, Fascist," and solemnly expounding his views in defense of constitutional government, when he is in actuality vindictively destroying sound constitutional government.

Section 8 provides for a fine of $1,000 and imprisonment for not more than a year for violation of the act.

Section 9, as I understand, is the Dempsey amendment, which makes it unlawful for any person employed in the executive branch of the Federal Government or any agency or department thereof to use his influence, and so forth, but further on in the section it says:

All such persons shall retain the right to vote as they may choose and to express their opinions on all political subjects.

Here the section restores the constitutional right to the people—a right which Congress cannot grant the people, but which they have instead reserved for themselves. The Members in Congress who do not believe this may be better impressed of such rights when they come up for election every 2 years. It is within the power of the people to do just exactly as they have said—to change the whole Congress every 2 years, and that is the right that the people have reserved for themselves, in the ninth and tenth amendments of the Constitution of the United States.

Let us now get this thing right. The Constitution delegates power to Congress in article I, to the President in article II, and to the Supreme Court in article III. All that is necessary is for each branch to read the powers that the people delegated, and if any question arises as to the limit of such power, the people have further provided in the ninth article in the Bill of Rights that, in case of doubt,

the benefit of the doubt should be given to the people—and not to the politician.

The Constitution further provides that anyone who in any manner destroys the value of the document is an enemy of the people and as such must be treated accordingly. An official who does not enforce the laws so as to protect the Nation commits a crime. If certain activities are bent upon destruction of the Republic, an official who does not protect the Republic by enforcing the law commits treason and lays himself open to impeachment. If Congress does not enforce this provision, it invites public contempt and public ridicule. The people can express their disapproval or approval by the ballot only, but do not forget that this Government belongs to the people of the United States and we are the servants of and the protectors of the people's rights.

I shall again refer to the amendment introduced by the gentleman from New Mexico [Mr. DEMPSEY]:

For the purposes of this section the term "officer or employee" shall not be construed to include (1) the President and Vice President of the United States, (2) persons whose compensation is paid from the appropriation for the office of the President, (3) heads and assistant heads of executive departments, (4) officers who are appointed by the President, by and with the advice and consent of the Senate, and who determine policies to be pursued by the United States in its relations with foreign powers or in the Nation-wide administration of Federal laws.

May I call your attention to No. (4) in this section?

(4) officers who are appointed by the President—

Do not forget that this covers a multitude of appointments. This is particularly true since we enacted the vicious and unconstitutional Reorganization Act, in which the President, for all intents and purposes, presents legislation to Congress which becomes law in 60 days if Congress does not deny this power to the Chief Executive. Under this same act he may make many kinds of appointments. Bear also in mind that it excludes those who administer the Federal laws, " * * * the Nation-wide administration of Federal laws." Now, then, what will the act accomplish? It will place every decent, honest, and sincere citizen who has the fortitude to leave his business in order to help the Nation and the people as a Member of Congress at the mercy of those who have been engaged in subversive political activities since the beginning of our Nation. He may innocently become a football for crooked politicians, for, mark you, this act will not in any sense prevent the same activities that have existed heretofore.

Mr. Speaker, last night was the first time since I have been a Member of Congress that the House engaged in extensive debate about the constitutionality of legislation. That alone is a healthy sign, for it is now evident that the Members of Congress recognize that we are operating under the Constitution of the United States instead of vague interpretations of the Constitution often delivered by the Supreme Court. This is as it should be, because Congress alone is responsible for the constitutionality of all legislation presented and considered by this body.

When either branch of the Government exceeds the power delegated to it in the Constitution in its literal meaning, it has exceeded the power delegated to it by the people. When the question arises, as it did last night, in respect to constitutionality, such uncertainty is in itself evidence of disagreement. When an occasion like that arises, Congress must, instead of passing the legislation, give the benefit of the doubt to the people, as provided for in the ninth amendment of the Constitution. Mr. Speaker, this is what I have been talking about since I have been in Congress, and by the nonobservance of the Constitution we have today such a chaotic mass of unconstitutional legislation on our books that half of the people do not know whether we are a republic or whether we have degenerated into the much-advertised, demoralized democracy, as expounded by the Communists, the liberals, and the New Deal Socialists. It is well for us to bear in mind, as I have already said, that Congress cannot give more rights to the people than they have already reserved for themselves, and Congress must not deprive the people of such rights.

If Congress acts arbitrarily or in contravention of this power, it is no longer observing its obligation to the people and to the Constitution of the United States.

I wish to deal briefly with another phase which is pertinent at this time, and that is the question of free speech. I am a firm believer in free speech, but free speech which has for its purpose the destruction of the Government of the United States may be classified as seditious. In such event, those who engage in expressions of that sort become enemies of the United States. I here and now charge that communism and anarchism have for their purpose the definite destruction of the United States Government, which is clearly proven in their own writings. Article III, section 3, provides punishment for those engaged in destruction of our Government, for they are enemies of the United States. It is the duty of the President to see that this law is faithfully obeyed, and to bring all those who are engaged in communistic and anarchistic activities before the bar of justice. If he fails to do this he himself neglects a duty which he has sworn to perform. In such event, no matter who the President may be, he, by acquiescence, and in not seeing that the laws are faithfully obeyed, becomes himself involved in the same activities. Congress should see that all departments perform their duties as provided for in the Constitution. If those whose duty it is to enforce the laws neglect their duties, then it becomes incumbent upon Congress to make inquiry as to the cause of such neglect. If Congress fails to do this, the people are still in supreme command, and no doubt will express their wishes by the ballot.

Business Recovery Ahead

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. THILL. Mr. Speaker, in yesterday's Evening Star, a newspaper published in Washington, I read the following news item:

HYDE PARK, N. Y., July 21.—President Roosevelt contended at a press conference today that a decision to defer action on neutrality legislation until the next congressional session would hurt business.

In my estimation, the President is wrong. Some keen students of finance and of the stock market indicate that, under the Dow theory, a signal of a new bull market was given this week. How long securities and business will go up cannot be foretold. But that a new psychology has taken hold of the investor and speculator in the securities markets cannot be denied. The stock market averages rose decisively during the past few days, and millions of dollars were added to the quoted values of securities.

What caused this change in mental attitude? Was it due to a realization on the part of businessmen and the public generally that Congress is again getting back to a sound, sane course?

That the activities of Congress have a tremendous effect upon the mental equilibrium of the average citizen is acknowledged. The passage of the Hatch bill, to prevent pernicious political activities, and the passage of the Smith resolution, to investigate the National Labor Relations Board, should have a calming effect upon the minds of those Americans who have been disturbed by New Deal political extravagances.

The Southern Plea for Abolition of Freight-Rate Discriminations

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. BRYSON. Mr. Speaker, no part of this transportation bill is more deserving of our consideration than section 6, which strikes a blow at sectional and intersectional freight-rate discriminations.

While those of us in this House who have been pressing for the enactment of legislation to wipe out freight-rate discriminations against industry in the South and West cannot say that the provisions of section 6 gives us all that was asked for, we do feel that it represents a partial victory—a precious concession to our demands.

Section 6 of this measure amends section 3, part I, of the Interstate Commerce Act, so as to make it unlawful for any common carrier either to give any undue advantage to any particular region, district, or territory, or to subject any particular region, district, or territory to any undue disadvantage. Under this section authority is also given the Interstate Commerce Commission to investigate rate structures throughout the country to determine instances in which unjust, unreasonable, or unlawful rates exist.

The inclusion of this section in the transportation bill recalls efforts at this session of Congress, which began with the meeting of a large group of southern and western Members of Congress on January 20. Representatives of 20 Southern and Western States participated in this meeting, and plans to attack the problem of freight-rate discrimination were considered at length.

The week following this conference I introduced a bill designed to wipe out existing freight-rate discriminations. This bill was referred to the Committee on Interstate and Foreign Commerce on January 30. Making it unlawful for any common carrier to maintain rates unduly disadvantageous to any particular region or territory, my bill would also require the Interstate Commerce Commission to revise existing freight-rate structures "for the purpose of establishing and thereafter maintaining sectional and intersectional uniformity in rates, permitting the free and unfettered flow of commerce between different sections and States of the United States."

Similar measures, aimed at the eradication of freight-rate differentials between different sections of the country, have been introduced by other Members of Congress. In an interview with the press on April 28, I stated that the introduction of these measures had made an impression on the Interstate Commerce Commission that was being reflected in a more sympathetic treatment of the complaints of southern shippers. In support of this view, I pointed to a recommended report which Commissioner Lee submitted to the Commission on February 27. This report recommended lower rates on a number of articles moving out of southern territory, stating that:

> The maintenance of rates reflecting territorial differences in rate levels, thereby creating rate walls along the borders of rate territories, tends to prevent a Nation-wide development of industry, and is not conducive to the promotion of the best interests of either the carriers as a whole or the country as a whole.

At that time I also predicted that the President's action in calling upon Congress to give special study to the subject of freight-rate discriminations would strengthen the position taken by the southern group in Congress. Last November I had an opportunity to discuss briefly the freight-rate situation with the President, and he left no doubt in my mind as to his readiness to support the South in this struggle.

Legislation to eliminate freight-rate differentials, which impose an unfair tariff on goods manufactured in the South, is long overdue. I wish to call to the attention of the Members of this House certain portions of a recent report on economic conditions of the South, which reads as follows:

> In addition to absentee ownership and the high cost of credit, the major problem which faces almost all industry in the South is that of freight-rate differentials. The present interterritorial freight rates which apply on movements into other areas of many southern manufactured and semifinished goods, and some agricultural products and raw materials, handicap the development of industry in the South. This disadvantage works a hardship particularly with regard to shipments into the important northeastern territory. This region, containing 51 percent of the Nation's population, is the greatest consuming area. The southeastern manufacturer sending goods across the boundary into this region is at a relative disadvantage of approximately 39 percent in the charges which he has to pay as compared with the rates for similar shipments entirely within the eastern rate territory. The southwestern manufacturer, with a 75-percent relative disadvantage, is even worse off. Such a disadvantage applies to the southern shipper even when, distance considered, he is entirely justified on economic grounds in competing with producers within the eastern territory.
>
> In effect, this difference in freight rates creates a man-made wall to replace the natural barrier long since overcome by modern railroad engineering. Both actual and potential southern manufacturers are hampered because attractive markets are restricted by the existence of a barrier that is now completely artificial. The southern producer, attempting to build up a large-scale production on the decreasing cost principle, finds his goods barred from the wider markets in the Nation's most populous area. In marketing his products over the wall he is forced to absorb the difference in freight charges.
>
> Two chief reasons for higher freight rates have disappeared. One was the greater expense of railroading in the South due to physical difficulties. This has been minimized by modern engineering. Another was the comparative lack of traffic that prevented the spreading of the cost. This no longer is the case, since many important southern roads have as great a traffic density as those above the Ohio River. The operating costs of southern lines today are lower than those in the eastern territory.

Despite the fact that all reasons for higher freight rates have disappeared, glaring examples of rate discriminations still exist. For instance the distance between Charlotte, N. C., and St. Louis, Mo., is 801 miles, and the cost per 100 pounds for shipping goods first class is $1.98. On the other hand, while the distance between New York City and South Bend, Ind., is 803 miles, the cost per 100 pounds for shipping goods first class is only $1.42. This means in this instance that the manufacturer in Charlotte must pay 56 cents more—an outright 56-cent tariff—on every 100 pounds of goods which he ships to St. Louis in competition with the New York manufacturer.

Looking at this matter of rate discrimination from another angle, we find that the distance between Atlanta, Ga., and Louisville, Ky., is only 449 miles, while the distance between New York City and Louisville is 852 miles, or almost twice as great as the distance between Atlanta and Louisville. Yet the transportation cost for the 852 miles between New York City and Louisville is only $1.49 per 100 pounds first class, while the transportation cost for the 449 miles between Atlanta and Louisville is $1.51 per 100 pounds first class. This means that the Southern manufacturer must pay 3 cents more than the New York manufacturer to ship every 100 pounds of his goods about half the distance of the New York shipper.

There can be no denying the fact that the industrial development of the South has been retarded and is being hampered today by the presence of discriminatory freight rates. All the people of the South have felt the oppressive effects of this great injustice. The manufacturer has been forced to meet competition from other sections of the country with one hand tied behind his back; the mill worker has seen his opportunities for employment limited, and he has often been expected to bear the burden of this freight-rate tariff while the farmer has had to place his product on sale in a restricted market.

By and large I know that the Members of this House hold to the vision that this Nation can, and will if it so

orders its affairs, attain the ultimate in productive genius and human happiness, and I appeal to each of you in a spirit of fair play to go forward with us in this effort to wipe out all freight-rate discriminations.

What Does Labor Want?

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

RADIO ADDRESS BY MARSHALL E. DIMOCK, SECOND ASSISTANT SECRETARY OF LABOR

Mr. HAVENNER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Marshall E. Dimock, Second Assistant Secretary of Labor, delivered over the radio on July 14, 1939:

I

In Pullman cars, businessmen's clubs, country post offices, and corner taverns—indeed, whenever topics of the day receive an airing—people are asking, "What does labor want?" Sometimes the question is discussed casually, merely to make conversation, while at other times it is attacked with great passion, as though life itself depended upon the answer.

To be sure, no one person should presume to know categorically what labor does want, but the question is so important that despite the danger of being considered presumptuous, individuals from widely differing walks of life need to discuss it as frequently as occasion permits. Our American institutions, let it never be forgotten, are built upon mutual education and universal assent.

What has happened to make people ask searching questions about labor's aims and objectives? In a relatively short time the ranks of organized labor have almost trebled; company unions have been outlawed (on paper at least) and collective bargaining has made great gains; industries have been organized which were once thought unorganizable; a floor for wages and a ceiling for hours is being created; and child labor is prohibited in important segments of our economic structure.

In the conference room and in the legislative halls organized labor has been outstandingly successful.

If these gains are to endure, however, public opinion must be much better informed on the necessity and legitimacy of organized labor's aggressive program than I, for one, think it is at the present time.

II

If we are to work out a sensible, democratic solution of the relations between capital and labor, we must learn to think of labor in terms of underlying realities rather than in terms of symbols.

What does labor want? As I see it, labor does not want anything special or peculiar; it merely wants the same thing that everybody else is seeking, whether they be called businessmen, farmers, professional people, or savants. Men from widely different walks of life have given expression to this basic truth. Thus, for example, we find one of the most outstanding businessmen Boston has ever produced observing as follows:

"Labor could not and did not act like a commodity. It acted like human beings. It acted, in fact, from much the same motives with which employers acted, and not even the most dismal economist supposed that employers were commodities."

The same idea was expressed even more graphically a year or so ago by the American workers' delegate to the International Labour Organization Conference in Geneva. Labor, he said, is but a group term for working people. They have the same desires as everyone else; that is, to earn a decent living for their families in self-respecting circumstances at jobs which they can enjoy. And keep constantly in mind, he added, that our fundamental social problems can be solved only by viewing labor as a "mass movement of individuals with the same sort of hopes and feelings and needs" as everyone else. I am convinced that this is the fundamental point of departure for all thinking and program planning in the field of industrial relations.

III

In order to understand what labor wants and why tensions exist today it is necessary to view the labor movement both historically and in comparison with developments in other countries. The history of the older industrial countries shows that just to the extent that technology replaces manual labor, that tools are owned by investors rather than by workmen, that aggregations of capital and management supersede the simple, individually owned form of business enterprise; just to this extent may organized labor be expected to form itself into compact defensive-offensive organizations for the purpose of bargaining collectively with employers and holding out for its fair share of the national income. In our modern industrial world, labor has no alternative than to form itself into organized groups if it is to be on a parity with large employers in collective bargaining.

It is well recognized by all competent observers that the American labor movement until recently was about 20 years behind corresponding labor movements, such as that of Great Britain, in securing recognition for its legitimate social and economic aims. It is a tribute to the perspective, Americanism, and sense of humor of American businessmen that the adjustments of the last few years have been accompanied with no more bitterness and warping of points of view than there has been.

This, then, is the historical explanation. A second, to which I now turn, is of a different sort, but, as you will see, it is closely related to the foregoing.

IV

I have already said that men in labor organizations want substantially the same things that the rest of us want. Applying this to the American scene, there emerges a second basic proposition which is a corollary of the first: American laboring men seek the things that America and Americans strive for. When, therefore, our national values place emphasis upon the dignity of the individual, organized labor assumes that its members will be given the same consideration; when in our scheme of values we as a people assume that a rich and fertile land should produce a constantly improving standard of living, American workers take it for granted that they will get their just deserts; when our ideology emphasizes individual responsibility and initiative, it is entirely natural that Amercan laboring men should take this position with reference to their work and their Government. In short, American workers want what we Americans as a whole want, nothing more and nothing less.

Men in groups attempt to adjust themselves to new situations. Now, for the words "men in groups," simply substitute the word "labor" and this is what you get: labor attempts to adjust itself to new situations. It is a well known truth of social psychology that men are happy only when geared into the prevailing thought and standards of the age. In terms of the adjustment we are considering this means that so long as we in America emphasize property, individualism, and progress, American labor may be expected to strive ceaselessly for the same goals. It is because of this fact that executives who have the large perspective realize that the worry and uneasiness which organizing activities sometimes cause them should be borne with that fundamental sense of confidence which is part of our tradition, because they realize that the activities which occur in their own particular plants are merely part of a larger program of adjustment to the changing structure of our industrial society.

Let us push our thinking forward into some concrete applications. Assuming that labor's aims are simply a reflection of the larger values of our civilization, that men in groups attempt to adjust themselves to new situations, and that the unprecedented unionization of recent years is largely due to a delayed reaction which occurred much earlier in other countries, what, then, may be said of the duties and responsibilities which devolve upon the executive of a particular business?

From the standpoint of industrial relations, the basic problem of management is to discover evidences and causes of maladjustment. These may be social, organizational, or psychological. (A great deal of what is labeled psychological might better be called social.)

Administrative organisms, like social ones, produce "cultures." Man's harmonious relationship to his culture is the most important problem both of labor economics and of the individual man. What does labor want? To be geared into the culture of our time. This means security, a chance to rise, good wages, everything that is considered right and proper in the thought of our age and society.

Among social psychologists who have attempted to study labor's attitudes and desires in a careful fashion there is almost unanimous agreement that security is a universal demand. However, this is one of those cases in which the argument is true up to a certain point, but thereafter, if pushed too far, becomes untrue. Security means different things to different people. True, most men want steady work; but mere security and holding the same job would not satisfy the man who wants to get ahead. Further, few people would care to hold the same job if they knew that the pay were going to be periodically cut. The implications of the security slogan, however, become really objectionable when it is interpreted as meaning a "frozen" industrial structure in which the masses are led to understand that they must give up hope of constantly bettering the average lot. When the term "security" takes on this connotation, it is virtually indistinguishable from class stratification.

V

I know from having talked extensively with employers that one of their great concerns when one assumes that organized labor will demand more and more, is that labor will "interfere" with management. Of all the factors which must be worked out over a considerable period of time, none is of greater potential significance than this. It is a matter, first of all, of defining what is meant by "Share the management" and thereafter of educating both sides with reference to what can and should be done.

Executives are naturally jealous of their traditional right to organize, coordinate, and direct all parts of their enterprise without let or hindrance, except insofar as a board of directors or some

other authority chooses the goals and establishes the limits of discretion. But when labor people talk about labor's right to an increased share in management they contemplate something which is quite different from the division of authority at the top. Most workers want cooperation rather than power. They want to be sure that they are not being exploited and that the corporation is not receiving exorbitant profits.

Industrial relations, therefore, is ultimately a matter of educating each side with reference to the viewpoints and problems of the other. No one has stated this more clearly than that astute student of our economic system, Louis D. Brandeis. In his testimony before the United States Commission on Industrial Relations in 1914, this keen observer of human nature and social organization said:

"I think the main mistake that the employers have made has been a failure to acquire understanding of the conditions and facts concerning labor. There has been ignorance in this respect on the part of the employers—ignorance due in large part to lack of imagination. Employers have not been able to think themselves into the labor position."

Then, turning to the other side of the picture, Mr. Brandeis added:

"What the employer needs most is to have proper representatives of labor understand the problems of his business, how serious they are, how great is the chance of losing money, how relatively small is the chance of making large profits, and how great is the percentage of failures."

It is a source of great satisfaction to all of us, I am sure, that so much progress has been made in the direction pointed to by Louis D. Brandeis since he offered his sound advice in 1914.

American workers are the most efficient in the world. They are hard workers and essentially individualists. I think it is also true that to a greater extent than in any other country, perhaps, American labor is essentially fair. Many will disagree with me, of course, and say that labor leaders are frequently unfair, visionary, impractical. But laboring men are close to realities, and when given the facts they can be trusted to come out with the right conclusion and to do the thing that is fair in at least as large a percentage of cases as would a group of employers.

It is also charged that there are "racketeers" among labor leaders; but when one investigates this one discovers that the number is very small indeed, and is without question proportionately less than the number of businessmen who have abused their trusts in a way which is unacceptable to our standards of morality. You also hear it said that some union organizers seem to be interested primarily in extending their own dominion, making a more important position for themselves; but have you ever talked with a candid businessman or a frank Government official who did not admit that aggrandizement is a universal trait of leaders and organizations of all kinds?

Do not misunderstand me. I am not attempting to justify or to condone the mistakes that labor leaders and labor unions have made and still continue to make. There is no question that in the labor movement, as in the management of large business enterprises, we need a stronger sense of institutional trusteeship and a more uniform level of individual competence.

There is no question in my mind but that labor will become more responsible and turn increasingly to internal improvements as more and more the militancy which has been necessary in order to secure its just claims passes from the scene. The question of how to improve responsible leadership is a very complex one and there is danger of oversimplifying it. However, as one important factor which needs to be kept constantly in mind, I would suggest a point which Robert Watt, one of labor's leaders, has made:

"Management can determine the sort of leadership which labor provides because it determines whether we must plead our cause by force or by reason. Give us conference-table discussion of honest issues and you will get that type of leadership. If you give us the Mohawk Valley formula, you will get militant unions with fighting leaders. You cannot breed respect and confidence by the stool pigeon and labor spy. Every union which you smash by force and deceit will be succeeded by a tougher, harder union ready to match itself against your tactics."

VI

Organized labor is merely a group name for other human beings like you and me, irrespective of our occupation or our place in society. This being the case, labor wants what all of us in America want. It is gregarious and fraternal; it is human nature for it to organize. It wants to sit around a conference table and talk things over with employers. It feels that only in this way can it get its just share of what it produces and render the contribution to the enterprise which it is capable of delivering. It wants everyone, including management, to recognize the dignity of the worker's task. The ultimate values which guide and inspire American labor are the values which constitute the pulling power of us all. Labor insists that as individuals and as a group, it be assured an opportunity to grow, to improve. Labor wants a basic minimum of security. It wants to be geared into the culture of our time. It wants to be educated and to be permitted to educate. It wants that form of power which grows out of cooperation rather than domination.

The Hatch Bill

EXTENSION OF REMARKS
OF
HON. FRANK H. BUCK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

Mr. BUCK. Mr. Speaker, yesterday you honored me by asking me to preside over the Committee of the Whole House on the state of the Union while it considered the so-called Hatch bill. The committee began consideration of the bill at 10 minutes after 3 in the afternoon and did not rise until 5 minutes of 11 last night. During that period, with the exception of a few moments during the general debate, I was in the chair the entire time. Even had I not been interested in the subject matter of the bill it was necessary, in the position that I occupied, to pay strict attention to both the general debate and the debate on various amendments that were offered to the bill. It is only proper to say that this debate was vigorous and illuminating, but it was not enough to convince me that the bill as finally amended in the Committee of the Whole House should receive my favorable vote.

On final passage, I found it necessary to cast a negative vote. The bill as it then stood, in my opinion, went far beyond any legitimate effort to make the text of the bill conform to its title—an act to prevent pernicious political activities.

"Pernicious," in its dictionary definition, means: "Malicious, wicked, baneful, deadly, destructive, evil, harmful, hurtful, injurious, mischievous, noxious, perverting, ruinous." Some of the activities which we have prohibited in the Hatch bill undoubtedly fall within this definition and they should be prohibited. Other activities, however, have been included which in my opinion are perfectly legitimate activities of the man who desires to exercise his elective franchise and his right to participate in political activity in a perfectly legitimate way. It is the prohibition of these activities by the Hatch bill that I find myself opposed to which caused me to vote against the bill. With the original purpose of the bill which was aimed at abuses such as corruption, fraud, coercion, and intimidation of voters, I am in entire sympathy. Section I of the bill provides that it shall be unlawful for any person to intimidate, threaten, or coerce or to attempt to do so, any other person, for the purpose of interfering with the right of such other person to vote as he may choose or of causing such other person to vote for or not for any candidate for the office of President, Vice President, Presidential elector, Member of the Senate or House of Representatives. Certainly there is nothing in that that anyone could object to.

Furthermore, one of the original purposes of the bill was to prevent intimidation or coercion of workers on relief rolls or the use of the official authority or influence of those in an administrative capacity over such relief workers. With that purpose I am in entire sympathy.

The difficulty is that those who drew the bill probably drew it rather hastily, and those who have amended it last night certainly amended it in a spirit of haste and without due consideration, if, indeed, they did not amend it in a spirit of partisanship. Perhaps they may themselves have been guilty of pernicious political activity in one of the milder terms of its definition.

As the bill now stands, as as it will go to the White House, for I understand the Senate is accepting the House amendments today, it will deny to those men and women who hold political appointments not under civil service even the simple political rights that civil-service appointees now have. A civil-service employee can contribute to campaign funds. He can go to all the political meetings he wants to and he can

express his personal opinion as to which candidate he may be for. Civil-service employees cannot take part in managing campaigns, and they are not supposed to make a political speech. But you have gone much further in this bill, which affects non-civil-service appointees. Perhaps it would have been all right to cover the non-civil-service appointees administering relief work, and I think I should have been glad to have gone along in this respect. But, after all, those who are appointed as district attorneys and marshals and collectors of internal revenue and their subordinate non-civil-service employees in the present status of the law have their foundation just as much dependent upon the political views and whims of the voters as do you and I; and it seems to me entirely unreasonable, even if we have the right, to deprive them of the privilege of defending their actions by word of mouth or by contribution to the war chest of the political party to which they belong, or by otherwise taking an active part in political campaigns.

I am not sure in this respect the bill is constitutional, but I do not propose to pass upon that question. I am certain that whether constitutional or not it is inadvisable for us to prohibit the activities of non-civil-service employees to a greater extent than those who are in the classified service. These gentlemen whom you are trying to drive to cover are just like ourselves. They have not the assurance of the security of the classified service. Their security depends upon the vote in the next election. Why, then, until such time as you put them under civil service and make their tenure permanent, should they not be permitted not only to express their opinions freely but to make contributions or even receive them for the benefit of the political party to which they belong? Frankly, I think this is an invasion of the principles of American equality and the civil liberties of this part of the voting population. I cannot go home to my people and tell them that I voted to take the first step to say that because you are in any way connected with the Federal Government or receive pay directly or indirectly from it, that you are hereafter to be hog-tied as to your participation in an election.

Frankly, I do not know how far this bill may go. One section provides that it shall be unlawful for any person employed in any agency of the United States, including any corporation controlled by the United States or any corporation all of the capital stock of which is owned by the United States, or any agency thereof, to use his official authority to influence any voter or any primary or general election. There are a great many people whose compensation is partly paid by the Federal Government and partly paid by the State. Such are those who work under the Federal-State matching plans for road building, for Federal-State employment service, for farm-extension work, and for various other activities. In my personal opinion all these individuals are now handcuffed as far as their participation in any political movement is concerned. One gentleman who spoke last night pointed out that it might be possible that even the employees of national banks might be covered by this bill. It seems to me that we have taken a very long step toward depriving a great element of our population of their rights to actively participate in political life.

The gentleman from Florida [Mr. GREEN] said yesterday:

> To whom is this bill directed? It is directed at the weak and underpaid Federal employee. It is not to remove from him the fear of casting his vote properly, but it is to put in his heart the fear that if he defends his political right, defends a principle in which he believes, defends an administration of which he is a part, attends a public dinner with the leaders of his party, contributes 5 cents for an advertisement for his political party, or engages in any kind of political activity, he will be branded as a Federal law violator.

I am not ready to go this far. I think we have exceeded our authority in passing the bill. I think we have deprived thousands of persons of inherent rights.

I have no quarrel with the primary objectives of the bill. I sincerely hope that the President will veto it and send it back so that those primary objectives may be enacted, without trespassing on what I consider the constitutional rights of our citizens.

Democracy and Americanism

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 22, 1939

ADDRESS BY DR. EDWARD J. McCORMICK

Mr. ANDERSON of Missouri. Mr. Speaker, on July 10 the Benevolent and Protective Order of Elks opened their Seventy-fifth National Convention in St. Louis, Mo. On that occasion Dr. Edward J. McCormick, grand exalted ruler of the Elks, delivered a memorable address on Democracy and Americanism. I ask unanimous consent to extend my remarks to include Dr. McCormick's address and I commend it to the attention of every Member of this House.

Mr. Chairman, Your Honor, the mayor of St. Louis, past grand exalted rulers, officers of the Grand Lodge of the Benevolent and Protective Order of Elks, distinguished guests, ladies, and gentlemen, it has been many years since the Benevolent and Protective Order of Elks of the United States of America met in national convention in the great city of St. Louis. In the name of half a million American gentlemen, who are members of the order, and on behalf of their families and friends, I express sincere gratitude for the words of commendation and welcome spoken by his honor, the mayor of the city of St. Louis. We know that St. Louis is one of the most substantial cities of the Union, its citizens noted for conservatism and solidity and undiluted Americanism.

We are your guests this week, not only for the purpose of fraternal reunion with men from all parts of the United States and its possessions, but to make plans for greater endeavors in our charitable and humanitarian undertakings and to marshal our forces for "a fight to the finish" against intolerance and un-American activities.

This is the seventy-fifth convention of the order, which is now 71 years of age. The fraternity came into being after the Civil War, as an Order of American Patriots, and was dedicated to charity, justice, brotherly love, and fidelity at a time when these virtues had been forgotten. That the founders of our order had great vision is evident, if we look about the world today. It would seem that these Biblical fundamentals had been relegated to the archives of history.

We are an American order, devoted to the cause of democracy. We accept into our ranks only those men who believe in and worship the Supreme Being and who are citizens of the United States of America and who are willing to acknowledge that they are their brother's keeper. We cannot separate God from democracy. Democracy is the government of God-loving people. When God is denied, democracy disappears and is replaced by totalitarianism or communism, and charity, justice, brotherly love, and fidelity become selfishness, injustice, intolerance, and immorality. The free man becomes the serf. The Constitution of Elkdom was written with the Holy Bible on the one hand and the Constitution of the United States on the other.

Recognizing that we are "our brother's keeper" and that the continued existence of democracy, government by and for the people, depends upon the interest of the more fortunate in the less fortunate, we have for 71 years maintained a charitable and humanitarian program that has necessitated the expenditure of millions of dollars by our 1,500 subordinate lodges, in excess of eighty millions having been expended by these lodges in the past 50 years. These expenditures are exclusive of grand lodge foundations and programs. The activities have been in every known humanitarian and altruistic field.

In New Jersey, Florida, North Dakota, Nebraska, Illinois, and other States, our State associations and subordinate lodges have pioneered in the care of crippled children and the physically handicapped. Hospitals are owned or supported by the order for this purpose. There are thousands upon thousands of self-supporting men and women in the world today, who but a few years ago were doomed to dependency, who have been rehabilitated by the Elks of America. In Arizona the Elks have devoted themselves to the care of the tubercular and operate a hospital for tubercular patients. In Ohio, Pennsylvania, and Massachusetts, and in other States, the State associations are supporting scholarship foundations. When I visited the Pennsylvania association, 14 scholarships were given to worthy boys. The Elks of Missouri are striving to solve the problem of defective vision in children of indigent fami-

lies. Five hundred boys of Indiana are in a camp provided by the Elks of that State, learning the lessons of physical fitness, moral cleanliness, crime prevention, and traffic safety. So in all States, the State organizations are devoting their energies to some major problem having to do with the welfare of the poor people.

Subordinate lodge activities for the unfortunate have been outstanding during the entire existence of the order. Practically all lodges give Christmas and Thanksgiving baskets. Hundreds of widows and orphans have been and are being cared for. Most lodges have Boy Scout troops and some Girl Scout troops. Many lodges are now awarding scholarships. All types of civic and community-welfare work have been undertaken at some time or another wherever there is a group of Elks.

Grand Lodge activities have included the erection and maintenance of a home for aged men at Bedford, Va., said to be one of the finest in the country, the construction of the National Memorial building in Chicago in honor of those who made the supreme sacrifice during the World War, and the publication of the Elks Magazine in New York City. The war work of the order, directed by the Grand Lodge, included the donation of base hospitals to the Government, the construction and the presentation to the Government of a fully equipped reconstruction hospital, the establishing of a revolving fund for loans to returned soldiers and the financing of the operations of the Salvation Army in France. I have ofttimes said that the War record of the order justified its existence had nothing else ever been done. Since the war, the Grand Lodge has brought into being the National Foundation Fund which is growing rapidly year by year, and from which fund moneys are dispersed to State and subordinate organizations for all types of constructive work. This fund is unique in that its principal is held in perpetuity, and that no part of the income is used for administrative expense—the latter is borne by the Grand Lodge.

During the past year, all lodges and members have been extremely active in civic works. New programs have been initiated for fire prevention, the tubercular testing of hundreds of school children, the study of child delinquency and crime prevention, traffic control campaigns, the building of swimming pools and recreation grounds, lunches for school children, tonsil and dental clinics—in fact the good works impetus has been so comprehensive that it almost defies description. One lodge of our order has expended $104,000 during the past 8 years for milk, and its members, during this period, have placed milk each morning upon the doorstep of every indigent family in its community. Hundreds of iron lungs and many electrocardiographs have been given to institutions, many hospital rooms furnished, and numerous safety cars presented to various cities. We have justified our existence. Through the years we have protected democracy by an active interest in the less fortunate, by public condemnation of intolerance and by fearlessly holding aloft the hands of democracy with a demand for liberty and justice for all.

During the past few months we Elks have conducted a Nation-wide Americanism program, teaching the blessings of democracy and warning all Americans of the present threats to Government "of and by the people." It has been estimated that we reached at least 15,000,000 people during our Americanism week in March. Thereafter many of our lodges started Americanization programs for the purpose of aiding the foreign born in the serious problem of actually becoming American citizens, designed to absorb them and to make them love America, its history, and traditions, and to cause them to respect its liberties and opportunities.

Flag Day observation throughout the order has assumed mammoth proportions. Hundreds of thousands of people have attended Flag Day ceremonies directed by officers of the order.

As an American order, we know that the founders and fathers of our country recognized the fact that we have been given certain inalienable rights by the Creator and not by form of government. They realized that men are created equal and we in America have obtained a higher degree of political and social equality than any other country. We are striving for equality of dignity and opportunity and we should aim at economic equality insofar as such equality is possible, but as has been said, "We cannot hope to shackle the more efficient, that they may not outrun the less efficient." Our Constitution tells us that we have certain inalienable rights derived from our Creator which, therefore, cannot be taken from us except by the Creator. So we guard in America the liberty of the individual and the minority.

Democracy and our Americanism has brought to the shores of this land of ours determined men and women who have realized that the rail splitter would here be given opportunity to prove himself worthy of the highest office in the land. Initiative of the individual has not been curtailed and America has progressed to become, while the youngest, yet the greatest of countries. We have become the world's leaders in art, in science, in the professions, and in business. We are a rich country. We are a progressive people. We lead the world because we are a democracy.

Would that I could say to this audience tonight that our democracy was marching on to new victories, without threat or obstacles. This, I cannot honestly do. Americanism and democracy are threatened by many and it is our duty to advise our friends and our neighbors that the very medium that has made us a great Nation and a great people is in danger. I have but to remind you that in our public-school systems and in our great universities, there are men and women who have cast God out of their hearts, who have turned their backs upon "Government by and for the people," and who are openly advocating changes in our form of government that to say the very least, would bring us to the brink of communism and totalitarianism. We find that these individuals have made their ways into city, State, and governmental agencies, that they are holding offices in our labor unions, stirring up strife and discord and doing everything possible to interfere with economic progress to the end that democracy may be torn down and discredited. I am sure that all of us recognize labor as the backbone of democracy and Americanism. We realize that under democracy, labor has made great strides and that the laboring man occupies a position in this country far above the plane on which he is placed in any other land, but I feel that I can truthfully say that unless labor relieves itself of the services of communistic racketeers, the failure of labor is inevitable and when labor fails, we all fail.

Communism is diametrically opposed to democracy and Americanism, and as Elks we dedicate our moneys and our manpower to an attempt to rid our country of every person who is in any way, shape, or form connected with it. Without God there can be no democracy. Without religion there can be no government "by the people and for the people." Our President has said: "There comes a time in the affairs of men when they must prepare to defend not their homes alone but the tenets of faith and humanity, on which their churches, their governments, and their very civilization are founded. The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one, we must now make up our minds to save all."

And I submit to you, my friends and my brothers, that in the saving of our homes and our faith and our Government, that we could do no better than to exclude forever from our shores those who are not in accord with the teachings of God and with the fundamentals of democratic government. I would warn you that the godless philosophy, which has worked its reign of terror in Germany, is rapidly penetrating the United States, and that many Fascist organizations, disguised as patriotic and Christian groups, are spreading a type of hatred and intolerance which is incubated on foreign soil and brought here to grow, and I would likewise warn you that the propaganda machines of foreign dictators will use, and are using, every possible method to cause disintegration of democracy in the United States of America.

It has been estimated that the German-American Bund numbers more than 25,000 members, that it could raise 5,000 storm troops, and that another 100,000 persons are willing to be seen at its meetings. I am told that there are 10,000 Italian Black Shirts in the United States, with some 200,000 sympathizers. Whether there are 1 or 100, or 100,000 of these individuals, we must proceed against them in the same manner as we would against a great epidemic which threatened to destroy our people and send them back to those lands where they can enjoy the particular Godless type of government which they crave. I would likewise advise that all Americans join in a movement to procure the legal definition of liberty and determine once and for all where free speech ends and treason begins.

I am happy in the fact that during the year we have been able to conduct a Nation-wide campaign against subversive activities. I know that this campaign has done a great deal of good. I am happy in the fact that churches and other organizations are active in the fight to prevent further inroads by these undesirables and I look forward to the day in the near future when the American Legion, the Veterans of Foreign Wars, the Daughters of the American Revolution, the Shrine, the Knights of Columbus, the masonic bodies, and all patriotic and American organizations will be united under one generalissimo for the express purpose of making America safe for Americans.

I have great respect for the work that has been done by these orders in behalf of America. I am anxious to see our own order grow and become stronger and more influential because it has the possibility of maintaining itself in perpetuity. I shall always remember the Sunday afternoon some months ago when I sat at my radio and listened to the President of the United States when he spoke on the occasion of the dedication of a monument to the soldiers who fought in the Civil War. Without the aid of television, I could see the old soldier in gray and the old soldier in blue as they were assisted to a position where they might light the perpetual flame in honor of the Blue and Gray and my thoughts then turned to a day, not so far distant, because time is fleeting, when the last doughboy of the American Legion and the last Veteran of Foreign Wars, and the last member of the Daughters of the American Revolution, and the last member of the Spanish American War Veterans shall have gone to their reward. I saw in my mind's eye a greater, a larger, a more determined group of men in all the cities of the United States of America, wearing the emblem of America's oldest charitable and patriotic fraternity, the Benevolent and Protective Order of Elks, with their faces turned to the enemy, determined that all the great battles and the lives of our heroes and leaders shall not have been in vain. Their hands will be raised against everything un-American and undemocratic and they shall go marching down the halls of time fully determined that it "cannot happen here."

So I commend to my brother Elks and to the friends of the order, a continuation of all humanitarian and civic and community welfare endeavors and a militant Americanism, to the end that we may give this great country of ours to our successors as it was given to us by our fathers and mothers and grandfathers and grandmothers, a country with a Government "of and for and by the people," where all of God's creatures may be accorded happiness and oportunity.

My brother Elks, democracy cannot, must not, shall not fail!

Gen. Barnard Elliott Bee

EXTENSION OF REMARKS

OF

HON. JOSEPH B. SHANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

ADDRESS BY COL. J. RION McKISSICK, PRESIDENT, UNIVERSITY OF SOUTH CAROLINA

Mr. SHANNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered by Col. J. Rion McKissick, president of the University of South Carolina, on Manassas Battlefield yesterday, July 21, 1939, at the presentation of a monument in honor of Gen. Barnard Elliott Bee.

It was a great pleasure to me to attend the dedication ceremonies, held under the auspices of the Mary Taliaferro Thompson Southern Memorial Association. It was stated by Virginia State Senator John W. Rust, president of the Manassas Battlefield Association, on that occasion that General Grant was practically the only one of the leading military figures of the Civil War who did not participate in either the first or second Battle of Manassas. Senator Rust also stated that it is the hope of his association that a monument will in time be erected in memory of each of the participating generals. Next July a monument will be presented in honor of General Jackson.

One day of battle for the Confederacy was all allotted to Gen. Barnard Elliott Bee, yet how tragic and how glorious it was for him!

For that day he had been preparing since he entered West Point 20 years before.

Born in 1824 in Charleston, he was his father's namesake and was a grandson of Thomas Bee, South Carolina's first Federal judge.

His mother, Ann Wragg Fayssoux, was of Huguenot descent.

General Bee's father, a signer of the South Carolina ordinance of nullification, moved to Texas in 1835, took a leading part in the establishment of the short-lived Republic of Texas and was its first Secretary of State.

The general's brother, Hamilton P. Bee, was himself a Confederate major general.

Graduating at West Point in 1845 with the rank of brevet second lieutenant of infantry, Bee served in the military occupation of Texas and in the War with Mexico.

For "gallant and meritorious conduct" in the Battles of Cerro Gordo and Chapultepec, he was successively brevetted first lieutenant and later captain, while the State of South Carolina presented him with a sword of honor for his "patriotic and meritorious conduct" in that war.

From the close of that conflict until he entered the service of the Confederacy Bee served in the United States Army successively as lieutenant, adjutant of the Third Infantry, captain of the Tenth Infantry, and colonel of the Utah Volunteer Battalion, mainly on frontier duty in the West.

Resigning in March 1861 to enter the Confederate Army, Bee was commissioned a major of infantry.

Such was his reputation that President Davis in June 1861 promoted him to be a brigadier general.

He was given command of the Third Brigade of the Army of the Shenandoah under Gen. Joseph E. Johnston who earlier in July had asked that Bee be assigned to him and who said that his army while in the valley was "strengthened" by the accession of the South Carolinian.

After participating with the army in the maneuvers in the valley against the Union forces, Bee accompanied General Johnston on the march to reinforce General Beauregard at Manassas.

His brigade was posted between McLean's and Blackburn's fords.

Since all of his command had not arrived, Bee actually commanded in the battle part of his brigade and part of Bartow's—Georgia, Alabama, North Carolina, and Mississippi infantry, and Virginia artillerymen.

The battle began shortly after 6 in the morning when the Union forces "opened with musketry and artillery against the small brigade commanded by Col. (N. G.) Evans, which held the stone bridge on the extreme left of the Confederate line."

An hour later the Shenandoah brigades, Bee's, Bartow's, and Jackson's together, with Bonham's, were ordered up in support.

"The attack was feebly pressed, and Evans * * * became satisfied that the movement to his front was but a feint, and that a column of the enemy was meanwhile marching to turn his flank by way of Sudley Springs, about 2 miles northwest. * * * He left four companies to hold the bridge; and with six companies of riflemen, a battalion called the Louisiana Tigers, and two 6-pound howitzers, he moved across Youngs Branch and took post on the Matthews Hill."

Half an hour later the leading Union brigade struck Evans' riflemen.

The enemy were twice repulsed, but supports came crowding up, and Evans sent back for reinforcements.

Lt. Col. G. F. R. Henderson, the chief biographer of Jackson, whose account of the battle to this point I have quoted, adds:

"Again the situation was saved by the prompt initiative of a brigade commander.

"Bee had been ordered to support the troops at the Stone Bridge.

"Moving forward toward the Henry Hill, he had been informed by a mounted orderly that the whole Federal Army seemed to be moving to the northwest.

"Bee waited for no further instruction.

"Ordering Bartow to follow, he climbed the Henry Hill.

"The wide and beautiful landscape lay spread before him; Evans' small command was nearly a mile distant, on the Matthews Hill; and on the ridges to the far northwest he saw the glitter of many bayonets.

"Rapidly placing his battery in position near the Henry house, Bee formed a line of battle on the crest above Young's Branch; but very shortly afterward, acceding to an appeal for help from Evans, he hurried his troops forward to the Matthews Hill.

"His new position protected the rear of the companies which held the stone bridge, and so long as the bridge was held the two wings of the Federal Army were unable to cooperate.

"But on the Matthews Hill the enemy's strength, especially in artillery, was overwhelming, and the Confederates were soon compelled to fall back to the Henry Hill. Sherman's brigade of this division, passing the stream by a ford, threatened the flanks of Bee and Evans as they retreated across Young's Branch."

So heavy and terrific was the fire of the Union artillery that Bee's troops were fleeing in great disorder.

The day seemed lost.

Henry Hill, "the commanding height, the key of the battleground," was abandoned to the enemy.

General Beauregard thus describes the scene:

"We found the commanders resolutely stemming the farther flight of the routed forces, but vainly endeavcring to restore order, and our own efforts were as futile.

"Every segment of line we succeeded in forming was again dissolved while another was being formed; more than 2,000 men were shouting each some suggestion to his neighbor, their voices mingling with the noise of the shells hurtling through the trees overhead, and all word of command drowned in the confusion and uproar."

Col. Thomas L. Preston, a member of Gen. Joseph E. Johnston's staff, says:

"General Bee rode up, and as he faced General Johnston he dropped the reins of his bridle and in a voice tremulous with emotion and tears rolling down his cheeks, he said, 'General, my command is scattered, and I am alone.'

"General Johnston replied, 'I know it was not your fault, General Bee. But don't despair; the day is not lost yet.' "

Thomas Marshall Spaulding, in the new Dictionary of American Biography, observes that Bee's brigade "was one of those that bore the brunt of the first attack—it suffered heavily, and finally broke up, but it had held back Union advance long enough for the defense to be organized in the rear."

"But help was at hand.

"Jackson, like Bee and Bartow, had been ordered to the stone bridge.

"Hearing the heavy fire to his left increasing in intensity, he had turned the head of his column toward the most pressing danger, and had sent a messenger to Bee to announce his coming.

"At this moment, about 11:30 a. m., Bee rode up at full gallop and met Jackson face to face.

"Jackson was cool, composed.

"Bee, covered with dust and sweat, sword in hand, his horse foaming, said:

" 'General, they are beating us back!'

"Jackson answered:

" 'Then, sir, we will give them the bayonet!'

"Jackson's determined bearing inspired Bee with renewed confidence. He turned bridle and galloped back to the ravine where his officers were attempting to re-form their broken companies.

"Riding into the midst of the throng, he pointed with his sword to the Virginia regiment, deployed in well-ordered array on the height above."

It was at this moment that Bee, as Mrs. Jackson put it, "christened his companion-in-arms, in the baptism of fire, with the name he was henceforth to bear, not only in the Southern Army, but in history, of Stonewall Jackson."

What did Bee actually say?

Dr. R. L. Dabney, one of the first biographers of Jackson, asserts that Bee said:

"There is Jackson standing like a stone wall.

"Rally behind the Virginians.

"Let us determine to die here, and we will conquer.

"Follow me."

Mrs. Jackson records that Bee said:

"Look at Jackson; there he stands like a stone wall! Rally behind the Virginians!"

General Beauregard asserts that Bee said:

"Look at Jackson's brigade! It stands there like a stone wall!"

Gen. E. P. Alexander, who was in the battle, puts it:

"See Jackson standing like a stone wall. Rally behind the Virginians!"

Jackson, with characteristic modesty, always insisted that Bee had referred to his brigade and not to himself personally.

Gen. Joseph E. Johnston, in his narrative, adds this curious note that just when Bee christened Jackson such of the latter's men as were "in sight of Bee's troops were lying down by Jackson's order to avoid the enemy's artillery."

Gen. E. P. Alexander observes:

"It is a coincidence that the same comparison was made the same afternoon by Gen. Joseph E. Johnston.

"I was acting as his guide late in the evening, and, in speaking of the fighting, he instanced the Fourth Virginia Regiment of Jackson's brigade, under Col. James F. Preston, and said, so impressively that I always remembered it, 'Preston's regiment stood there like a stone wall.'"

While I was preparing to come here today, a South Carolina woman of the elder generation sent me this message: "Be sure you don't quote General Bee as saying to his men, 'Rally behind the Virginians!' because you know no South Carolinian would ever tell his men to do that."

However, recalling numerous expressions of admiration and affection for the people of the Old Dominion uttered by South Carolina Confederate veterans and our women of wartimes, I am certain that our soldiers would rather have rallied behind the Virginians than anywhere else.

Jackson's own account of this phase of the battle is characteristically terse and laconic. He says: "Ascertaining that General Bee, who was on the left of our line, was hard pressed, I marched to his assistance, notifying him at the same time that I was advancing to his support; but before arriving within cannon range of the enemy I met General Bee's forces falling back. I continued to advance with the understanding that he would form in my rear. General Bee, with his rallied troops, soon marched to my support."

Whatever it was that Bee exclaimed, "the men took up the cry, and the happy augury of the expression, applied at a time when defeat seemed imminent and hearts were failing, was remembered when the danger had passed away."

After the retreat had been halted General Beauregard resolved to take the offensive and ordered a charge for the purpose of recovering the plateau.

"The movement, made with alacrity and force by the commands of Bee, Bartow, Evans, and Hampton thrilled the entire line," Beauregard declared.

The enemy was swept from the Henry plateau, but they reformed and pressed the Confederates back.

Beauregard determined to make another effort to recover the plateau and ordered a charge of the entire line of battle which, as he said, "broke the Federal fortunes of the day at severe cost."

Bee had reformed the remnant of his command with Jackson's brigade and held his ground.

"To hold the raw and undisciplined troops up to their work required desperate exertion and reckless exposure on the part of the officers."

Bee had lost nearly all of his field officers in addition to many of his men.

In the second charge of the whole gray line Bee was mortally wounded a few yards back of the Henry house "near the very spot whence in the morning he first looked forth upon Evans' struggle with the enemy."

When he fell Bee was grasping the sword of honor which the State of South Carolina had presented to him 17 years before.

President Davis noted in his book:

"When riding to the front I met an ambulance bearing Gen. Barnard Bee from the field where he had been mortally wounded after his patriotism had been illustrated by conspicuous exhibitions of skill, daring, and fortitude."

He died the following morning, July 22, in the little cabin on the field where he had made his headquarters—he and General Bartow having been the first Confederate generals to give their lives for their country.

His body and those of General Bartow and Lieutenant Colonel Johnson, of South Carolina, were sent to Charleston on a special train.

Bartow's corpse was later carried on to Savannah.

Charleston did the utmost honor to the slain South Carolinians and to General Bartow.

A great number of citizens and the local military companies met the train and escorted the bodies to the city hall, which had been draped in mourning. The bells of the churches tolled, flags flew at half-mast, the stores closed, and between 4,000 and 5,000 people viewed the bodies laid out in state.

The body of General Bee was carried across the State to Pendleton, historic village to which has family had moved.

When he fell mortally wounded his thoughts were of that home, for he called out, "Where are the Pendleton boys? Let them take me off the field," and some of them did.

In the Episcopal churchyard, not far from the home of John C. Calhoun, and in sight of the sentinel ranges of the Blue Ridge, General Bee sleeps beside his brother-in-law, another Confederate brigadier general, Clement H. Stevens, his volunteer aide who was seriously wounded at the same time Bee was mortally shot at Manassas, who invented the Confederate armored floating battery, and who was killed at the Battle of Atlanta.

Theirs is a common monument
The simple epitaph for Bee is:

"If thou a noble soldier art
That passest by his grave, man,
There moulders here a gallant heart
For this was a brave man."

Bee earned the high opinion of his superior officers at Manassas.

Gen. Joseph E. Johnston said:

"I had full confidence in the high soldierly qualities of General Bee."

He added that the victory at Manassas was "due, under Almighty God, to the skill and resolution of General Beauregard, the admirable conduct of Generals Bee, E. K. Smith, and Jackson, and of colonels commanding brigades (Evans, Cocke, Early, and Elzey), and the courage and unyielding firmness of our patriotic volunteers."

In his official report General Beauregard said:

"In the death of Gen. Bernard E. Bee the Confederacy has sustained an irreparable loss, for, with great personal bravery and coolness, he possessed the qualities of an accomplished soldier, and an able, reliable commander."

Beauregard also styled him "the brave Bee" and "the heroic Bee," and declared that he fell "to the great misfortune of his country, but after deeds of deliberate and ever-memorable courage."

Gen. E. P. Alexander, referring to Bee and Bartow at Manassas, asserts that "the victory could never have been won without them," while Robert M. Hughes, biographer of Gen. Joseph E. Johnston, asks, "What would have been the story of Manassas without Bee, Bartow, and Jackson to illumine its page?"

The sentiment of Bee's native State was voiced by its leading newspaper of the time, the Charleston Mercury, which said:

"South Carolina * * * mourns his loss, for he was a true representative of his race—mild, modest, amiable of deportment, open, generous, bold and dashing in achievement, nice of honor, and punctilious of fame, winning friends by sterling conduct, as fearless of foes as sensitive of regard, he was all that his State could ask of a gentleman, a soldier, and a patriot.

"South Carolina will ever bend in honor over the tomb of such a son."

Thomas Marshall Spaulding observes in the Dictionary of American Biography:

"He is chiefly remembered now as the man who gave Stonewall Jackson the name by which he is known in history.

"These accidental titles to fame have rather obscured his real merit.

"He showed a capacity for command that was not usual in the early days of the war, and it is fair to suppose that he would have risen high if he had lived."

The old Palmetto State is and ever will be deeply grateful for the high honor done here and now to a son who loved her and whom she loves forevermore.

South Carolina has proclaimed to the world for all time to come her judgment of her sons and all others who wore the gray in an inscription upon a white shaft before her statehouse which perpetuates the memory of those who—

"True to the instincts of their birth,
Faithful to the teaching of their fathers,
Constant in their love for the State,
Died in the performance of their duty; who
Have glorified a fallen cause
By the simple manhood of their lives,
The patient endurance of suffering
And the heroism of death; and who
In the dark hours of imprisonment,
In the hopelessness of the hospital,
In the short sharp agony of the field,
Found support and consolation in the belief
That at home they would not be forgotten."

Those for whom they died inscribe—

"The solemn record of their sacrifice
The perpetual gratitude of the State they served.
Their names recall to their children and kinsmen
How worthily they lived;
How nobly they died;
And in what tender reverence their memory survives."

These were men—

"Whom power could not corrupt,
Whom death could not terrify,
Whom defeat could not dishonor;
And let their virtues plead for just judgment
Of the cause in which they perished;
Let the South Carolinian
Of another generation."

Remember—

"That the State taught them
How to live and how to die,
And that from her broken fortunes
She has preserved
The priceless treasure of their memory,
Teaching all who may claim the same birthright
That truth, courage, and patriotism endure forever."

A Scholar of the Law Discusses Current Problems

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

ADDRESS BY ROBERT H. JACKSON, SOLICITOR GENERAL OF THE UNITED STATES, AT THE COMMONWEALTH CLUB OF CALIFORNIA, SAN FRANCISCO, CALIF., JULY 14, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks, I include herein an address by the Honorable Robert H. Jackson, Solicitor General of the United States. I consider Mr. Jackson to be one of the ablest and most brilliant figures identified with this administration. Mr. Jackson is courageous, scholarly, profound, and versatile. Politically I would say that Mr. Jackson possesses "oomph," or "it." We need more men in public life of his character and potentialities.

This meeting with the rationally famous Commonwealth Club of California is the high spot of my trip across the continent. I have driven for the purpose of getting a more intimate view of the towns and various countrysides which make up the great Nation whose cases before the Supreme Court are my responsibility. I have often said that everyone in official life should be compelled to spend every third week at home—wherever that is—so as to get the tonic of life as it really is, to relieve the political high blood pressure that always affects Washington, and which at about this season is apt to make its victims a little hysterical.

I am a living example that the errors of the fathers are visited upon the sons even unto the second generation. But for the mistake of returning east on the part of my grandfather, I might actually be, as I have come to feel myself, at home here in California. He came here seeking gold in 1851. Where our family had settled on the headwaters of the Allegheny River, the news arrived slowly and he did not make it in time to be a forty-niner. He came by the Isthmus of Panama and by packet up the Pacific, and I always understood from him that the transportation of that day did admit of some improvement. He told me with an indignation that never died of being compelled to pay a native a whole dollar, as he footed it across the Isthmus, for the privilege of sleeping one night on a bed of poles elevated some feet so as to be above reach of snakes and vermin. I think my hatred of all monopoly originated in that story. But California itself, San Francisco, and the Sacramento Valley were set in my young imagination as a land of romance. He returned to marry—in the East—and that made me a stranger to California, but it is not a strange land to me.

As I sense the real problems and worries of our steady-going American people, they are not political—that is, you cannot vote them out. You can change the names and faces in the newspapers about official life by an election. But the old problems remain after election to vex the new administration.

And the real problems and worries of America are not local. A shortage of buying power in cities means a low market for the farmer and fruit grower. A shortage of buying power on the farms means unemployment in the implement, automobile, and other factories which sell to farmers. A failure of crops in one locality means migration to another. Refusal or inability of one State to meet its social or economic problems means that the problems may move on to another State. No one knows this better than you of California. Any idea that a break-down of our social system is not your affair, if it is a couple of hundred miles away, must be gone by now. In our interrelated and interdependent life there is no such thing as a local problem any more. If it rises to the importance of a problem, it rises above merely local concern.

This administration had a whole basket of these problems dumped on its lap at once. And I am not unrealistic enough to claim that we have yet reached a satisfactory or permanent solution of some of them. But we are again approaching a national campaign in which there will be sharp division and controversy over the methods and the objectives of this administration.

As I go about the country I find that many of those who aspire to be leaders of an opposition to the administration are talking about things that not only fail to satisfy but fail even to interest the mass of average Americans.

Editors, lawyers, columnists, and many businessmen engage in a war of what has been called "ideologies." That is, they try to make some idea fit over every proposal of government and enclose it like a tent. Proposals are labeled and disposed of by epithets. This proposal is called "socialistic," that one is "fascistic." Another is called "American" and a fourth is "Marxian." Some are called "communistic," others just "alien" or "totalitarian" or "conservative" or "radical" or reactionary." This war of ideologies is making most of the noise of politics.

I came from people too busy making a living to work life's annoyances up into a philosophy. I believe that the mass of Americans rightly feel that no good will come to them from any side in a war of abstract ideologies.

The way of life of the American is practical, hard-headed, and concrete. It is not made of what Justice Holmes once called "pernicious abstraction." Its distinguishing ideology is that it has no "ideology" except to get results.

The most dramatic examples I have ever seen of the victory of practical results over conflicting ideologies are your breath-taking bridges which are now the symbol of San Francisco to the world. Each was built according to a different "ideology."

The Oakland Bridge was built by an agency of the State of California with funds borrowed from a Federal Government agency—borrowed, by the way, under a Republican administration on the same theory of self-liquidating projects as that which President Roosevelt is now proposing. After the bridge had proved its worth, the Federal Government sold its interest to private investors through a private banking house.

That, I suppose, ideologists would say, was a bridge with Socialist antecedents and capitalistic consequences.

The Golden Gate Bridge, so I understand, was financed by a local bridge district through a bond issue supported by tax liens. That, of course, according to the ideologists, would be a strictly socialized bridge.

A third bridge far down the bay was built by private enterprise and is a less useful but a strictly respectable capitalist bridge.

But I will wager that neither Communist or capitalist, nor private enterprise or parlor Socialist, nor liberal or conservative, Democrat or Republican, ever lets his political preferences decide whether he will travel by a wholly private bridge, by a half-private bridge, or by the wholly public bridge. At those misguided moments when he wants to leave San Francisco, each mother's son of them takes the shortest route and forgets his theories. And no banker ever refused to come here on a railroad just because when private capital lagged before a task too big, the Government stepped in and financed the railroads with land grants.

That, I submit, is the true American way of life—that habit of thinking things and not words, that emphasis on results—concrete results for our people. Our people do not want barren theories from their democracy. Maury Maverick has expressed very quaintly, but clearly, what they really want when he says, "We Americans want to talk, pray, think as we please—and eat regular."

We grew from a little string of settlements to a great Nation because the practical philosophy of our people was that government should interfere in business almost as freely as business interfered in government—and that "the legitimate object of government" was as Abraham Lincoln put it: "To do for a community of people whatever they need to have done, but cannot do at all, or cannot do so well, for themselves, in their separate and individual capacities."

This is the underlying attitude of the American people toward our problems as I sense it. No ideology is going to stand in the way of the instinct to "eat regular." Americans prefer private capital to run our business, to build our bridges, and to employ our workmen. But when private capital cannot, or will not, on reasonable terms, do these things, then the people turn to their Government for big bridges, for T. V. A.'s, for big dams, and they will turn to it to relieve unemployment and provide for dependent old age and to meet other problems along the whole social and economic front where private effort fails or falters.

A large part of the strength of the Roosevelt administration is that it has followed this very practical and traditional attitude of the masses of our people. It has not been an administration of sterile ideologies. It has been one of action, of experiment, of determination that our people by some means or another "eat regular." And it is hard to understand why this simple and self-preservationist attitude of the great mass of the people should arouse such opposition among those who not only "eat regular" themselves but who represent so much of educational, cultural, and social, as well as economic, advantage.

I think it was Henry Adams who lamented that he was educated in one century and had to live in another. Something like this happens to all of us. It is especially true of those who are able in early years of life to acquire a formalized learning on which to coast the rest of their lives. The times out-run their intellectual preparation. So the depression, with its score of new problems, and its other score of old problems greatly accentuated, caught much of the political and financial leadership of the country wholly unaware. They found themselves living in a world for which they had learned no formula, and they were frightened about every move of government for which they knew no precedent, and were afraid of every experiment which was not included in their last century ideology. They comprise the bulk of the opposition to the administration.

But the masses of the people who do not so formalize their ideas do not suffer this lag between their ideas and their lives. Their theories are the product of their experiences; they do not try to shape experience to fit previously learned theories. Their ideas are always up to date with their experience. They are willing to breakfast on one ideology, lunch on another, and dine on a third. I repeat that the strength of the Roosevelt administration with the masses of the people is based on its sympathy and understanding of this elemental American practical trait. A weakness of the opposition has been in offering people ideology when they want dinner—and stale ideology at that.

One of the things that government has had to do was to get time—to buy time—time to let us all bring our thinking up to date with our problems. It has used stopgaps and temporary measures, it has tried experiments, and it has met new conditions with new remedies. The administration is a living example of the philosophy in which I am a believer, which was best stated by Mr. Justice Holmes when he said: "I have little faith in panaceas and almost none in sudden ruin."

No one who knows how slow are the processes of political evolution, or who appreciates that government is no exact science, will claim that the measures of the administration to deal with unemployment, with lagging industry, with dependent old age, or with a score of other problems are panaceas or are in acceptable permanent form today.

Not only had our problems accumulated until they were acute in form but their very existence had long been unnoticed. Our people had been preoccupied with the marvelous inventions which have revolutionized our lives and with the sciences which have exposed new frontiers to our enterprise. We had not been socially minded, nor had we watched the growing tendency to unemployment, the denial of jobs to older men, nor the effects of increasing concentration of wealth in few hands. Ventures of our democracy upon solution of the difficulties that beset us have, therefore, of necessity been experimental and tentative.

In fact, we have not even known until lately how far the Supreme Court would permit the American democracy to try to solve its problems. During the whole of the first administration of President Roosevelt nearly every effort was struck down before we had a chance to appraise its worth or effectiveness. It has taken the most of the second administration to find out that the law imposed upon the first administration by the Court was not even good constitutional law.

For nearly half a century scholars of the law knew that a slow destruction of the powers of the Government was in progress; that we no longer had the strong and virile Government that the great opinions of Marshall foreshadowed. Farsighted men knew that sooner or later in some form that trend must be reversed. They hoped it might not destroy in the reversal either the Court itself or the democratic nature of our institution. One of the most important services which the Roosevelt administration has rendered to the future is to meet and solve this problem, without destroying the Court, without impairing its usefulness, and without upsetting our form of government. To understand what has happened, let us turn to history.

Our Constitution was framed by aggressive young men to give us a government with powers enough to combat an economic depression. The Convention met in a period of great economic crisis. Ships were rotting in the harbor, men were out of work in the cities, debtors were unable to meet debts, States were laying discriminatory restrictions on the trade of each other. The desperation of that day lingers in our phrase "not worth a continental," which was their expression of contempt for their Government's obligations. That time of our founding has well been described as "the critical period of American history."

Driven by this desperation, the country sought a central government equal to economic emergency. They did a master job of creating it. John Marshall, who well knew the need and the purpose, started off the Supreme Court interpretations which gave us a virile and solid National Government.

Then the slave question began to appear. Slave interests saw that institution endangered by the sentiment of the Nation but cherished by the sentiment of their own States. Able lawyers and judges under that influence began the work of protecting slavery by cramping constructions of the only power that threatened it—that of the Federal Government. They overplayed their hands, and their most extreme decisions were reversed on the battlefields of the Civil War. But many of their incidental decisions cutting down Federal power remain as precedents for later judges to follow.

The will to follow was not wanting. As the great railroad and industrial and financial corporations rose to power, they saw, as the slave power had seen, that if they could keep the central government weak they could handle most of the local governments, play some against others, and make government regulation generally ineffective. So we had another powerful interest, represented in our courts by most able minds, bent on keeping the central government weak.

By the first Roosevelt administration there were precedents to furnish the background for the Supreme Court to hold that this Government, founded to deal with economic emergency, had almost no such power at all. These precedents were used, often over the protests of such far-sighted men at Chief Justice Hughes, Mr. Justice Stone and others to strike down nearly every economic measure of the New Deal. N. R. A., the Petroleum Code, the agricultural program, the Railroad Retirement Act, the Bituminous Coal Act, were some of those struck down.

I do not know how good these laws would have been found. We were never permitted to know. There were strong indications of recovery and no doubt these, or some of these laws, were of help. The point is that powerful interests, by the use of an abstract ideology not found in the Constitution at all, had reduced the structure of Federal Government to a very ornamental but pretty helpless shadow, while the real running of the country could be done by men whose power did not come from being elected at all.

The second administration has been devoted to breaking up that philosophy of weakness and paralysis. The task of carrying us back to the strength and virility of the original founders of the Government has been the task on which my whole service in government has been spent. And I say to you that we have restored the powers of the Federal Government to where it may once again govern the powerful and protect the weak. This is the legitimate end of all government.

I know we have succeeded. The slashing attack on the Supreme Court by the president of the American Bar Association this week testifies to our success. That association, after spending some years preaching that new dealers should not attack the Court even if they disagreed with its decisions, now listens to a blast from its president that makes the worst we ever said of the Court seem temperate. And he does not spare such men as the Chief Justice, Mr. Justice Stone, or Mr. Justice Roberts, all of whom have at times taken the Court leadership in rediscovering the Constitution and in helping to undo a half century or more of misinterpretation. But the people will recognize the attack as a tribute and feel assured that the Court is again imbued with the spirit of the people of the United States instead of the ideology of the Liberty League.

Then I know we have succeeded because of the acknowledgment of our adversaries. Mr. Arthur Krock in the New York Times said, after the decision sustaining the new Agricultural Adjustment Act, that the New Deal had wholly won its long fight to reinvigorate the commerce clause of the Constitution. He might have said the same of the general-welfare clause, the taxing power, and he might have noticed a return toward the original concept of the due-process clause.

We are really living under the Constitution again.

There are people who think that President Roosevelt, whose first term was destroyed by the judges, and whose second term has been stalled on many policies while the judges have been correcting the judges, should now have one term under the Constitution.

And this now successful battle to reestablish the powers of Government has been accomplished without impairment of the democratic process. There again the common sense of the American people discounts the nonsense about a theoretical "dictatorship" which some editors have so steadily peddled.

The American people know that they are almost alone among the peoples of the world who look forward next year to an election to choose their leader. They know the result will be accepted in good sportsmanship by all parties. They know their election will not be a mere "yes" or "no" vote on a single name, with soldiers to see that they vote "yes" or else!

They know that any man will be free to take criticism, however extreme, of the President, the Congress, the Supreme Court, or any official or policy, and will not be sent to a concentration camp for doing it. They know that their newspapers will write bitter and unfair attacks on those who are running the Government and that same Government will carry those newspapers to subscribers—at less than cost. Nowhere in the world today is the democratic process so free, so virile, and so safe. And they know that to have kept it so, when democracies elsewhere in the world fell before the same forces that have battered our country, is no mean accomplishment.

What will we use our democratic freedom to do?

In the field of policy, while I do not have time to consider detailed programs, the great need is to reexamine the work which has of necessity been done in haste and in emergency. In these calmer days measures which have failed should be rejected or replaced; those which reveal shortcomings should be amended; those with hope and promise should be strengthened and their administration improved. Evils not yet touched must be remedied by measures yet untried.

The task ahead is one that calls for the same practical common sense that is the most American thing about America. It needs the open-minded testing policy, not by some "ideology" but by its effect on the welfare and the daily lives of the masses of the American people. The status quo is at many points indefensible. We have a long road to go to the standard stability, security, peace, and justice which we Americans demand.

And in the field of leadership what use are we likely to make of one of the few significant free elections the world can anticipate?

We know that only a strong President will mean a strong democracy.

There may have been times in our history when we did not need a strong President to keep our democracy strong—when any middle-of-the-roader, or no one at all, could safely occupy the White House—and the people sensed no need of leadership. There have been times when the people did not resent the manipulation of the machinery of two political parties to bring out two candidates of a kind that has been called a "tweedledum" and a "tweedledumber," who both stood for the same things. There have been times when the country could stand for a "middle-of-the-road" leader—and a "middle-of-the-roader" which usually means one who holds up traffic going in both directions. But these are not and cannot be such times.

There are times when every clear head knows that the mysterious personal electricity of leadership is needed, and desperately needed, to cohere the otherwise scattered forces of good will and intelligence—to bring them together, to hold them together—so they become an effective and concentrated force in using the reinvigorated powers of Government in the solution of the country's problems.

Lincoln had that power—to hold his people's courage to the great moral issues of their time; to hold them together not only to start but to finish a crusade after the first fine flush of excitement was past and the burden became really heavy; and there were those who wanted to quit to make money; and there were those who wanted to quit because they were simply tired.

That same magnificent power to give men the steady courage to throw themselves against problems bigger than men ever have faced, that same power to inspire the trust of millions who trust nothing else, and no one else, in our political and business life rests in the White House today in Franklin D. Roosevelt.

He is the greatest natural resource we have.

I am not yet saying that he must accept a third term which he may not want.

What I am saying is this:

First, irrespective of a third term for President Roosevelt, there must be a third term for Roosevelt's ideas.

The achievements of his administration have become so much a part of our national life that any attempt to rip them out rather than carry them through would bring disorder and chaos to all classes in the country.

Second, if anyone else is to be President it must be someone who will be President in the Roosevelt tradition.

For unless I mistake the temper of the American people they do not propose to quit.

Nor do they propose to turn back when their feet are on the road that leads to America's limitless future.

W. P. A. Furloughs

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. HOOK. Mr. Speaker, during the course of the consideration of the work-relief bill I called the attention of the House to the hardship that would result to my section of the country and to the people who through no fault of their own have depended upon the meager wage paid them for W. P. A. work.

I urgently solicit the attention of the Committee on Appropriations, and especially the subcommittee that was in charge of the work-relief bill, to the hardship that will result if all those who have been on W. P. A. for 18 months are furloughed for 30 days in my district.

The economic situation is such because of the practical shut-down of the iron and copper mines and the reduction of employment in the lumber industry that the people of my section are forced on relief. They are good, clean, honest, industrious people, ready and eager to take private employment if it were offered to them. I see no reason why they should be forced to starve for 30 days in this land of plenty.

May I urge the Committee on Appropriations to submit an amendment to the Work Relief Act striking out subsection B of section 16, which provides for the dismissal of persons continuously employed on projects for more than 18 months and making such person so removed ineligible to be restored to employment on these projects until after the expiration of 30 days.

Unless this provision is stricken from the act untold misery will result.

In order to more forcefully call attention to the situation which confronts the people of my district I hereby include in these remarks the following telegram:

HOUGHTON, MICH., *July 19, 1939.*

Hon. FRANK E. HOOK,

House of Representatives, Washington, D. C.:

The Democratic Club of Houghton County wishes to enter a strenuous protest against the 30-day lay-off provision in the new Works Progress Administration law enacted by Congress and respectfully solicits your efforts in bringing about a revision of the law in such a way as to eliminate this objectionable feature.

Enforcement of 30-day lay-off provision in this district would work a tremendous hardship on a large number of residents who, through no fault of their own, have depended on a mere subsistence wage from Government Works Program. For several years they have not been able to save anything from their meager wages to meet such an emergency, and a 30-day suspension at any time will bring them face to face with starvation.

Due to the depressed conditions of the copper industry, Houghton County has had and will continue to have a large proportion of its workable population dependent upon the Government Works Program. They are merely living from hand to mouth and cannot afford the loss of a single day's employment.

JOHN G. SALMI.

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 20, 1939

LETTER FROM AMERICAN ZIONIST BUREAU

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from the American Zionist Bureau:

AMERICAN ZIONIST BUREAU,
Washington, D. C., May 1, 1939.

Hon. MICHAEL J. BRADLEY,

House Office Building, Washington, D. C.

DEAR CONGRESSMAN BRADLEY: I want you to know how much we appreciate the joint statement you signed in behalf of Palestine and in behalf of the thousands of homeless Jews of the world, whose fate is so closely bound up with the fate of the Holy Land. It was cabled to London and widely circulated in the English press. Your ready support gave us encouragement and help not alone in America but in British circles as well, where responsible American opinion is still respected and carries great weight.

Be assured we shall remember your kindness and interest.

With my personal thanks and the thanks of all our friends, I am,

Sincerely yours,

ISADORE BRESLAU.

RESOLUTION OF THE TENNESSEE DELEGATION IN THE HOUSE OF REPRESENTATIVES ON THE DEATH OF HON. SAM D. McREYNOLDS, OF TENNESSEE

Mr. CHANDLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Tennessee delegation in the House of Representatives on the passing of our colleague Hon. SAM D. MCREYNOLDS:

The passing of Hon. SAM DAVIS MCREYNOLDS, Representative from the Third Congressional District of Tennessee, has brought deep sadness to his colleagues in the House of Representatives and has deprived the members of the Tennessee delegation of a true friend, wise counselor, and distinguished leader.

Born in the beautiful Sequatchie Valley in Tennessee 67 years ago, and reared in the very district which he represented in Congress for 16 years, SAM MCREYNOLDS was exceptionally qualified by character and ability for public office. He understood the people of his district, a composite one, rich in natural resources and industrial and cultural development and containing within its boundaries people of the mountains and mines, rivers and forests, hamlets and cities.

On the circuit bench for 20 years, Judge MCREYNOLDS had been the arbiter of the legal differences of his constituents, and as their friend and neighbor he had shared their hopes, their adversities, and their loyalties. He knew their needs, he understood their problems, he served them with unswerving devotion, and they appreciated him.

Representative MCREYNOLDS brought to the House of Representatives a vigorous mind and body, an engaging personality, and an abundance of common sense. As the great obligations of leadership pressed upon him, he met them assiduously and skillfully.

He became an effective debater and an excellent parliamentarian. Well informed on international law, a lover of peace, yet unafraid, he was a splendid chairman of the Committee on Foreign Affairs. His colleagues liked him, and when they needed him he never failed them.

Personally, SAM MCREYNOLDS was a man of strong convictions, unaffected, humbly religious, and honest. Sorrowfully, we take our leave of him, ever grateful for the privilege of his friendship and thankful for the lessons of his useful life: Therefore be it

Resolved by the members of the Tennessee delegation in the House of Representatives, Seventy-sixth Congress, That we record this our tribute of esteem and affection for our departed friend and colleague; that this resolution be placed in the CONGRESSIONAL RECORD; and that a copy be sent to the family of the deceased.

Amendment in W. P. A. Appropriation Bill Affecting Veterans

EXTENSION OF REMARKS
OF
HON. MICHAEL J. BRADLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 20, 1939

LETTER FROM HON. JAMES H. FAY, OF NEW YORK

Mr. BRADLEY of Pennsylvania. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from Hon. JAMES H. FAY, of New York:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 3, 1939.

Hon. MICHAEL J. BRADLEY,
Member of Congress, House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: I wish to express my thanks to you for your support of the amendment introduced by me to the W. P. A. appropriation bill liberalizing provisions of the act with regard to veterans and extending preferential treatment to those who served our country in time of war.

Because I was aware of your active interest in the welfare of veterans while a member of the Committee on World War Veterans' Legislation I sought your cooperation and discussed the amendment with you prior to its introduction, and I feel that your efforts contributed in a great measure to its passage.

I am a disabled World War veteran myself, and for that reason have always been interested in legislation affecting the veterans, and I am consequently gratified and thankful to my colleagues in the House for their support of the amendment as introduced and I wish to convey to you my appreciation for your fine cooperation.

With kindest regards, I am,

Sincerely yours,

JAMES H. FAY.

Annual Convention of Connecticut Postmasters

EXTENSION OF REMARKS
OF
HON. FRANCIS T. MALONEY
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, July 24 (legislative day of Tuesday, July 18), 1939

ADDRESS BY HON. FRANCIS T. MALONEY, JULY 22, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD introductory remarks which I made in connection with an address delivered by Postmaster General James A. Farley at the annual convention of the postmasters of Connecticut at West Haven, Conn., on July 22, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful to you for inviting me to present the Postmaster General to this great group of postal employees and their friends who gather in annual convention on the historic and romantic shores of Long Island Sound to pay tribute to the leader of their forces. I am greatly pleased as well, because it gives me a chance to catch a breath of New England atmosphere, at a time when we are undergoing the seemingly necessary excitement of the closing days of another session of Congress. I am glad to have the chance to break bread with my lifetime neighbors and dear friends and with the splendid men and women who are serving the Government and their fellows in the not altogether exciting but exceedingly interesting and tremendously important work of handling the mails.

I congratulate you upon the work that you have done and are doing, and upon the fact that you are welded together in such a fine spirit of fraternalism—that you so much like and understand each other—and that when you came together this year you were thoughtful enough, and lucky enough to bring to Connecticut as your guest of honor the great and good man who is "a swell stamp salesman," and perhaps the finest Postmaster General in the history of the mail service.

I am presenting a man who has served in a great crusade as a member of the general staff. The crusade has been against careless thinking, governmental inaction, a little greed, and unintentional selfishness. The crusade has been waged to reestablish a sound social order, and to strengthen, spiritually and financially, an abused economic system. The effort has not as yet been completely successful, but the measure of success has been tremendous, and in spite of the odds against the loyal legions, in which Mr. Farley is "one of the high command," there will be a final success and complete victory.

Under the guidance and leadership of President Roosevelt, whose idealistic vision and courage, and whose brotherly interest in his less fortunate fellow men quickens the heartbeats of our people, Mr. Farley has played a part that will stand out when the record of this period in our country's history is calmly compiled.

In all of the history of politics and government men who were active in public office have suffered criticism. The criticism has been very harsh in times of economic stress. It has been especially harsh when the leadership was bold and brave. That is why our national leadership has suffered a continuous attack. For our part we would like to have Mr. Farley tell the President of the United States that we are proud to be of his legion, and anxious to serve with the shock troops until his work is done.

There have been some mistakes, but this administration has a high record of accomplishment, and while there are some who would not cloak us with even thin garments of wisdom and respectability, or high purpose, our heads are high, and our hearts not too heavy, because we know where we ought to go, and what we ought to do, and with God's help that's where we are going.

We are going that way, though the path be rough, because the seriousness of the times, and the confidence placed in us, has impressed the people of this administration with the need to press forward.

At times it has been a little lonesome in the no man's land of legislative and governmental uncertainty, but an irresistible feeling that the great masses of the American people wanted neither surrender nor retreat was a sufficient balm for the pain of criticism and abuse.

If it were not an intrusion upon your pleasure, and the limited radio time of the Postmaster General, I would rejoice in an opportunity to review the record of these crusading years, but I am denied that chance. As a matter of fact you are quite familiar with the record. I think that you are pretty certain as well of what needs to be done, and I am reasonably sure that you do not believe that the President of the United States, or those who serve with him, want to overdo it.

The political revolution seems to be nearing its end. Things are more quiet on the economic front, and there has been a clearing of the social atmosphere. We are, it seems to me, approaching the proof of the righteousness of the efforts that have been made. In spite of the errors it seems to me that we have most times been right, and I know we have at all times desired to be right.

I have been acquainted with your distinguished guest for many years. I am proud of his accomplishments and his friendship, and I must again say that I am grateful to you, and exceedingly pleased that you have given me this opportunity to see you again, and to present to you and to the large radio audience anxious to hear him, this distinguished gentleman of rare energy and compelling personality—as he best likes to be presented—Jim Farley.

The W. P. A. Situation

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 24 (legislative day of Tuesday, July 18), 1939

MEMORANDUM OF UNITED STATES CONFERENCE OF MAYORS

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement concerning the W. P. A. situation which I have just received from Mr. Paul V. Betters, executive director of the United States Conference of Mayors.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE UNITED STATES CONFERENCE OF MAYORS,
Washington, D. C., July 22, 1939.

DEAR SIR: I have been directed by the executive committee of the United States Conference of Mayors to forward to you the attached report dealing with the present and future W. P. A. situation. I am,

Faithfully yours,

PAUL V. BETTERS,
Executive Director.

WORK RELIEF AND THE IMMEDIATE FUTURE

(A memorandum prepared by the United States Conference of Mayors)

INTRODUCTION

The problems which have recently arisen—and much more serious problems which will soon arise—in connection with the Federal work-relief program under the Emergency Relief Appropriation Act of 1939 prompt the United States Conference of Mayors to present the viewpoints of the major cities. It is not the intent to present an unduly alarming picture of what lies immediately ahead. But it is already unmistakably clear that the whole work program is jeopardized as a result of certain provisions of the 1939 law. This situation is of such serious import to the needy unemployed, to the success of W. P. A. operations, and to the cities as responsible coadministrators of the work projects as to warrant a frank and realistic discussion.

STATUS AND INTEREST OF THE CITIES

At the outset several points should be emphasized. While the W. P. A. is a Federal agency, the cities are deeply concerned in the execution and administration of the work program. As sponsors of projects the cities are called upon for large contributions in cash and in kind. In most instances this financial burden on local real estate taxpayers is in addition to direct relief costs as well as the local share of the social-security expenditures.

Second, as cooperating agents in supervising work projects, the cities are vitally concerned with efficient execution of the work.

Finally, insofar as W. P. A. provides work relief to destitute employable persons, the number of such persons given employment is an important factor in local financing. For if hundreds of thousands of eligible needy persons are not assigned to the W. P. A. they must be provided with local direct relief.

The scheme of Federal work program along the lines of the present program had its inception on January 4, 1935, when the President made the following recommendation to the Congress:

"But the stark fact before us is that great numbers still remain unemployed.

"A large proportion of these unemployed and their dependents have been forced on the relief rolls. The burden on the Federal Government has grown with great rapidity. We have here a human as well as an economic problem. When humane considerations are concerned, Americans give them precedence. The lessons of history, confirmed by the evidence immediately before me show conclusively that continued dependence upon relief induces a spiritual and moral disintegration fundamentally destructive to the national fiber. To dole out relief in this way is to administer a narcotic, a subtle destroyer of the human spirit. It is inimical to the dictates of sound policy. It is in violation of the traditions of America. Work must be found for able-bodied but destitute workers.

The Federal Government must and shall quit this business of relief.

"I am not willing that the vitality of our people be further sapped by the giving of cash, of market baskets, of a few hours of weekly work cutting grass, raking leaves, or picking up papers in the public parks. We must preserve not only the bodies of the unemployed from destitution but also their self-respect, their self-reliance, and courage, and determination. This decision brings me to the problem of what the Government should do with approximately 5,000,000 unemployed now on the relief rolls.

"About one million and a half of these belong to the group which in the past was dependent upon local welfare efforts. Most of them are unable for one reason or another to maintain themselves independently—for the most part, through no fault of their own. Such people, in the days before the great depression, were cared for by local efforts—by States, by counties, by towns, by cities, by churches, and by private welfare agencies. It is my thought that in the future they must be cared for as they were before. I stand ready through my own personal efforts, and through the public influence of the office that I hold, to help these local agencies to get the means necessary to assume this burden.

"The security legislation which I shall propose to the Congress will, I am confident, be of assistance to local effort in the care of this type of cases. Local responsibility can and will be resumed, for after all, common sense tells us that the wealth necessary for this task existed and still exists in the local community, and the dictates of sound administration require that this responsibility be in the first instance a local one.

"There are, however, an additional 3,500,000 employable people who are on relief. With them the problem is different and the responsibility is different. This group was the victim of a Nation-wide depression caused by conditions which were not local but national. The Federal Government is the only governmental agency with sufficient power and credit to meet this situation. We have assumed this task and we shall not shrink from it in the future. It is a duty dictated by every intelligent consideration of national policy to ask you to make it possible for the United States to give employment to all of these 3,500,000 employable people now on relief, pending their absorption in a rising tide of private employment."

Passage of the Emergency Relief Appropriation Act of 1935 marked this new approach to the relief problem as suggested by the President.

But since 1935 complete Federal responsibility for the so-called employable group has never been assumed by the Federal Government. At no time have all needy employable persons been provided with W. P. A. work. It is now estimated that over 1,000,000 persons are eligible for but unassigned to W. P. A. work. The W. P. A. Administrator himself has officially stated that at least 750,000 eligible people had not been given work.

And it should further be emphasized that since 1935 an ever-increasing share of the cost of Federal work relief has been contributed by the cities. The costs of direct relief, however, have remained completely with the States, counties, and cities without financial aid from the National Government. In other words, the original formula providing for Federal responsibility for the employables has never actually been carried out by the Government while the financial responsibilities of the cities have been increased year by year.

Until such time as a more equitable and balanced Federal-State-city tax program can be effected, the cities can stand no additional financial burdens. They do not have available the same sources of revenue as the Federal Government; they are restricted and hamstrung by constitutional and charter restrictions; and they are confined to real-estate taxes which in most communities are so high as to have reached the point of diminishing returns. It has been suggested that charter and constitutional limitations, if they exist, can be changed. It should be emphasized in the strongest possible terms that, as the Members of Congress know, such changes would at the best take time and cannot legally be accomplished in time to avert the destructive effects of this law.

This is not an attempt merely to dodge a responsibility, or to shift a burden to the Federal Government. It is a question of taking care of the unemployed in the only way they can be cared for, taking care of them in a decently adequate minimum way until such time as the national economic system gets back into gear and they can be reabsorbed in private jobs. The Nation has no alternative but to do this if the present economic system is to endure.

What we are now seeking to impress upon Congress, with all the emphasis and seriousness in our power, is that if the law stands as recently enacted by the Congress problems lie just ahead, which must be faced jointly by W. P. A., the cities, and the unemployed, which will be so serious that their full import is not yet generally realized, even by Congress.

These problems, if the law is not changed, will bring about an almost complete collapse of the work-relief program in industrial cities.

The full effects of this law can be properly analyzed only when its various phases are considered together. No single provision, except that requiring posting of 25 percent of the cost of all projects, in itself could be sufficient to wreck the program. But taken together their cumulative effect would be its destruction.

I. Mandatory 25-percent contribution: If this provision stands, the appropriation by Congress of money for the unemployed will be, so far as many cities are concerned, but an idle gesture. The funds are not available and will not be available to meet this requirement.

II. Reduction of W. P. A. rolls: Because of the lower appropriation we are now confronted with a reduction in W. P. A. employment during the period July 1–August 31 of approximately 650,000 per-

sons. This coincides with the necessity of "furloughing" by August 31 all persons who have been on the rolls continuously for 18 months. But in actual practice this will mean laying them off, regardless of need. For under its appropriation of $1,477,000,000 W. P. A. will be forced to reduce its rolls to 1,800,000 in September, and the scheduled national quota for next June is down to 1,500,000.

We must point out that this wholesale discharge of needy persons can only result in widespread suffering. To say arbitrarily that after a certain date hundreds to thousands of people cannot eat is not what we consider the proper policy for Congress to declare.

III. Fixing new monthly earnings: The new law requires on September 1 that security wages in different localities shall not be varied in greater degree than is justified by differences in the cost of living. The same section of the law also requires that the current national average security wage, which is around $53, shall be maintained.

This can mean but one thing: Substantial reductions in many cities and areas. If the security wages are too low in some areas, the proper approach should be to increase them. But here we are faced not with meritorious increases for certain areas but drastic reductions as well where there is not justification for it. Who is to supplement the needs of many workers who must accept wage slashes on September 1? Those familiar with the facts know that even the present security wage offers only the barest subsistence.

In addition to these provisions, the cumulative effect of other sections of the law in themselves would jointly be enough to seriously cripple the program. The reduction of the $7 per man-month for material, particularly in view of the fact that the increase in hours to 130 will mean use of more materials; the restrictions placed around sponsors credits; the limit of $52,000 as the maximum building project; the fact that many communities cannot legally make contributions for "white collar" projects, which means they would be killed by the impact of the 25-percent clause; the provision that sponsors must assume the burden of providing skilled workers whenever they cannot be found on relief rolls—all pyramid to make the law virtually an administrative impossibility.

SUMMARY

The questions here presented can only be answered by legislation. They are not susceptible of remedial administrative action.

To avoid wholesale dismissals a supplementary appropriation is needed or the section in the law requiring the appropriation to last the full 12 months of the current fiscal year must be amended.

We do not want to witness a collapse of the work program. It is our duty to state that there will be such a collapse unless the issues here discussed are remedied by Congress, a fact fully realized by those administering W. P. A., and we must inquire, What good is it to appropriate funds for work relief if the conditions around the appropriation are such as to actually prevent providing work?

As stated by the President on June 30 when he signed the bill, this "will work definite hardship and inequality on more than 2,000,000 American citizens—about 8,000,000 if we count in their families—people who through no fault of their own are in dire need."

We do not think that Congress when it fully understands what it means will want the law to stand as written. We only hope that it realizes the situation in time to prevent suffering.

Democratic Success in 1940

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, July 24 (legislative day of Tuesday, July 18), 1939

ARTICLE BY HON. JAMES A. FARLEY

Mr. GUFFEY. Mr. President, the accuracy of James A. Farley as a political prophet has to this date proven unerring. In a special article in today's Philadelphia Inquirer General Farley says Democratic victory is sure in 1940. As the general discusses his reasons for Democratic success and Republican failure in a most interesting way, I feel that my Republican friends as well as the Democratic Senators will be interested in having this article placed in the Appendix of the RECORD, where they may all read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of July 24, 1939]

FARLEY SAYS DEMOCRATIC VICTORY IS SURE IN '40—PREDICTS SPLIT IN REPUBLICAN RANKS OVER ISSUE OF PENSIONS

(By James A. Farley, Postmaster General and Chairman, Democratic National Committee)

Apparently the title "Strictly Politics" is the only thing that qualifies me to take over—for 1 day only—this column of space which is ordinarily devoted to the sharp and caustic sayings of the Honorable John M. Cummings.

Writing is not my trade, and the readers would hardly expect me to match the barbed and brilliant phrases which John M. serves piping hot to the breakfast tables of Philadelphia every single morning of the year—vacation time alone excepted.

Like everyone else who would rather miss a night's sleep than the morning newspaper, I envy the life of the columnist. He has all pudding and no hash. He can swat whom he likes, debunk what he doesn't like, pull the trappings off stuffed shirts, and tell the world what's wrong with the world and how it can be cured. On top of that he gets paid for doing it. Pounding a typewriter is far easier than mounting a soap box and infinitely safer.

However, politics is my business, and let's get down (or up) to that. A good newspaperman always puts the hot news in the "lead," especially if it happens to have the added spice of being controversial. So then, who is going to win the 1940 presidential election? The Democratic Party, of course. (Mr. Cummings breaks out in a rash of perspiration as he reads this in his favorite corner.)

I assume that many readers of the Philadelphia Inquirer will also question (a very mild term) the prediction of another Democratic victory. First of all they shudder at the thought of President Roosevelt's policies being upheld by the voters and, second, they have been misled by the current victory chant of the Republican propagandists, who made somewhat the same mistake back in the early days of 1936. Self-confidence is the grandest trait in politics because it seldom evaporates before election day.

But I stick to the conclusion that the Republican Party is headed for another defeat at the polls. The reason is fairly obvious. To be successful, a political party must stand for something. It must have a philosophy, a purpose, and a program. The notion that it can win simply by denouncing everything undertaken by the party in power is false. In the old days, when the party knuckled under to the iron fist of a Hanna or a Penrose, the G. O. P. had a very definite philosophy of government, no matter how distasteful it may have been to millions of worthy citizens who disliked the idea of government for wealthy alone. Yet the party stood by its guns, denounced all those who opposed it as crackpots and radicals, and proceeded to win elections by the dual method of sanctifying the tariff and spending campaign funds both generously and well.

Times have changed since then, and the Republican Party has failed to change or to adapt itself. The party has been trying to ride two horses going in opposite directions, and that is always perilous. Instead of the orthodox conservatism which formed its stock in trade in the days of triumph, the G. O. P. is now a strange compound of Hooverites and Townsendites, two totally divergent factions, who are joined together for political expediency while miles apart in principle. The alliance won't last because alliances of that kind never do.

If some folks are skeptical about the influence of the Townsendites in Republican ranks, they are deceiving themselves. Over one-third of the Republican Members of the House—55 Members in all—voted for the fantastic pension scheme when it came before that body for a vote. Various Republican Governors, as well as candidates for the Presidency, flirted with the doctor's plan to distribute about $24,000,000,000 a year in annuities and many of them owe their political existence to this support of Townsendism—although most of them denounce it privately in vehement terms.

The Hoover wing of the party is at least consistent and forthright. The Hooverites have a definite platform. They want to pull up, from root to twig, everything the Roosevelt administration has accomplished for the betterment of the workers, the unemployed, the farmers, the aged, and the small investors. This wing of the party supplies the financial sinews of war, and the gentlemen who put up the cash have a habit of knowing what they want and what they are paying for. A recent report of the Republican National Committee disclosed that its funds came almost exclusively from the wealthy donors who financed the ill-fated Liberty League so lavishly.

The G. O. P. attained a measure of success in the 1938 congressional elections by going over whole hog to the Old Guard in States like Pennsylvania, while beating the drums for outlandish pension plans in other States where the latter course seemed popular. Unfortunately for them, the Republican Presidential candidate next year must make his choice, and when he does the party ranks will be split right down the middle.

The Democratic Party will take its stand squarely on the badly needed social and economic reforms put through by the Roosevelt administration. The majority of these reforms, including the insurance of bank deposits, old-age security, and the regulation of stock exchanges, are favored by the overwhelming mass of the American voters. We welcome a battle on the issue of their continuance.

The Military Order of the Purple Heart

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, July 24 (legislative day of Tuesday, July 18), 1939

MEMORIAL RADIO SERVICE

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD the first annual international radio memorial Sunday radio service under the auspices of the Military Order of the Purple Heart, held on May 28, 1939.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

RÉSUMÉ OF THE FIRST ANNUAL INTERNATIONAL MEMORIAL SUNDAY RADIO SERVICE, MAY 28, 1939, UNDER THE AUSPICES OF THE MILITARY ORDER OF THE PURPLE HEART

(Directed and arranged by Eugene W. Sebring, national patriotic instructor, M. O. P. H., Los Angeles, Calif. Broadcast from Los Angeles, Calif.; Charleston, S. C.; Detroit, Mich.; Minneapolis, Minn.; San Francisco, Calif.; Hollywood, Calif.)

Because time and death have made great inroads in the ranks of the Grand Army of the Republic—those gallant heroes of the Civil War—who originated Memorial Day, other veterans organizations must carry on that great tradition. The Military Order of the Purple Heart, whose members possess the oldest honor award in the United States, and the second oldest in the world, have assumed that noble burden. Eugene W. Sebring, National Patriotic Instructor of the Purple Heart Order, assisted by the Reverend Father Edwin A. Shearer, Past National Chaplain of the Veterans of Foreign Wars, and committees from the American Legion, Disabled American Veterans of the World War, the Veterans of Foreign Wars of the United States, the United Spanish American War Veterans, and the Military Order of the Purple Heart called together representatives of every American veterans group to join the First Annual International Memorial Sunday Broadcast, which was aired Sunday, May 28, 1939, from 1:30 to 2 p. m., E. D. S. T., over the red network of the National Broadcasting Company.

The radio service opened by "first call" followed by "assembly" by the Department of California buglers of the Disabled American Veterans of the World War, at Radio City, Hollywood. The Sons of the American Legion Band, Squadron No. 43, Hollywood, Calif., under the direction of Lt. Wm. B. Jenner, band leader of the One Hundred and Sixtieth Infantry, Fortieth Division, United States National Guard, of California, rendered martial airs, and played the national anthem following the posting of the colors. Posting of the colors was staged in impressive form, with the colors of the Legion of Valor, Military Order of the Purple Heart, the Grand Army of the Republic, the United Spanish War Veterans, the Disabled American War Veterans, the Veterans of Foreign Wars of the United States, and 26 standards representing the combat divisions of the World War.

When the program switched to the East, the invocation, impressive, reverential, and sympathetic, with its appeal for divine aid for our President, the Members of Congress, the Governors of the several States, and other officers of state, and the solemn plea that Almighty God would comfort and console the families of the victims of the ill-fated *Squalus*, and a final prayer that our soldier and sailor dead might have eternal rest, was pronounced by the Reverend James J. Guinea, national chaplain of the Military Order of the Purple Heart, a recipient of the Purple Heart Medal, and recommended for the Distinguished Service Cross. Father Guinea spoke from Charleston, S. C.

From Detroit, Mich., came a message from Eugene I. Van Antwerp, national commander of the V. F. W., followed by Owen A. Galvin, national commander of the D. A. V., from Minneapolis, Minn. The memorial program then returned to the Pacific coast, bringing a message from the national commander of the Military Order of the Purple Heart, Charles O. Carlston, at San Francisco. Commander Carlston spoke for that organization which took the initiative in developing this veterans' memorial Sunday radio program, a group of veterans who have been honored by their Government with the oldest military decoration of the United States, established by Gen. George Washington during the War of the Revolution, and which is awarded to those men who received wounds in action against the enemy in any war in which the United States has participated. The national commander of the American Legion was represented by Smedley Peck, national executive committeeman of the Department of France, who spoke on "Flanders Fields," and reviewed the story of the American cemeteries in France. Rabbi Edgar Magnin, of Wilshire Boulevard Temple, Los Angeles, delivered the benediction to the assembled service men and the listening audience. Mother Alice Davis, the past president of the American War Mothers, of California, paid tribute to all sons departed, of all American wars.

This program was broadcast over the entire red network of the N. B. C., and parts of the blue network. The Canadian Broadcasting Corporation carried the program throughout Canada, and by short wave it was sent to Mexico, the Panama Canal Zone, the Hebrides, through Honolulu, the Philippine Islands, and France. The Military Order of the Purple Heart is grateful for the splendid support given this program by the various veterans' committees and the radio systems so generous in their work, both of which brought about complete triumph of the veterans' cause.

Administration of the W. P. A. in Marion County, W. Va.

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, July 24 (legislative day of Tuesday, July 18), 1939

LETTER WRITTEN BY HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD an open letter addressed by me to the residents of Marion County, W. Va., with respect to the administration of W. P. A. in that county.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the Residents of Marion County:

DEAR FRIENDS: I read the following in the Fairmont West Virginian:

"Approximately 75 W. P. A. workers were cut from the rolls Saturday because of lack of funds."

I sent you a letter explaining how the bosses, earning at the rate of $1,000 or more each, receive in excess of $100,000 in Marion County.

Here are some facts about salary raises in Marion County:

There were 25 project bosses on a recent pay roll whose names I found on the 1936–37 pay rolls. Of these 25, 22 received increases. These 22 had a monthly increase of $855 which would make a yearly salary increase of $10,260. The average increase was $466 a year. Compare that with the amount a W. P. A. worker receives for working an entire year.

Three of these bosses received salary increases of more than $1,000 each per year. Four more received increases from $540 to $900. Eight received increases from $300 to $420 each.

I have recently made public a statement showing that the project bosses in West Virginia had salary increases of more than $15,000 a month, which would make more than $180,000 a year. How many persons now unemployed could be given work with this amount of money?

A W. P. A. worker in Marion County would draw approximately $460 a year if he had full-time work. If the $10,000 yearly raises of bosses in Marion County had been applied to the W. P. A. needy, it would have paid the salaries of these 75 who were laid off for 4 months.

No wonder there is a "lack of funds." Where did the money go? It went to build a political machine. You know the W. P. A. workers were not being fired before the elections. They were employed. The people realize how the W. P. A. is being used and it will not be long until it is cleaned up to help the needy, not to pay political debts.

Sincerely,

RUSH D. HOLT.

W. P. A.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

MEMORANDUM BY THE UNITED STATES CONFERENCE OF MAYORS

Mr. McCORMACK. Mr. Speaker, I include herein a memorandum recently issued by the executive committee of the United States Conference of Mayors, dealing with the pres-

ent and future W. P. A. situation. The views of the mayors of the various cities of the country as stated by the executive committee on any subject are worthy of profound consideration, particularly so when any such statement relates to relief and W. P. A. activities.

Work Relief and the Immediate Future

(A memorandum prepared by the United States Conference of Mayors)

INTRODUCTION

The problems which have recently arisen—and much more serious problems which will soon arise—in connection with the Federal work-relief program under the Emergency Relief Appropriation Act of 1939 prompt the United States Conference of Mayors to present the viewpoints of the major cities. It is not the intent to present an unduly alarming picture of what lies immediately ahead. But it is already unmistakably clear that the whole work program is jeopardized as a result of certain provisions of the 1939 law. This situation is of such serious import to the needy unemployed, to the success of W. P. A. operations, and to the cities as responsible coadministrators of the work projects as to warrant a frank and realistic discussion.

STATUS AND INTEREST OF THE CITIES

At the outset several points should be emphasized. While the W. P. A. is a Federal agency, the cities are deeply concerned in the execution and administration of the work program. As sponsors of projects, the cities are called upon for large contributions in cash and in kind. In most instances this financial burden on local real-estate taxpayers is in addition to direct relief costs as well as the local share of the social-security expenditures.

Second, as cooperating agents in supervising work projects, the cities are vitally concerned with efficient execution of the work.

Finally, insofar as W. P. A. provides work relief to destitute employable persons, the number of such persons given employment is an important factor in local financing. For if hundreds of thousands of eligible needy persons are not assigned to the W. P. A. they must be provided with local direct relief.

The scheme of Federal work program along the lines of the present program had its inception on January 4, 1935, when the President made the following recommendation to the Congress:

"But the stark fact before us is that great numbers still remain unemployed.

"A large proportion of these unemployed and their dependents have been forced on the relief rolls. The burden on the Federal Government has grown with great rapidity. We have here a human as well as an economic problem. When humane considerations are concerned Americans give them precedence. The lessons of history, confirmed by the evidence immediately before me, show conclusively that continued dependence upon relief induces a spiritual and moral disintegration fundamentally destructive to the national fiber. To dole out relief in this way is to administer a narcotic, a subtle destroyer of the human spirit. It is inimical to the dictates of sound policy. It is in violation of the traditions of America. Work must be found for able-bodied but destitute workers.

"The Federal Government must and shall quit this business of relief.

"I am not willing that the vitality of our people be further sapped by the giving of cash, of market baskets, of a few hours of weekly work cutting grass, raking leaves, or picking up papers in the public parks. We must preserve not only the bodies of the unemployed from destitution but also their self-respect, their self-reliance, and courage and determination. This decision brings me to the problem of what the Government should do with approximately 5,000,000 unemployed now on the relief rolls.

"About one million and a half of these belong to the group which in the past was dependent upon local welfare efforts. Most of them are unable for one reason or another to maintain themselves independently—for the most part, through no fault of their own. Such people, in the days before the great depression, were cared for by local efforts—by States, by counties, by towns, by cities, by churches, and by private welfare agencies. It is my thought that in the future they must be cared for as they were before. I stand ready through my own personal efforts, and through the public influence of the office that I hold, to help these local agencies to get the means necessary to assume this burden.

"The security legislation which I shall propose to the Congress will, I am confident, be of assistance to local effort in the care of this type of cases. Local responsibility can and will be resumed, for, after all, common sense tells us that the wealth necessary for this task existed and still exists in the local community, and the dictates of sound administration require that this responsibility be in the first instance a local one.

"There are, however, an additional 3,500,000 employable people who are on relief. With them the problem is different and the responsibility is different. This group was the victim of a Nation-wide depression caused by conditions which were not local but national. The Federal Government is the only governmental agency with sufficient power and credit to meet this situation. We have assumed this task and we shall not shrink from it in the future. It is a duty dictated by every intelligent consideration of national policy to ask you to make it possible for the United States to give employment to all of these 3,500,000 employable people now on relief, pending their absorption in a rising tide of private employment."

Passage of the Emergency Relief Appropriation Act of 1935 marked this new approach to the relief problem as suggested by the President.

But since 1935 complete Federal responsibility for the so-called employable group has never been assumed by the Federal Government. At no time have all needy employable persons been provided with W. P. A. work. It is now estimated that over 1,000,000 persons are eligible for but unassigned to W. P. A. work. The W. P. A. Administrator himself has officially stated that at least 750,000 eligible people had not been given work.

And it should further be emphasized that since 1935 an ever-increasing share of the cost of Federal work relief has been contributed by the cities. The costs of direct relief, however, have remained completely with the States, counties, and cities without financial aid from the National Government. In other words, the original formula providing for Federal responsibility for the employables has never actually been carried out by the Government while the financial responsibilities of the cities have been increased year by year.

Until such time as a more equitable and balanced Federal-State-city tax program can be effected, the cities can stand no additional financial burdens. They do not have available the same sources of revenue as the Federal Government; they are restricted and hamstrung by constitutional and charter restrictions; and they are confined to real-estate taxes which in most communities are so high as to have reached the point of diminishing returns. It has been suggested that charter and constitutional limitations, if they exist, can be changed. It should be emphasized in the strongest possible terms that, as the Members of Congress know, such changes would at the best take time and cannot legally be accomplished in time to avert the destructive effects of this law.

This is not an attempt merely to dodge a responsibility, or to shift a burden to the Federal Government. It is a question of taking care of the unemployed in the only way they can be cared for, taking care of them in a decently adequate minimum way until such time as the national economic system gets back into gear and they can be reabsorbed in private jobs. The Nation has no alternative but to do this if the present economic system is to endure.

What we are now seeking to impress upon Congress, with all the emphasis and seriousness in our power, is that if the law stands as recently enacted by the Congress problems lie just ahead, which must be faced jointly by W. P. A., the cities, and the unemployed, which will be so serious that their full import is not yet generally realized even by Congress.

These problems, if the law is not changed, will bring about an almost complete collapse of the work-relief program in industrial cities.

The full effects of this law can be properly analyzed only when its various phases are considered together. No single provision, except that requiring posting of 25 percent of the cost of all projects, in itself could be sufficient to wreck the program. But taken together, their cumulative effect would be its destruction.

I. Mandatory 25-percent contribution: If this provision stands, the appropriation by Congress of money for the unemployed will be, so far as many cities are concerned, but an idle gesture. The funds are not available and will not be available to meet this requirement.

II. Reduction of W. P. A. rolls: Because of the lower appropriation we are now confronted with a reduction in W. P. A. employment during the period July 1 to August 31 of approximately 650,000 persons. This coincides with the necessity of furloughing by August 31 all persons who have been on the rolls continuously for 18 months. But in actual practice this will mean laying them off, regardless of need. For under its appropriation of $1,477,000,000 W. P. A. will be forced to reduce its rolls to 1,800,000 in September and the scheduled national quota for next June is down to 1,500,000.

We must point out that this wholesale discharge of needy persons can only result in widespread suffering. To say arbitrarily that after a certain date hundreds of thousands of people cannot eat is not what we consider the proper policy for Congress to declare.

III. Fixing new monthly earnings: The new law requires on September 1 that security wages in different localities shall not be varied in greater degree than is justified by differences in the cost of living. The same section of the law also requires that the current national average security wage, which is around $53, shall be maintained.

This can mean but one thing: Substantial reductions in many cities and areas. If the security wages are too low in some areas, the proper approach should be to increase them. But here we are faced not with meritorious increases for certain areas but drastic reductions as well where there is not justification for it. Who is to supplement the needs of many workers who must now accept wage slashes on September 1? Those familiar with the facts know that even the present security wage offers only the barest subsistence.

In addition to these provisions, the cumulative effect of other sections of the law in themselves would jointly be enough to seriously cripple the program. The reduction of the $7 per man-month for material, particularly in view of the fact that the increase in hours to 130, will mean use of more materials; the restrictions placed around sponsors' credits; the limit of $52,000 as the maximum building project; the fact that many communities cannot legally make contributions for white-collar projects, which means they would be killed by the impact of the 25-percent clause; the provision that sponsors must assume the burden of providing skilled workers whenever they cannot be found on relief rolls—all pyramid to make the law virtually an administrative impossibility.

SUMMARY

The questions here presented can only be answered by legislation. They are not susceptible of remedial administrative action.

To avoid wholesale dismissals a supplementary appropriation is needed or the section in the law requiring the appropriation to last the full 12 months of the current fiscal year must be amended.

We do not want to witness a collapse of the work program. It is our duty to state that there will be such a collapse unless the issues here discussed are remedied by Congress, a fact fully realized by those administering W. P. A. And, we must inquire, what good is it to appropriate funds for work relief if the conditions around the appropriation are such as to actually prevent providing work?

As stated by the President on June 30 when he signed the bill, this "will work definite hardship and inequality on more than 2,000,000 American citizens—about 8,000,000 if we count in their families—people who through no fault of their own are in dire need."

We do not think that Congress, when it fully understands what it means, will want the law to stand as written. We only hope that it realizes the situation in time to prevent suffering.

Transportation on the Great Lakes—Report of the Maritime Commission

REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. DONDERO. Mr. Speaker, it is my privilege to inform the House and particularly my colleagues from the Great Lakes States that on Saturday the Maritime Commission made public a report of one of its examiners that will truly make history and be of inestimable benefit to the farms, factories, and people of the great Middle West and Northwest sections of our country.

The Maritime Commission report removes the shackles from the shippers of the Middle West and permits them to ship in original bottoms direct to the markets of the world. We, out in our country, have long sought to regain that natural and inherent right which was taken from us by the North Atlantic steamship conferences. Thanks to the efficiency, ability, intelligence, and broad vision of the Maritime Commission, and particularly Examiner Horan, the presently issued report recommends that shippers in the Great Lakes be permitted to ship direct to foreign commerce, free from handicaps and discriminations and on the same basis as those on the Atlantic coast.

So that we who today are attempting to find a solution of the transportation problem may see this picture in its details and the efficient manner in which it was handled by the Maritime Commission, let me outline the following:

For years the North Atlantic steamship conferences have demanded that shippers in the Great Lakes and Middle West, if they desired a contract rate with such boat companies, must agree to give such lines 100 percent of their shipments, and such shipments must be delivered to them at Atlantic coast ports. If any Great Lakes shipper shipped one pound of freight direct from Detroit, Chicago, Milwaukee, Cleveland, Duluth, Muskegon, or any other such port, the North Atlantic Conference would cancel the contract, and the shipper would have to pay the higher rate, not only on future shipments but also on all previous shipments during the season. That was transportation slavery; it held in shackles our great factories and farms who wanted to get their products into foreign markets at the lowest possible price. It means employment for our people.

Last fall the Great Lakes Harbors' Association, representing lake ports, and the attorneys general of Michigan, Wisconsin, Indiana, and Ohio asked relief. Similar requests were made by the Detroit Board of Commerce, the Detroit Port Authority, Milwaukee Harbor Commission, Muskegon Chamber of Commerce, Cleveland Port Commission, and others.

After discussions as to procedure the formal request of the attorneys general was made in January of this year. Now, note this carefully so that you may note the efficiency of the Maritime Commission: In February a "show cause" order was issued against the North Atlantic Conferences and a hearing ordered for Chicago in March. Briefs were ordered to be filed by the end of April. The proposed report and recommendation is issued by the middle of July, a truly remarkable record of efficiency and response to public need.

I am anxious that my associates study this procedure which will remove the shackles from close to 40,000,000 people and thus permit the great Middle West proper an unhandicapped access to the markets of the world. Our farms and factories will be the beneficiaries. The Great Lakes will be free once again to fight for trade all over the world. The great auto factories of my district will be able to load cars on ships right at their docks and then start them on their uninterrupted way to all the corners of the world. The people of my district will benefit greatly from this most equitable ruling of the Maritime Commission. So will the people in the districts of practically every one of my colleagues in the States touching and close to the Great Lakes.

This present report is a dramatic example of efficiency and broad vision. The Maritime Commission is to be sincerely complimented. I ask my associates to search their conscience and see if this great service rendered by the Maritime Commission could be improved by any other commission. Here we have knowledge of water shipping; here we have experts and experience. I plead with you not to take the backward step of taking this control from the Maritime Commission. Let us retain the best in public service; let us keep in mind our duty to all the people; let us today strike from the Lea bill the impractical and short-sighted proposal to transfer water commerce regulation to the I. C. C.

It is with pride and pleasure that I pay this modest tribute to the Maritime Commission for an efficiency which I am afraid will be destroyed if we pass the Lea bill without serious amendments. The Maritime Commission has become one of the truly great commissions, and it should be preserved in all its experience and efficiency.

American Good Government Society Endorses Mundt Bill

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. MUNDT. Mr. Speaker, in the Appendix of the CONGRESSIONAL RECORD, starting with page 3345, I analyzed pending pollution legislation, and mentioned the unanimous support of H. R. 6723 by our national conservation organizations. Further unbiased support has come from the American Good Government Society, a national, nonpartisan organization with headquarters at Tilden Hall, Washington, D. C., and several branches, including one in the National Press Building. This organization publishes a magazine, the American Good Government Review, and has a broad program of sincere objectives, one of which is conservation of our irreplaceable natural resources. The society's principal officers include: President and editor, Richard A. Staderman; vice president and counsel, H. W. Lincoln; and vice presidents E. M. Norton, M. A. Richter, Delfin Salazar, A. P. Weeks, and Grant Wells. I quote the statement of Mr. Staderman, who is a former teacher of economics:

STATEMENT BY RICHARD A. STADERMAN

At the request of certain public-spirited readers of our magazine, the American Good Government Review, a study of pending anti-pollution legislation was made by the board of governors of the American Good Government Society, resulting in the consensus of opinion I have the honor to express herewith.

TWO MAJOR BILLS

The chief antipollution measures now being considered by the Congress are on the one hand the Mundt bill (H. R. 6723) and on the other hand Senate bill 685.

It is not the purpose here to go into details of the need for minimizing pollution, for preventing destruction of the fish and game in our waters and for preservation of the natural vegetation and scenic beauties of our great Nation. No; it is not necessary to reiterate lessons the public has already learned from ugly, foul-smelling, and germ-laden streams. Our worthy fellow citizens have either learned the need for antipollution first hand when they try to go fishing, boating, and hunting, or the "armchair philosophers" have been enlightened by such unselfish organizations as the Izaak Walton League, the American Wildlife Institute, the American Nature Association, the American Fisheries Society, the Audubon organizations, and so forth.

MORE APPARENT THAN REAL

Senate bill S. 685 consists more of shadow than of tangible substance, except that its $1,000,000 raid on the United States Treasury would provide pecuniary lifeblood for human leeches to devour. Far from reducing pollution, S. 685 might temporarily increase it, inasmuch as it provides for direct Federal payments to firms or individuals only if the pollution is "sufficiently deleterious." In general, examination of S. 685 shows that it would not provide a positive, clear, nor logical method of abolishing pollution, and that it even might give the force of law to certain technicalities which would impair present rights of citizens to bring court action to control pollution. Certainly we already have too much vague and haphazard legislation on the statute books to add another piece such as S. 685, which might well do more harm than good.

REVISED MUNDT BILL A HAPPY MEDIUM

The entire pollution question devolves upon effecting a compromise between the legitimate interests of the factories now doing the polluting, and the general public who would prefer that polluting be immediately terminated. The manufacture of useful byproducts from polluting waste material is obviously an important part of the solution, as we incidentally pointed out in testimony to the Senate Finance Committee in favor of a proposal of the distinguished Senator from South Dakota [Mr. GURNEY] for solving some of our farm problems. This is reprinted on page 3008 of the Appendix of the CONGRESSIONAL RECORD and shows how Sweden and other countries use waste sulphite liquors from paper and pulp mills to manufacture alcohol to use in motor fuel, thereby avoiding pollution of air and streams with this deadly waste.

The earlier Mundt bill was criticized as being too prompt in its attack on pollution to give industry adequate opportunity to adjust itself to its requirements. The present bill, however, H. R. 6723, allows a sufficient leeway in point of time so that no sudden repercussions will be felt by industry in adjusting itself to its provisions.

H. R. 6723 AVOIDS OVERLAPPING BUREAUS

S. 685 provides for another new bureau in our already unwieldy executive branch of the Government. On the other hand, H. R. 6723 merely expands the present pollution-control functions of the Army engineers, thereby saving half a million dollars a year as compared to the cost of administering S. 685, an item which our already overladen taxpayers will appreciate.

This factor of preventing another increment in the mushroom growth of new governmental bureaus is of vital importance to our American way of things. Several years ago Col. O. R. McGuire, chairman of the committee on administrative law of the American Bar Association and an honorary member of the American Good Government Society, collaborated with the late distinguished Congressman from Pennsylvania, James M. Beck, in writing the book, Our Wonderland of Bureaucracy, which pointed out serious situations when we had only some 500,000 Federal employees.

Now that we have added some 400,000 more Federal workers to make food scarce for starving people, to pay $45,000,000 a year to store cotton that should have been sold, and to negotiate reciprocal agreements that diminish our exports and increase our imports, the problem is just that much more serious in keeping government the servant and not the master, the latter having partially come about in France, where the bureaucrats hold the balance of power in many elections.

H. R. 6723 SHOULD BE PASSED

In the case of H. R. 6723 we have a measure for correcting serious abuses affecting millions of people and generations unborn. Yet H. R. 6723 does this with the minimum of additional expense to the Treasury.

We of the American Good Government Society therefore believe that the Mundt bill, H. R. 6723, should be passed; and in view of the unanimous support for it by all unselfish organizations who have studied it, we urge all citizens who feel likewise to wire or write their views to their Senators and Congressmen.

Mr. Speaker, I have included the foregoing statement by the head of the American Good Government Society because I think it is highly significant that this group, interested as they are solely in securing the best possible legislation to regulate and control pollution, have so wholeheartedly endorsed H. R. 6723 and joined the many other patriotic and conservation organizations which are pointing out that it would be better to pass no pollution legislation at all at this session than to adopt S. 685.

We are nearing the end of this session, and it is my sincere hope that this Congress will not be asked to consider the important and controversial problem of pollution legislation in the hurried, closing days of this session. I believe it would be much better to let this whole problem go over until we convene again following the new year so that Members will have full opportunity to study the whole problem and to confer with their constituents in the meantime. It is of Nation-wide importance and permanent significance that after 150 years of failure to pass a national antipollution law we do not now enact legislation which may actually aggravate the problem rather than ameliorate it. Having waited 150 years to attack this problem, it seems logical that we should wait another 5 months to be sure that our method of approach will serve to stop rather than to stimulate pollution. If we are compelled to decide this problem by our votes this session, however, I urge your support of H. R. 6723, which will be offered in the Committee of the Whole House as a substitute for S. 685. H. R. 6723 is the outgrowth of more than 10 years of study and development on the part of the great conservation groups of America and carries their unanimous endorsement; it bears the badge of honor of being opposed by the greatest polluters of America; it will control pollution and it will safeguard the interests and investments of honest industries; it will protect the public waters of this country for the health and happiness of the general public. Ladies and gentlemen, I urge your support for this legislation.

The Philippines in a Changing World

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

ARTICLE FROM THE COMMONWEALTH ADVOCATE

Mr. ANDERSON of Missouri. Mr. Speaker, all Americans have their eyes directed toward the situation developing in the Pacific area. I have the feeling that what happens there has its affect on the situation in Europe, so that any light that may be thrown upon the Asiatic situation is of world-wide importance.

My knowledge of the Philippine situation is extremely limited. My attention has been called to an article in a Philippine paper, the Commonwealth Advocate, published in Manila.

Unlike some of the Philippine papers that are published in the United States for selfish purposes, this paper is well edited.

The following article was written by the Honorable Carlos S. Tan, a member of the Philippine Assembly, and I am informed, a very able and thoughtful statesman. The article speaks for itself, and I hope that it will add to the information we require about this commonwealth which contains 18,000,000 Christian people and is the fifth best customer of the United States:

[From the Commonwealth Advocate for May 1939]

THE PHILIPPINES IN A CHANGING WORLD—WHAT ROLE THE PHILIPPINES WILL PLAY IN THE NEXT CONFLICT

(By Hon. Carlos S. Tan)

We are living in a very unstable world. The territorial boundaries of nations contract or expand or completely disappear from the map with kaleidoscopic rapidity in a world ready to assume new forms according to the antiquated idea of democracy, or the new and virile ideas of fascism, or the imperialistic plans of some powerful nations. Some people believe that the fate of democracy will be decided in the Mediterranean; others assert that the final supremacy in the Orient will be decided in the Pacific. Whether in the Mediterranean or in the Pacific those two supreme ideas will clash and decide the mastery of the world, and our country will not be able to evade the consequences. What will be the

Philippines, then? After the clash of nations, where shall we be? What role are we going to play in that tragedy?

It has been more than 30 years ago that we have been dreaming of a happy independent Philippines in a peaceful world, guaranteed by America, European and Oriental nations and respected by all. Philippines, the mistress of the Orient.

We were dreaming then about the eternal principles of justice, about the sanctity of treaties, about the validity of international laws.

The World War came to confirm our hopes. Above the din of battle the inspired voice of the greatest and most sublime apostle of democracy, President Woodrow Wilson, was heard by the whole world, expounding the right of the peoples for self-determination and condemning international banditry. The dynamic force of the ideas of the great President, backed by the power of arms, was translated into reality. Those nations that despised the sanctity of treaties were subdued, and from the ashes of war there arose vigorous and flourishing democracies. At the impulse of such democratic ideas, Czechoslovakia, Yugoslavia, Albania, and suffering Poland were born under freedom's wings to take their places in the assembly of nations. It seemed that democracy had triumphed forever, that treaties would be more sacred, and that international laws and the principles of justice would reign supreme in a world that had undergone the extreme test. It seemed that international vandalism and rapacity had no more place in this world.

Hardly 20 years have elapsed since that supreme ordeal. The grimness of that war still fresh in the minds of those who have survived, and now we find ourselves once more before a world full of discord, preparing and arming itself, dizzily headed for another, much bigger debacle, perhaps.

The Treaty of Versailles, that piece of complicated puzzle designed by the victorious nations to prevent future aggressions, has been torn into bits. The League of Nations created as an international agent to stop new wars and to settle international disputes, has failed shamefully. Treaties are once more trampled. International laws have become a myth and the world is a vast field open to the rapaciousness and greed of stronger nations whose only law is might and whose only justification is the necessity to expand in order to exist as a nation. Such is the present situation.

Manchukuo, Ethiopia, Czechoslovakia, Albania are recent and bleeding examples of this situation—a situation that makes Poland, Rumania, Yugoslavia, Switzerland, and even traditionally peaceful Holland—cower with fear. Even the big nations such as England, France, and Italy are cowering before a universal cataclysm. An America that always considered herself isolated from Europe does not believe any longer that she can be isolated from the events now developing in Europe and in the Orient.

The world has become so small before modern scientific advancement such as the radio, the aeroplane; and especially before the rising imperialism of nations. Isolation, the best guaranty of security, is no longer available. We can truthfully say now that neither the North Pole nor the South Pole is isolated.

Thus we see how all countries are feverishly arming themselves, and many like England with their airplane and munitions factories are working 24 hours a day preparing for a conflict which everybody believes is very near. On the face of this probable cataclysm we see nations alining themselves not only in Europe but also in the Orient. A clash between these camps must necessarily affect us for the simple reason that the Philippines are within the sphere of expansion of certain nations. Let us not be deceived when a nation says it has no imperialistic designs. On the eve of the annexation of Austria, Hitler declared that he had no intention of annexing Austria. Weeks before the occupation of Moravia and Bohemia in Czechoslovakia, Hitler stated that he had no desire of expanding toward eastern Europe. And the same is true with other countries. Nor believe that friendship is a guaranty against the imperialism of a friendly country; friendship gives way to necessity.

The great American Nation is an exception. If up to the present time America has not lowered her flag from our country it is because she believes that there is no security for us. Through all these years America has become wedded to us not only through material and economic bonds but also through spiritual and ideologic ones. If the Philippines have to live always under a nation I would rather prefer to be under the great American Nation than any other nation.

In the face of this serious international situation it is time to ponder and make a revision of all political values that affect or may affect our country. In desiring to seek definite solution of our status we should first consider the international situation and study it conscientiously until we reach a final conclusion. We should petition the United States to study and decide with us the present situation and solve the problems that we have before us in an open and frank manner, without any redundancy or subterfuge. The American High Commissioner, His Excellency, Paul McNutt, after visiting the Orient, came back advocating a realistic reexamination of the political situation. I admire the courage of the High Commissioner in launching his proposal before opinions diametrically opposed to his, and I have been a follower of that idea. I have also visited certain neighboring countries and seen certain things that made me ponder for a long time.

When dealing with a problem as serious as the destiny of our country, a little hesitation and consideration is certainly most welcome. Let us demur and continue studying. Who knows, perchance, a happy solution lies in the future.

The Lending-Spending Plan

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

EDITORIAL FROM THE WASHINGTON POST OF JULY 24, 1939

Mr. SPRINGER. Mr. Speaker, each day I receive many communications regarding the proposed "spending-lending program," which is proposed by the President of the United States, and from the general trend of those communications I find the people, generally, are deeply concerned because of this huge spending plan. It is agreed that if loans are made, and not repaid, the overburdened taxpayers of this Nation will have to assume and pay the indebtedness incurred, and with the present indebtedness, which has reached an all-time high, this plan, while it may operate as "another shot in the arm," will finally impose an added burden upon every class of our people; our farmers, laborers, industrialists, and businessmen will suffer because of this additional imposition, and business and industry in our Nation will find another obstruction upon the highway of progress which will further stagnate development and the opportunity to take up the slack in our unemployed groups. I am convinced, from the record of the past, that this proposed lending program will mean another "spending program" by the administration now in power, which will mean a continuation of our depressed business conditions.

Mr. Speaker, I include in my remarks an excellent editorial which appeared in the Washington Post on Monday morning, July 24, 1939, which editorial has my complete endorsement, and which is as follows:

[From the Washington Post of July 24, 1939]

THE LENDING PLAN

The administration's new lending program authorizes the R. F. C. to issue its own obligations to a maximum amount of $2,490,000,000 to finance construction of highways, expansion of rural electrification, purchase of railway equipment, loans to farm tenants, irrigation projects, and various other enterprises.

Superficially, this new pump-priming venture does not differ in any fundamental respect from preceding ones. The general type of projects is the same, and the agencies through which loans are to be made have been functioning for a number of years. Indeed, Senator BYRD maintains that the present program is not essential, because the R. F. C. already has a huge fund available for financing the bulk of the projects listed.

There has been a very significant change, however, in the character of the arguments advanced to support the new spending-lending program. Earlier proposals have been offered as stop-gap arrangements designed to hasten the revival of private investment activity. The "build-up" for the present plan reveals a new conception of its nature and purpose. The ground was carefully prepared for this new approach in hearings conducted before the Temporary National Economic Committee a short time ago.

Experts attached to the Federal Reserve Board and the S. E. C. presented a mass of statistical data purporting to show an inadequacy of private investment outlets and a consequent need of Government capital investments to meet the deficiency. Hence the latest pump-priming essay has taken on the guise of a governmentally sponsored investment program to finance self-liquidating projects—one that may properly be financed entirely outside the regular Federal Budget.

Senator BYRD has issued a timely warning that the American public must not be deluded into believing that this new spending scheme will neither increase the Federal debt nor increase the Federal tax burden. "If the Government borrows money and makes loans for untried and impractical projects that are not likely to be repaid," he says, "the burden will eventually fall on the taxpayer." In his opinion the "whole scheme is devised to evade the present statutory debt limit." It is, he concludes, "a spending scheme masquerading as a lending scheme."

This is, of course, an extreme statement since it is not to be supposed that all the R. F. C. advances will be a dead loss. However, there is a virtual certainty that a large percentage of loans made to construct toll roads, to aid tenant farmers and to dig irrigation ditches will, like the R. F. C.'s industrial loans, show a high percentage of loss.

Furthermore, a good many loans, which by stretching the definition might be called self-liquidating, will yield very low returns

and be repayable over an excessively long period of time. Government debts incurred to finance such slow enterprises will remain outstanding indefinitely. And should the Government later be compelled to borrow at higher interest rates to refund this indebtedness, the taxpayers would be compelled to shoulder the additional cost.

The American people should not be deceived by soothing phrases or led astray by hair-splitting definitions that broaden the meaning of the word "self-liquidating" until it no longer has any practical significance. Whether the additional billions which the administration proposes to lend are carried in the regular budgetary statement as expenditures offset by additions to the Federal debt or listed as liabilities of the R. F. C. is immaterial. The obligation to repay that debt rests, in final analysis, upon the Federal Government. Verbal legerdemain cannot relieve taxpayers of the necessity of meeting the losses from bad investments.

Townsend Plan in Illinois

EXTENSION OF REMARKS

OF

HON. EDWIN M. SCHAEFER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

ARTICLE BY SAM TUCKER

Mr. SCHAEFER of Illinois. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include a very enlightening article on the Townsend old-age pension plan which was written by the distinguished Illinois journalist, Mr. Sam Tucker, for the East St. Louis, Ill., Journal, and published in the issue of Sunday, July 16, 1939. Mr. Tucker is a well-known observer of National and State affairs. He is a close student of economics and it is my opinion he knows whereof he speaks in the article which follows:

[From the East St. Louis (Ill.) Journal of July 16, 1939]

AS I VIEW THE THING

(By Sam Tucker)

By word of mouth, and by letter, during the last week a number of nice old folks who had put their faith in the Townsend dream have been telling me exactly what they think of me. They have suggested in indelicate language, that I am an offspring of canine ancestry. Worse than that, they have suggested, in a single, pointed word, that my father was a bachelor.

It so happens that I never have traded upon ancestry as an excuse for any of my errors or as a means of advancement. If anybody wants to make something of it, I am willing to stand upon the record of my forebears. In a realistic view, however, it becomes clear that these unfortunate folks did not really mean to insult my father or mother, grandparents, or great-grandparents. I am the one they wanted to punch in the jaw, and I can take it.

ARITHMETIC REFUSES TO YIELD

This is mock heroics—the foregoing—because it is not even your humble columnist with whom the critics have a quarrel. What they are sore at is the law of arithmetic, and they might drive every wage-earning newspaperman of the country out of his job without changing arithmetic. Arithmetic is a very stubborn thing, which refuses to yield either to governments or to wishful dreams. It can't be altered by calling names, nor by any sort of rainbow magic.

In order to see what fantastic, impossible dreaming the Townsend pension scheme is, test it by the unchangeable rules of arithmetic. For a starting point, take the United States census report for Illinois in 1930, the last year of an actual count. You will find that there were, in April of that year, 667,383 persons in this State past the age of 60, an age sometimes suggested as suitable for the beginning of pensions. There were 421,073 persons past the age of 65. Remember these are figures for the State of Illinois alone. In some States, most notably California and Florida, the proportion of old folks is much higher still.

TAXES TO BE CONSIDERED

Assume that we have only Illinois to deal with, and assume that the glorious period of easy living upon pension is to begin at age 65. We have 421,073 persons to pay off. Old Doc Townsend thinks that this part of the population, men and women, lazy vagrants and worn-out workers alike, all should receive $200 a month each. What would it cost?

Take your pencil, multiply 421,073 by 2,400, to obtain the number of dollars that must be expended each year to give $200 a month to each person above 65, as a reward for having continued to breathe so long. What figure do you get? What does that figure mean, in terms of taxes to be raised to meet the cost?

COST ONE-HALF BILLION AT $100

At this point, we hear an interruption. An indignant Townsend dreamer points out that the figure of $200 a month is an ideal, and not necessary the immediate goal. A smaller amount would be accepted, for a starter, with the idea of working up to the higher figure as time went on.

Very well, then: let's cut the Townsend ideal in half, and say that we are going to pay each person in Illinois $100 a month, as reward for having continued to consume groceries past the age of 65. Multiply 421,073 by 1,200. By my arithmetic, this makes 505,287,600—the number of dollars it would take in a year to pay each person of Illinois over 65 a bare $100 each month. Well over a half a billion dollars, for a single State, but perhaps that does not sound impressive to you.

TRANSACTION TAX IS VICIOUS

Take, then, another figure for consideration. The total amount of tax revenue collected in the State of Illinois in 1 year (June 30, 1937–June 30, 1938) from a 3-percent sales tax upon all retail business was $80,917,000. This 3-percent sales tax is a source of serious embarrassment to many small retailers and a cause of much grumbling by customers who are asked to fork over extra pennies on every purchase. It has proved necessary, however, to finance the present expenditure of State government.

The present State sales tax, of course, must be continued until the expenses of State government are greatly reduced, or until the State constitution is amended to permit a State income tax. The Townsend dreamers propose to raise their money by a "transaction" tax—a sales tax under another name, and more vicious because it involves payment of tax two or three times over upon the same merchandise. Assume, however, that nothing worse than a simple sales tax were proposed.

We must have the present 3 percent to finance the State in its previous scheme of operations. To raise an additional half billion dollars a year we must have an additional sales tax six times as big as the present one. In other words, to pay the hopeful old folks $100 a month, without regard to their need or worth, every person who went into a store to buy $1 worth of groceries would have to fork over, in addition, 3 percent, as the ordinary cost of State government, plus 18 cents as Townsend tax, making the bill $1.21 for each $1 worth of goods that were bought.

ALL WAGES WOULD SHRINK

In other words, every wage in the State would shrink by a fifth (for all the families that still continued to support themselves, by their own efforts). Every little retail business would be loaded down by difficulties, due to rising prices and taxes six times bigger than now. Every benefit that was gained by the aged idlers would come out of the pockets of that minority in the population who earn their own way, produce all the wealth that is created, and work for every cent they get or expect to get.

Thus far I have been able to invite you to use your own pencil along with me in computing just what would happen. The whole story, however, cannot be told by means of any figures yet available. Actually there are not merely 421,073 persons of 65 and over in Illinois, as there were in the year 1930, but many thousands more than that number. The death rate has been dropping, the birth rate also, so today we have a larger proportion of old folks to earning men. The actual burden upon workers would be far worse than any official figure will show.

Export of War Materials to Japan

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

LETTER FROM REV. WILLIAM W. DARSIE

Mr. GEYER of California. Mr. Speaker, I have on various occasions before this body expressed myself concerning the part the United States is having toward prolonging the war in China.

Authentic authorities agree that if we could embargo war materials to Japan the terrific slaughter would be over in less than a month. I represent the great harbor area of Los Angeles, and I am receiving many communications from my constituents urging that something be done about this matter.

The First Presbyterian Church, of San Pedro, Calif., under the leadership of Rev. William W. Darsie, has just communicated with me upon this subject. His letter is typical of those I am receiving. I hope the membership will read this

letter thoughtfully and enact legislation that will put an end to this terrible tragedy.

The letter follows:

Congressman LEE GEYER:

Washington, D. C.

DEAR CONGRESSMAN GEYER: The session of the First Presbyterian Church of San Pedro, acting unanimously for the congregation of our church, voted to express to you and the Members of Congress our sincere hope that Congress would act in withholding war materials from Japan. Since our church is located in that section of the city of Los Angeles from which oil and scrap iron is shipped in large quantities, we have a deep interest in seeing that Congress act before adjournment in stopping the slaughter of innocents in the Far East. It is our sincere hope that action will be taken at once in correcting this wrong.

Very sincerely yours,

WILLIAM W. DARSIE.

Possibility of Joint Truck-Rate Schedules

EXTENSION OF REMARKS
OF
HON. WADE H. KITCHENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. KITCHENS. Mr. Speaker, the railroad bill before us is inimical to all other forms of transportation. A case of first impression pertaining to joint truck-water transportation arose in my district last year. It took over a year to get an adverse ruling in favor of the railroads by the Interstate Commerce Commission in a decision rendered May 20, 1939.

Camden, Ark., a town located in my district, has for many years been the head of navigation on the Ouachita River. From Camden this river flows in a southeasterly direction down to the Mississippi, and boats using the Ouachita can thus travel between Camden and New Orleans by water. It is the only direct water connection between the coast and the interior towns and cities in my district and in the other districts of southern Arkansas. There has for many years been some commercial use of the Ouachita to Camden, but this was uncertain and not the kind of service which the merchants and businessmen could ever depend upon.

About 4 years ago, however, a common carrier barge line began operations over this water route. This line uses a fleet of modern barges and plies between New Orleans and Camden, using the Mississippi and Ouachita Rivers. Regular semimonthly sailings were established and a slow but dependable service by water to Camden was made available to the merchants. Being an inland-water carrier, this barge line was not under the Interstate Commerce Commission or subject to its rulings, but it made every effort to keep its rates stable and was invaluable to business in this territory.

Not long after the establishment of this common-carrier barge line the Motor Carrier Act was passed by Congress placing interstate truck operations under the Interstate Commerce Commission and providing for the joining of truck and water operations where the barge lines were willing to submit to the jurisdiction of the Commission.

At the request of the shipping interests around Camden and in the territory served by Camden the barge line decided to join with the common-carrier truckers in joint through water-truck tariffs which would name rates from New Orleans to various south Arkansas points through Camden.

There were five common-carrier truck lines whose routes radiated from Camden and provided a service to towns in Arkansas as far north as Little Rock.

It was the purpose of the new tariff to allow wholesalers, merchants, and businessmen at all of these Arkansas destinations to ship directly between their places of business and New Orleans by water and truck without the necessity of taking delivery at the head of navigation in Camden and still have the benefit of low-cost water transportation.

The project was greeted with great enthusiasm all over my district and in the surrounding districts which also would benefit, and in spite of some misgivings on the part of the barge line at submitting to the jurisdiction of the Interstate Commerce Commission, the tariffs naming the through rates were published in April of last year.

The ink on the tariffs was scarcely dry, however, before a loud and vigorous complaint arose from the railroads. They protested to the Interstate Commerce Commission that the new through joint rates were unconscionably low and would completely tear down the rate structure that they had built up for service to this territory. It even developed that one of the common-carrier truck lines which had joined with the barge company in the joint rates was owned and controlled by one of the railroads. As soon as the railroad opposition was made known it immediately withdrew from its participation. The Commission gave ear to the strong protests of the railroads and in May of 1938 suspended the new tariff, setting it down for an investigation and hearing before one of its examiners.

The scheduled hearing was held at the end of June 1938, in Camden. At this hearing there were in attendance many shippers and businessmen who testified as to the great advantages which a joint barge-truck route through Camden would bring to them. They assured the Commission that they had urged the establishment of this valuable service and, in spite of its slowness, they would patronize it and be very glad to make use of the waterway serving their locality. On its part, the barge line depicted the careful study which had been given to the problem before the through rates were decided on; the urgent requests which they had received; and the care which had been taken to name rates which would make use of the through route by shippers possible and still be compensatory to the carriers operating over it.

The barge line pointed out that the through route was very much an experiment and that for this reason an experimental period of 6 months was to be used. Suggestions as to improvements in the tariff were solicited and a willingness to correct any errors or ambiguities was repeatedly expressed. The answer of the railroads to all the pleas of the water and truck carriers and of the shippers for this service was that the rates to be charged were too low and would injure their business.

The case was before the Interstate Commerce Commission for many months. Finally, in late May of this year, over a year after the rates had been first published, the decision was released. It found the proposed joint through rates to be unlawful because unduly low and ordered them to be canceled. The Commission apparently felt that, regardless of the value and cost of the service offered, rates by other forms of transportation must not be low enough to take traffic from the railroads. The effect of the decision is to say that the inherent advantages of low-cost water transportation cannot be given to a locality, no matter how great the need, if to do so can possibly interfere with or injure the business of the rail carriers. No other conclusion can be drawn when this was the sole plea of the railroads to which the Commission in this case lent such a ready ear.

Since the decision ordering their rates canceled, the common-carrier barge and truck lines serving southern Arkansas through Camden have not abandoned their efforts to provide a joint through service. They have been and now are endeavoring to work out rates which will produce some business and still be compensatory. They have been asked, however, by the railroads to furnish copies of such new rates as soon as they are prepared. There is little doubt that the new rates, whatever they are, will be protested again by the railroads and the same long-drawn-out procedure will have to be repeated. Nor does a common carrier by water have much incentive to seek Commission approval of its rates, no matter how valuable the projected service may be to shippers and the people in general, or how reasonable they may be when the slow character of water travel is taken into account. The experience of this barge line which has with the common-carrier truckers, been attempting to provide water and truck transportation to Camden, Ark., and surrounding towns makes the prospect of further Commission regulation a dark one.

The National Debt Limitation

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 24, 1939

Mr. FISH. Mr. Speaker, a recapitulation of congressional appropriations discloses that we are dangerously near the debt limitation of $45,000,000,000 established by law. The national debt, as of June 30, 1939, the end of the fiscal year, was $40,440,000,000, of which total Treasury bonds now outstanding amount to $28,066,000,000, while Treasury notes, bills, and certificates of indebtedness eligible for conversion into long-term obligations sum up to $11,820,000,000.

We have experienced 9 continuous years of operating deficits. The excess of expenditures over receipts has varied from year to year due to changes in business conditions and the program of public finance. During the 1939 fiscal year expenditures exceeded receipts by $3,601,000,000 and were more than twice the expenditures for the 1931 period.

A tabulation of the appropriations for the 1940 fiscal year shows that the national-defense program will amount to one and eight-tenths billion dollars; it will cost about the same for relief as it will for national defense; the agricultural program will still run at a level of about one and three-tenths billion dollars. All told, national defense, relief, and agricultural expenditures will constitute about one-half of the cost of government for this fiscal year. Expenditures are estimated to exceed $10,000,000,000 in the 1940 fiscal year with an operating deficit of over $3,000,000,000.

The Treasury Department estimates a gross national debt, as of June 30, 1940, of $44,458,000,000, based on estimated deficit of $3,326,000,000 for the fiscal year ending June 30, 1940. The actual deficit for the fiscal year ending June 30, 1939, was three and six-tenths billion dollars.

There has been proposed a program of expenditures for public works of a self-liquidating nature amounting to approximately $3,000,000,000. If the plan is carried out to completion then the outstanding contingent liabilities (guaranteed obligations of the United States) will approximate $10,000,000,000 in addition to the national debt.

These figures show that we are rapidly approaching the debt limitation and that the time has come to put our own financial house in order, to practice rigid economy, and to balance or at least to approximate a balanced Budget for 1941.

I believe the best way to start doing this is to cut 10 percent off the total appropriations for every department of the Government, except for disabled veterans, those on pensions and relief. There is no way to balance the Budget without a definite attempt to practice national economy, and that can only be done through an effort to reduce the amount of appropriations made by the Congress.

I have introduced a resolution—House Resolution 195—for the creation of a committee of five Members of the House, to be appointed by the Speaker, to make a recapitulation and a complete survey of the authorizations and appropriations of the Seventy-sixth Congress, to ascertain whether or not the limitation on the national debt established by law at $45,000,000,000 has been exceeded. I propose to ask for action on this resolution as soon as Congress reconvenes in January 1940 so that Members will know definitely before the big appropriation bills are considered the exact status of our public debt in relation to the debt limitation.

The proposed spending and lending bill is just a camouflage effort to evade the legal-debt limitation. The fact is that our country has been overdrugged with stimulants and shots in the arm. Business is in a dry rot, confidence has been destroyed, and fear pervades the land. Incomes, profits, wages, all are falling, but unemployment and taxes continue to rise. The tax collector is as inevitable as the messenger of death. The Federal Government is drifting rapidly onto the shoals of inflation, repudiation, bankruptcy, or financial chaos and more unemployment.

I include the following tables showing the state of the public debt as of June 30, 1939, the cost of operating the Federal Government for the fiscal years 1931–39, comparison of changes in the public debt with expenditures for relief for the fiscal years 1934–39, appropriations for the fiscal year ending June 30, 1940, and the growth of contingent liabilities, 1934–39.

TABLE I.—*The public debt as of June 30, 1939*

Bonds:	
Panama Canal, conversion, postal savings	$196,470,660
Treasury bonds	25,218,322,650
United States savings bonds	1,868,149,116
Adjusted service bonds	783,052,606
Total bonds	28,065,995,032
Treasury notes	9,225,905,700
Certificates of indebtedness	1,286,500,000
Treasury bills	1,307,569,000
Total interest-bearing debt outstanding	39,885,969,732
Matured debt on which interest has ceased	142,283,140
Debt bearing no interest	411,279,539
Total gross debt	40,439,532,411
Net balance in general fund	2,838,225,533
Gross debt less net balance in general fund	37,601,306,879
Gross debt per capita	308.29
Computed rate of interest on interest-bearing debt outstanding	2.60

TABLE II.—*Cost of operating the Federal Government for the fiscal years, 1931–39, inclusive*

	Expenditures	Receipts	Operating deficits: Receipts as compared with expenditures
1931	$4,092,000,000	$3,190,000,000	$902,000,000
1932	5,154,000,000	2,006,000,000	3,148,000,000
1933	5,143,000,000	2,080,000,000	3,063,000,000
1934	7,105,000,000	3,116,000,000	3,989,000,000
1935	7,376,000,000	3,800,000,000	3,575,000,000
1936	8,880,000,000	4,116,000,000	4,764,000,000
1937	8,105,000,000	5,294,000,000	2,811,000,000
1938	7,691,000,000	6,242,000,000	1,450,000,000
1939	9,268,000,000	5,668,000,000	3,601,000,000

TABLE III.—*Comparison of changes in the public debt with expenditures for relief for the fiscal years, 1934–39*

	Gross direct debt	Annual increase in gross debt	Relief expenditures [1]
1934	$27,053,000,000	$4,514,000,000	$1,767,000,000
1935	28,701,000,000	1,648,000,000	1,982,000,000
1936	33,778,000,000	5,077,000,000	2,441,000,000
1937	36,425,000,000	2,647,000,000	2,542,000,000
1938	37,165,000,000	740,000,000	2,133,000,000
1939	40,440,000,000	3,275,000,000	[2] 2,854,000,000
Total		17,901,000,000	13,719,000,000

[1] Relief expenditures include only those allocations to the Civil Works Administration, Federal Emergency Relief Administration, Works Progress Administration, Civilian Conservation Corps, direct relief, and the work relief of public works such as emergency flood control, reclamation, etc.
[2] Preliminary computation.

TABLE IV.—*Appropriations for the fiscal year ending June 30, 1940*

Legislative establishment, H. H. 4218, Public, No. 130	$21,892,079
Independent offices, Public, No. 8	1,678,847,840
Independent administrative expenses	73,550,000
Department of Agriculture, H. R. 5269	1,273,004,798
Farm Credit Administration, H. R. 5269	18,741,000
Administrative expenses, H. R. 5269	9,500,000
Department of Commerce, H. R. 6392	52,751,000
Department of the Interior, Public, No. 68	188,337,265
Department of Justice, H. R. 6392	50,907,520
Department of Labor, H. R. 5427	30,536,170
Navy Department, H. R. 6149	773,049,151
Post Office Department, Public, No. 65	[1] 50,987,244
Department of State, H. R. 6392	18,518,700
Treasury Department, Public, No. 65	[2] 2,549,978,410

[1] Appropriated $790,987,244, less $740,000,000 of post-office receipts.
[2] Out of the Treasury Department appropriation of $2,550,000,000, $1,050,000,000 was allocated for payments of interest on the public debt, $585,000,000 for public-debt retirement, $580,000,000 to the old-age reserve account, and the remainder of the appropriation ($335,000,000) will be spent on operations of the Department, such as refunds, public buildings, the Coast Guard, the Public Health Service, Internal Revenue Bureau.

Collective Security

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. BREWSTER. Mr. Speaker, in recent months the administration has used various powers available to it under law to curtail so far as practicable our interchange of trade with Germany in carrying out its program of cooperation with the "democracies against the autocracies" and in particular to show American sympathy for Great Britain in its current controversy with Germany.

It seems worth while to note that during this same period, when American business with Germany has been substantially curtailed, under the restrictions imposed by the administration the trade of Great Britain with Germany has very materially increased.

In fact Great Britain has apparently increased its trade with Germany to about fill the gap America has left.

The following Associated Press dispatch from the New York Herald Tribune of July 20, 1939, tells a story that should have significance to American students of international relations:

[From the New York Herald Tribune of July 20, 1939]

GERMAN EXPORT BALANCE FOR JUNE IS $37,640,000—PART OF GAIN IS IN BOOKKEEPING; SALES TO UNITED STATES DROP SHARPLY

BERLIN, July 19.—Germany's exports in June exceeded imports by 94,100,000 marks (about $37,640,000), more than double the export balance in May, it was announced today. For the first 6 months of 1939 an excess of 58,800,000 marks (about $23,520,000) in exports over imports was recorded.

The apparent increase in exports in June over May, 52,200,000 marks ($20,000,000), was in large measure a result of a new method of keeping statistics. June figures included some deliveries actually made in May. Exports listed for June amounted to 537,500,000 marks ($215,000,000), and imports 443,400,000 marks ($117,360,000).

Today's announcement said imports from Italy, Great Britain, Hungary, and the Netherlands had increased and those from Rumania, Greece, and Turkey had decreased.

German exports increased to Britain, Turkey, the Netherlands, Italy, and Sweden, while those to Poland, Switzerland, and France decreased. Export increases to Argentina, Venezuela, Mexico, and Colombia were noted, while there was a strong recession in exports to the United States.

Dark Days Ahead

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. GILLIE. Mr. Speaker, a shadow recently has been cast over the Fourth Congressional District of Indiana, that region of rich farm land and prosperous communities in the extreme northeastern section of the State which I have the proud honor to represent. It was placed there, I regret to report, by the distinguished junior Senator from Indiana [Mr. MINTON]. I rise, therefore, to erase that shadow once and for all, using as my weapon the potent sunlight of the truth.

Mr. Speaker, on Thursday, July 20, the Senator from Indiana, during the heat of debate in the Senate, made the following statement in response to a question by the Senator from New Hampshire [Mr. BRIDGES]. I quote from page 9575 of the CONGRESSIONAL RECORD of that date:

Mr. MINTON. I have in mind one Republican Representative from my State, who inserted in the RECORD some figures which had been tabulated by a Republican editor up in the dark corner of Indiana, a man who ran for the United States Senate last year and was defeated. That is one of them I have in mind. I could refer the Senators to others.

The Republican Representative to whom the Senator from Indiana refers is myself.

The Republican editor he mentions is the Honorable Raymond E. Willis, of Angola, Ind., one of the finest gentlemen from one of the finest communities in my district.

It is only natural for me to assume, therefore, that "the dark corner of Indiana" to which the Indiana Senator refers is my own Fourth District—a district which, I might add, needs bow to no other in the entire United States. At least, Mr. Speaker, this is the conclusion which has been drawn by the newspapers of my district. I wish to insert at this point a Washington dispatch which has gained wide circulation in Indiana:

[Washington dispatch of July 22, 1939]

FOURTH DISTRICT DARK CORNER OF STATE—MINTON

WASHINGTON, D. C.—The Fourth Congressional District, which went Republican by an all-time record majority of over 20,000 votes in 1938, is the "dark corner of Indiana" to Senator SHERMAN MINTON, the Hoosier new dealer, who must stand for reelection next year, probably against Raymond E. Willis, Angola publisher.

The junior Senator from Indiana made public reference to his strongest potential opponent, Mr. Willis, during a debate in the Senate the other day, but he didn't refer to him by name. Instead, he identified him simply as "a Republican editor up in the dark corner of Indiana, a man who ran for the United States Senate last year and was defeated."

It all came about during a debate between Mr. MINTON and Senator BRIDGES of New Hampshire over the farm policies of the New Deal.

The Hoosier Senator took the floor to complain that "numerous attempts have been made by Republican leaders to circulate throughout the country propaganda detrimental to the New Deal economic program. * * * They are trying to show that farmers were better off under Mr. Hoover than they are under the Roosevelt administration."

Mr. BRIDGES. The Senator says Republicans have been circulating these figures. Who does he mean are circulating these figures? "Republicans" is a pretty indefinite term.

Mr. MINTON. I have in mind one Republican Representative from my State who inserted in the RECORD some figures which had been tabulated by a Republican editor up in the dark corner of Indiana, a man who ran for the United States Senate last year and was defeated. That is one of them I have in mind.

The Hoosier Senator had taken exception to a table of comparative farm prices which Representative GILLIE had placed in the CONGRESSIONAL RECORD. The table, taken from Mr. Willis' newspaper, the Steuben Republican, revealed that average prices of

leading farm products under the New Deal period, 1933–37, are as much as 30 percent lower than they were during the Republican period, 1921–32.

The Indiana Senator objected to the figures and inserted his own table, comparing New Deal farm prices with the 1930–32 averages, ignoring the high prices under the Harding and Coolidge administrations.

Mr. Speaker, some very interesting inferences are contained in this newspaper article. The inference is made, for example, that the junior Senator considers the Fourth District the "dark corner of Indiana" because it went Republican last year by the largest plurality in history. The exact plurality, according to the Congressional Directory, was 20,274 votes. Every one of the eight counties in the district contributed to this record plurality. The results by counties were as follows:

County	Republican	Democratic
Allen	36,398	25,118
Adams	4,671	4,081
Wells	4,648	4,594
Lagrange	3,389	2,175
Steuben	4,561	2,494
Noble	6,794	4,515
Whitley	4,955	4,081
De Kalb	7,251	5,210
Total	72,567	52,293

The inference also is made that the Indiana Senator may consider northeastern Indiana the "dark corner" of the State, because it is the home of his strongest potential opponent, Mr. Willis, whom I sincerely believe will be the next Senator from Indiana.

The junior Senator identified Mr. Willis rather curtly as "the man who ran for the United States Senate last year and was defeated." I might say that many citizens of Indiana entertain serious doubts as to the truth of that statement. To be sure, Mr. Willis is not in the Senate today. But there are many who believe that he should be.

This attitude was summed up recently in an editorial in the Columbia City (Ind.) Commercial-Mail as follows:

Raymond E. Willis, it is felt by 90 percent of the voters of the State, was defrauded out of the place by election corruption—and came within a hair's breadth of securing election in spite of the frauds.

Official returns revealed that Mr. Willis polled 783,189 votes and Senator FREDERICK VAN NUYS, his opponent, received 788,386—a difference of 5,197 votes out of a total of 1,581,839 cast.

My purpose in rising today, however, is not to discuss the pros and cons of the much-disputed senatorial election in Indiana last year or to recall with justifiable pleasure the election results in my own congressional district. A shadow has been cast over the portion of Indiana which I represent and it becomes my duty to pierce it and let in the light.

The Fourth Indiana District, Mr. Speaker, is not "the dark corner of Indiana." Anyone who has ever had the good fortune to visit this section of the State, which God so generously endowed with all the natural wealth at His command, can testify to this statement. Its land is as fertile as any in the United States. Its industries are diversified. Its communities are progressing. Its people are the most hospitable on earth.

Northeastern Indiana, among other things, is a vacation paradise. Here, within a radius of 50 miles, are located 200 beautiful lakes, ranging from small ones to giant Wawasee. All of these waters, as well as the winding streams tributary to them, offer splendid fishing and every kind of outdoor amusement.

I wish to pause a moment here to extend a cordial invitation to my colleagues, on behalf of the constituency I represent, to visit northeastern Indiana after adjournment and see for yourselves. I will guarantee you the vacation of your lives. And I will warrant that you will meet the finest, most thoroughly genuine people in the world.

Whether you come from California, Maine, Florida, or Minnesota, you will feel that you are coming home when you come to Indiana. For Indiana's authors have told the whole world about the wonders of this wonderful State. Booth Tarkington, Edward Eggleston, Lew Wallace, James Whitcomb Riley, George Ade, Meredith Nicholson, Theodore Dreiser, and northeastern Indiana's own Gene Stratton Porter—these and many other Hoosier writers have brought Indiana into the home of every American. You will find many of the scenes they wrote about right in Mr. MINTON'S "dark corner of Indiana."

The business and industrial life of northeastern Indiana is centered in my home city of Fort Wayne, a thriving metropolis with a history as colorful as any community in America.

The present site of Fort Wayne, "where the three rivers meet," was an important center of early American Indian life before the coming of the white men. Chief Little Turtle described it as "that glorious gate through which all the good words of our chiefs had to pass from the north to the south and from the east to the west."

Fort Wayne is named after that Revolutionary War hero, Gen. Anthony Wayne, who brought the glorious aftermath of the war to Indiana soil on the site of the present city.

In 1785, just 2 years before the formation of the Northwest Territory, General Washington pointed to this spot as "a most important post for the Union." He wanted it fortified and maintained as a strategic American stronghold in the West. He never gave up that conception, and for 10 years pursued his purpose by sending three armies to accomplish it. His vision finally was realized in the building of Old Fort Wayne by the famous "Mad Anthony," after his defeat of the Indians at Fallen Timbers.

Since its colorful beginning, Fort Wayne has continued to grow until today it is an important industrial center of 130,000 population. Its ideal location in the heart of the great markets of the Middle West has been widely recognized, and many important industries have located plants there.

Mr. Speaker, I could go on forever about northeastern Indiana, her natural riches and varied attractions, the industrious farmers who till her soil, the citizens she has developed, the contributions she has made to the progress of civilization, the good people who perform their daily tasks there. For I love every inch of it and, to me, there is no place on earth to compare with it. I think, however, that I have said enough to convince my colleagues, and the Nation at large, that it is not "the dark corner of Indiana." I also would like to feel that the junior Senator from Indiana, deep down in his heart, shares with me an admiration and affection for the people of this district.

Mr. Speaker, the Nation should be warned. There are dark days ahead. I solemnly predict, here and now, that the Republican darkness to which the Senator has condemned the Fourth District of Indiana—and which already extends over 7 districts in Indiana and 167 in the United States—will envelop the entire country in 1940.

The Ramspeck Bill—H. R. 960

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mrs. O'DAY. Mr. Speaker, one of the early tests of feeblemindedness in children, I have been told, was to direct the child in question to bale out a bucket into which water from a tap was running. If the child stayed at the task all day, it was a sure sign that he was feeble-minded, because any

average child would soon discover the source of the water and turn off the tap.

I am reminded of this illustration by two bills, one of which has just passed the House, the other is awaiting action by this body.

There has been a great fuss over politics in relief, political activity by Federal employees, and much-to-do over the Hatch bill prohibiting "pernicious political activity."

Much less public attention has been given to the bill (H. R. 960) introduced by the distinguished chairman of the Civil Service Committee, Mr. RAMSPECK, of Georgia. This bill would place the bulk of Federal employees within the scope of the civil-service system. Mr. RAMSPECK's bill would shut off the flow of patronage, automatically eliminating pernicious political activity.

The House may draw its own inferences.

Everett Post Office Dedication

EXTENSION OF REMARKS

OF

HON. ARTHUR D. HEALEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

ADDRESS BY HON. ARTHUR D. HEALEY, OF MASSACHUSETTS

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address recently delivered by me at the dedication of a post office at Everett, Mass.:

It is indeed a pleasure to be present here today to participate in the dedication of the new post-office building for the city of Everett. This building is a splendid example of the policy of this administration in erecting post-office buildings with a view toward utility rather than the impracticable type of monumental buildings that we have witnessed in the past. It also represents the policy of the administration to bring up to a modern standard of efficiency the service rendered to the public by the Post Office Department by means of the construction of new self-liquidating buildings such as this one which, over a period of years, will pay for itself.

This building represents the most modern developments in comfort, convenience, and efficiency. A fine example of colonial architecture, embodying the fullest utilization of space, air, and light, it takes its place as the newest of the many thousands of far-flung outposts of the Post Office Department, the most gigantic business in the entire world.

It was indeed high time that the city of Everett, a splendid community of some 60,000 people, should receive the benefits of a publicly owned post-office building, and it very rightfully represents a source of pride to the residents of this city.

In my opinion, the Post Office Department is one of the most typically American institutions of our great Government. Bound up as it has been with the intimate lives, education, society, business, industry, and virtually every phase of American social and economic life, the history of the post office represents a history of the progress and development of America.

In the field of transportation, the Post Office has wielded an important influence on the development of better and swifter means of communication. From the pony express to the latest amphibians of the air, the Post Office Department has fostered and nurtured the growth of modern transportation. When Fulton sailed the first steamship up the Hudson River, sacks of mail were passengers on the historic journey. On their maiden voyages, the great leviathans of the sea carried mail from the United States in their holds. The early railroads were important mediums for the transportation of mail. Lindbergh and the other great conquerors of the air gave passage to mail from this country. And as swifter and more modern means of transportation are devised, it seems a safe surmise that the United States mail will maintain its historic record as first passenger.

From the earliest days of our internal development, the mail has carried news and information to every corner of our growing Nation. Wherever the intrepid explorer blazed a trail and founded a human habitation, there swiftly followed the United States mail.

If time permitted, we could trace through every phase of our economic and social life the all-pervading influence of the post office. When the great pioneers pushed westward to expand the frontiers of this Nation, the mail followed to bring them cherished news from home. The great movement for popular education found a potent ally in the post office, whereby the means of public enlightenment could be transmitted swiftly and cheaply to every corner of the land. However far the wanderer might roam, there was still this vital link to bring him solace from his loved ones and bind him to his hearth.

Like a great all-embracing mind, it has served to spread swiftly to every corner of this land the great developments in thought, culture, and ideals, serving to weld ever closer and closer into one the hearts and minds of the people of this Nation. Business and industry have found a valuable instrument in the mails, and there is hardly a phase of American life that has not felt the beneficent influence of this great institution.

Our Nation represents the last great frontier of freedom. The spirit of autocracy that has pervaded Europe and Asia has yet to take root in this country. However, because of the very existence of swift means of communication and transportation, alien ideologies swiftly find their way to this land. Because of its preeminent position, this Nation is the principal target for the propaganda of foreign governments.

Yet I believe that the people of America cherish too dearly the freedom and liberty that has been preserved inviolate in our land to succumb readily to the illusory enticements of foreign ideologies. Here, as in no other country, the dignity and majesty of the individual are preserved as an inexorable axiom of government. While in other lands the status of the individual has been degraded to that of mere chattel of the state, the great principle that governments are founded for and by the consent of the governed remains the very foundation of our system of government. Freedom of speech, freedom of the press, freedom of thought and conscience remain today the priceless heritage of all Americans. And when any of you chooses to deposit a letter in this building, you may do so with the full assurance that it will be safe from the prying eyes of censorship—that no despotic censor can deprive you of your inalienable right to communicate your thoughts as you deem fitting.

But while we have reason to rejoice in our great heritage, it is incumbent on us to remain vigilant in its preservation. The vast majority of citizens are sensitive to the great blessings that flow from our system of government and are unshakably devoted to free American institutions. However, we cannot be unmindful of the fact that great minority pressure groups in other lands have been able, by virtue of their unanimity of purpose, to subject the majority to their iron rule and discipline. It is incumbent upon all Americans to closely observe and investigate the activities of persons who would destroy our great institutions and, by the active promulgation of Americanism, do their part toward heading off subversive movements in their very inception.

Today, in a world gripped by the haunting fear of imminent war, the dedication of this post-office building may well serve as an inspiring symbol of Americanism. It represents a history of peaceful progress. I believe that the entire progress of America has been founded on peace. Although we have witnessed and suffered warfare, it has always been motivated by great ideals. Never yet has this Nation embarked on a war of conquest and selfish purpose, and it is our hope that it never will. Born in the great War of Independence, this Nation has prospered and developed on a foundation of peace and good will. Our Nation has risen to its position of preeminence under a program of peace and freedom, industry and tolerance, culture and achievement. Those wars that have afflicted us in the past have brought no benefit to this Nation but have served only to retard our growth and progress.

Today with war clouds hovering over Europe, it is fitting that we should dedicate this building in the name of peace. Europe and Asia are a turbulent seething scene of war preparation, a powder keg ready to ignite and blast civilization to bits on the merest incident. I know that there lurks in the hearts of all men a fear of the dreadful consequences that would flow from a new war and that Americans are gravely concerned lest our Nation should be drawn into a conflict that could only mean the end of civilization as we know it.

For months now a barrage of foreign propaganda, calculated to involve the sentiment of this Nation, has inundated our shores from all camps. Undoubtedly, as conditions become more acute, these efforts will be increased and more vigorously prosecuted. The objective is to win American public opinion, as it is the public opinion of America that will eventually guide the course of our destiny toward peace or toward war.

It has traditionally been the policy of this Nation to remain as free from entangling alliances with nations abroad as circumstances will permit. The entire course of our history reveals the wisdom of the principles enunciated by Washington in his Farewell Address. Today we are confronted with a situation similar to that which existed prior to the World War. Should we choose again the path we followed in those momentous days, it is my belief that the possibility of our involvement would be greatly increased.

It would be sound foreign policy, in my opinion, for this Nation to maintain during these critical days a barrier against the shipment of arms and ammunition to belligerent nations. If this Nation were to be converted into an arsenal for the manufacture of death-dealing instruments of war for any nation or nations abroad, this might well be the first step that would lead us inextricably into the seething current of European diplomacy and power politics.

I believe the overwhelming sentiment of the residents of my district and of the entire Nation to be opposed to any war other than one of defense and to favor the maintenance of strict neutrality. It is this sentiment of the people that, in the final analysis, will hold the key to peace or war. It will ever be neces-

sary that each of us exercise care and judgment in dispassionately appraising all news and appeals from abroad, lest the American conscience be imposed upon by spurious propaganda and false reports.

It is my conviction that the people of America will continue to follow the paths of peace and freedom and will continue to progress toward the greatest fulfillment of American ideals of freedom and liberty and the attainment of the fullest measure of the blessings of democracy.

It is my earnest hope that this building will serve for many years as a symbol of the resolution of the American people to cherish, nurture, and preserve our great institutions and to maintain our traditional independence and freedom from entangling alliances with nations abroad.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

RADIO ADDRESS BY HON. JAMES A. FARLEY

Mr. SHANLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Connecticut Chapter of the National Association of Postmasters, New Haven, Conn., July 22, 1939:

It is always a pleasure for me to visit Connecticut, and I want you postmasters assembled here tonight to know how much I appreciate the invitation which I received to address this convention of the Connecticut Chapter of the National Association of Postmasters.

I always welcome an opportunity to talk with postal people, for it gives me a chance to get first-hand information from you who carry on this great business day in and day out. You are the direct representatives of the Department in your respective communities, and it is for that reason that your viewpoint is of great value to us in Washington in formulating our policies. At the same time, these meetings enable me to keep you more directly informed concerning our plans and the progress we are making in the solution of the many perplexing problems that are constantly arising in the operation of the Postal Service.

We are most fortunate in having an opportunity to share in the management and operation of the United States Postal Service, and I know that each and every one of us has a justifiable pride in our accomplishments. While every person in this country uses the Postal Service in one form or another, it is astonishing how few people realize the tremendous influence that is exerted by this great Government utility in the progress of business, industry, transportation, and in the daily pursuits of our citizens in all walks of life.

The report of the Comptroller General of the United States for the fiscal year 1938 shows that during that year the transactions of the Federal service resulted in a total turn-over of cash handled in post offices of more than $8,000,000,000. This amounts to more than all the money in circulation in the United States and exceeds the total appropriations made by Congress for the maintenance of the entire Federal establishment, including the emergency agencies. This figure amounts to more than $62 for every man, woman, and child in America.

We must remember, therefore, that we are partners in the world's largest business, public or private.

I am more than pleased to be able to report to you tonight that the Post Office Department was operated at a net profit to the Government of $10,000,000 during the 1939 fiscal year which just ended on June 30 last, and that postal revenues for this 1939 fiscal year totaled $745,098,350, the highest year in the history of the Postal Service.

This figure is $17,000,000 ahead of the 1938 fiscal year, which in turn represented the previous all-time high in the matter of postal earnings. This is the fifth year that we have operated the Postal Service at a profit rather than a tremendous loss during my administration of the Post Office Department.

It is interesting to note that postal expenditures are still far below what they were during the previous administration, this despite increased volume and receipts, and the additional cost of the 40-hour-week law for postal employees and the public-building program. This reflects outstanding credit on the efficiency of the entire postal personnel, and is a source of great satisfaction to me.

These gains in postal earnings started during the last Christmas season, and each month since that time has been well ahead of the corresponding month a year ago. These gains came from all over the country and have been evenly distributed among the metropolitan and rural areas of every section in the Nation.

The large increase of mailings under permit postage, which obviates the use of postage stamps, has accounted for a considerable portion of the gains, and this has been largely due to increased use of the mails by business and industry. Thus, as a sensitive barometer of business conditions, the postal establishment is again seen as indicating a sharp upward trend in general prosperity.

As for the State of Connecticut, it has shown one of the best increases of any State in the Union during the past 4 years. For the calendar year 1938, postal receipts in Connecticut totaled $11,374,134, which figure represents a 20-percent increase over the same 12 months in 1934.

Thus, it may be readily seen that Connecticut is among the most progressive States in the Union, particularly with respect to its use of the Postal Service.

In this connection I want to take this opportunity of commending the postmasters of Connecticut and, in fact, every postal worker in the State for the outstanding work they did last September during the hurricane crisis. The manner in which the postal employees of this State responded in that time of unprecedented stress in this section of New England will go down in postal annals as one of the finest and most efficient emergency tasks ever performed by postal workers anywhere. If ever the Department's motto, "Neither rain, nor snow, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds," was carried out in its full meaning it certainly was during those difficult days of last fall when transportation and communication facilities in this State were so badly crippled.

Getting back to the present condition of the Post Office Department, the mail volume is increasing daily, weekly, and monthly when compared to the same periods of last year. We have kept pace with this increased volume by adding more employees. We now have on our rolls and at work in the post offices more people than have ever been employed at any time in the history of the service. Working conditions are better. The average salary of postal employees in the field service is greater than the average salary in other Government establishments, and certainly higher than the average income of employees in private industry. This indicates a steady gain in business, confidence on the part of the people, and shows that the patrons are taking advantage to a greater extent than ever before of the wonderful facilities of the United States Postal Service.

I am proud, indeed, to be able to make this report to you, and I know that you, as public officials and as citizens, are pleased to note and accept this report as evidence of the fact that the United States of America is keeping up its march of progress; that its people are increasing business activities; that they believe in their Government; that they are living up to the good-neighbor policy—for you and I know that when postal receipts are increasing in the smaller cities and towns a good part of that revenue comes from the ordinary social correspondence carried on between families and friends. When that condition exists everybody knows that we are getting along all right in America.

I make no claim for personal credit for the accomplishments of this fine establishment. While the service has been generally improved during my administration as Postmaster General, frankness and honesty require that I give to you, the postmasters, to my most efficient staff in the Department, and to all of the postal employees the credit for such improvements. You know, and I know, that the Postal Service has been the most respected of all Government agencies for many, many years. Before we were born, postal officials and employees, hundreds of thousands of them, had given the best years of their lives and their efforts to the development of this magnificent communication system. All praise to my predecessors and your predecessors, and to the loyal army of workers that has given such a fine example of courage, fidelity, and efficiency. We make but one claim; that we have accepted our positions as a public trust. We have but one objective—that in the administration of this public trust we shall at all times safeguard the public interest and pass on to our successors an improved service in keeping with the progress of the Nation.

Our greatest asset is goodwill. In private business goodwill is recorded as a capital asset. In a public establishment such as ours we have no reason to reduce this asset to a dollar-and-cents value. We do know, however, that unless we do everything possible to develop goodwill we are not satisfying our patrons and we will not attain our objective.

I am happy to say to you that careful observance of postmasters and postal employees convinces me that we are reaping the benefit of our many campaigns to encourage courteous and efficient postal service. I hear many expressions and receive many letters commending postal people on their tact and courtesy. I want to thank all postmasters for this accomplishment and to urge that you continue your efforts along this line. Eternal vigilance is required if we are to meet our obligation to our patrons. We in the Department are convinced that the need for politeness is more pronounced in the post office than in most other public services. It is an important part of what we term "efficiency." We operate a monopoly, at least in the transmission of letters, therefore, a patron has no choice but to deal with us; consequently, it is fundamental that we exercise great care in dealing with our customers who are in reality our employers.

Obviously, the patron is not always right, but we gain nothing in attempting to prove to him that he is wrong. Conversely, we are not always right. While it is true that relatively few mistakes occur in the handling of the billions of pieces of mail annually, yet it is human to err, and our employees on rare occasions mis-send mail or delay the transmission of mail matter. When such a thing occurs be frank about it. Admit the fault and take prompt steps to prevent a recurrence. Apologize for the mistake and you will make a friend for the Postal Service and add to the goodwill so valuable to the Department.

You, as postmasters, should constantly strive to secure the cooperation and goodwill of the employees of your office. Make each and every person in your establishment feel that the part he plays in the Service is an important part. Be firm when necessary and always point out the mistakes made by your subordinates. Let them feel that they have an individual responsibility to the public and encourage them to assume responsibility.

It is also important to recognize good work. When some member of your staff has performed a task in a most efficient manner, or has done something to cause favorable comment on the part of a patron, let him know you are pleased with his work. It does not take long to pat him on the back and commend him for his interest in the Service. To do so encourages him to continue in his efforts along that line.

I feel very strongly on this matter of tact and courtesy in our dealings with the patrons and employees, and shall appreciate your continued cooperation.

You may be assured that the Department will cooperate with you if you will but seek its help when you are in need of assistance in solving any of your problems. The administrative agencies of the Department are organized and maintained for that purpose. The several bureaus under my general direction formulate policies and issue rules and regulations which are calculated to insure adequate and efficient service for the people, and also to protect your interest and the interest of the employees.

We in the Department have no direct contact with our customers but must of necessity leave that most important function to you and your staff in the local post offices, so that, in the final analysis, no matter how high our purpose may be, unless we can secure your enthusiastic support we cannot be successful. For that reason I attend meetings of this kind whenever possible, and I encourage the administrative officials in the Department to do likewise—for I am convinced that these conventions offer us our best opportunity to engender goodwill and good feeling between the headquarters staff and the personnel in the field service. There are others here with me from the Department and a number of post-office inspectors are present, all of them available for counsel and advice concerning your service problems.

In conclusion, I again thank you for inviting me here this evening, and wish for each of you a full measure of success and happiness.

Delegates to Oslo Conference and Permanent Study Commissions Assignments

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 22, 1939

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following list of delegates of the American group to the Interparliamentary Union Conference to be held at Oslo, Norway, beginning August 15, 1939:

UNITED STATES OF AMERICA GROUP, THE INTERPARLIAMENTARY UNION

PERMANENT STUDY COMMISSIONS

(1) Political and organization questions: Representative HAROLD KNUTSON, chairman; Representative THOMAS S. MCMILLAN; Representative PEHR G. HOLMES; Representative HENRY O. TALLE; Representative JOHN M. ROBSION.

(2) Juridical questions: Senator ALBEN W. BARKLEY, chairman; Representative FRITZ G. LANHAM; Representative NOBLE J. JOHNSON; Representative JAMES M. BARNES.

(3) Economic and financial questions: Representative ALLEN T. TREADWAY, chairman; Representative MILLARD F. CALDWELL; Representative KARL STEFAN; Representative EUGENE B. CROWE.

(4) Ethnic and colonial questions: Representative HAMILTON FISH, chairman; Senator THEODORE F. GREEN; Representative RICHARD B. WIGGLESWORTH; Representative DEWEY SHORT; Representative LOUIS C. RABAUT.

(5) Reduction of armaments: Senator RUSH D. HOLT, chairman; Senator LYNN J. FRAZIER; Representative ROY O. WOODRUFF; Representative RALPH E. CHURCH.

(6) Social and humanitarian questions: Representative DANIEL A. REED, chairman; Representative MARTIN J. KENNEDY; Representative HARRY B. COFFEE; Representative LEWIS D. THILL.

(7) Intellectual cooperation: Senator ALEXANDER WILEY, chairman; Representative VINCENT F. HARRINGTON; Representative FOSTER STEARNS.

Wagner Labor Relations Act

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

LETTER FROM THE CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I include a letter from the California Committee to Support the Wagner Act and the statements referred to in that letter:

LOS ANGELES, *July 13, 1939.*

Hon. LEE GEYER,
House Office Building, Washington, D. C.

DEAR SIR: This committee believes it will be of interest to you to see the significant statements, herein enclosed, made in behalf of the Wagner Act and in opposition to changes in the act or Board.

The first group of statements are made by outstanding and representative union leaders of San Francisco—all of them members of important American Federation of Labor unions. The second group are by outstanding lawyers and citizens, including Mr. George Creel, chairman of this committee; Dr. Louis Bloch, member of the Maritime Labor Board; and Prof. Max Radin, of the department of law, University of California.

Respectfully,

URCEL DANIEL,
Acting Executive Secretary.

CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT

Martin Christsen, secretary, joint local executive board, International Union of United Brewery Workers:

"The Wagner Labor Relations Act has done more to promote and maintain peaceable and orderly relations between employers and employees than any single piece of legislation enacted by any civilized country. Such strife as has resulted from its application is not due to the act but rather to the refusal on the part of a selfish minority of employers to go along with the great majority as good, law-abiding citizens. Nothing but harm can result from the adoption of any amendments which attack the fundamentals of the Wagner Act.

"MARTIN CHRISTENSEN."

Emile Rabin, secretary, Cleaners and Dyers Union, Local No. 7, San Francisco, Calif.:

"The Cleaners and Dyers Union, Local No. 7 of San Francisco, believe it would be disastrous to open the Wagner Act by amending it now. As an official of an A. F. of L. union in California, I am entirely in agreement with, and support the stand taken by, Mr. George Kidwell in defending the act at a time when certain elements in the A. F. of L. officialdom were attempting to use the Westwood situation as an attack on the Labor Board and the Olson New Deal administration.

"EMILE RABIN."

George W. Rohrs, delegate to Bay Counties District Council Carpenters, San Francisco, Calif.:

"The Wagner Labor Relations Act is a key part of the New Deal program which has done so much to further the interests of wage earners. If this important legislation is weakened, it will mean opening the way for destroying the rights and gains of workingmen won by them through the New Deal. More specifically, weakening the Wagner Act would result in immediate and crushing attacks on the rights of collective bargaining and self-organization. I am therefore opposed to all changes in the Wagner Act.

"GEORGE W. ROHRS."

Wendell Phillips, secretary, Bakery Wagon Drivers Union, No. 484:
"The present administration of the Wagner Act has been highly satisfactory. I can see no reason for amendments at this time.
"W. PHILLIPS."

—

Wayne Cantu, secretary, Miscellaneous Employees Union, No. 110:
"The Miscellaneous Employees Union is definitely opposed to any amendments to the Wagner Act which would take away the right of workers to democratically choose their collective bargaining agencies. We are also opposed to having added power given to the courts in labor cases; and to having bargaining units limited to a narrow craft basis, especially in large-scale industries. In other words we are opposed to the Walsh amendments. In fact, we think the Labor Act is the soundest labor legislation ever devised and believe it should be retained in its present form.
"A. W. CANTU."

—

Larry Vail, secretary-treasurer, Retail Department Store Employees Union, No. 1100:
"The retail clerks in San Francisco regard of utmost importance the principles of democracy established by the Wagner Labor Relations Act. These principles have protected us against employers who might otherwise have succeeded in their attempt to avoid bargaining in good faith, and against antilabor judges whose unfavorable rulings might destroy our rights and strength. Our bargaining power has been won since the Wagner Act became law. And we know that without its protection there would be a return to instability and strife. We are therefore unalterably opposed to the antilabor amendments to the Wagner Act now being considered.
"LARRY VAIL."

—

George Hardy, secretary, Building Service Employees Local, No. 87:
"The principles of the Wagner Act have greatly benefited the entire labor movement. Any changes in the act would be detrimental to labor's interest. Therefore, I am against proposed changes to the act and all others of a weakening nature which may be proposed in the future.
"GEORGE HARDY."

—

Walter J. Burchell, business agent, Sign, Scene, and Pictorial Painters, No. 510; delegate, District Council of Painters, No. 8:
"Those who complain that the Wagner Act is unfair to employers should remember that the Wagner Act was specifically designed to bring equality in bargaining power between employer and employee. This act merely forbids employers to use such unfair labor practices as blacklisting, espionage, "yellow dog" contracts, and company-dominated unions. None of the employers' rights are taken from them; rather, protection is being given to workingmen to offset the stronger bargaining position which employers have enjoyed for years. Nothing should be done to impair the newly won equality between employer and employee. Amending the act would do this. For this reason, as an officer in the Sign, Scene, and Pictorial Painters, No. 510, and a delegate to the District Council of Painters, No. 8, I am opposed to any changes in the act which would in any way destroy the above-mentioned protection.
"WALTER J. BURCHELL."

—

Alvaro P. Carrarra, president, California State Conference Board of Box Makers; business relations and secretary, Box Makers, No. 1137, San Francisco:
"Since the Wagner Act has been instrumental in diminishing the cost of labor disputes and in improving the standard of living of wage earners, it should be allowed to continue in effect as it now stands. Any tampering with the act will result eventually in its destruction by its enemies. It should be left intact as the Magna Carta has been intact for these many centuries. The Wagner Act is the foundation of economic democracy as the Magna Carta is the foundation of political democracy.
"ALVARO P. CARRARRA."

—

Daniel Del Carlo, president, San Francisco and Marin County District Council of Painters; business representative and secretary, Glass Workers, No. 718:
"The honest labor movement in California has been protected and stimulated by the Wagner Act. This movement is now speaking out against all amendments to the act—including those which are paraded as fair and just and which are actually emasculatory.
"DANIEL DEL CARLO."

—

C. W. Randall, general chairman, Brotherhood of Railroad Trainmen, Pacific Greyhound Lines:
"Although the National Labor Relations Board has conducted impartial elections among the Pacific Greyhound stage drivers and has certified the Brotherhood of Railroad Trainmen, the union receiving the largest number of votes, the company has refused to bargain with this properly chosen unit. Because of this noncompliance with the law of the land, the union was forced to take a strike vote. The executive committee was authorized to call a strike. However, such drastic action has not been necesssary because, following its usual procedure, the Board intervened at this time, bringing contempt action against the company. Had this not occurred, the result would have been to tie up approximately 90 percent of the passenger-bus traffic in seven Western States, causing a loss to the company on a basis of $9,000,000 annual earnings, and inconveniencing hundreds of thousands of passengers.
"This is one more instance where normal Board procedure has resulted in averting strife. It is clear to the stage drivers that if the Wagner Act is amended as now proposed, employer interference in organization will be legalized and Board procedure will be crippled. In this event, strike action will be forced upon unions in situations such as ours. Therefore, we stagecoach drivers of the western coast and intermountain area strongly hold that the Wagner Act should be kept strictly as it is now written.
"C. W. RANDALL."

—

Statements by outstanding San Francisco attorneys—in behalf of the Wagner Act.

Mathew O. Tobriner:
"The underlying principle of the Wagner Act is economic democracy in industry. This means that the majority of a given plant or craft can select their bargaining representatives and those representatives can negotiate with employers to fix wages, hours, and working conditions. They can make a collective bargaining agreement which provides for a union shop or preferential hiring. This principle is the very opposite of the ruling of the District Court of Appeal of California in the Howard case which denies the right to collective bargaining as expressed in a contract for a union shop covering existing employees and which rests upon individual rather than collective bargaining. The protection would be crippled if the amendments now being proposed are adopted.
"MATHEW O. TOBRINER."

—

Harold M. Sawyer:
"The Wagner Labor Relations Act is, in my opinion, the greatest legislative contribution ever made to the cause of industrial peace. It is well known that it has stimulated trade-union organization, raised wages, protected employees from intimidation and coercion, and promoted industrial peace by reducing the number and magnitude of strikes. In 1938 the saving to the country in strikes averted was estimated to be $33,400,000.
"Since its passage, the act has been under constant attack by the enemies of labor. The La Follette committee has advised the public concerning the identity of these enemies, and how they profit from industrial warfare. These same great corporations are the spearhead of the move to destroy the Wagner Labor Relations Act by amendment. If they would transform the energy spent in an effort to destroy the act, into genuine cooperation with the Labor Board in the administration of the act, industrial peace would be an accomplished fact instead of a goal yet to be attained.
"HAROLD M. SAWYER."

—

George R. Anderson:
"All organized labor is strengthened by the legalization of collective bargaining and the right to organize without interference or intimidation. However, more than the workingman's material needs are provided by the protection of this great labor act. His independence, integrity, and self-respect are fostered by the institutions of collective bargaining and self-organization. I consider amending the Wagner Act as a distinct menace to these fruits of true democracy; and I wish it to be known that I oppose them all. I know that I speak not alone for myself, but for clear-sighted and fearless friends of labor.
"GEORGE R. ANDERSON."

—

STATEMENT BY GEORGE CREEL, CHAIRMAN, CALIFORNIA COMMITTEE TO SUPPORT THE WAGNER ACT

All who believe in justice and democracy will oppose present attempts to amend Wagner Act. The enemies of the law, having failed to nullify it by court fights and every known form of sabotage, have returned to the attack as friends, eager only for "changes that will enable the act to function more effectively and fairly."

With a few trivial exceptions, the amendments now being urged are designed to destroy, not improve. Proof is furnished by the fact that virtually every proposal to amend is accompanied by denunciation of both the law and of the Board. Not one proponent of change seems willing to make admission that the act has fulfilled its purpose in any degree. This in itself shows sinister intent, for no fair-minded man can review the record of the National Labor Relations Board without recognizing its very real accomplishment. Defied from the very first and hampered by the tragic split in the ranks of organized labor, it is still the case that the act has been a mighty force for the prevention of industrial war and the promotion of industrial peace.

According to figures just published since the fall of 1935 the Board has handled 20,743 cases involving 4,862,041 workers. Of this huge number, 16,603 were closed as of April 1, and the manner of their disposal attests the value of the act and the fairness of the Board. For example, 8,633 cases involving 1,578,156 workers were closed by agreement of both parties; 2,569 cases, involving 321,512 workers, were dismissed by the Board or the regional directors; and 4,374 cases, involving 922,877 workers, were withdrawn. Certainly these figures do not sustain the charge that the act and the Board have fomented strife.

Even more illuminating is that part of the record which shows that 1,576 strikes and lockouts were settled, resulting in the reinstatement of 233,371 workers, while 688 threatened strikes involving 174,766 workers, were averted. Another fact to be emphasized

is that the Board has conducted 1,943 elections in which 609,559 valid votes were cast, all leading to the establishment of permanent collective bargaining relations, the one firm basis for the peaceful settlement of future disputes.

An impressive record, and rendered doubly so by the fact that it has been compiled in the face of bitter and unceasing attack. From the very first, even before the act became operative, a large majority of employers have engaged in an unprecedented campaign of harassment. May it not be asked how boasted desires for industrial peace can be squared with persistent antagonism to a law and an agency that have done so much for industrial peace? And when it is seen that these same enemies and saboteurs are behind the drive to amend, how can the conviction be escaped that their purpose is not remedial but destructive?

GEORGE CREEL.

STATEMENT BY PROF. MAX RADIN, DEPARTMENT OF LAW, UNIVERSITY OF CALIFORNIA

The Wagner Act has been in effect for 4 years. It was received at first with vigorous opposition, an opposition that was directed against its basic principles as well as against specific provisions.

After 4 years of enforcement of the Labor Act, it can be said that the basic principles of the act, the principle of collective bargaining and the principle of complete freedom in selecting the bargaining agent, are so well established that they are no longer subject to discussion. It will be generally conceded that anything which impairs these principles or renders their application less effective, is an injury to labor and to the community.

The amendments so far proposed do impair these basic principles. They do so by weakening the guaranties of freedom in selecting the bargaining agent and by complicating unnecessarily the process of enforcement. If the amendments are adopted, a step backward will be taken and the history of the Clayton Act will be repeated. That act, passed to protect labor, was transformed by restrictive interpretation into an act which limited and restrained the legitimate activities of labor. It will be extremely unfortunate if the Wagner Act is similarly denatured by restrictive amendments.

MAX RADIN.

STATEMENT BY LOUIS BLOCH, UNITED STATES COMMISSIONER, IN BEHALF OF THE WAGNER ACT

Those who talk glibly of the "one-sidedness" of the National Labor Relations Act should be reminded that the act was passed for the purpose of equalizing—at least in part—the inequality in bargaining which has always existed between employers and employees. The law does not now and never has restricted the right of employers and corporations to band themselves together for the purpose of dealing collectively with their employees. The workers never challenged that right. All the National Labor Relations Act does is to forbid employers from interfering with the rights of workers to self-organization and to forbid them from using such unfair methods as blacklisting, espionage, yellow-dog contracts, and the use of company unions to combat the workers' efforts to organize into unions of their own choosing.

It was never anticipated that the National Labor Relations Act would prevent all strikes. The right of free men and women to refuse to work for low wages and poor working conditions must not be abridged in a democracy. The National Labor Relations Board has no jurisdiction in labor disputes involving questions of wages, hours, and working conditions. In matters involving questions of representation for the purpose of collective bargaining, in which the Board has jurisdiction, it has been singularly effective in preventing strikes. This it has done by virtue of its authority to certify collective-bargaining agencies, largely by means of resorting to elections among employees wishing to deal with their employers through their own chosen spokesmen.

That the Board has been effective in carrying out the duties imposed upon it by law is clearly shown by the number of cases handled by it since its inception. According to its latest published report, "From the appointment of the Board in the fall of 1935 until March 1, 1939, the Board has handled a total of 20,192 cases, involving 4,577,303 workers. Of these cases, 16,018, or almost four-fifths, have been finally closed.

"Of the cases thus closed, 8,378, or 52 percent, involving 1,554,300 workers, were closed by agreement of both parties. Some 2,475, or 16 percent of the cases, involving 311,442 workers, were dismissed by the Board or its regional directors. A total of 4,205 cases, or 26 percent, involving 883,256 workers, were withdrawn by the parties filling the charge or petition. The remainder of the closed cases, some 960, or 6 percent, involving 334,402 workers, were closed in some other way, including compliance with Board decisions and trial examiners' intermediate reports, certification after election, refusal by the Board to certify, intermediate report finding no violation, transfer to other agencies, and issuance of cease-and-desist orders. Thus, 94 percent of the cases have been adjusted before reaching the state of formal hearing.

"Of the total cases closed, 2,057 were strike cases involving 356 workers, and of these 1,547, or about 75 percent, were settled and 227,603 workers were reinstated after strikes and lock-outs. An additional 15,083 workers were reinstated after discriminatory discharges. Threatened strikes, totaling 679 and involving 173,088 workers were averted through Board action. And 1,863 elections were held, in which 589,298 valid votes were cast.

"These figures stated in the mass, actually represent thousands of individual situations, pregnant with bitterness and strife, which have been satisfactorily adjusted according to the orderly process of law."

The act was designed primarily to avert such strikes which arise out of the employer's attempt to resist self-organization of his employees. Facts and figures show that the proportion of strikes caused by organizational issues increased steadily from 1932 until it reached a high in 1937 of about 58 percent of all strikes. Workers involved in organization strikes amounted to about 60 percent of workers involved in all strikes in 1937, and man-days of idleness due to organizational strikes rose to over 76 percent of the total of such idleness. By 1938, the first full year of comparatively unhampered operation of the act, the issue of organization was of much less importance as a strike cause, decreasing to approximately 32 percent of all workers involved, 50 percent of all strikes, and 44 percent of man-days of idleness.

The latest report of the National Labor Relations Board clearly and unmistakably shows that the act greatly stimulated the growth of unionism in the United States. Thus, in 1933 membership in labor organizations stood at less than 3,000,000. By 1938 it had reached a total of somewhat over 8,000,000. This increase is not only the largest increase on record in absolute terms but is also the largest proportional increase in any 5-year period in the twentieth century. This increase in membership is to be found in virtually every industry or trade. The act, of course, is by no means the only factor in this growth of organization, but it cannot be doubted that the protection to self-organization guaranteed in the act has been an important contributing factor.

It is a matter of record that as a result of the operation of the National Labor Relations Act there has been a substantial increase in the number and coverage of collective agreements.

In the steel industry, for instance, during the period from 1913 to 1935, the Amalgamated Association of Iron, Steel, and Tin Workers never had agreements with more than 41 companies, most of them the smaller ones. But in 1938 the Steel Workers Organizing Committee reported collective agreements covering 532 steel manufacturing, processing, and fabricating plants and including more than 400,000 employees.

In the automobile industry collective agreements were virtually nonexistent prior to 1933. By June 1938, there were 537 agreements in the industry covering all the large manufacturing companies except the Ford Motor Co.

Substantial increases in collective agreements are also on record in other industries since the enactment of the National Labor Relations Act. Among these are rubber, electrical equipment, flat glass, aluminum industries, textiles, shoe, cement, canning, petroleum, clothing, mining, lumber, and maritime industries.

In the maritime industry the Board held elections or certified collective-bargaining agencies in cases involving over 750 companies In these elections the number of ballots cast was about 45,000. These elections and certifications affected unions affiliated with the A. F. of L. and with C. I. O.

The only democratic way of securing fair conditions in industry is by means of collective bargaining between organized groups of employers and employees and through written agreements. The N. L. R. A. seeks to provide this orderly and democratic means of handling labor relations. Those who seek to emasculate the act by depriving the workers of their right to organize and to form unions of their own choosing would knowingly or otherwise doom the workers of our country to a status of slavery and to low standards of living which all fair-minded Americans resent.

LOUIS BLOCH.

Resolution in Opposition to Subversive Movements

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

RESOLUTION ADOPTED AT A MEETING IN BOSTON, MASS.

Mr. McCORMACK. Mr. Speaker, I herewith include in my extension of remarks a powerful resolution in opposition to subversive movements and activities which was adopted by the many thousands of persons present on the occasion of the one hundred and sixty-third anniversary of the signing of the Declaration of Independence, held recently in the Mattapan district of the city of Boston, which patriotic meeting was held under the auspices of the Mattapan Council, No. 1538, of the Knights of Columbus and the Mattapan Post of the American Legion.

Whereas Mattapan Council, No. 1538, of the Knights of Columbus, and Mattapan Post, No. 128, of the American Legion, have

joined together to fittingly celebrate the one hundred and sixty-third anniversary of the signing of the Declaration of Independence;

Whereas it has come to the attention of the general public that the insidious, subversive forces to the alien "isms" are actively at work in this country, seeking to undermine and destroy the American democratic philosophy of government: Be it

Resolved, That Mattapan Council, No. 1538, of the Knights of Columbus, and Mattapan Post, No. 128, of the American Legion, repledge themselves to the rights of man and the principles of Government guaranteed by the Declaration of Independence and preserved by the Constitution of the United States; be it further

Resolved, That we are steadfastly opposed to fascism, nazi-ism, and communism; be it further

Resolved, That we solidly support the amendment now pending before the Senate of the United States, proposed by Congressman JOHN W. MCCORMACK, and passed by the House of Representatives, "making it a crime for a person to willfully or knowingly advocate the overthrow of government by force and violence."

Passed by acclamation at a public gathering July 1, 1939.

James J. Sullivan, commander, Mattapan Post, No. 128, A. L., chairman; William J. Hassan, P. G. K., Mattapan Council, No. 1538, K. of C., secretary; Committee: American Legion—James J. Sullivan (commander), Bart Lee (S. V. C.), Harold Alexander (J. V. C.), Maxwell Cohen (P. C.), Joseph Breger (sergeant at arms); Knights of Columbus—Joseph Alves (G. K.), Michael J. Patts (P. G. K., P. D. D. S. K.), William J. Hassan (P. G. K.), John Horigan (P. G. K.), Thomas McCarthy.

Analysis of Operations of the United States Housing Act

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony given by me before the Banking and Currency Committee of the House:

WHAT ARE THE LOCAL HOUSING AUTHORITIES?

To comprehend fully the operations of the United States housing program, it is essential that we understand just what constitutes the so-called local housing authority. We must know how it comes into being, its actual functions, and its real authority.

Mr. Straus and his staff are apparently obsessed with the desire to create the impression that the local housing authority is an independent body, and responsible only to the community in which it is located; that the construction of the housing project is initiated, completed, and operated by it; that the Federal Government has little interest in the matter other than that of a lending agency.

Mr. Straus, before the House Appropriations Committee and other places, repeated over and over that this is the case. "* * * This program is the Nation's first non-Federal low-rent housing program," he said.

In a pamphlet put out by Mr. Straus we also read, "Ours is a decentralized program in which the responsibility for carrying out housing programs rests not with the United States Housing Authority but with the communities themselves. * * * The United States Housing Authority program is entirely decentralized. The United States Housing Authority cannot turn a single spadeful of dirt or lay a single brick. It is purely a financial-assistance agency, which makes loans and subsidies to local public-housing authorities."

Nothing, of course, could be further from the truth. The United States Housing Authority program is a purely Federal and completely centralized program. The Government houses built by the United States Housing Authority are as completely owned and operated by the Federal Government for 60 years, which may be considered the life of these structures, as post offices or any other federally owned buildings. The local public-housing authorities, though creatures de jure of the States, the same as municipalities, are entirely creatures de facto of the United States Housing Authority, hence of the Federal Government, and serve merely as agents for the United States Housing Authority to carry on its activities.

The United States Housing Authority is the instigator and promoter of the State laws which set up the State housing bodies, which in turn enable it to create its local housing agencies.

"The preparation of original and amendatory legislation is an important function of the Authority and requires considerable studies of State constitutions, laws, and decisions," said Mr. Straus in the hearings before the subcommittee on appropriations. He went on to say: "But legislation is not enough; it is necessary, if there is to be a program within that State, for housing authorities to be created. This means furnishing information with reference to the need for such an authority and the preparation of a suggested transcript which, if followed, will result in the legal existence of a local housing authority."

From the initial propaganda in a municipality for the creation of a local Federal housing authority to its completion, the Federal Housing Authority is the guiding and directing spirit. It supplies the interested parties in the local communities with a "suggested transcript for organization." From this it is seen that the United States Housing Authority directs every step from the making of a local survey to the completion of the so-called local metropolitan housing authority, providing even the completed forms for the State housing authority's approval and need for a local authority; for the appointment of the members of the local authority, minutes of resolutions necessary to be adopted by the appointing officer or officers, minutes of organization of the local housing authority, etc. Indeed, every detail is prescribed by the United States Housing Authority.

Once the local housing authority is established it becomes a body "corporate and politic," over which the municipality has absolutely no authority, any more than one city has control over another city. Five members usually compose the local authority. Except in the case of four of the first appointees, the terms are for 5 years. They are usually appointed by the mayor. In Ohio they are appointed by the mayor, common pleas judge, probate judge, and county commissioners.

The State laws creating the local housing authorities are in substance all alike. The Ohio housing law reads in part, as follows:

Section 1078-34-A, of Ohio General Code: "the governing body, chairman, and counsel of the housing authority shall perform the duties of the municipal council, mayor, and solicitor respectively, * * * and the members of the housing authority shall, and are hereby authorized, to exercise and carry out all other powers and duties conferred upon officers of municipal corporations by the laws providing for such appropriation proceedings."

Section 1078-34: "An authority created under this act shall constitute a body corporate and politic, * * * shall have the following powers in addition to others herein specifically granted:

"b. To determine what areas constitute slum areas * * * and to prepare plans for housing projects in such areas; to purchase, lease, sell, exchange, transfer, assign, or mortgage any property, real or personal, or any interest therein, or acquire the same by gift, bequest, or eminent domain."

Practically all the State laws make the local housing authority a "body corporate and politic," so that it becomes a distinct and independent municipality or political subdivision within a municipality or a political subdivision. The Illinois law specifically provides—

"An authority shall be a municipal corporation, and shall constitute a body both corporate and politic, exercising public and essential governmental functions."

Upon the establishment of the local housing authority, it enters into a contract with the municipality containing the following clause:

"The city consents to the assignment of this agreement for the protection of the holders of any bonds issued to aid in financing the development of the projects."

A reading of this contract indicates it is a wholly one-sided affair wherein the municipality agrees to exempt the project from taxation and grant other concessions and services without any rights of cancelation or authority over the housing project whatever.

Following is agreement between city and local housing authority:

"The city agrees to complete the elimination of unsafe and insanitary dwelling units required hereunder at such a rate that, in connection with each project, a number at least equal to the number of new dwelling units constructed in each project shall be eliminated within 1 year from the date of the physical completion of that project.

"The city agrees that, during the period commencing with the date of the acquisition of any part of the site or sites for each project and continuing throughout the useful life of such project, it will not levy, impose, or charge any taxes, special assessments, * * * service fees, charges, or tolls against the project or against the authority, and will furnish, without cost or charge to the authority or the tenants thereof, municipal services and facilities for such project and the tenants thereof, of the same character as those furnished without cost or charge for other dwellings and inhabitants in the city, including but not limited to: * * * fire, police, and health protection and services, street maintenance, snow removal, garbage, trash, and ash collection and disposal, street lighting on public streets within any project and on the boundaries thereof, and sewer services; that it will maintain in good repair and working order any and all municipal utilities and facilities, provided by it for the use and benefit of each project and the tenants thereof; and that it will maintain in good repair, streets, roads, and alleys which are within, adjacent, or leading to the boundaries of each project."

The complete subjugation of the local housing authority to the U. S. H. A. is consummated the moment a contract has been entered into between them for the construction of a housing project. Since the local housing authority has no resources of its own and since the Federal Government furnishes 100 percent of the development cost, how could it be otherwise? The claim made that it supplies only 90 percent of the cost is false and will be explained later under another heading.

The housing law itself virtually holds the United States Housing Authority responsible for the acquisition and detailed construction and operation of the housing projects. It places a limit on the cost of the project. It prescribes standards of wages to be paid in their construction. In substance, it together with the contract, fixes the rental charges which shall be no more nor less than the amount required (not to retire any loan because in reality, as I shall show later, no such loan is actually made) but merely to cover maintenance and operating costs.

Mr. Straus in the hearings referred to goes into great detail in explaining the duties of the U. S. H. A. with respect to the development of the projects. Following are some of them:

1. "Assisting in the establishment of local housing authorities."
2. "Preliminary examinations to determine the need for housing projects."
3. "Place fair values on land in order to determine equitable purchase price."
4. "Preparation of and reviews of all contracts relative to acquisition of sites."
5. "Preparation of forms for and proposals for surveys * * *."
6. "Furnish title certificates, proposals for appraisals, proposals for procuring options, appraisal forms and offers for sale of land. Planning experts, engineers, lawyers, architects, personnel well qualified in large-scale housing construction work * * * sociologists * * * project plans and specifications."
7. "* * * Advising local authorities during local project construction."
8. "Assisting local authorities in management and operation of the projects."
9. "Aid the local authorities in the preparation of bid documents and contracts, concurs in awards, and approves the contracts in final form."

Says Mr. Straus: "It must be kept in mind that those local authorities are using money loaned to them by the Federal Government through the United States Housing Authority. The Authority must therefore see to it that the money is used to achieve decent housing. * * *

"Final approval of the plans and specifications by its architectural staff is the authorities' assurance that the proposed projects are in keeping with the proper building standards and with the limitations prescribed by the act.

"These newly created agencies have had absolutely no experience in the housing field. This means it is necessary for the United States Housing Authority constantly to be rendering advice and assistance on all aspects of the program undertaken by the local housing authority."

He says further:

"The U. S. H. A. must prescribe regulations governing eligibility of tenants, * * * eliminating slum conditions, * * * thorough comprehensive auditing and checking of tenant rent rolls."

Also, "the local authorities must comply with regulations pertaining to management. * * * Assist local bodies in coping with such problems; for example, relocation of occupants of slum sites on which projects are to be built, surveys of housing conditions, authorization of eligibles, and education of tenants in dwelling facilities."

The trust indenture which secures the bonds is, of course, dictated entirely by the United States Housing Authority and it leaves no question about who is boss over the local housing project.

The local housing authority is in law not responsible to the communities in which it is located for anything pertaining to the housing project. In some States it is required to make annual reports to the mayor, council, or city clerk, but no action may be taken by any of these except to accept the report, nor is it specified in any of the laws as to what these reports shall consist of. These reports can, therefore, be nothing but an empty gesture. There can be no question that the State laws specifically provide that the municipality or county shall not have any control or jurisdiction over the local housing authority as such. The contracts which it signs with the United States Housing Authority do legally bind it completely to the will of the United States Housing Authority, and therefore, to the Federal Government. In reality, the local housing authority is merely an agent of the United States Housing Authority and acts as a dummy for it to carry on its financial transactions.

THE FEDERAL GOVERNMENT MAKES AN OUTRIGHT GRANT OF MORE THAN 100 PERCENT OF THE COST OF THE GOVERNMENT HOUSES BUILT UNDER THE UNITED STATES HOUSING ACT

The general impression is that the Federal Government makes a loan to a municipality of 90 percent of the development cost of the Government houses; that the interest on such loan and its retirement is met out of the rent income. It is also believed that the remaining 10 percent of the development cost is supplied, somehow, by the local community. The Housing Authority deliberately makes the public believe these things. They are, however, wholly untrue.

The Federal Government does not lend one red cent to any local community to build any of these Government houses; nor does the local community, as such, contribute one cent to help pay for their cost. The bare truth is the Federal Government furnishes the full 100 percent of the development cost of these projects. What really takes place is the taxpayers of the United States are forced, under the Housing Act, to make an outright gift of the full development cost of these houses, not to any local community, because, as I shall show, the local community is receiving a heavy liability, not an asset. Nor does the local community share in any of the benefits, as I shall also show. These houses are built to subsidize the rent of a small middle-class income group, who are already able to pay their rent. None of the rent income goes to pay interest or to retire any part of any loan. That is used to pay operating and maintenance costs of the project and janitor services of the renters.

The United States housing law provides that Congress shall make simultaneously two separate and distinct appropriations, both for the same purpose, that of financing the construction of Federal Government houses. In the final analysis, the one appropriation is largely a duplication of the other.

Under chapter 1402 of the United States Housing Act, Congress authorized the United States Housing Authority to borrow against its own obligations $800,000,000, ostensibly to be loaned to local housing authorities to construct housing projects. No time limit is set in which this money is to be borrowed, but the presumption is it is to be made available within a year or so. This is, therefore, so to speak, a lump-sum appropriation.

Under chapter 1410 (e) the Congress appropriated no less than $1,652,000,000, to be paid in annual contributions of $28,000,000 over the next 59 years to the Government housing projects. It must be understood that the $28,000,000 for annual contributions is not an appropriation that Congress makes each year. Congress has made this annual appropriation for 59 years. That is now the law. However, as Mr. WOLCOTT pointed out to the committee, future Congresses are not necessarily bound to continue these appropriations. But if they should be stopped the contractual obligations involved in the program would be broken. It is seen that this is not a lump-sum appropriation, but what might properly be called an annual installment appropriation.

Now, the United States Housing Authority writes two contracts with its dummy, the local housing authority. The one is called the "loan contract," and the other the "annual contributions contract." These "contracts" are so interrelated and interwoven that in the end they are but one. Let us consider the so-called "loan contract" first.

The law provides for the Federal Government to "make loans to public housing agencies to assist the development * * * or administration of low-rent housing or slum-clearance projects by such agencies. The total of such loans outstanding on any one project * * * shall not exceed 90 percent of the development * * * cost of such project. * * * Such loans shall bear interest at such rate not less than the going Federal rate at the time the loan is made, plus one-half of 1 percent, * * * shall be repaid within such period not exceeding 60 years."

The going Federal rate of interest as defined in the law "means, at any time, the annual rate of interest specified in the then most recently issued bonds of the Federal Government having a maturity of 10 years or more."

In the loan contract the dummy is made to agree to borrow from the United States Housing Authority 90 percent of the development cost of the project, to issue bonds to secure this loan, and to pay it all back with interest over a period of 59 years. It is further ostensibly made to agree to somehow supply the remaining 10 percent of the development cost against its own bonds by local subscription.

Accordingly, the money for the development cost, presumably 90 percent, is advanced by the United States Housing Authority, to its local agency, and the latter presumably supplies the remaining 10 percent.

On its face these particulars have the appearance of being genuine, but upon final analysis they are not found to be so. This becomes apparent as we examine the contributions contract.

The Housing Act provides that the Federal Government, through its agency, the United States Housing Authority, "may make annual contributions to public housing agencies to assist in achieving and maintaining the low-rent character of their housing projects. The annual contributions for any such project shall be fixed in uniform amounts, and shall be paid in such amounts * * * in no case shall any contract for annual contributions be made for a period exceeding 60 years."

How is the amount of these annual Federal contributions determined? The law reads as follows:

"The fixed contributions payable annually under any contract shall in no case exceed a sum equal to the annual yield, at the going Federal rate of interest at the time such contract is made, plus 1 percent, upon the development or acquisition cost of the * * * housing project."

Suppose the going Federal interest rate is 2½ percent. Then the United States Housing Authority makes a "loan" to its local housing agency at 3 percent and the annual Federal contribution is 3½ percent of the full cost of the housing project.

The statute specifically provides that the annual Federal contribution shall be used primarily to pay the interest and principal of the so-called loan. It reads as follows:

"All such annual contributions shall be used first to apply toward any payments of interest or principal on any loan due to the Authority from the public-housing agency."

The contract between the United States Housing Authority and its agency provides for the security of interest and principal payments on the so-called loan, "a pledge of any annual contributions to be made to the local authority by the United States Housing Authority under the annual contributions contract between the said parties of even date herewith (which pledge shall also secure any other obligations issued under said trust indenture to the extent permitted by the annual contributions contract)."

The trust indenture also provides as security for the payment of interest and principal on the loan "the pledge of the aforesaid annual contributions."

The phrase above, "which shall also secure other obligations," has reference to the 10-percent development cost which it is supposed the local community supplies. The Housing Act itself obligates the Federal Government to underwrite the "local" 10-percent loan. Chapter 1410 (f) of the Housing Act reads:

"Payments under annual contribution contracts shall be pledged as security for any loans obtained by a public housing agency to assist the development of the housing project to which annual contributions relate."

Since annual contributions relate in the act specifically to the "development cost of the housing project," this can mean nothing other than that the annual contributions underwrite the 10 percent of the development cost supposedly furnished by the local community, as well as the 90 percent supposedly borrowed by the local agency from the United States Housing Authority.

It may be well at this point to explain just how the local Federal housing agency actually raises its supposed share—10 percent of the cost. Many people are of the opinion the municipality or community somehow raises this amount. It is not done that way. After the local housing agency has driven its stakes setting off the area to be used for the Government project, it issues bonds for the 10-percent part of the development cost, not against its own resources, because it has none, but against the annual contributions; that is, against the credit of the Federal Government. These bonds are to be sold to local banks and anyone else who may care to buy them. They mature in about 15 years.

Now, the net effect of this whole business of the Federal Government lending money to build these housing projects and paying annual contributions to subsidize rents is simply this: The Federal Government lends to its dummy, the local housing authority, 90 percent of the cost. Through its dummy it borrows the other 10 percent from local banks and others. Then it turns around and gives its dummy enough money to pay back to itself all of the 90 percent it supposedly loaned, and it gives its dummy enough more to pay off the "local" 10-percent loan.

The Federal Government reaches into the right pocket of the taxpayers and takes out a lump sum of money with which it builds Government houses. Then it reaches into his left pocket and takes out a much larger sum, of which it pledges to put back into his right pocket in the next 59 years as much as it took out of said right pocket in the first place.

Note particularly that the Government does not intend to put into the right pocket as much as it took out of the left.

Why is the law written so as to make it appear that the Federal Government actually makes a loan when in reality it does nothing of the sort, but makes an outright grant of the full 100 percent of the cost of these Government houses? Why the propaganda that the interest and principal charges are met out of rents? Why are the people told the local community furnishes 10 percent of the cost when this is not true?

Hidden deep in the labyrinth of all this financial juggling is a transaction taking place which, when understood, will no doubt help us to answer some of the above questions.

The statement was made above that the Federal Government takes more out of the left pocket of the taxpayers than it does out of the right, but that it puts back into the right pocket no more than it took out of it. What becomes of the difference?

Perhaps we may better understand this whole procedure if we take an illustration of what is actually taking place. Let us assume a project costing $1,000,000.

ACT I

1. The U. S. H. A. borrows out of the right pocket of the taxpayers, at 1⅜-percent interest, the lump sum of	$900,000
2. Then the U. S. H. A. lends to its dummy, the local housing authority, at 3-percent interest for 59 years, the same	900,000
(Note that the U. S. H. A. "lends" this sum to its dummy at 1⅝-percent interest more than it pays. We shall come back to this later.)	
3. Through its dummy the U. S. H. A. borrows at 3-percent interest from local banks, etc., for 15 years an additional	100,000
Total borrowed by dummy	1,000,000
4. Total amortization charge (3-percent interest) of the $900,000 loan to dummy over the 59-year period ($0.036355928×$900,000×59 years)	1,930,500
5. Total amortization cost (3-percent interest) of $100,000 borrowed by dummy over 15 years $0.083766580×$100,000×15 years)	125,650
6. Total amortization cost of both	2,056,150

ACT II

The U. S. H. A. takes from the left pocket of the taxpayers annual Federal contributions in amounts of $35,000 each year for the next 59 years—or a total of	2,065,000

It is seen that the total amortization cost of the project is $2,056,150, whereas the annual contributions amount to $2,065,000. Therefore the annual contributions are more than sufficient to pay all interest charges and retire all of the capital cost of the project. The excess is $8,850. We are now getting a glimpse of the mysterious housing "profit," but only a glimpse.

The United States Housing Administration by a devious method splits these annual contributions into three ways. One part goes back into the right pocket of the taxpayer to replace the amount taken from it to build the Government houses. Another part goes to the dummy to pay off the "local 10-percent loan." Where does the third part go?

Be very careful at this point to keep in mind the fact that the interest rate at which the United States Housing Authority borrows money is 1⅜ percent and the rate at which it lends this same money to its dummy is 3 percent.

We stated the total amount of annual Federal contributions that is received by the dummy on a $1,000,000 project over 59 years is	$2,065,000
Dummy uses the first part of this subsidy to pay off the "local" 10-percent "loan," or $100,000 it borrowed, which with interest at 3 percent over the 15-year period is	125,650
Balance of subsidy to credit of dummy	1,939,350
Dummy uses second part of annual contribution subsidy to pay off the 90-percent loan, or $900,000, borrowed from the U. S. H. A. at 3 percent, which with interest in 59 years is	1,930,500
Balance of subsidy	8,850

Let us now consider the $1,930,500 which the dummy pays to the United States Housing Authority. As just stated, this is the amount required to amortize the supposed loan to the dummy of $900,000 at 3 percent interest by the United States Housing Authority over the 59-year period. But—and this is the crux of the Federal housing scheme—the United States Housing Authority is paying only 1⅜-percent interest on this same $900,000 it must pay back to the banks.

Dummy pays back to the United States Housing Authority over 59-year period $900,000, at 3-percent interest	$1,930,500
United States Housing Authority pays back to bank over period of 59 years $900,000 at 1⅜-percent interest (0.024853800 × $900,000 × 59 years)	1,319,736
Balance	610,764

This is the mysterious "profit" Mr. Straus and his staff talk so much about and claim is earned for the Government.

"* * * profit of United States Housing Authority resulting from difference between the interest cost of money to the United States Housing Authority and the interest it charges on loans to public housing agencies, * * *," says Mr. Straus, Administrator of the United States Housing Authority. And, strange as it may seem, the housing bureau actually credits the Federal Government with this $610,764 as a profit.

Says Mr. Straus again: "Remember, there is a saving that we make by interest profit, which is very substantial at the present time, the difference between borrowing at 1⅜ percent and lending at over 3 percent" (p. 150, subcommittee of the House Committee on Appropriations, Interior Department).

And still again in the Senate hearings (p. 109):

"These loans, therefore, represent a profitable transaction for the Government," says Mr. Straus.

Said the distinguished Senator ELLENDER on the Senate floor in a colloquy with Senator TYDINGS:

"There is something else the Senator from Maryland overlooked, namely, the savings on interest. The money loaned to the local housing authority at a rate fixed by statute, which is one-half percent in excess of the Federal going rate of interest. Money has been borrowed by the Housing Authority at 1⅜ percent and afterward loaned to local authorities at 3 percent and in some instances 3¾ percent. The United States Housing Authority has shown a profit on the bonds so far issued, and if all the bonds authorized under the 1937 act and those herein authorized were sold under like terms, a profit of $20,000,000 per year would be made on the transaction."

Then he adds this remarkable statement:

"In summing up these profits, thereby reducing the subsidy payments from a total of $73,000,000 to $53,000,000." (CONGRESSIONAL RECORD, p. 6664, June 6, 1939.)

Mr. Straus and others have repeated over and over again the same statement.

The above analysis shows how this "profit" is paid out of the annual Federal contribution. Therefore instead of it being a real profit and a credit to the Government, it is a wholly fabricated profit, indeed a dead loss to the Government and must be charged up against it. Aye, what is still worse is that it may become necessary for the Federal Government to borrow the money for the annual Federal contributions, and therefore this housing profit may become a double liability of the Government.

But not all the annual contribution contracts are written on the basis of 3½ percent interest rate of the development cost. Some have been written on the basis of 3¾ percent. In these cases this fabricated profit would amount to $892,736 on a million dollar project in 59 years.

It would appear if the United States Housing Authority could get the annual Federal contributions high enough it ought to make enough "profit" to pay off the national debt.

What does the Housing Authority do with this fabricated profit? It uses it to pay its own administrative expenses, to promote its own interests, to build its own bureaucracy.

Just a word more about the local 10-percent loan. Here is one of the strangest financial transactions that can be found anywhere. Why does the Federal Government pay 3 percent interest on the 10-percent part of the development cost when it can borrow the money at 1⅜ percent? Remember, this 3 percent interest is finally paid out of annual contributions. So that if the Federal Government were to finance directly the full 100 percent of the development cost instead of doing so indirectly, it could make a substantial saving to the taxpayers.

Continuing with our same illustration, if this were done the comparative figures on the 10 percent part of the development cost would be as follows:

Amortization charges under present plan on $100,000 at 3 percent interest for 15 years ($100,000 × $0.083766580 × 15 years)	$125,650
Amortization charges—if Government furnished same at 1⅜ percent instead of 3 percent—on $100,000 for 15 years	111,345
Saving	14,305

Yet Mr. Straus states: "* * * there is a possibility that we may be able to induce the local authorities to raise a greater share of the financial burden in the future."

To which Senator ELLENDER adds (CONGRESSIONAL RECORD, p. 6755, June 7): "In other words, it is hoped that by adopting this amendment the local housing authority, instead of raising only 10 percent of the development cost from private sources and calling upon the United States Housing Authority for the remaining 90 percent, will be able to raise say 20 percent or 30 percent or 50 percent from private capital, thus reducing the amount to be borrowed from the United States Housing Authority to 80 percent or 70 percent or 50 percent, as the case may be."

Why did the Senator stop at 50 percent? Why didn't he go right on and make it a hundred?

If the Federal Government is still operating at a deficit at the time the payments of the "local loans" fall due, it must borrow the money to meet them. Thus the Government may be compelled to pay interest on these loans for an indefinite period of time after the principal has been met.

It should be mentioned that the Federal Government is borrowing money for the United States Housing Authority at 1⅜-percent interest on short-term notes, running only 5 years.

I heard the statement made repeatedly by Mr. Straus that efforts are being made to attract more private capital to invest in the bonds sold by the local authorities, instead of the Government furnishing so much of the capital. I am wondering what private capital he is speaking of. Does not the money the Treasury borrows for the United States Housing Authority come from private capital, exactly the same as that borrowed from local banks? Is it not private capital in both cases? Does the Government have any capital of its own?

Aside from paying the 10 percent local borrowing and the housing profit, the remaining part of the annual Federal contributions become a matter of bookkeeping by the Treasury.

WHAT ARE THE FEDERAL GOVERNMENT HOUSES COSTING? WHAT IS THE AMOUNT OF THE RENT SUBSIDY?

The Annual Report of the United States Housing Authority dated January 30, 1939, on page 17, gives the total estimated cost of United States Housing Authority aided projects covered by approved loan contracts, as of December 31, 1938, of 64,451 dwelling units as $356,695,341. This would be $5,534 per house.

June 7, 1939, Senator ELLENDER had inserted in the RECORD, page 6753, a table of estimated costs for 48 United States Housing Authority aided projects for which main construction awards have been approved, which shows an average dwelling unit cost of $4,731.

June 3, 1939, I received what must be the same estimated total development cost for 48 United States Housing Authority projects for which construction awards have been approved, which shows an average dwelling unit cost of $5,270.

On June 7, 1939, Senator WAGNER, who should be informed (CONGRESSIONAL RECORD, p. 6752, June 7), stated:

"The net construction cost per dwelling unit of the United States Housing Authority project in Allentown, Pa., based on approved construction contracts, was $3,123."

The list I received on June 3 showed the cost of the Allentown housing units to be $4,955.

With figures varying in amount so widely as these do what dependence can be placed in them? Why can Congress not get from the United States Housing Authority dependable figures with respect to the cost of these houses? Certainly when it gives out almost on the same day a figure of $4,731 as the average cost per dwelling unit of 48 projects, and another figure of $5,270 as the average per dwelling unit of the same 48 projects, except 1, there must be something wrong. I should add a list of the number of dwelling units in these 48 projects was especially prepared for me at my request by the United States Housing Authority to be certain of their correctness. With such widely varying figures of construction costs as these coming directly from the United States Housing Authority on almost the same day, what possible dependence can be placed in Mr. Straus' figures showing the amount of rent subsidies the Federal Government is paying to each family housed? He gives the figure of $115.50 per family per year on the basis of an over-all cost of each unit of $4,507. By the way, note that here is still another unit cost, different from any mentioned heretofore, and also again by Mr. Straus himself. But even if the unit cost should be $4,507, 3½ percent of this is $158. And it must be remembered some annual contributions are 3¾ percent, in which case the figure would be $169. But with the fabricated housing profit he succeeds in reducing this to $155 per dwelling unit per annum.

However, until Mr. Straus denies the figures he sent me June 3, I shall use them as a basis for estimating the number of houses that can be built under the present and proposed program, and also the amount of annual rent subsidies the tenants of the Government houses will receive. As stated, the average dwelling unit cost of these 48 projects is $5,270.

Assuming the total available funds of the present and proposed appropriations to be $1,778,000,000, 337,571 dwelling units could be constructed, not 402,000, as Mr. Straus testified.

On the basis of 3½-percent annual Federal contributions the Federal Government will pay an average annual rent subsidy to each family in the 48 projects of $184.

On the basis of 80-percent tax valuation and 2-percent tax rate on the total development cost of the 48 projects the annual subsidy furnished by the local community for each unit would be $83.

Total annual rent subsidies, Federal and municipal, are $267 per dwelling unit, or $22.25 per month per family.

The United States Housing Authority prepared for me the actual rent charges that have been set up for several projects. The following will show the annual Federal rent subsidies, the local rent subsidies, and the actual rent charges per dwelling unit in each one of these projects.

Buffalo, N. Y., three projects: New York, 2–1; New York, 2–2; New York, 2–3; 1,613 dwelling units:	
Development cost	$9,202,814
Annual Federal rent subsidy per dwelling unit	193
Annual local rent subsidy	91
Total tax subsidized rent per dwelling unit per annum	284
Tax subsidized rent per dwelling unit per month	23.65
Rent paid by tenant	20.65
Total tax and earned rent	44.30
New York City: New York, 5–1; number of units, 2,583:	
Development cost	13,096,843
Annual Federal rent subsidy per dwelling unit	177
Annual local tax rent subsidy per dwelling unit	81
Total tax subsidized rent per dwelling unit per annum	258
Total tax subsidized rent per dwelling unit per month	21.50
Rent paid by tenant	24.04
Total tax and earned rent	45.54
Jacksonville, Fla.: Florida, 1–1: 230 dwelling units:	
Development cost	1,009,825
Annual Federal rent subsidy per dwelling unit	153
Annual local tax rent subsidy	70
Total tax-subsidized rent for dwelling unit per annum	223
Tax subsidized rent per dwelling unit per month	23.75
Rent paid by tenant	24.04
Total tax and earned rent per month	47.79
Austin, Tex.: 3 projects: 186 dwelling units:	
Total development cost	739,538
Annual Federal rent subsidy per dwelling unit	139
Annual local tax rent subsidy	63
Total tax-subsidized rent for dwelling unit per annum	223
Tax-subsidized rent per dwelling unit per month	16.83
Rent paid by tenant	12.03
Total tax and earned rent	28.86

Following is a table of the 48 projects for which main construction awards have been made by the United States Housing Authority, furnished me June 3, 1939, by the United States Housing Authority, which show the annual Federal contribution subsidy per dwelling unit, as well as the annual municipal tax subsidy.

This table shows the Federal Government is paying annual rent subsidies to the families renting the Government houses ranging from $100 in Daytona Beach, Fla., to $231 in Syracuse, N. Y.

Estimated total development cost for 48 U. S. Housing Authority aided projects for which main construction awards have been approved

Location	Project No.	Total estimated development cost	Annual Federal subsidy per dwelling unit	Annual municipal tax subsidy per dwelling unit
Florida:				
Daytona Beach	FLA-7-1	$481,863	$100	$46
Jacksonville	FLA-1-1	1,009,825	153	70
Miami	FLA-5-1	1,459,412	148	67
St. Petersburg	FLA-2-1	977,961	141	64
Tampa	FLA-3-1	1,578,081	157	72
Georgia:				
Augusta	GA-1-1	682,792	143	65
Do	GA-1-2	703,968	146	67
Columbus	GA-4-2	1,048,931	127	58
Indiana:				
Kokomo	IND-7-1	707,551	140	64
Vincennes	IND-2-1	295,888	124	57
Kentucky:				
Louisville	KY-1-1	4,565,635	203	92
Do	KY-1-2	4,518,167	209	89
Louisiana:

FEDERAL COST AND DEBT RESULTING FROM THE PRESENT HOUSING PROGRAM AND THAT WHICH WOULD ACCRUE IF THE PROPOSED EXPANSION AS CONTEMPLATED IN THE BILL BEFORE US IS CARRIED THROUGH

On page 74, question 36, of Questions and Answers of the United States House Authority, Administrator Straus asks: "What is the total cost of the United States Housing Authority program over the next 60 years?"

Answer. "In the first place," he says, "the cost to the Federal Government so far as the loans are concerned, is absolutely nothing. These loans are fully repayable, with interest. In fact, as has been indicated in the answer to question 29, there is a profit."

Congress appropriated directly, by authorizing the Federal Government to borrow in the name of the United States Housing Authority 90 percent of the development cost of the Government housing projects $800,000,000

Adding 10 percent to the above would bring the full development cost up to 100 percent 889,000,000

On the basis of 3½ percent of the development cost the amount of annual Federal contributions appropriated, $28,000,000, is insufficient to pay the interest and retire the capital on $889,000,000. The annual Federal contributions are just about sufficient to service $800,000,000.

Hence the United States Housing Authority is at present able to use only $720,000,000 of the $800,000,000 appropriated. It states it is able to use only $650,000,000 claiming it must allow 10 percent as a margin of safety. It sets up the following figures:

$650,000,000 loans available from present loan authorization, plus 10 percent local loan participation and 10 percent margin of safety $794,000,000

Since it is possible, however, for the Federal Government to spend $720,000,000 of the $800,000,000, I shall take this figure as representing the amount actually available for supplying 90 percent of the development cost of the Government houses. This amount being borrowed by the Federal Treasury it must of necessity be added immediately to the Federal debt.

But we have seen that through the annual Federal contributions the remaining 10 percent, $80,000,000, is also assumed by the Federal Government. Hence it, too, becomes a part of the Federal debt, making the total addition to the debt of $800,000,000.

Since the "loan" made by the United States Housing Authority to its dummy is a purely fictitious loan, it being really a loan by itself to itself, a mere internal manipulation of funds, this part of the financial transaction will here be ignored, except as may be necessary to show up the fictitious housing profit.

90 percent of the above amount, or $720,000,000, is now being borrowed by the Federal Government at 1⅜-percent interest. Assuming the Government will be able to continue to borrow for the full 59-year period at this rate of interest, the $720,000,000 will amortize over this period at ($0.024853800 x $720,000,000 x 59 years), at $1,055,789,424

10 percent of the cost, $80,000,000, borrowed by the dummy from local banks and others at 3 percent for 15 years' amortization cost ($0.083766580 x $80,000,000 x 15 years) 100,519,890

1,156,309,314

To which must be added the fabricated housing profit—the difference between the amortization of $720,000,000 at 1⅜ percent at which the United States Housing Authority borrows same, and the amortization of $720,000,000 at 3 percent, at which it lends the same back to itself over the next 59 years 495,690,686

Total present housing program adds to Federal debt 1,652,000,000

This amount must unqualifiedly be added immediately to the Federal debt, as the principal is already borrowed and the interest pledged by the Federal Government through annual Federal contributions.

Proposed appropriations will add $800,000,000 to amortize in 59 years at 1⅜ percent and $178,000,000 available local loans to amortize at 3 percent in 15 years at $1,396,756,128

Plus fabricated housing profit 552,501,000

To which must be added $4,305,000 annual Federal contributions over next 59 years for P. W. A. houses 253,995,000

To which add $5,040,000 annual Federal contributions for the next 59 years, which apparently is being asked for in the $45,000,000 annual Federal contributions requested, to pay for $144,000,000 demolition costs, which Mr. Straus and Mr. Keyserling both told the Banking and Currency Committee is neither a problem of the U. S. H. A. nor the local housing authority, and does not cost the Federal Government one cent 297,360,000

To which add $1,425,000 annual Federal contributions for the next 59 years, apparently to service extra costs entailed where annual Federal contributions are 3¾ percent of development cost instead of 3½ percent 84,075,000

To which add debt of present program $1,652,000,000

Grand total Federal debt of present and proposed program which must be met over the next 59 years 4,236,687,128

The above figures are predicated on the basis that the Federal Government will be able to continue to borrow money at the rate af 1⅜-percent interest over the full 59-year period. It certainly is unlikely the rate will be lower and judging from the history of past interest rates, will in all likelihood be higher. In that event the amount of the annual Federal contributions must be raised, which will increase the debt or obligation proportionately.

It must also be considered that this being a political institution, all costs to the Federal Government will tend to increase, which will raise the debt still further.

Much protest has been made by Mr. Straus and others that these are astronomical figures—that they are not justified. The argument has been made, especially by Mr. Straus and his attorney, Mr. Keyserling, that it would be just as logical to add up the costs of education, roads, etc., over the next 60 years, and speak of the costs of these services in the same astronomical terms. That line of argument begs the question. It misses the point entirely. When did Congress or any other legislative body in this country ever obligate itself for any road or education program for a period of 60 years? Where would we be today in road building if our forefathers had planned our roads for us 60 years ago, and bound the Nation firmly to such a politically planned program? Where would we be in home building today if we were compelled to construct our houses according to the plans and specifications as laid down by the Congress of 60 years ago?

Whether the rents repay the construction costs of the Government houses and the annual Federal contributions pay the maintenance and operating costs, or the reverse, has no bearing on the amount the housing program adds to the Federal debt.

It cannot be denied that the rent is insufficient to meet both. The statute itself states substantially what this difference is when it says, "the fixed contribution payable annually under any contract shall in no case exceed a sum equal to the annual yield, at the going Federal rate of interest at the time such contract is made plus 1 percent, upon the development * * * cost * * *."

This difference is simply the development cost including United States Housing Authority administrative costs, plus service charges. Both are met by the Federal Government.

Should there be any lingering doubt in the minds of any members of this committee that Mr. Straus and his staff are fully aware that the rent to be charged in the Government houses under the United States Housing Authority in strict compliance with the Housing Act, does not pay their development costs, that the annual Federal contributions together with the money appropriated directly for housing construction do bear all those costs, the following should once and for all put an end to such doubt.

On page 43 of Questions and Answers (No. 13)—United States Housing Authority, Department of the Interior, we read:

Question: "Why did the United States Housing Authority have only about $656,000,000 actually available for loans under the present program, although $800,000,000 was authorized?"

Answer: "The act authorizes U. S. H. A. to enter into annual contributions contracts calling for payments not in excess of $28,000,000 a year. Since the annual contributions contract and the loan contracts are entered into simultaneously, it follows that the total development cost of projects covered in loan contracts cannot be greater than the amount which can be served by $28,000,000."

Clearly and unmistakably Mr. Straus here admits that the one and only purpose of the annual Federal contributions is to "serve" the development costs.

Furthermore, Mr. Leon H. Keyserling, general counsel for Administrator Straus, in a letter to me dated May 19, 1938, in reply to a letter written by me to him, says:

"You are correct in assuming that the fixed charges on capital are almost met by the annual contributions and the latter consists substantially of the annual costs of operation and maintenance."

Why Mr. Keyserling says "almost met" is strange, to say the least, since he surely is aware that the annual contributions pay more than the interest and capital cost.

The question has been raised by members of the Banking and Currency Committee as to the actual amount of contribution a city makes to these housing projects in the form of tax exemptions. It has been questioned whether a city actually contributes a substantial sum by this exemption. One point should not be overlooked here, which is that the renters who will occupy these Government houses will either be those who were the best rent payers formerly living in the so-called slum area, or they will be a high class of rent payers drawn from other sections of the city. They will all be persons with a steady income and only the cream of good rent payers. Hence the city will lose of its best taxpayers. How could it be otherwise but that the remaining citizens of a municipality would be compelled to make up what they thus lose? I should, therefore, be inclined to think it fair to state that the local real-estate tax exemption of the project represents a contribution by the city in an amount substantially equal to full taxes on the completed housing project.

Assume total development cost of present and proposed program to be $1,778,000,000, to which add $123,000,000 for P. W. A. houses taken over, we have a total value of $1,901,000,000. Assume assessed value to be 80 percent of this amount and the tax rate 2 percent, the total amount of taxes local communities must pay over the next 59 years for street and sewer maintenance, police and fire service, janitor service, and schools for the families renting the Government houses, present and proposed program, $1,794,544,000.

Grand total, Federal and municipal debt over next 59 years, $6,055,609,000.

There are still other material costs, such as office-space costs for housing the United States Housing Authority, costs of State housing boards, court costs which have resulted from the inauguration of this program, etc.

WHITHER IS THE UNITED STATES HOUSING AUTHORITY PROGRAM LEADING THE NATION?

At this point we may appropriately ask, What is the ultimate goal of this Government housing program?

How many families in the United States are to become tenants of the Federal Government? Who knows? Does anyone know? Surely we should not expect Mr. Straus to give us an unbiased answer to this question. Is it not natural that he should be inclined to promote the program in his own interest? We Congressmen should know where we are going. It is our duty and responsibility to know for it is we who are spending the taxpayers' money that pays for these Government houses, and it is we who are responsible for any injustice that may be involved in the scheme, and any failures that may result from it.

Apparently, however, Mr. Straus and his staff are being relied upon to no inconsiderable extent for information as to the ultimate Federal Government housing goal. But is there anything to indicate Mr. Straus knows what it is all about or that he has any definite figures upon which to base any estimate? Before the Senate committee recently he said:

"If you rehoused about 15 percent, certainly not over 20 percent, of the whole population, over the next generation, you would be wiping out the slums, * * * that an ultimate goal would possibly be about 4,500,000 families."

Before the Banking and Currency Committee, Mr. Straus testified that the very outside limit of the housing goal would be $500,000,000 expenditure per annum. At present costs this would build about 2,483,000 Government houses. However, a few days later, July 5, he reversed himself again and made it 4,500,000.

Assume 4,500,000 dwelling units are built, on the basis of present costs, $5,270 per unit, that program would obligate the Federal Government in the amount of $48,000,000,000, and the municipalities in an additional amount of $22,000,000,000, or a total national and municipal debt of more than $71,000,000,000.

Suppose the goal were set at 4,500,000 Government houses over the "next generation" or in the "next 20 to 30 years." Are there 4,500,000 families now to be supplied with Government houses? What about new ones that would develop in the "next 20 to 30 years"? The population of the United States increased about 44 percent in the last 30 years. Assume it increases in the same proportion in the next 30 years; could it not be expected there would be an increase of a proportionate number of so-called substandard homes which would be in the same category as the ones existing now? If so, certainly it would not be denied that the families living in them would be entitled to Government subsidies to give them cheap rents the same as these now so entitled. In that event, 6,480,000 Government houses would be needed and would cost the Federal Government $70,000,000,000 and the municipalities $33,000,000,000, or a total obligation by the Federal Government and the cities of $103,000,000,000. Can it really be the United States Government has committed itself to a colossal obligation like this?

This begins to bring us to the really serious part of this Federal housing scheme. Suppose the goal is 4,500,000 Government houses in the "next 20 or 30 years." Let us now see just who and where the families are that would make up this number. The housing advocates, especially Mr. Straus and his staff, are so fond of telling Congress and the public that the lower third of our population are being placed in these houses. "Rehousing slum dwellers" has become a veritable fetish with Mr. Straus and his staff. If this were true, we should expect to find the 4,500,000 families in the lowest income third, and should confine our search for them to this group.

Of course, there is nothing in the United States Housing Act that says these Government houses are to be built for the people who live in what are designated as slums. It says specifically in chapter 1401 under "Declaration of policy," that these houses are to be built for "families of low income." The statute defines a "slum" which it says "means any area where dwellings predominate which, by reason of dilapidation, overcrowding, faulty arrangement or design, lack of ventilation, light, or sanitation facilities, or any combination of these factors are detrimental to safety, health, or morals." It defines "slum clearance" as "the demolition and removal of buildings from any slum area."

The point I wish to make is that the act nowhere states that these Government houses are to be built for the people now living in the areas designated as slums. It is very important to keep this in mind. As stated, it specifically provides for "low-rent housing." Nowhere, however, does it define what is meant by "low-rent housing," except that it "means decent, safe, and sanitary dwellings within the financial reach of families of low income, and developed and administered to promote service ability, efficiency, economy, and stability, and embraces all the appurtenances thereto. The dwellings in low-rent housing, as defined in this chapter, shall be available solely for families whose net income at the time of admission does not exceed five times the rental (including the value or cost to them of heat, light, water, and cooking fuel) of the dwellings to be furnished such families, except that in the case of families with three or more minor dependents, such ratio shall not exceed six to one."

Note that the law specifically makes the income dependent upon the rent. It does not make the rent dependent upon the income.

Since the housing bureau has the authority to arbitrarily fix the amount of the rent it also has unlimited latitude to determine the meaning of "low-income families."

The Housing Act leaves a wide range within which may be defined the amount that it considers as "low income." Notwithstanding, Mr. Straus testified before the House Subcommittee on Appropriations last January "the law does impose upon us the responsibility of rehousing the lowest-income groups."

So we have no way of knowing what the housing bureau considers as low income until we actually examine the rent schedule of the houses to be occupied by their so-called slum dwellers.

You remember the P. W. A. houses. They, too, were to be built for "slum dwellers." You know the story. Only families within the higher income brackets can rent them. But the United States Housing Authority is different, so different from the old P. W. A., says Mr. Straus. The old P. W. A. houses were federally built, federally owned, federally operated, centralized right here in Washington. United States Housing Authority houses are locally built, owned, operated, decentralized. Well, let us see.

Let us assume the program embraces the building of 4,500,000 Government houses to be rented to "low-income families." Who are these families and where are they located? Who knows? Does anyone know?

In order to present this problem more realistically and to show the implications it involves, I have prepared a graphic chart, I, which classifies all of the families and single persons in the United States into several groups, with special reference to (a) incomes; (b) place of abode, whether living in the larger cities, smaller cities, or rural communities; (c) being engaged in farming; and (d) being on relief.

This chart was developed by myself from a statistical work put out by the "National Resources Committee," known as "Consumer Income in the United States."

There are about 29,000,000 family units. Beginning to your right and passing to your left, we have in their order, 6,166,558 nonrelief farm families; 4,585,665 nonrelief nonfarm families living in rural communities; 4,079,741 nonrelief families living in cities under 25,000 population; 10,058,035 single persons; 2,503,791 rural relief families; 1,983,289 relief families living in cities; and last, 10,081,213 nonrelief families, at least 3,000,000 of whom own their own homes, which would leave about 7,000,000 nonrelief city families living in metropolitan centers and cities of more than 25,000 population.

These groups are then subdivided into three definite income groups, the upper, middle, and lower third.

The lower third comprises all families and single persons earning $750 or less; the middle third all earning between $750 and $1,500; the upper third earning more than $1,500.

Superimposed upon this classification the National Resources Committee makes a second classification which is shown on the chart. This places the several groups into slightly different income levels. It includes in the lower third all families and single persons earning up to $780 instead of $750; all in the middle third earning between $780 and $1,450, instead of $750 to $1,500; and in the upper third, all earning more than $1,450, instead of $1,500.

However, there being fewer than 500,000 families earning between $750 and $780, we may for the purposes of our present study consider the two classifications as being the same.

The National Resources Committee places 8,465,000 families and 4,687,677 single persons in the lower income third.

Since the Housing Act specifically states that these Government houses are to be built to furnish rent to families of low income, that it defines a slum and slum clearance, and inasmuch as the housing bureaucracy definitely claims it is building these Government houses only for "slum dwellers" and the lowest income group, certainly we must be warranted in the assumption that we should confine our search for the 4,500,000 families to the lower third income group. If slums exist anywhere, it must be here. Furthermore, we should expect to find the number of "slum dwellers" increasing as we descend to the lowest income level.

The National Resources Committee subdivides each of the three main income groups into other income levels. The lower third is divided into the following groups: (1) Those at the extreme bottom earning $250 or less; (2) those just above earning between $250 and $500; (3) the topmost group of the lower third earning between $500 and $780. Let us keep this last income classification in mind, as we shall return to it in a few moments.

Beginning with the farm group and passing to the other end of the chart, let us examine in their order each one of the groups to determine in as reasonable a manner as we can how many families there are in it the housing bureau can mold to fit into its 4,500,000 Government housing scheme.

I do not believe we need to spend much time with the farm group. Congress is hardly considering seriously the amendment in the Senate bill which provides for an extension of the program to include this group. I listened with considerable interest to Mr. Straus' testimony with respect to this amendment. I was not impressed that he had given the matter any serious consideration, and much less that he had thought it through. It must not be overlooked that title to any land upon which these Federal houses are built, as well as that of the building, passes de facto if not de jure, into the hands of the Federal Government in the name of its agency, the local housing authority, and that it becomes exempt from all taxation, Federal, State, and local. Now, it is quite a different matter to apply these provisions to a single plat of ground upon which apartment houses are built and individual farmhouse lots. Questions like the following arise:

(1) Would State laws permit the exemption from taxation of individual parcels of property of this kind?

(2) How much land would be exempted from taxation? Would the entire farm be exempted? Would only the land actually covered by the house be exempted?

(3) Would there be limits to the value of a farmer's possessions to make him fit into the housing scheme? If so, what would be the maximum? What would be the minimum?

(4) Suppose after a farmer had the Government house built he decided to sell off a part of his farm. Would he be allowed to do so?

(5) Suppose he failed to make his rent payments. What would become of him? Would he be thrown out of the Government house and another farmer placed in it? Where would the second farmer farm?

(6) About 40 percent of the farms are mortgaged. How would such Government housing projects affect those mortgages?

Mr. Straus testified before the Banking and Currency Committee that he thought it would enhance the value of a mortgage now held against a farm if an old and rickety house upon it were torn down and replaced with a new Government house, but he failed to explain how this would be done. Certainly a mortgage on a farm with a so-called substandard house upon it is of greater value than a farm without any house upon it. Remember the Government house would not set on the farm, but upon ground located entirely outside the farm. Mr. Straus also stated that the houses would be unfinished, that the farmer could do his own painting, lawn grading, etc. Thus he would spend the income of his farm, upon which there is a mortgage, on a house that did not belong to him, and was not covered by the mortgage, but which he was merely renting. Just how would that enhance the value of the mortgage?

What about the fair-wages standard? Would the farmer be given credit for the painting of his house and other finishing work that he would do on it at the prevailing rate of pay for skilled labor in the community? What would become of the skilled mechanic?

Many more questions of a similar nature could be asked here, but why pursue the matter any further? The questions asked should throw enough doubt upon the merits of the proposal to extend the housing scheme to include the farms that it should not be necessary to further discuss it. Should the farmer group be included, then certainly Mr. Straus must change his figure of 4,500,000 families. He himself made the statement before the Banking and Currency Committee that one-half of the farm homes in the country are substandard. He also stated the cost of new farm homes would be between $2,000 and $3,000. Parenthetically one wonders why city "slum dwellers" should have $5,000 houses at the taxpayers' expense and country "slum dwellers" should have $2,500 houses at the taxpayers' expense. One-half of the farm families would be about 3,500,000. The total initial cost to the Federal Government would be $3,750,000,000, and if financed along the same lines as the present Government houses, the total cost over the 59-year period would be about $18,000,000,000.

I believe we may safely eliminate the entire farm group from our consideration. This takes over 2,316,488 families from the lower third.

Nor is it necessary to give much consideration to the rural nonfarm group. The Housing Authority has itself indicated the answer we are here seeking. Of the $800,000,000 appropriated to it, all of which has been allocated or earmarked, none has been used for rural government housing. Of course, the act provides for the inclusion of the rural nonfarm population, but it has never been so applied. The housing bureau should know the reason why. Anyone familiar, however, with the housing conditions of rural nonfarm families can have a pretty good idea as to why this group does not fit very well into the housing scheme. Rents are so exceedingly low here that the Government would have trouble competing. Many other factors are against it.

Since the Federal Housing Bureau has itself failed to apply the plan to the rural nonfarm families, we may justly eliminate this group from our consideration. There are 1,165,481 families in this group in the lower third.

Let us for the present pass over the next group, the families living in cities under 25,000.

Single persons can of course be eliminated as the program cannot apply to them.

We now come to the relief group. Mr. Straus testified before the Banking and Currency Committee that these homes are to be rented to relief families. The record should show that in one statement he asserted half the families renting these Government houses would be relief families. I think that was unfortunate, to say the least One of the iron-clad requirements of all renters of these Government houses is that they must show that they have steady jobs, that they have been employed steadily for a full year previous to making application for rent, that they have earned and are earning a certain minimum income, that they have a gilt-edge reputation as rent payers. How many families on relief could possibly qualify in all of these requirements? Certainly few. Furthermore, if relief families are to be included, then the entire Housing Act is upset. This would involve two rent subsidies by the Federal Government—one in the form of annual contributions and the other relief.

The evil of such an arrangement should be so apparent as to require no argument. Would Mr. Straus and his staff then appear before the Appropriations Committees to urge for bigger and better relief appropriations to drum up their Government-housing business? I am not saying these houses should not be rented to relief people. If they should be built at all, relief families should have preference. That is not the point. I am merely showing the implications of the program if it were extended to include these groups.

Furthermore, Mr. Straus gave this testimony knowing, as he must, that the last W. P. A. relief appropriation measure contains a provision which may require persons who have been on W. P. A. for 18 months or more to lay off for 2 months to give others an opportunity to work. Certainly this would affect seriously the matter in question.

Nor do I believe Mr. Straus hopes to rent many of these houses to relief families. Therefore, I believe we are safe in eliminating this group from our consideration.

Rural and city relief families, in the lower third, together number 2,611,681 families. Adding this number to the farm families and rural nonfarm families we have a total of 6,093,650 families out of the 8,465,000 families in the lower-income third who do not fit into the housing scheme, and who, therefore, must be eliminated. This leaves only 2,371,437 from which to select 4,500,000 low-income families, or slum dwellers, as Mr. Straus prefers to call them, for whom Government houses could be built and rented in the next 20 or 30 years. But can the housing bureau make its program fit all of these 2,500,000 families? By no means. Indeed, the process of elimination has now just begun, as I shall show you.

At this juncture I wish to call your attention to a point which has a decided bearing not only on the matter we are now studying, but upon the entire Federal housing policy and plan. These Government houses must bring in enough rent to pay operating, maintenance, and local administrative costs. It might be well to set up an example showing this. Fortunately, the housing bureau itself supplies this for us.

In a propaganda pamphlet entitled, "What the Housing Act Can Do for Your City," page 20, is given an illustration showing the amount of rent that must be charged to meet these costs. The project is in Louisville, Ky. The total development cost is given as $4,734,000, upon which the estimated annual operating cost is given as $150,000. That would represent an annual charge against the project of 3.17 percent of the development cost. The illustration here referred to gives the number of dwelling units as 814. Therefore, the average annual rent that would have to be charged per unit would be $184.53. Multiplying this by 4, we have the figure $738.12, as representing the average annual income of tenants renting the Louisville project. Multiplying the figure by 5, we have the statutory income allowed, which is $922.65.

The first thing to be noted here is that the average annual income on the basis of the income being only four times the rent, $738.12, is almost at the top of the lower third income group. True, this is the average, and some with lower incomes than this may possibly qualify, but for every dollar that may be taken off the annual rent to reach the lower income groups, a dollar must be added to the rent of another family which brings it into a higher income level. In any event, on the basis of the United States Housing Authority's own figures, the Louisville project cannot reach families with incomes much under $738.12.

It must not be thought from this illustration that this represents the general run of projects, as regards the income level reached, as we shall in a moment show. The point I desire to make here is that the rent must be high enough to meet operating costs, which in itself eliminates practically all families earning $650 annually or less, or about 6,350,000 families in the lower income third. The housing bureau cannot get around this fact.

By this process of elimination, we have left only about 655,000 in the large and small cities in the lower of the three income groups—and these are to be found in the upper part of this income group—to be considered as possibly fitting into this Federal housing plan. Could all of these qualify? By no means. At least 20 or 25 percent of these families own their own homes or are families of seven or more individuals which would eliminate them from consideration. There are many families in this group who are paying lower rents than those furnished by the Government houses, who could not afford to move into them. Others could not qualify because they have, since the depression, not had steady employment and whose incomes, though perhaps averaging the required amount, nevertheless have been irregular, which might disqualify them. Others owing to numerous causes, though having the necessary income, may not have been able always to meet their rent and other bills promptly, who are considerably in debt, which would militate against their qualifying for one of these Government houses.

Certain it is, there are at the outside limit not more than one-half million families of the 8,465,000 families of the lower-income third who could possibly be made to fit into this Federal Government housing scheme. And, these families, as stated, are not of the lowermost part of the lower-income third, but of the topmost part of it. This alone condemns this entire housing scheme.

Let us now see what income groups will likely be placed into these United States Housing Authority houses.

Here we will show just what groups can be served from the costs and data that are available. In the United States Housing Authority annual report for 1938 there appears a tentative rent schedule for 140 approved projects consisting of 64,451 dwelling units. Chart II is a list of these units distributed under the different rent levels and showing the percentage of units at each level. The rent given in the report is shelter rent. To this shelter rent we have added 31 percent for utilities. The 31 percent is used to compute this charge because it is the actual average cost of utilities in the P. W. A. houses now being operated by the United States Housing Authority, as given in 1938 report. Considering then the shelter rent plus this utility charge as the occupancy rent, we have this figure to estimate the income level of the families to be served at the various rent levels.

The United States Housing Act does not limit or specify the income of the families to be housed except that the income shall not exceed five times the annual occupancy rent, except in the case of larger families where the ratio may be 1 to 6.

Obviously then, the families to be selected will be those whose incomes are at or near this level. Various factors will contribute to force the selection of families whose incomes are as high as the law will allow. There will be competition with private interests, desirability and credit rating of prospective renters, together with the fact that the maintenance and operating costs of the projects must come out of rents collected. Doubtless other factors will develop later.

Using the occupancy rent at the various levels, multiplying by 12 to get the annual rent, and then by 5 gives us the annual income allowed by law for the different rental levels. We have also shown what the income would be in a 1-to-4 ratio, or in those cases where income is four times the occupancy rent. It is doubtful if self-sustaining families in low-income levels can spend more than 25 percent for rent. There would be too little left for food, clothing, and other necessities. The Federal Home Loan Bank Board estimates the 1-to-4 ratio as being reasonable.

A glance at the chart is sufficient to show that the vast majority of the units will be made available to families with incomes above $1,000. Not more than 10 percent of these units will reach the lower third, for whom the United States Housing Authority is supposed to exist, even at the ratio of 1 to 4; even these few will come from the highest salary group of the lower third. The statutory income would allow 17 percent in the upper third to be served by these projects.

As a means of comparison, we have taken the rent schedules reported by the United States Housing Authority on June 6–7, 1939, for eight complete projects consisting of 4,568 units, and set up chart III. Rents given in this report were occupancy rents. We have computed the annual rents under the various levels and figured the income levels in both the ratios, 1 to 5 and 1 to 4.

A comparison of chart III with chart II will reveal that even a higher percent of the units are at the higher income levels. Even at 1 to 4 not more than 9 percent could serve families in the lower third, while the statutory income will allow 33 percent in the upper third.

Annual income	Families in cities	Relief		Single persons	Small cities	Rural nonfarm	Farm	Percent

[1] A comparison of the income levels reached when the rent is actually established shows them to be higher than the estimated rents of the United States Housing Authority's annual report.

But the acid test as to whether these Government houses are really being built for the lower-income third is clearly revealed in chart IV. Here we have the actual individual annual incomes of 148 families now renting or certified for occupancy in the Red Hook project in New York and in Willert Park and Lakeview projects in Buffalo. This data was supplied to me by the New York and Buffalo Housing Authorities.

CHART IV

Income	Number of units	Percent	Cumula-tive percent
$1,606 to $1,260	11	8.1	8.1
$1,249 to $1,215	6	4.0	12.1
$1,197 to $1,150	17	10.8	22.9
$1,145 to $1,100	13	8.7	31.75
$1,096 to $1,070	8	5.4	37.16
$1,065 to $1,000	28	18.9	56.08
$977 to $900	22	14.8	70.94
$889 to $780	17	11.4	82.43
$773 to $665	18	12.1	94.59
$591 to $550	4	2.7	97.29
$491 to $480	2	1.35	98.64
$288 to $259	2	1.35	100.00
	148		

It will be noted that 56 percent of the families have incomes above $1,000; 82 percent will have incomes above $780, which is above the lower third income group, according to the classification of the National Resources Committee. Thus only 17-plus percent of the families eligible to rent these houses are taken from the lower income third.

Then note that of this 17 percent all but 2.70 percent reaches families only in the very uppermost part of the lower income third.

Taking into consideration also the fact that all families eligible to rent these Government houses must have steady incomes and must have a reputation of being first-class rent payers, it is clearly seen that this housing program cannot possibly serve many families in the lower income third. It cannot possibly abolish any slums.

Congress, however, should consider the so-called statutory income allowed only, as we are dealing with the actual provisions of the law alone. The United States Housing Authority is free to follow the law. It will be natural for it to select, as much as possible, families of the highest incomes permitted by law. At present, to be sure, it will make a desperate effort to keep these incomes as low as possible, because it needs to make a showing to Congress to get the necessary appropriations for the continuation of its program. The above figures show, however, how miserably it has failed even in this.

The statutory incomes as shown in chart III should perhaps be the ones to serve as a guide for Congress in legislating with respect to the United States Housing Act of 1937.

It should be mentioned that in some instances in chart IV the annual rent paid represents from 34 to 56 percent of the annual income. In one case the annual rent charged is given as $273 while the annual income is only $259.

Thus it is seen that the United States Housing Authority program, even with annual Federal rent subsidies averaging $184 per family, is not supplying houses for the lower-income third but for the middle-income third.

No one has said it better than Thomas A. Danahey, president of the Detroit Housing Commission. In a strong plea defending the United States Housing Authority program he said:

"In the first place, it must be made clear that they will not be rented to slum residents or welfare clients. The tenants in these buildings will be people with definite minimum incomes and to be eligible to move in they must prove that their incomes are steady. There seems to be an impression that the slum residents are going to take the buildings over. Such is not the case."

This Federal housing scheme is being held up as a humanitarian act. What is the justification for arbitrarily taxing the whole population to subsidize the rent of an arbitrarily selected middle class income group who are already able to pay their rent? There are several million families with incomes above those for whom these $5,000 houses are built, who cannot afford homes costing more than three or four thousand dollars. Where is the justice in arbitrarily taxing these people to build for another group more expensive houses than they themselves can afford? Where is the fairness in arbitrarily taxing a part of the middle-income group, who cannot afford to own or rent houses costing more than two or three thousand dollars, to maintain in luxury families of their own income class in $5,000 homes?

There are six or seven million families and some three or four million single persons in the lower third of our population, whose incomes are too low to rent these houses. Many of these people by toil and sacrifice have laid by enough to provide themselves with the comforts of humble little homes they can call their own. Where, in the name of God, is there any humanitarianism in arbitrarily taxing these, His own poor, to provide free rents for families whose incomes are from two to five times those of their own?

In my opinion the wrong of this Government housing scheme is so great that no words can be found to describe it. I experienced an attempt by the United States Housing Authority to place one of these Government houses in my own city—Marion, Ohio. There I saw in the areas where it was proposed to build the project a bewildered and terrified people. A giant Government bureaucracy, armed with the cruel power of eminent domain, was about to descend upon them, dispossess them of their homes, and drive them

onto the streets. These unfortunate people were abused and slandered by a few self-styled uplifters who were being urged by persons in high Government authority to force the project into Marion.

"Slum dwellers" was the designation given the people living in these areas. It should not be overlooked that the term "slum" has reference to character more than to physical environment. Webster's dictionary defines a slum as:

"A foul back street of a city, especially one filled with poor, dirty, degraded and often vicious population; any low neighborhood or dark retreat; usually in the plural; as Westminster's slums are haunts of thieves."

The residents living in the falsely designated slums picked up their daily paper one evening and saw in large headlines: "Slum survey for Marion filed with the State board."

Reading on they came to this: "Points brought out in discussing these data are: 'Social diseases of various forms found in these areas. Desirable tenants have gradually withdrawn from the areas until a low class of occupants have almost destroyed the livability of the structures.'"

"Among the comments made in the introduction to the survey were that * * * persons are living below decent levels in regard to sanitation and moral environment * * * A low standard of living has been continuing for many years * * * and will, without a doubt, to the detriment of the city and community in general unless action is taken."

Think of the residents where on some streets 55 percent of the families owned their homes free of debt, reading this scurrilous insult against them, and when the persons who were responsible for this malicious attack were driven by a self-respecting and righteously indignant people into a position of defense, what do you suppose was their answer? "We just followed instructions from Washington."

In an overwhelming majority the people of my city rose up against any Federal Government houses being placed there. Our city council passed an ordinance rejecting it. Nor was the opposition led by any real-estate men. Quite the contrary. The real-estate board sponsored the project.

The proposal in Marion was defeated principally by the people living in the areas where the project was to be built. They organized, held meetings, appointed a committee, which in no uncertain terms demanded of their mayor to stop what they designated as an "ungodly outrage" against them. Nor was this movement manufactured. It was wholly spontaneous and sprang out of what these people believe to be their God-given right to live their own lives, in their own way, in homes of their own choosing.

It certainly is common knowledge that all over the country opposition is growing to this Federal housing program. The fact that cities are rejecting it by action of council and by popular vote should be sufficient to cause Congress to hesitate in extending it any further. Flint, Mich., Burlington, Vt., and Portland, Oreg., rejected it by vote.

I am confident not a single city in the United States would permit any United States housing project to be placed in it if that city really understood it.

The very idea of placing a municipality within a municipality, and exempting it from taxation, will not be tolerated once the people understand the full significance of this revolutionary special-privilege grant. Think of it! The people living in these Government houses are exempted from paying real-estate taxes. They have their own solicitor, council, and mayor. They are an independent municipality, yet they have the right to vote on all questions relating to real-estate taxes in the community and State where the project is located. They may take part in the election of city officials, help to select a mayor, the council, etc. On the other hand, the people living in the city are estopped from voting on any questions pertaining to the housing project as such. Who can, or will try to, defend this immoral and un-American thing?

It violates every equitable and just principle of taxation.

It will not abolish any slums, however many slum buildings it may eradicate.

It will destroy more employment than it will create.

It will not rehouse the lower third.

It is financially wholly unsound.

It is committing us to a monstrous program which has possibilities of expansion beyond the reasoning powers of any man or group of men to foresee.

It destroys the ancient and time-honored virtues industry, frugality, and discretion.

It is communism outright.

It is the most fertile soil for the growth of a gigantic lecherous political bureaucracy.

No more appropriations should be made for the United States Housing Authority. It should be stopped immediately from carrying on any more propaganda activities for an extension of this housing program, and its affairs wound up as quickly as possible.

Works Financing Act of 1939

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ROUND-TABLE DISCUSSION

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the round-table radio discussion on the Works Financing Act of 1939, which was broadcast on Monday night, July 24, 1939.

There being no objection, the round-table discussion was ordered to be printed in the RECORD, as follows:

Senator WAGNER. The United States Senate will begin debate tomorrow afternoon on legislation to carry out the works-financing program recommended by President Roosevelt. For about 10 days the Senate Committee on Banking and Currency worked intensively in open hearings and executive sessions, gathering information and perfecting the terms of the bill.

Tonight, through the courtesy of the National Broadcasting Co., we are able to bring to this national radio audience some of the high lights of the hearings in Washington. Senator BARKLEY, as the sponsor of the legislation, won't you please describe briefly its purposes and provisions?

Senator BARKLEY. The object of this legislation which has been the result of very careful cooperation and consideration, not only by the Banking and Currency Committee of the Senate—of which you are chairman and of which I am a member—but also by the executive heads of various departments involved is to utilize more fully than is now being utilized, idle money, idle men, and idle resources throughout the United States. It has been estimated in testimony before the Joint Committee of the House, Senate, and the executive departments looking into economy conditions with particular reference to monopolies that there are something like $8,000,000,000 of savings in the United States. The Federal Reserve Board has recently issued a statement in which it is shown that the reserve credit of the country is at almost a high peak at this time. Notwithstanding this, notwithstanding the need for greater services and more commodities, notwithstanding the fact that if purchasing power existed in this country, this idle money might be utilized in new resources for the development of our wealth and our prosperity might be discovered. But as a result of this some 10,000,000 men are still idle in the United States of America.

The object of this program is to draw from private sources through the channel of the Reconstruction Finance Corporation some two and one-half billion dollars of idle money in this country now, and utilize that idle money in the employment of idle men in the manufacture of commodities, in the increase in purchasing power among the people so that they may buy those commodities and thus start into motion the endless chain of production and purchase and consumption so necessary to the prosperity of all of our people.

This money is not to be secured through taxation, it is not to be secured through the Treasury of the United States. It is not intended and will not bring about an increase in the national debt. This money is to be secured through the issue of bonds by the Reconstruction Finance Corporation. Those bonds to be purchased by private individuals throughout the Nation who now have idle money in the banks, and trust companies of the Nation. And when the Reconstruction Finance Corporation secures these bonds under the direction of the President and the cooperation of the Secretary of the Treasury they are to be distributed among existing agencies of the Government in the following fashion:

For Public Roads Administration, $500,000,000, to inaugurate a program of road construction through the cooperation of various highway authorities in the States, counties, and cities, to bring about not only employment, not only the use of materials, but to bring about a less congested situation in the thickly populated centers of our country, as well as throughout the countryside, for the enjoyment of highways both for pleasure and for commercial purposes, and looking forward also to national defense.

For the Public Works Administration, $350,000,000, for non-Federal projects similar to those which the Public Works Administration has heretofore to the extent of about $4,000,000,000 sponsored throughout the United States. This money is not to be

granted, but it is to be loaned at a low rate of interest which will be sufficiently attractive to induce States, cities, and counties, and other public bodies to use this money for these non-Federal projects.

The Reconstruction Finance Corporation itself is to use $350,000,000 to bring about the manufacture, lease, and use of railway equipment which is so sorely needed by many of the railroads in the United States. This is to be brought about by loans or by leases or by contracts made by the R. F. C. with the railroad companies in the country for the manufacture and use of railway equipment. Much of the railway equipment in use now is old. Forty-five percent of all engines and cars are more than 20 years old and less than 3 percent have been manufactured within the last 10 years. Also there is to be an allocation of $500,000,000 for rural electrification throughout the country. Today there is less than one farm out of every five that enjoys the convenience of electrification, electrical appliances, and conveniences in the rural sections of this country. Congress authorized a 10-year program of $40,000,000 a year, 3 years of which has gone by and 7 years of which remain. Congress is increasing the amount to be expended for this purpose so as to make a $500,000,000 program covering, if necessary, the next 7 years or if it can be expended in a shorter time to bring about the utilization of electric power for the benefit of our rural sections.

Six hundred million dollars will be allocated to the Agricultural Department, under the jurisdiction of Secretary Wallace, for land tenancy and for rehabilitation among the farmers of the United States. This program is intended to enable tenants to own their farms under a long-term payment plan by which they can become owners of farms and not tenants upon them. It is also designed to help owners of farms in stocking their farms, providing necessary machinery and enabling them more successfully to cultivate the soil and thus not become tenants.

Ninety million dollars will be allocated to the Reclamation Service under the Department of the Interior for the purpose of expediting programs of reclamation of arid lands throughout the West and the Import-Export Bank, which was created under the Reconstruction Finance Corporation by an act of Congress, will have its complete stock or its authority increased from $100,000,000 to $200,000,000 to enable it to finance exportation of American products, both agricultural and industrial.

This makes a program of $2,490,000,000. This program, when carried out, in cooperation with States, counties, municipalities, and other public bodies throughout the Nation will mean the employment of more than 500,000 men on direct projects, in addition to the indirect employment brought about by the manufacture of materials, in factories, plants, and everywhere else throughout the United States.

This program is conservative. It is sound, because it contemplates the complete repayment of this entire sum to the United States Government; and, when it has been repaid and the people have enjoyed the use of these facilities which will be brought to them through its use, it is my judgment that employment will materially increase, purchasing power will be multiplied, and that we will be even on a road to more rapid recovery and prosperity than we are at the present time. These are in general the purposes of this legislation which will be taken up tomorrow in the Senate, and I hope passed within the next few days.

Senator WAGNER. Thank you, Senator BARKLEY. Now, Secretary Wallace, you will supervise the lending of funds authorized in the pending bill as they affect the great agricultural sections of the country. Will you explain first the rural-electrification program?

Secretary WALLACE. Gladly, Senator WAGNER. We know there is an urgent demand for rural-electrification loans. Four years of experience with programs under the present legislation have made it plain that farm people want electric service—and want it now. In the 30 years up to 1935 when the R. E. A. started its work, 1 farm in each 10 had been connected with power lines. In the 4 years of the R. E. A., the number has doubled. Now 1 farm in each 5 is connected—but for each 1 connected, 4 are not—and the farm people are impatient to have electric service.

Naturally, the demand for R. E. A. loans has been greater than the supply of funds. At some periods the R. E. A. has had to discourage applicants. Nevertheless, this evening there are on hand or in preparation, applications for one hundred millions in loans, which is the amount contemplated for lending this year by the act as your committee reported it to the Senate.

Now, as to the prospects for repayment of loans, while it is too early to pass final judgment on these loans individually, the prospects are promising. The Rural Electrification Act itself provides that these loans shall be self-liquidating, and that they shall not be made until the Administrator of the R. E. A. certifies that in his judgment the security is reasonably adequate and that the loans will be repaid in the time agreed. The experience to date has been very encouraging.

Senator WAGNER. Next, Secretary Wallace, may we have some facts about the employment that will be provided by loans for rural electrification?

Secretary WALLACE. That is a very interesting and important point, Senator WAGNER. Let me explain that most of the loans will go into line construction. A small part will go to finance house and farmstead wiring and plumbing. But about as much more will be spent out of pocket for wiring and appliances by the farmers who get electric service. For each $100,000,000 lent it is estimated that another $100,000,000, or close to it, will be spent by farm families for wiring and electrical appliances.

In the first 6 months of service after the new lines financed by the entire $500,000,000 program are put into operation farmers would buy about a million radios, 950,000 hand irons, 550,000 washing machines, 300,000 refrigerators, 275,000 toasters, 200,000 water pumps, 200,000 vacuum cleaners, 100,000 small motors. You can easily visualize the millions of hours of work needed to make and transport and sell that many appliances. Also the hours of work required to turn out the materials for the lines and to set the poles, string the wire, and put in substations and transformers. In all, for each $100,000,000 lent in the program there would be created about 34,000,000 hours of work in the country districts where the lines go in and 47,000,000 hours of work in mines, forests, factories, and on transportation systems.

Senator WAGNER. Mr. Secretary, as Senator BARKLEY reported earlier, $600,000,000 would be loaned during the next 2 years by the Farm Security Administration—half to tenant farmers to enable them to become land owners, and the rest to help needy, low-income farm families make a new start on the land.

Secretary WALLACE. Let me say, Senator that these are among the most worthy public investments that could be made. Take the tenant purchase loans. At present nearly one-half of the Nation's soil is tilled by tenants. On the average, communities made up largely of farm tenants are less stable and prosperous, have lower buying power than communities of farm owners. Furthermore, ownership tends to preserve the soil—the Nation's greatest natural resource.

Experience indicates that through a loan program, tenants can become succeessful farm owners. Two years ago, in the Bankhead-Jones Farm Tenant Act, Congress authorized an experimental lending program. So far, we have made loans to about 7,000 tenant farmers. Of course, only a small amount has fallen due for repayment, but more has been repaid than has fallen due.

Increased funds could be displaced with little delay. So far, we have accepted applications in one-fourth of the farming counties. From those counties alone we have received 20 certified applications for every loan we have been able to grant. Under the new program, we shall make loans in additional counties, and we shall still be unable to grant loans to any except the best applicants.

Senator WAGNER. Mr. Wallace, what about rehabilitation loans to needy farm families?

Secretary WALLACE. These loans, Senator, will be similar to loans we have been making through the Farm Security Administration in recent years to farm families who have been knocked financially flat and can't get credit anywhere else.

Given a start again, these families have the skill and the determination to be self-supporting. Without a new start, they will be forced on relief either in the farm communities or in nearby cities. This is a continuing problem. Even in the boom years, almost 2,000,000 families living on the land had such low incomes that they were close to being charges on the communities where they lived.

Since 1935, we have made loans to some 750,000 needy farm families. Most of these loans are not yet due. But already more than 87,000 families have paid in full.

Under the expanded program, this fund will be used only for loans made to standard rehabilitation borrowers, and the loans will be based on the use by the borrowers of sound farm management plans drafted with the advice of the extension service and State Agricultural College specialists. There is every prospect that the typical rehabilitation loan will be self-liquidating. In many ways these loans will be very much like the character loans which before the war were made in nearly every small town by the local banker.

Senator WAGNER. There is great need and demand for these loans by farm families, is there not, Mr. Secretary?

Secretary WALLACE. Emphatically, Senator. During the past year the Farm Security Administration has had to refuse this assistance to 400,000 qualified farm families. Many others didn't even apply because they knew it was useless. The contemplated amount—and more—could be wisely and prudently used in making the rehabilitation type of loan.

One of the best ways to measure the national gain is to determine the increase in the net worth of the borrowers. In a recent survey of 230,000 typical borrowers, we found that $62,000,000 in new wealth and purchasing power had been created by these borrowers alone. The net gain to the Nation of making the loans to them will be even greater, of course. The loans enable the families to retain their human dignity by continuing as self-supporting units of society; and they save the fellow citizens of the borrowers the cost of maintaining them as relief clients.

But these loans do more than merely maintain the dignity of these farmers. They make them active consumers of the goods and services of the cities. Under this legislation the Government proposes to do for these farmers what our credit institutions have characteristically done in the past to stimulate the creation of wealth and jobs, but which for various reasons those institutions

are not doing or cannot do effectively at present. To this extent the granting of this credit will be a contribution to better business.

One of the basic needs of recovery is greater expenditures by both producers and consumers that create jobs. The measures included in this proposed legislation are of that nature.

Senator WAGNER. Thank you, Secretary Wallace. Now, as Senator BARKLEY has explained, a major part of the program consists of loans for public works, roads, bridges, and the like. I want to ask Mr. John M. Carmody about that program. Mr. Carmody is Administrator of the Federal Works Agency, recently established by the President and bringing under a single administration P. W. A., W. P. A., the United States Housing Authority, the Public Roads Administration, and the Public Buildings Administration. Mr. Carmody, will you tell us how the Federal Works Agency will be affected by this bill?

Mr. CARMODY. There are two aspects of the Federal Works Agency, Senator WAGNER, that will be vitally affected by this bill—public works, or P. W. A., and public roads. The Senate bill provides an investment of $350,000,000 in public works and $500,000,000 in public roads.

If I may, Senator, I'd like at this point to state the fundamental objectives of this whole program as I see them. We talk a great deal about large amounts of money and so many miles of roads, so many buildings, and so on. But it seems to me the chief aim of the President's program is to bring together idle money and idle men and put them to work constructing useful public projects which will contribute for many years to a higher standard of living for the American people. Constructive use of these funds will bring about an increased national income and provide needed jobs in industry for American workmen.

As you know, Senator, Commissioner MacDonald, of the Public Roads Administration, has been before the committees of both Houses of Congress and told in great detail his constructive plans for the highway program this bill will make possible. This program of express highways, new bridges and tunnels, and the other phases going along with this work, will materially improve the Nation's transportation system. Commissioner MacDonald's long years of experience with the problems involved in such a program and the wealth of factual data on which it is based provided a firm basis for confidence in its social and financial success. This program, by facilitating the movement of men and materials in what are now highly congested areas, also will make an important contribution to our national defense.

The second item in this bill affecting the Federal Works Agency is that providing for public works.

For the past 6 years the effects of the depression on private industry have crippled the construction industry and have penalized those industries which are dependent upon the construction industry. During these years the programs of the Public Works Administration, by enabling thousands of municipalities to construct a great variety of needed and useful projects, have supported construction and industries allied with it.

The current program of the Public Works Administration will be at its peak during the next 3 months, and by next summer there will be only a small trickle of money going out for construction.

Contrasted with total estimated cost for P. W. A. non-Federal projects of nearly $4,000,000,000, the proposed 2-year program totaling $350,000,000 is one of very modest proportions.

Senator WAGNER. Mr. Carmody, what has been the experience of P. W. A. in obtaining public financing for the loans it has made for projects?

Mr. CARMODY. I think P. W. A. has a remarkable record in that connection, Senator WAGNER. Out of $730,000,000 in loans by P. W. A., the Government has sold more than $500,000,000 to the public, and on these sales has realized a profit of approximately $13,500,000.

Right here, Senator, I'd like to refer again to the national importance of the program that is proposed. I don't believe there is any doubt that our national economy would benefit from new legislation providing for projects to be financed by loans at "sufficiently low rates of interest to stimulate borrowing" for such non-Federal works as waterworks, sewage-disposal plants, hospitals, and a wide range of other municipal projects, including public garages to free our city streets from uneconomic and dangerous congestion.

To date the interest rate on loans made by the Public Works Administration has been 4 percent. The inducement to borrow for the construction of projects under the Public Works Administration's program to date has been a grant which, since the summer of 1935, has been 45 percent of the cost of a project.

Under the proposed new program it is probable that loans for approved non-Federal public works could be made at an interest rate which would not much exceed 2 percent. It is pertinent to note that the annual debt service on a 40-year loan, covering the entire cost of a project, at 2 percent is less than that on a 20-year loan covering 55 percent of a project when the interest rate is 4 percent.

We are confident that the problem will be one of satisfying applicants rather than one of finding a sufficient volume of approved projects to absorb the new funds.

Senator WAGNER. I quite agree, Mr. Carmody. Isn't your conclusion borne out by the experience of P. W. A. in the past when Congress provided new programs for public works?

Mr. CARMODY. Yes, Senator; each new program of the Public Works Administration has resulted in a flood of new applications from every part of the United States. Since the inception of the P. W. A. in 1933, over 37,000 applications have been filed by sponsors of non-Federal public works projects. These projects had an estimated cost of more than $12,000,000,000. Such a demand was by far in excess of funds appropriated by Congress for such work and as a result less than 24 percent of the funds requested were allotted.

During the 4 months of the year 1938 when P. W. A. was permitted to receive applications, 12,814 were filed for projects costing over $4,000,000,000. Funds were made available to P. W. A. for the 1938 P. W. A. program permitted allotments to less than 29 percent of the projects which represented only 24 percent of the total cost of the program requested. The majority of the remaining applications filed under the 1938 program are now pending before the administration.

Senator WAGNER. You said a moment ago that the important consideration was putting men to work, providing employment on jobs that will create better conditions in American communities. As I recall, the Department of Labor has made careful studies showing in detail the jobs created and the material orders placed, as a result of past P. W. A. programs. Do you have those figures, Mr. Carmody?

Mr. CARMODY. Yes, Senator WAGNER; and they make it possible for me to foretell with surprising accuracy the effect of this new $350,000,000 program, made up of projects comparable to those undertaken in the past. It will provide a total of approximately 420,000,000 man-hours of employment. Of the total employment 120,000,000 man-hours will be provided to skilled and unskilled laborers at the construction sites, and 300,000,000 man-hours will be provided to workers away from the construction sites, in the forests, mines, mills, and factories, and transportation systems engaged in producing, manufacturing, and transporting construction materials.

This does not take into account employment afforded to workers engaged in supplying the increased demands of the site and off-site workers for consumers' goods and services; nor does it include the engineers, architects, draftsmen, clerks, and other office employees working on details of the projects in private offices, and the supervisory and administrative forces of the projects.

Construction materials costing approximately $200,000,000 will be required for such a program of non-Federal projects. These materials, to be purchased from the heavy-goods industries, will consist mainly of iron and steel and their products, machinery, cement, stone, clay, and glass products, and lumber products.

Senator WAGNER. Mr. Carmody, your figures on jobs and material orders would be greatly increased, would they not, when you take into account the $500,000,000 highway program authorized by the bill under your supervision?

Mr. CARMODY. Yes, Senator. Highway improvements meet especially well the President's demand for self-liquidating projects furnishing a "maximum of employment per dollar of investment."

The public-roads and the public-works programs of the Federal Government, worked out in cooperation with State and local authorities, have helped to sustain the economic life of the United States during the past 6 years. This legislation will put private capital to work. As Administrator of the new Federal Works Agency, I assure you that if this legislation is enacted, the Public Roads Administration and the Public Works Administration will make every effort to expedite these programs and not only assure the selection of projects which will be financially sound and socially useful, but integrate its planning with industry in such fashion as to assist business to work out its own employment problem intelligently.

Senator WAGNER. One last question, Mr. Carmody. Your agency also embraces the United States Housing Authority, under the direction of Mr. Nathan Straus, does it not?

Mr. CARMODY. Yes, Senator; I should have elaborated on that.

Senator WAGNER. As you know, earlier in the session the Senate adopted a bill I had introduced, to increase by $800,000,000 the loan authorization of that agency for public-housing projects. I was happy to note that in connection with the general works financing program, the President reiterated his strong support of the slum-clearance bill, which is expected to come up for a vote in the House in a day or two. That bill, I may say, also carries good news to the families in rural areas. It earmarks $200,000,000 for loans to begin the tremendous job of meeting their long-neglected housing needs.

Mr. CARMODY. I believe there is well-nigh universal agreement that this slum-clearance and low-rent housing program should be expanded.

Senator WAGNER. Thank you, Mr. Carmody. We turn now to the railroad-equipment program, to be administered by the R. F. C. Mr. Emil Schram, the newly elected chairman of the Corporation, is here to discuss that phase of the bill. The Federal Loan Administrator, Mr. Jesse Jones, who has been called out of the city, has asked me to state that Mr. Schram speaks for him as well as for the R. F. C. Mr. Schram.

Mr. SCHRAM. Thank you, Senator WAGNER. A great deal of railroad equipment now in use is quite old. While the R. F. C. now has the power to aid in financing the purchase of new equipment by railroads and has made numerous loans for this purpose with excellent results, the bill will give us further powers that should stimulate the use of new equipment by the roads. For example, it will enable us to purchase old equipment, rebuild or dispose of it, giving the roads what may be termed a "trade-in" allowance which will enable them to finance the purchase of new equipment when otherwise they could not do so.

Furthermore, under the proposed law we could, upon the request of railroads, arrange with them for the construction of equipment and lease it to them with or without an option to purchase, on

a long- or a short-term basis, and thus enable them to have the immediate use of modern equipment even if they would not feel able financially to assume the debt involved in financing such equipment themselves. The program is so constituted that it may be adapted to meet the requirements of individual railroads both in respect to the character of the leases negotiated and the rates to be charged. As the Federal Loan Administrator, Mr. Jesse Jones, said last week, the Government would seek no advantage in negotiating leases except the advantage that would flow from the stimulation of business generally and the increase in productive employment. In addition let me say that the proposed bill makes needful provision for aiding railroads in financing shop equipment as distinguished from rolling stock.

Senator WAGNER. As I understand it, Mr. Schram, the new bill provides that the R. F. C. itself takes title to the new railroad equipment constructed for lease or sale, and to the old equipment purchased for rebuilding. You could not do that under existing law, could you?

Mr. SCHRAM. No; we could not, Senator Wagner. Under existing law the Corporation can make only loans to finance the purchase of equipment and cannot itself take title. This latter method is, of course, a more direct way of doing what we have in mind since the Corporation can then make leases under such conditions as will insure easy repossession in the event of default in meeting monthly rentals.

Senator WAGNER. You speak of monthly rental payments. Do you expect through the collection of rents, and through the repayment of loans, when you finance such equipment, to be entirely reimbursed for the cost of the program?

Mr. SCHRAM. Yes, Senator WAGNER. It is expected that the cost of the locomotives, cars, and other equipment when purchased by the R. F. C. and leased to railroads, on a long-term basis, will be entirely repaid through rentals over the term of the lease and that our loans for such purposes will be fully paid.

Senator WAGNER. In the case of a lease, Mr. Schram, to whom does the equipment belong when the lease expires, assuming, of course, that all the rentals have been paid?

Mr. SCHRAM. Well, of course, if it were a short-term lease the title would remain with the Corporation at the end of the period and the equipment could then become the subject of a new lease to the same or another railroad. If, on the other hand, the lease were for a long term, the contract would be so arranged that at its expiration the cost to the Government having been entirely repaid the title to the equipment would pass to the railroad.

Senator WAGNER. The Senate and the country are especially interested in the fact that this railroad-equipment program will materially increase employment in certain industries which have long been depressed. Do you have any data on that, Mr. Schram?

Mr. SCHRAM. Yes, Senator WAGNER. By giving greater flexibility in financing methods the program will encourage and enable railroads to do today many needful things they are forced or inclined to postpone because of lack of proper financing facilities. Doing away with obsolete and inefficient equipment will result in a desirable economy of operation.

It has been estimated that for every $1,000 spent on railroad equipment 10 men will be put to work for about 2 weeks each on actual construction and in related fields. You can see, therefore, the advantages to be derived from an expenditure of the $350,000,000 allocated to the railroad-equipment program. And yet, as we have said before, this money will ultimately be returned to the Government. In addition to increasing employment in this way the general stimulus to business should encourage private investment in allied fields, besides giving a boost to business that cannot be reduced to actual figures. But aside from these benefits, we must not overlook the cumulative effect of the entire program contemplated by the pending bill.

Senator WAGNER. You have said, Mr. Schram, that the pending bill will give you desirable powers with respect to railroad equipment that you do not already possess. The other provisions of the bill, about which Senator Barkley, Secretary Wallace, and Mr. Carmody have spoken, also add new and desirable powers, do they not?

Mr. SCHRAM. That is correct. The R. F. C. has broad and varied powers, but as Mr. Jones has testified before the Banking and Currency Committee of the Senate, the R. F. C. cannot under existing law do what is contemplated by this bill, since neither the Secretary of Agriculture nor the Rural Electrification Administration are authorized to borrow from it and neither is the Commissioner of Public Roads. Moreover, you realize that under existing law the R. F. C. cannot issue notes with maturities exceeding 5 years. Since it is called upon by the pending bill to finance all the loans and undertakings provided for in the bill, many of which will be repaid over a considerably longer period, it is very desirable to give the Corporation the power to issue its notes with longer maturities.

Senator WAGNER. Now, Mr. Schram, the proposed bill also increases by $100,000,000 the amount of loans which the Export-Import Bank of Washington may have outstanding at any one time. I should like you to explain the relation between your Corporation and the bank, and something of its organizations and policies.

Mr. SCHRAM. Senator WAGNER, the bank is in the Federal Loan Agency, of which Mr. Jones was recently named Administrator by President Roosevelt. Mr. Warren Lee Pierson is the president and a director of the bank, and, in addition to the R. F. C., the Departments of State, of the Treasury, and of Agriculture, and Commerce are represented on the Board of Directors.

The bank is primarily interested in assisting citizens of this country in developing a sound foreign trade and in stimulating exports when this cannot otherwise be done. At present, the bank has exhausted its funds by loans and commitments and the increase in its funds contemplated by the pending bill is necessary to enable it to continue its functions as heretofore. The bank has, in the past, been able to facilitate the sale abroad of surplus agricultural commodities, such as cotton and tobacco, and has stimulated business and employment in the United States generally by providing new markets for American goods. Practically all the proceeds of loans being spent in this country, they will contribute to the same objectives as the other provisions of the proposed bill. The bank has demonstrated that credit can be extended in this way on a sound basis.

In closing, Senator WAGNER, I should like to say that we have had a wide and successful experience with many self-liquidating projects of the sort covered by the pending bill. For example, we have made loans for public works projects ourselves and in cooperation with the Public Works Administration. We have further acted as the sales agent in marketing many securities acquired by the Public Works Administration and have succeeded in doing so at a considerable profit to the Government.

Accordingly, based on that experience, I can endorse not only the objectives of the bill but the character of projects contemplated.

Senator WAGNER. Thank you, Mr. Schram.

Friends of the radio audience, testimony such as you have been hearing tonight convinced the Senate Banking and Currency Committee that the new works-financing program should be speeded to enactment. I am confident that the Senate and the House will concur.

This program is a major advance in our unceasing efforts toward full employment of idle machines, idle money, and idle men. Without competing with private enterprise, it would provide a profitable investment for almost two and a half billion dollars in private funds. Without increasing the public debt, it would stimulate a tremendous volume of orders for private industry. Without authorizing any outright expenditures from the Federal Treasury, it would make deep inroads in the ranks of the unemployed and in the public relief rolls.

Through this wise use of public credit, we will vastly increase our permanent national wealth, while promoting the most fundamental human needs of the American people, on the farm and in the cities.

The United States is blessed with material advantages unequaled by any other nation in the history of man. Our resources are greater than those of all the countries of Europe from the Irish coast to the Russian border. We are happily free of the external wars and internal disorders that mark the economic rivalries of the Old World. Our monetary system is safe from any attack. The credit of our Government is the soundest in the world.

Blessed with all these material assets, we have developed on this continent an industrial machine superlative in its efficiency and magnitude. The American people possess spiritual resources no less vital—the firm determination to make our system succeed, the full faith in America's future. The aggressive leadership of their Government toward the solution of pressing economic problems is an accurate reflection of their determination and their faith. By approving the works-financing program, Congress will win their overwhelming approval and hasten the day of their complete economic and spiritual victory.

Rise in Trade Index

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ARTICLE FROM THE WASHINGTON POST OF JULY 24, 1939

Mr. MINTON. Mr. President, I ask leave to have printed in the RECORD an article from the Washington Post of July 24, 1939, dealing with the increase in the trade index during the past 12 months.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of July 24, 1939]

TRADE INDEX UP 20 POINTS IN 12 MONTHS—SUBSTANTIAL GAINS IN JUNE CONTINUE IN JULY, FEDERAL RESERVE BOARD FINDS

American business, in marked contrast with the steadily slumping trend of a year ago, is maintaining in July substantial gains recorded in June, it was shown by Federal Reserve Board data made public yesterday.

The Board reported its index of industrial production rose to 97 in June, compared to 92 in April and May and 77 in June of last year.

The output of factories and mines increased in June, the report said, reflecting mainly a sharp expansion at steel mills and bituminous-coal mines.

STEEL PRODUCTION GAINS

Steel production rose from 45 percent of capacity in the third week of May to 54 at the end of June and to 56 in the third week of July, the report added.

Motor production, which had fallen in May, swung upward in June, a month when a drop is customary. In the first 3 weeks of July automobile output was lower, reflecting in part slower operations preparatory to the change-over to new models.

The report, coupled with repeated gains in the stock market recently, served to emphasize anew the great difference between present business conditions and those of last year, when, for months, there had been a steady recession laid to overinventoried conditions that followed 1937 business increases.

In June, plate-glass output rose considerably, while production of lumber, which usually gains over May, was unchanged.

In the non-durable-goods industries, woolen mills scored higher activity in June, and activity at cotton and silk mills was maintained against the usual seasonal trend. Meat packing was lower than in May.

CAR LOADINGS SHOW RISE

A number of important industrial centers reported increased factory employment and pay rolls from the middle of May to the middle of June. There was a sharp expansion in employment at bituminous-coal centers following the reopening of mines in mid May, and the number of persons employed on railroads increased more than seasonally from May to June.

A less than seasonal decline was recorded by department-store sales from May to June.

The more than seasonal upturn in freight-car loadings in June bore witness to a sharp rise in shipments of coal and smaller gains in movements of grain and miscellaneous freight, the report said.

Prices of hides, silk, steel scrap, copper, and some other industrial materials advanced from the middle of June to the third week of July, while some farm products, particularly grains, declined. Prices of most other commodities showed little change.

Preliminary Report of Temporary National Economic Committee

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

RADIO ADDRESS BY HON. JOSEPH C. O'MAHONEY, OF WYOMING, AND CERTAIN NEWSPAPER ARTICLES

Mr. O'MAHONEY. Mr. President, the preliminary report of the Temporary National Economic Committee was filed with the President, the Vice President, and with the Speaker of the House of Representatives on Monday last. It is now Senate Document No. 95. Last night, at the invitation of the Washington Star, I discussed this report on the National Radio Forum.

I ask unanimous consent that my address over the National Radio Forum be printed in the Appendix of the RECORD, together with newspaper articles by John T. Flynn, Hugh S. Johnson, and David Lawrence.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

THE PRELIMINARY REPORT OF THE "MONOPOLY" COMMITTEE

(Address by Hon. JOSEPH C. O'MAHONEY, of Wyoming)

One year ago, when the management of the Washington Star invited me to talk on the National Radio Forum on the work of the Temporary National Economic Committee, which had then just come into existence, it was freely predicted that this committee would indulge in a far-reaching punitive probe of business. So general were these predictions that I took occasion in my broadcast on the evening of July 11, 1938, to say:

"Though this has been called a monopoly investigation and a monopoly probe, it is definitely not to be thought of as a grand-jury hunt for law violators. It is rather to be a careful, serious, objective, and constructive study of the causes which have brought about the concentration of economic power, the existence of which has been so generally recognized."

Tonight, as I come back to you to discuss the preliminary report of this committee, filed with the President and with both Houses of Congress last Monday, I am glad to be able to say that my predictions of last year have been justified; that the committee has not looked for victims; that it has studiously avoided doing anything that might disturb business and that it has confined itself to an objective search for the answer to the economic question which is everywhere disturbing mankind.

SYSTEM OF PRIVATE PROPERTY DEFENDED

The preliminary report now available to Congress and to the public does not, of course, supply the answer sought by all. Nor does it foreshadow the final recommendations which may be submitted to the next regular session of Congress. It does, however, clearly enunciate the faith of the committee in the democratic system of private property:

"Private enterprise, the profit motive, the free utilization of capital, the full employment of labor—the maintenance of these," says the report, "is the objective of the study" which the committee has undertaken.

A vast amount of material, some of it in the files of the Government, some of it supplied by business, has been examined and analyzed. A portion of it was presented at public hearings through the answers given by a wide range of witnesses to the questions propounded by the members of the committee and its staff. It would be quite impossible in a broadcast of 20 minutes to give an adequate summary of this evidence. Those who are interested in the details of the hearings may procure printed copies from the Superintendent of Documents at the Government Printing Office here in Washington or from the committee itself. For this evening's purposes it will be sufficient to point out only a few of the highlights which are reviewed in the report. For example:

EVIDENCE OF CONCENTRATION

Less than 3 percent of all the families in the United States have annual incomes of $5,000 or more.

Scarcely 10 percent of all of the families in the United States have annual incomes ranging from $5,000 down to $2,500.

At the other end of the scale, 54 percent of all of the families in the United States have annual incomes of $1,250 or less.

Comparable to this distribution of family income is the distribution of employment. Concerns which employ more than 250 workers each, though they constitute only about 1 percent of all the employers in the country, employ one-half of all the workers, while 50 percent of all employers hire only 4 percent of all the workers.

Hand in hand with this concentration of the opportunities for industrial employment goes a concentration of industrial assets. The evidence presented to the committee shows that less than one-half of 1 percent of all the corporations in the United States own 62 percent of the total assets of all corporations, while 55 percent of the corporations, with assets of $50,000 or less each, own only 1.4 percent of all corporate assets.

Concentration has also appeared in the financial field. The 25 largest legal reserve life insurance companies own 87 percent of all the assets of all the legal reserve life insurance companies. Sixteen of these companies own 80 percent of all the assets and the five largest own 54 percent. Sixteen with home offices in New York or New England own 74 percent of all the assets of all companies.

What this means in terms of concentrated control of the national capital reservoir is to be illustrated by the fact that the 49 largest of these companies, on December 31, 1938, owned 11 percent of the direct and guaranteed debt of the Government of the United States, almost 10 percent of the debt of all States, cities, and political subdivisions of the United States; 22.9 percent of all railroad bonds; 22 percent of the entire public utility debt; 15 percent of the entire industrial debt; 11 percent of all farm mortgages, and 14 percent of all city mortgages.

These resources were contributed by 64,000,000 policyholders. They represent, it is true, a fund held in trust by the insurance companies which are managed in accordance with State law and under public examination by State authority. I recite the facts without any intimation of criticism, but merely to illustrate one of the many amazing features of the complex system which has produced at one and the same time great poverty for millions of men and great prosperity for a few organizations of men.

STUDY OF PATENT LAW

Monopoly is a word of many meanings. All monopoly is not necessarily bad. Sometimes it is unavoidable. Sometimes it is beneficial and desirable. Sometimes it is authorized by Government to encourage business enterprise. Such is the case with patent monopolies created by law in execution of the power granted to Congress by the Constitution of the United States to grant to inventors an exclusive right to their discoveries for a limited time in order "to promote the progress of science and the useful arts."

The study of the patent laws was one of the most revealing and interesting of those carried on by the committee. It disclosed that the laws enacted by Congress to extend to inventors the monopoly intended by the framers of the Constitution to be a personal reward for their genius is sometimes used to harass inventors, to deprive them of the use of their discoveries, to control and direct industry, to restrict production, and to fix prices.

Finally, the Federal Trade Commission, which was created by Congress in 1914 in the effort to keep business free, presented to the committee the story of its experience during the last 7 years with the practices which have been used to suppress competition and to

build up concentrated control of American business. Instances were marshaled to describe 45 different monopolistic practices, all of them recognized to be unfair and unethical as well as illegal, all of them obviously founded in fraud, force, and sharp practices, and all of them also practices which were used by some businessmen to crush other businessmen.

PROTECTION OF PRIVATE BUSINESS

Additional evidence presented by the Trade Commission told the stories of formal complaints filed with the Federal Trade Commission by business executives seeking the aid of Government to protect them from what they alleged to be the predatory practices of other business executives. This was not the story of voluntary Government interference with business, but, rather, the story of Government protecting business from aggressive attacks by other business which was not content to observe the law intended to prevent unreasonable restraints of trade.

If you seek the first cause of unemployment and economic distress, you will find it in the adoption by men in economic warfare of those devices which the law defines as unreasonable restraints of trade. When men resort to coercion, fraud, misrepresentation, and manipulation to prevent other men from succeeding, they inevitably close the door to opportunity. That trade has been restrained no one can doubt who has reviewed the testimony presented to this committee. That trade must be kept free if it is to be kept private is to me, after 12 months' work with this committee, an inescapable conclusion. Moreover, to keep it free is an objective to the attainment of which all the patience and ability of the people of America must be directed in the interests of all alike if the America we love is to be preserved. All distinctions of property, of education, social standing, ability, skill, or geographical location vanish before the primary and essential necessity of keeping the door of opportunity open to all. There is no worker, no employer, no executive, no investor who does not have a vital stake in making certain that private enterprise shall not be controlled by any form of arbitrary power, either private or public.

RECOMMENDATIONS OF T. N. E. C.

The preliminary recommendations which are to be found in this report are all directed toward this end. The first group have to do with matters of patent-law procedure. Amendments have been suggested to reduce the possibility of the perversion of the spirit of the patent laws by legalistic manipulation of the letter of the law. These recommendations are already in the form of bills now pending in Congress, five of them having been passed by the House of Representatives are now upon the calendar of the Senate. Accompanying them are several other suggestions for legislation in the field of patents, all designed to prevent patents from being used for the purpose of suppressing competition, controlling or restricting production and fixing prices, or to sum it up in a phrase, to make it more difficult for any person to use the public grant of a patent as a device for restraining trade and thereby reducing the opportunity for private profit and free employment.

Two more recommendations are made. One, which was advanced by the Federal Trade Commission, has been urged in its reports to Congress every year since 1930. It is to amend the so-called Clayton Antitrust Act so as to prohibit corporations from acquiring the assets as well as the stock of competing corporations. In 1914, when Congress passed the Clayton Act, it intended by that law to prohibit the merger of competing corporations because it believed that mergers and combinations have a baneful effect upon free, private enterprise. The language of the law prohibited the acquisition by one corporation of the capital stock of a competing corporation. What Congress overlooked was that a merger could be effected without the purchase of the stock by merely purchasing the assets instead; and so for almost 25 years that simple law against monopolies has been a dead letter.

CIVIL REMEDIES TO ENFORCE ANTITRUST LAWS

Hand in hand with this suggestion, the Temporary National Economic Committee has put forward another recommendation, namely, that for the enforcement of the Sherman Antitrust Law, as well as of the Clayton Act, civil remedies should be provided to supplement the criminal remedies now authorized. Curiously enough, this recommendation which would provide a certain and efficient means of preventing monopolistic practices before they are put into effect is the one recommendation of the committee that has not been received with approval on the part of business leaders and editorial writers. This failure, I am convinced, proceeds from a complete misunderstanding of the purpose and effect of the suggestion.

"The antitrust laws are too vague," it is said, and it would be "too drastic" to provide by law that the individuals who devise the monopolistic practices of some corporations should be held personally responsible in money damages for the violations of the law they have themselves planned. The answer to that argument is perfectly plain. Wherever the antitrust laws are, in fact, vague it would be quite impossible to induce any jury to bring in a verdict against any defendant, if, indeed, any court should allow the case to go to the jury.

The truth, however, is that in their more serious aspects the antitrust laws are clear and explicit. It is, for example, a plain violation of law for two competing corporations to agree with one another to sell their commodities at cut prices for a time and in a particular location in order to drive a particular competitor out of business. Agreements to pool earnings, to divide territory, to control prices, to crush competitors, are all not only clear violations of the law but obvious monopolistic devices which not only promote the concentration of economic power and wealth but also create unemployment.

When business executives wanted to secure congressional exemption in certain fields from the operation of the antitrust laws, they were not troubled by any belief that the laws were vague. Back in 1916, when the Shipping Act was passed and shipping corporations desired to be relieved of the prohibitions of the antitrust laws, they had no difficulty in helping Congress to write a law, which in ocean-going foreign commerce declared that agreements to fix rates, apportion traffic, pool earnings, allot ports, and regulate sailings were exempt from the antitrust laws.

In 1920, when it was desired to allow combinations among the railroads, the authors of the Transportation Act of 1920 knew exactly what they had to do in order to permit competing railroad lines to consolidate.

HOW PRESIDENT TAFT DESCRIBED ANTITRUST LAWS

As long ago as January 7, 1910, President William Howard Taft, in a special message to Congress, wrote a succinct and clear definition of what is prohibited by the antitrust laws. Said he:

"It is possible for the owners of a business of manufacturing and selling useful articles of merchandise so to conduct their business as not to violate the inhibitions of the antitrust law and yet to secure to themselves the benefit of the economies of management and of production due to the concentration under one control of large capital and many plants. If they use no other inducement than the constant low price of their product and its good quality to attract custom, and their business is a profitable one, they violate no law. If their actual competitors are small in comparison with the total capital invested, the prospect of new investments of capital by others in such a profitable business is sufficiently near and potential to restrain them in the prices at which they sell their product. But if they attempt by a use of their preponderating capital and by a sale of their goods temporarily at unduly low prices to drive out of business their competitors, or if they attempt, by exclusive contracts with their patrons and threats of nondealing except upon such contracts, or by other methods of a similar character, to use the largeness of their resources and the extent of their output compared with the total output as a means of compelling custom and frightening off competition, then they disclose a purpose to restrain trade and to establish a monopoly and violate the act."

Make no mistake about it, these violations of business ethics and of law, thus described by a former Chief Justice, are the primary cause of all our economic troubles. They have not been and they cannot be effectively prevented because, under the law as it stands, the Government has only two remedies worth mentioning—a suit for an injunction to prohibit a threatened violation of the law and a criminal indictment after an offense has been committed.

It is obviously impossible for the Federal Government to foresee violations, so that this remedy has never been effective. The criminal remedy has been no less futile and for an equally plain reason. Offenses against the antitrust law are, for the most part, economic offenses. They do not, like murder, highway robbery, and similar crimes, necessarily involve moral turpitude. They cannot be prevented by the criminal remedy, they can only be prosecuted, and the penalty provided in the law is only a $5,000 fine, which is surely not a deterrent to a predatory executive who can hide behind the artificial personality of the corporation he directs.

The civil remedy proposed by the Temporary National Economic Committee and embodied in a bill which I have introduced in the Senate and which has been introduced in the House of Representatives by Congress SAM HOBBS, of Alabama, would authorize the United States to bring suit for damages against the offending corporations and their responsible officers and directors—damages which would not exceed twice the total net income received by the corporation while it was violating the law or by the offending officer or director. By this provision the penalty is automatically adjusted to the economic importance of the offender and the offense. I venture to say, however, that it would seldom be necessary for the Department of Justice to bring such an action, because officers and directors who knew themselves to be personally responsible in money damages for a violation of the economic law would be careful not to commit such violations.

REASON FOR NONENFORCEMENT OF LAWS

The great defect of the antitrust laws, exemplified during the 49 years which have elapsed since the Sherman law was enacted in 1890, is that in their present form they depend for their effect upon active policing by Government agents. A law thus framed is almost certain to be a nullity, because it is impossible in a country like this for government ever to become so big that it can watch all offenders, apprehend, and punish them.

The successful law is one that is automatic in its application, that depends for results, not upon the punishment it inflicts after the fact but in the degree of respect it inspires in a prospective violator when the violation is contemplated. It is my firm conviction that one of the principal reasons for the steady growth of government during the past two generations is to be found in the fact that the antitrust laws as they are now written require policing. Their enforcement is measured, first, by the energy and ability of the individual who for the time being directs the Department of Justice, and, second, by the amount of the appropriations granted by Congress to enforce the law.

The great virtue of the civil-damages recommendation of the Temporary National Economic Committee is that it would depend upon neither congressional appropriations nor administrative energy or discretion for its success, but upon the unwillingness of business

executives to lay themselves personally open to a plain liability for the commission of an offense clearly understood.

ROAD TO PROSPERITY

I can foresee that with the adoption of these simple recommendations and with the adjustment of existing tax and other Government policies, it would be easily possible for American business to enter upon the most prosperous era the world has ever imagined. Government expenditures to prime the pump, deficit financing, self-liquidating projects, supported by Government drafts upon the future earnings of the people—all of these would be unnecessary. Opportunity for the expansion of production, the development of new industries, the gainful employment of all of the idle, and the building up of home markets for all the produce of the farm are easily possible, if only we make up our mind as a united people to put an end to the restraints of trade which the conscience of the Nation denounces and then adopt a policy of government taxation designed to hold out rewards to those who have the energy, the brains, and the capital to develop the unmeasured resources of America.

[From the Washington Daily News of July 5, 1939]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK.—Senator O'MAHONEY, chairman of the Monopoly Investigating Committee, has introduced a bill to make the anti-monopoly laws work. Of course this has excited criticism. What the Senator has done is hardly cricket. Monopoly is a word to play politics with, not an abuse to do anything about.

Under our antitrust laws if a corporation violates the law it may be sued civilly and may be prosecuted criminally. But a corporation is not a human being—only a legal being. It does not do its own thinking. Some individual in the president's office or some individual in the board of directors' room does the thinking for the corporation.

Senator O'MAHONEY proposes to be realistic about this. He says that not only should the corporation be punished but that the individuals who do its thinking and guide it and make its decisions and actually carry out its violations of the law should also be held guilty. It would be difficult to imagine anything more reasonable than this.

Senator O'MAHONEY proposes that when a corporation violates the antitrust laws the president or the chairman of the board or any other officers or the members of the board of directors who actually take part in the violation may be sued for a sum equal to twice their compensation from the corporation during every month that the violation occurs. In addition to that they may be enjoined from rendering any service to the corporation permanently or for a period not less than 90 days in the discretion of the court, or from receiving any compensation from the corporation in that time and they may be enjoined from engaging in competition with the company which they are enjoined from serving.

Put it this way: Corporation XYZ violates the antitrust laws. If it does, the violation is doubtless arranged and carried out by the chairman of the board, the president, the vice president of the corporation. As a rule, the stockholders who own the corporation know nothing about it and would be powerless to do anything about it if they did.

Nevertheless, they own the corporation and under the law as it exists, if the corporation is fined by a court it is the stockholders who must pay. But Senator O'MAHONEY thinks that in the corporation imagined—the XYZ Corporation—the president, the chairman of the board, and the vice president may also be sued.

If the corporation is guilty, certainly they are the ones guilty in fact and if found guilty each one may be compelled to pay a fine equal to twice his salary during the period of the violation. More important, however, all of these gentlemen may be removed from holding office in this corporation for anywhere from 90 days to life and cannot engage in competition with it thereafter.

Enforcement of the antitrust laws has been made difficult by reason of the criminal penalties. Here are penalties which are not criminal but will certainly be effective. Either we should enforce the law or get rid of it. This is one reasonable way to enforce it.

ONE MAN'S OPINION

(By Hugh S. Johnson)

The recommendations of Senator JOE (Monopoly) O'MAHONEY's committee on revision of patent law and procedure are all good. They boil down to this—that, while an owner of a patent still will be entitled to deny or sell the right to others to use it, he can't couple with any license, restrictions fixing price or regulating production by the people he licenses.

The proposed procedural changes are for economy, speed, simplicity, and clarity. Anybody who has had broad experience with this particular field of business knows that the present patent laws are sometimes used not merely to protect invention, but to fix prices, restrict progress and production, and do many other monopolistic things clearly never intended by the patent clause in the Constitution.

But the Senator's proposals for strengthening the antitrust laws by a new procedure and penalties for their violation are down a very different alley. The sanctions now are criminal penalties—fine and imprisonment. There have been few convictions. Why? Because before you can convict a man of a crime you must show that he knowingly and willfully broke some law that so clearly prohibited and punished what he did that there could be no question of the lawlessness of his act. Also, you have to prove his crime beyond a reasonable doubt.

The antitrust acts never have set up any such standards. They broadly prohibit "combinations in restraint of trade." What does that mean? Nobody knows. There are certain extreme acts about which there can be no doubt. But few businessmen are fools enough to do them. Every contract or agreement in commerce is in some measure a restraint of trade. What restraints are permitted and what are lawless in the vast intermediate field is absolutely uncertain. This Government, in its Congress, in its courts, its Federal Trade Commission, and other regulatory bodies has stubbornly and, I think, stupidly and arbitrarily refused to state the rules of the game except to condemn particular acts in particular cases. Their principle is admittedly: "Act at your peril in this unknown field. If you guess one way and we guess another after you have acted, you are guilty."

That, and that alone, is why there have been so few convictions. It violates the most essential principles of Anglo-Saxon law and turns the clock back to Draco, who is sometimes said to have obscured his laws to get violations and convictions.

The brilliant new proposed solution is solely to provide new penalties to be imposed by civil and not by criminal proceedings. The "offending" company is to forfeit twice its income during all the time the violation is (later) determined to have continued and all its responsible officers and directors are similarly to forfeit all their compensation. These penalties are so severe that even for a trifling, unintended, and obscure offense long continued, they could amount to sentences of economic death.

The objective here is obviously not the real evil. It is not to clarify the law, but to avoid the duty to clarify it. It is to get away from having to show some intent to violate the law and from having to prove the violation beyond a reasonable doubt. It is a shocking revelation of the increasing tendency of a bureaucratic administration to ride ruthlessly down any freedom in business from fear of a regimentation by a Nazilike personalized arbitrary control in Washington.

Chief Trust-Buster Professor Arnold flippantly suggests that a business has no more right to know whether what it is doing will be later held legal than a runner to third to know whether the umpire will rule the ball has beaten him to the base. That is exactly the philosophy of this whole business-baiting crowd. And yet Senator O'MAHONEY is trying to find out why our economic system is not working. All he needs to do is to look at some of the people and ideas working in his own committee—and he might also look in a mirror.

PROBE OF COST OF BUILDING IS HAILED—OBSERVER WONDERS AT DELAY IN ANTITRUST QUIZ

(By David Lawrence)

The biggest news in the National Capital—biggest so far as economic recovery is concerned—is the evolution of the policy just announced by Thurman Arnold, Assistant Attorney General in charge of antitrust suits. It is that the Federal Government at last will tackle building costs both with respect to labor and management in an effort to rid America of rackets, price fixing, monopolies, and other restraints that for several years have held up a construction boom.

If the Arnold plan of attack is carried out impartially and without regard to political or economic pressure groups, it will mean that America will have found in a system of free competition the answer to the debates on the "isms" of Europe as they relate to a planned or controlled economy.

There have been two schools of thought in the last 6 years of economic disturbance—those who have felt that in a centralized government more and more of the activities of the business of America should be controlled, and those who have felt that by removing restraints of trade involving fraud, dishonesty, and monopoly America could retain her liberties and show the world that the competitive system can function.

But every time the antitrust problem has been tackled, obstacles have been placed in the path of those who favored strict enforcement. Thurman Arnold himself became zealous about criminal indictments as a means of securing respect for the antitrust laws, but the complex economic life of the country together with the lack of specific knowledge on what the laws really required made it unfair to use criminal punishment.

PROVIDES CIVIL PENALTIES

Now, instead, Mr. Arnold is supporting the bill recently introduced by Senator O'MAHONEY, of Wyoming, to provide severe civil penalties. These, too, will act to some extent as a deterrent, but there is much more to be said for a policy of vigorous enforcement by the injunction method of existing laws than for the introduction of new penalties. What is vital at the moment is that the antitrust laws should be enforced and Mr. Arnold significantly revealed last week that for the first time in history the antitrust division of the Department of Justice now had adequate staff and personnel to do the job.

Mr. Arnold has made mistakes in judgment in some of his speeches and in his policy of consent decrees on the antitrust problem, but certainly nobody in recent years has stirred up more interest or revealed himself as more genuinely desirous of getting free competition going than has the Assistant Attorney General.

In the hands of a man who believes as sincerely in free competition as does Thurman Arnold there can be no doubt that a start will be made at last to enforce the law as it should have been enforced years ago.

The building industry, moreover, furnishes an excellent proving ground. It has in it more ramifications and more real impediments to progress than any other industry that has ever come before the Department of Justice for investigation. Mr. Arnold's sensational statement outlining the malicious practices which prevent the people from getting lower building costs may be startling to the public, but it summarizes what has been gossip in governmental circles, Federal, State, and local, for a generation.

WONDER AT DELAY

When some building contractors and some raw-material makers get together with labor unions to exclude rival products, when city governments at the behest of unions and contractors pass ordinances that prevent the public from getting good plumbing fixtures at low costs and when all sorts of monopolies are collusively undertaken in efforts to gyp the public, then the wonder is that the long arm of government has been so long in protecting the people against these injustices.

The new attack may touch labor as definitely, if not more so, than management, and the administration will be put to the test of whether the labor vote here and there will cause it to soft-pedal the prosecutions.

There is another side to the picture. These efforts to keep out competitors and to hold up labor costs have had behind them in most instances no real criminal purpose. There are many persons in the building industry, as in other lines of business, who feel that they can use political government—Federal, State, and local—to insure monopolistic benefits. There are States where auto dealers have combined to get laws passed to keep out other dealers or to require buyers of cars to pay a heavy inspection tax if they purchase autos outside the State.

STATE TARIFF BARRIERS

There are all kinds of tariff barriers within America camouflaged under inspection laws or tax laws. All this proceeds from the theory of "isolation," which has been preached far and wide, as well as from the doctrine of protection in our tariff history. While, however, there is justification for protecting home industry against foreign competition, there is logically no reason why the power of State or Federal Government should be used to favor one geographical division of the United States against another or the producers of one State as against another.

The antitrust suit in the building industry will run up against the doctrine that unions and employers in self-protection ask for and obtain monopolies irrespective of the effect on other groups of citizens. Unfortunately for those who think they need the monopoly, a system of free competition properly organized will increase the volume of transactions and increase wages. The idea of a guaranteed annual wage in the building trades has, for instance, long been discussed as a desirable way of reducing building costs, but the existence of rigid levels of cost and other restraints of trade have prevented any progress being made toward meeting the consumer demand for lower-cost housing. The construction industry, stimulated naturally, is big enough to help the Nation back to recovery. Hence the attack on barriers to free interchange of services and money by removal of artificial impediments is a step in the right direction.

Social Security

REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. BATES of Massachusetts. Mr. Speaker, in connection with the present legislation in conference at the present time relative to the social-security set-up, and particularly in relation to the effort being made by individual Members of both Houses to increase the old-age contribution by the Federal Government, I have prepared a tabulation of the expenses that are already borne by the Federal Government in the various States of the Union, together with a tabulation of internal-revenue collections from each State.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and to include therein a tabulation of figures from the Treasury Department and also the census of manufactures from the Department of Commerce.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. BATES]?

There was no objection.

GRANTS-IN-AID AND THE DISTRIBUTION OF INCOME

Mr. BATES of Massachusetts. Mr. Speaker, since the origin of the New Deal one of the main functions of Government has supposedly been the redistribution of wealth. The new dealers have contended that one function of the state is to take money away from those who have exercised their intelligence, initiative, and daring in order to make money, and distribute it to those persons who did not have the capacity, the initiative, and the daring necessary to add to the national income.

This redistribution of income on the part of the Government of course involves assumptions. It can be done either by direct payments to certain groups or areas of the country or through the creation of certain Government services devised primarily to benefit certain groups in the community. This redistribution of wealth can occur as between different classes of society. It can also occur as between different geographical regions of the Nation.

Certain areas of the country are better situated for trade and commerce than others because they have better ports and harbors. Other areas have mineral resources. Still others have rich and fertile soil. Some agricultural areas have the good fortune of being situated close to large consuming centers; others are not. It is such industrial areas as these that produce most of the income of the country. On the other hand, there are areas that have poor or worn-out soil, that are deserts, that are mountainous, and generally inhospitable to development by human economic institutions. In these inhospitable areas, under our form of a free capitalistic economic society, it is apparent that there will not be a general free flow of private capital for investment purposes. People will want to invest their money where it will secure the greatest proportional return. Inevitably the marginal productivity of certain areas will be less than that of other areas. Unless there is a great surplus of capital because of economic stagnation, these less fortunate areas will not secure the benefits of agricultural, industrial, or general commercial development.

Such regions will feel slighted. They then start a clamor for the expenditure of public money to develop their alleged resources. When such clamor became loud enough, the legislative branch has embarked upon vast programs of Federal expenditure, either directly or indirectly, in order to develop these areas that do not prove to be a profitable sphere of capitalistic investment.

What standards does the Government have for investing its money in unproductive areas? The capitalist has an automatic standard. He invests his money where it will yield to him the greatest potential return commensurate with the risks involved. The lure of profit automatically determines where capital will flow. But what will determine whether the Government will spend money in New York or Tennessee, Massachusetts, or Alabama? The only thing that will determine it will be political pressures and not the national advantage. What is to determine the form that such Government investments are to take? Is the Federal Government going to spend its money on building public roads in the backward areas? Or are we going to have reclamation projects, schools, or public-utility undertakings? In a free capitalistic system, once again, these questions are answered automatically. Capital will flow into those uses which will yield the greatest return commensurate with the risks involved. But when it comes to Government spending for the development of certain backward areas or for the benefit of certain unfortunate classes in the community, there are no criteria to determine whether the expenditure is to be for schools, roads, reclamation projects, hydroelectric plants, or for reforestation. There is no clearly defined basis for determining what are the advantages of one type of Government expenditure over another. In fact, there is presented at this point the most crucial problem of State planning in the economic sphere—how to weight alternative uses for a limited amount of economic resources. When you leave the determination of this problem to the Government, these questions are resolved not according to any scientific principles but according to political influence.

Concerning the undesirability of the redistribution of income through Government action, the following quotation from Andrew Jackson's eighth annual message to Congress (December 5, 1836) is a very clear statement:

> The shortest reflection must satisfy everyone that to require the people to pay taxes to the Government merely that they may be paid back again is sporting with the substantial interests of the country, and no system which produces such a result can be expected to receive the public countenance * * *.
>
> A distribution to the people is impracticable and unjust in other respects. It would be taking one man's property and giving it to another. Such would be the unavoidable result of a rule of equality (and none other is spoken of or would be likely to be adopted), inasmuch as there is no mode by which the amount of the individual contributions of our citizens to the public revenue can be ascertained. We know that they contribute unequally, and a rule, therefore, that would distribute to them equally would be liable to all the objections which apply to the principle of an equal division of property. To make the General Government the instrument of carrying this odious principle into effect would be at once to destroy the means of its usefulness and change the character designed for it by the framers of the Constitution.

Under the New Deal we have had a tremendous wave of expenditure of public money in many of the States of the Union and at the expense of impoverishing others. Such expenditures have taken the form of either grants-in-aid from the Federal Government, supposedly to be paid to all States of the Union but really intended for the poorer regions, or, on the other hand, the form of the direct assumption of functions by the Federal Government.

First, let us view the development of the present system of Federal grants-in-aid. All Federal grants-in-aid to the States in 1938, according to the reports of the Secretary of the Treasury, amounted to the astonishing figure of $2,952,068,622. The program of Federal grants-in-aid to the States is not a novelty. If I attempted to tell you that it was something new, I would be misrepresenting facts. But, as I will show you, an old device established for a most legitimate purpose has been perverted by certain influences in the community to serve the cause of a most illegitimate and undesirable purpose. A program of grants-in-aid is, in fact, older than the Federal Government. The confederation commenced the program of grants-in-aid in 1787. It made land grants in the old Northwest Territory primarily for educational and religious purposes. From this beginning a general system of land grants to the States developed for education, roads, and other forms of public works and the development of agriculture.

Through cession by older States, through purchase, and by conquest, the Government of the United States acquired titles, from 1787 to 1853, to a vast public domain amounting, after the satisfaction of all claims against it, to nearly a billion and a half acres. Approximately one-sixth of this total, or close to 400,000 square miles, has been given to the States in the form of grants for roads, canals, railroads, schools, and colleges, and for reclamation and public buildings. These grants were, in effect, both the means of securing certain essential public services and a subsidy to private enterprise. Nevertheless, they served at the same time a most useful purpose. They increased the value of the land remaining in the hands of the Federal Government. Underlying these various grants there were numerous theoretical considerations, basic among which was an assumption of responsibility on the part of the Federal Government for providing the initial means for the development of education and communication. The reasoning on which this was based was entirely realistic. Unless this new territory could be reached, it would not be settled. Consequently, land grants for transportation facilities were in order, and unless educational facilities were provided the new public land would not attract settlers of the better types of families from the older States. Until this public domain was settled it was more of a liability than an asset. Consequently, in order to increase the value of the public domain remaining in the hands of the Government, it was advantageous for the Government to give away part of it. A very large part of these grants of the public domain to States and their political subdivisions was for the purpose of education. In all, a total of 15,483,000 acres was devoted to this purpose. For the purpose of construction of internal improvements, for instance, roads, railroads, canals, and public buildings, 65,430,000 acres were disposed of. The Federal Government gave to the States approximately 65,000,000 acres of swamps and salt-spring land that could be drained and subjected to tillage. Thus, all told, the Federal Government gave away more than 246,400,000 acres of the public domain. Once again let it be pointed out that the purpose of these grants to the States and their political subdivisions was to increase the value of the remaining assets of the Federal Government; that is, the public domain still in its possession.

The whole scheme of grants-in-aid that had developed before 1862 had been of the nature of nonrecurring grants, but with the establishment of the land-grant colleges and agricultural experiment stations, a system of annual grants to the States ultimately was undertaken. The grants for experiment stations and colleges of mechanical and agricultural arts do not have to be matched by the States. They are for the purpose of stimulating agriculture. In theory, at least, the funds were derived from the sale of the public land. In practice it was immaterial where the money came from.

The present system of matched grants not related to the public lands was really commenced when Congress, in 1911, by the Weeks Act, commenced the distribution of funds to the States for the purpose of forest-fire prevention. This Federal money had to be matched by State funds. Of course, the grant for forest-fire prevention had a distinct Federal interest, especially in the Western States, where there is a large amount of public land on which forests still stand. It is highly desirable that the States take adequate steps for the prevention of forest fires on land that is not subject to the Federal Government for such fires have no regard for land boundaries.

In 1917 the Federal Government commenced to grant funds to the several States for the construction of public roads. The grants have increased from $5,000,000 to $125,000,000 annually. The money granted for this purpose has to be matched by State funds and is allocated among the several States on the basis of population, area, rural free delivery, and mileage. The national interest in the development of a system of public roads is evident. The roads are necessary for the postal service. If the States were left to their own devices in the construction of highways, some States would fail to construct an adequate system. Some of these needed funds; others merely needed a stimulus. Other States would build roads, but they would not be part of any kind of a pattern of usable interstate roads. Consequently, it is quite evident that the development of a system of grants-in-aid for the construction of public roads has some legitimate basis. The basis for apportionment is open to question, however. There is a question also as to just how far we should go in expenditures along this line at this particular time when the country is having an annual deficit of over $3,000,000,000.

At approximately the same time grants-in-aid for vocational education, agricultural extension, and vocational rehabilitation were inaugurated. With the exception of vocational rehabilitation for our veterans the justification for many of such Federal grants is much more difficult. Early in the twenties grants to the States for maternal welfare were undertaken but they were allowed to expire about 1926. Thus there is some basis for believing that under the Republican regime of the twenties a movement for decentralization of government and the revival of State rights was developing.

With the emergence of the New Deal, Federal grants-in-aid for various new purposes not readily connected with the apparent national interest began to make their appearance, and with the New Deal there began to develop the idea of the use of grants-in-aid for the purpose of equalization, that is, the distribution of larger proportionate grants to so-called poorer areas than to other areas. This, of course, is the redistribution of income. With the enactment of the Federal Emer-

gency Relief Act on May 12, 1933, this change became apparent. This act and subsequent acts provided for a scheme of Federal grants-in-aid to the States for the purpose of financing relief. The amounts of grants to each State were not fixed by any standards set forth in the law and the ratio of Federal funds to State and local funds was not determined. The Administrator of the Federal Emergency Relief Administration could, at his own free will without any preexisting standards, determine how much money was to be given to each State. In some cases the States and their subdivisions were required to raise only approximately 2 percent of the total cost of relief during the period from 1933 to 1938, and in others the State and its political subdivisions were required to raise more than 35 percent of the cost of the relief. During the whole period the Federal contribution was probably more than 65 percent of the total cost of relief.

Grants-in-aid for the construction of public works through the Public Works Administration were commenced in the same year. In this case the Federal Government contributed 30 percent and the State or locality contributed 70 percent, which was loaned to the borrower by the Federal Government. In 1935 the amount of the Federal grant for public works was increased from 30 to 45 percent because the demand for such funds with only a 30-percent grant was slacking.

A scheme of grants for State employment services was also inaugurated in 1933. During the war a half-hearted attempt at Federal assistance to State employment services was developed, and this was carried on in a desultory fashion during the twenties. But with the enactment of the Wagner-Peyser Act in 1933 this endeavor was established on a firm basis with an appropriation of $4,000,000. Here again Federal funds had to be met by State or local funds.

In many ways the Social Security Act of 1935 was the greatest step in the development of the present system of Federal grants-in-aid. Grants to the States for old-age assistance were provided and a larger Federal grant than that now given, is being sought in the present Congress. This is another obvious attempt to shift the burden of taxation from those States that refuse to bear a just share of the cost of old-age assistance. The billions of dollars of public funds that have been distributed to the States through the Works Progress Administration as grants-in-aid to States and localities need no recital here. Many States and communities are required to contribute but a small part of the cost of the relief undertaking, while others, a much more substantial contribution. Of course, without any published standards it is quite possible for the Administrator to play political favorites in allocating funds and this is just what has happened under the relief program previously carried on.

In 1937 we entered upon a program of Federal grants-in-aid to municipalities and public-housing authorities to subsidize low-cost housing. The grants and loans used for this program are the most complicated ever devised. The system is complicated so as to conceal the full amount of the subsidy. In reality the Federal contributions will amount to more than the fully amortized cost of each project. The program that has already been undertaken will probably cost billions to complete.

We have witnessed during the last few years a persistent public lobby, paid for at the expense of the Federal Government, for the passage of legislation by this Congress for grants-in-aid to the States for the purpose of general education. I refer to the Thomas bill. In 1936 the President set up an Advisory Committee on Vocational Education. The task of this committee was broadened in 1937 to include all education and was supported through funds from the W. P. A. This organization was extremely active in lobbying for the passage of the Harrison-Thomas bill authorizing extensive grants to the States to assist primary and secondary education. Such grants are to be distributed on a basis of equalization. This would inaugurate a most extensive scheme of grants-in-aid for an entirely new purpose and solely for the purpose of the redistribution of the national income.

The scheme of Federal grants-in-aid has been growing more and more costly year by year. In 1920 Federal grants-in-aid to the States cost but $42,500,000. By 1925 it had jumped to $159,000,000. By 1930 they amounted to $147,000,000. By 1932 they were $269,425,000. In 1935 they were $2,201,313,000, of which $234,137,000 was regular grants and $1,967,176,000 was grants derived from emergency funds. In 1938 a total of $2,952,000,000 was distributed to the States as grants-in-aid; $472,318,000 of this was normal regular grants, whereas $2,479,730,000 were grants of emergency funds. These figures do not include any loans. They are direct grants to the States or their political subdivisions. Thus in less than 20 years Federal grants-in-aid have risen from $42,000,000 to $2,952,000,000, or 6,928 percent. If this continues during the next score of years, it is hard to imagine what portion of the national income will be used for this purpose.

In addition to direct Federal grants-in-aid to the States as a method of redistributing the national income, the Federal Government has taken upon itself the performance of various functions throughout the whole country and in certain areas. The natural result is a further redistribution of the national income through the use of Government expenditures. Throughout the past 100 years the functions of the Federal Government have been expanding steadily. We all know of the great development of the Department of Agriculture, the rise of the Departments of Commerce and Labor, the various services embodied in the Department of Interior, and a host of independent establishments. Under the New Deal the expansion of the functions of the National Government has been at a much accelerated pace.

In addition the New Deal has felt impelled to make available Federal funds in certain backward areas through the direct expenditure of public money. Probably the largest undertaking of this kind with this avowed purpose is the Tennessee Valley Authority. For various obvious reasons, private capital has not flowed into the valley of the Tennessee River to produce the development of a tremendous industrial area there. The complete development of the T. V. A. as at present envisaged by the Board, will cost $500,000,000. We have all had experience with New Deal estimates of costs, and it is quite likely that to complete the present program and to execute such additional programs as might mature in the dreams of the members of the Board, many times this figure will be required. Not only is the T. V. A. building dams, powerhouses, and transmission lines; it is stimulating the farmers to a wider use of electricity through research on new electrical equipment on farms.

At the taxpayers' expense it has also entered the fertilizer business, notwithstanding the fact that the Department of Agriculture is experimenting constantly along this line. It is assisting the farmers in the terracing of their fields, in reforesting their lands, and in many other ways. It has even gone into the cattle business. Model herds of cattle were maintained to improve the breeds in this area. Through the investment of this large sum of Federal money in this area, are we not subsidizing people to stay in an area that is not economically productive? If such a subsidy is not given to them, would not people in this area who possess the most initiative attempt to move to areas where they could make better use of their talents? What are we doing? We are stultifying this natural flow of population from the impoverished to the more wealthy sections of the country. We are investing the national capital in areas that will not yield to the national economy the greatest return per dollar invested.

The South is not the only region into which the Federal Government is putting large sums of money in order to develop areas where private capital does not find it profitable to go. In the Columbia River Valley we have two large projects—Bonneville Dam on the lower river and Grand Coulee in Washington. The complete development of these two projects with necessary transmission lines and other appurtenances will probably cost close to $1,000,000,000. These two projects will produce several times the amount

of electricity that the area is now consuming. Grand Coulee will bring into cultivation large areas of land that are not now subject to the plow. In a similar manner the Federal Government is investing large sums of money to resurrect agriculture in other parts of the country, while at the same time the Agricultural Adjustment Administration is spending hundreds of millions of dollars annually attempting to reduce agricultural production in other areas.

Let us now see how this process of redistribution has really worked out. From the Annual Report of the Secretary of the Treasury we are able to get certain very interesting information concerning the relationship of the sources of Government income to the areas where such funds are expended by the Federal Government in the form of direct grants-in-aid to the States and their political subdivisions. The total amount of internal-revenue-tax collections of the Federal Government in 1938 was $4,917,105,078, and it distributed to the States, in one form or another, $2,952,068,622.

In certain States of the South and West the expenditures of the Federal Government were many times the amount of internal-revenue collections in the State. For example, in the State of Arkansas the direct expenditures of the Federal Government in the forms of grants-in-aid were 683 percent of the total revenue collections in the State; in Mississippi, they were 806 percent; in Alabama, 312 percent; and in South Dakota, 3,035 percent. On the other hand, there are some States where the expenditures of the Federal Government are much less than the revenue collections derived in such areas. In Delaware the expenditures of the Federal Government were less than 6 percent of the revenue collections; in New York, they were 27 percent; in New Jersey, 43 percent; in Connecticut, 33 percent; in Illinois, 41 percent. I am submitting herewith a tabulation showing Federal internal-revenue collections in each State in the fiscal year 1938 and also the Federal expenditures in each State for the same period. Thus it is quite apparent that through the system of Federal grants-in-aid the revenue of the Federal Government is being drained from the more wealthy sections of the country and those sections best able to produce the national income into the poor sections of the country which produce practically nothing. This public money is being expended in such areas in a relatively unproductive manner, and in order to have such large sums of money to spend in such areas a continually increasing burden must be placed upon the wealthier areas.

Under the Federal Emergency Relief Administration during 1933 and 1934 we had some phenomenal happenings relative to the distribution of Federal funds. During 1933 and 1934 there was derived from Federal sources 65 percent of the total cost of the maintenance of relief throughout the entire United States but in some States in the South, State and local authorities contributed practically nothing. In Alabama, 96 percent was derived from the Federal Government; in Louisiana, 98 percent; in Georgia, 95 percent; on the other hand, in Connecticut but 34 percent was derived from the Federal Government; in Delaware, 34 percent; in New York, 49 percent; and in New Jersey, 55 percent. The same high percentage of relief grants to these Southern States still exist today.

It is hard to see how the relief problem is actually so pressing in the South. In Alabama, Georgia, North Carolina, South Carolina, and Tennessee, according to the census of manufactures, the average number of persons employed in industrial pursuits was higher in 1929 than in 1919, and, what is more to the point, higher in 1937 than in the boom year of 1929. A number of other States, too, show a like improvement during this 18-year period as the table submitted herewith will show. In most instances, pay rolls had increased in a similar manner. How can the South have a more pressing relief problem than the Northeast where industrial employment and pay rolls are declining?

Southern States continually contend that they do not have the revenue to meet such services as relief; that they cannot raise from their own funds sufficient money to pay for the services that we now believe desirable. But why is it that these States do not have the money? It is because they do not care to tax their inhabitants sufficiently to do this. They exempt large parts of both industrial and residential properties in the State from taxation. For example, in Florida in order to encourage industrial development, factory buildings are exempt from taxation for 15 years. In Arkansas textile mills are exempt for 7 years. Georgia frees manufacturing establishments from taxation for 5 years. In Louisiana, Alabama, and Mississippi all industries are exempt for 10 years after the date of establishment and South Carolina exempts for 5 years.

In addition, practically all of these States and many others levy no taxes on homes and farms. Exemptions are provided for under the homestead laws on properties assessed from $1,000 to $5,000. Assessed values in many States are very low; in such cases, fairly valuable property is tax exempt altogether. When they were asked to impose new and increased taxes by the Administrator of the F. E. R. A., they protested that this could not be done under the existing constitutions. When these States have freed such a large part of their tax base from the impositions of the tax collector, it is no wonder that they allege that they cannot raise sufficient revenue to meet their relief needs and other public purposes.

But let me point out to you that this policy of tax exemption in most instances is solely for the purpose of attracting new industries to such areas. And where do those industries move from? They move from the northern and eastern parts of the country. And it is from the northern and eastern parts of the country that the largest part of the Federal revenue is derived. It is this revenue derived from such sources that is diverted into these southern areas so as to enable them to exempt industry and residential property from taxation. I will demonstrate to you forthwith that what I am talking about is not merely a theoretical proposition.

Such exemptions and other inducements have apparently been instrumental in attracting industry from the North and East to the South. From 1919 to 1937 the amount of industrial pay rolls in Massachusetts declined 27.5 percent; in Pennsylvania, 16.3 percent; in New York, 15.3 percent; in New Jersey, 12.9 percent, and in Rhode Island, 18 percent. On the other hand, did the amount of industrial pay rolls in the South decline during this period? Most certainly it did not. In North Carolina during this period there was an increase of 49.4 percent in the amount of industrial pay rolls; in South Carolina, 30.7 percent; in Georgia, 9.2 percent; in Texas, 13.8 percent, and Tennessee, 34.2 percent. The President a short while ago called the South the No. 1 economic problem of the country. In view of the above facts, how can that be so?

True, there are some parts of the South in quite a depressed state, but this is also true in many northern States as a result of the tremendous decline in their industrial activities. No wonder industry has a tendency to move to the South. With the development of the T. V. A. and Government-subsidized electric-power production—a subsidy which is being paid for out of the pocket of the taxpayers of the rest of the country—more and more industries will be attracted to the South.

What is the natural result of this? In order to redistribute the national income and raise the standards of living in certain areas, namely, the South and the Far West, the wealth and industry of the northern and eastern areas are being taxed. But it is alleged that these backward areas do not have the funds to meet the ordinary services of government. Why is that? Because they are not willing to tax themselves not even for relief. And why? Because they are attracting new industries by such tax exemptions. Because of these tax exemptions, grants-in-aid, and other subsidies, industry is attracted from the North. By this very process of Government subsidy, freedom from taxation in certain areas, and grants-in-aid, the tax base in the North and

East, the very source of the income of the whole Nation, is being destroyed.

President Roosevelt, in a speech at Pittsburgh, October 19, 1932, stated:

Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If these taxes are excessive, they are reflected in idle factories, in tax-sold farms, and in hordes of hungry people tramping the streets and seeking jobs in vain.

Are not the excessive taxes on the industrial States of the Nation today reflected in the unemployment situation, tax-sold properties and idle factories that we see everywhere in the northeastern section of the United States?

[1] The figures for 1919 include data for establishments with products valued at $500 or more. The corresponding limit for subsequent census years was $5,000. This change resulted in a considerable reduction in the number of establishments covered but did not otherwise materially affect the comparableness of the statistics.

Census of manufactures—Continued

Slum Clearance

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

LIST OF ORGANIZATIONS AND INDIVIDUALS ENDORSING S. 591

Mr. WAGNER. Mr. President, I ask to have printed in the RECORD a list of the organizations and individuals who have endorsed Senate bill 591, which would authorize the expansion of the slum-clearance and low-rent housing program.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST OF ORGANIZATIONS AND INDIVIDUALS WHO HAVE ENDORSED S. 591, AUTHORIZING THE EXPANSION OF THE SLUM-CLEARANCE AND LOW-RENT HOUSING PROGRAM UNDER THE UNITED STATES HOUSING ACT

National organizations: Amalgamated Association of Iron, Steel, and Tin Workers Union; Amalgamated Clothing Workers of America; American Association for Social Security; American Association of Social Workers; American Federation of Hosiery Workers; American Federation of Housing Authorities, Inc.; American Federation of Labor; American Federation of Musicians; American Federation of State, County, and Municipal Employees; American Federation of Teachers; American Home Economics Association; American Institute of Architects; American Planning and Civic Association; American Society of Planning Officials; Bricklayers, Masons, and Plasterers; Cigar Makers' International Union of America; Congress of Industrial Organizations; Construction League of the United States; Federal Council of the Churches of Christ in America; Federation of Architects, Engineers, Chemists, and Technicians; Federation of Flat Glass Workers; Glass Blowers Association; Hotel and Restaurant Employees' International Alliance; International Alliance of Theatrical Stage Employees and Moving Picture Operators; International Association of Bridge Structural and Ornamental Iron Workers; International Association of Machinists; International Association of Marble, Stone, and Slate Polishers and Sawyers, Tile and Marble Setters, Helpers, and Terrazzo Helpers; International Broom and Whisk Makers Union; International Brotherhood of Blacksmiths, Drop Forgers, and Helpers; International Brotherhood of Boilermakers and Iron Shop Builders and Helpers; International Brotherhood of Electrical Workers; International Federation of Technical Engineers', Architects', and Draftsmen's Unions; International Fur Workers' Union; International Hod Carriers, Building and Common Laborers Union; International Ladies Garment Workers; International Union of Elevator Constructors; International Union Federation of Architects, Engineers, Chemists, and Technicians; International Union of Operating Engineers; Joint Board of the Cloak, Suit, Skirt, and Reefer Makers Union; Knights of Columbus, Educational Bureau; Labor Housing Conference; Labor's Non-Partisan League; Municipal Law Officers' Institute; National Association of Letter Carriers; National Chapter, Society of Designing Engineers; National Council of Catholic Men; National Council of Catholic Women; National Women's Trade Union League of America; National Federation of Post Office Clerks; National Federation of Settlements; National Lawyers Guild; National Organization Masters, Mates, and Pilots of America; National Public Housing Conference; National Women's Trade Union League of America; Operative Plasterers and Cement Finishers International Association; Presbyterian Church in the United States, Board of Christian Education; Public Ownership League of America; Social Service Employees Union; Transport Workers Union of America; United Association of Journeymen Plumbers and Steam Fitters; United Hatters, Cap, and Millinery Workers; United Rubber Workers of America; United Wall Paper Craftsmen and Workers of North America; United Mine Workers of America; Women's International League for Peace and Freedom; Y. W. C. A. National Board.

Alabama: Birmingham Pastor's Union; Central Trades Council, Mobile; Muscle Shoals Building Trades Council; Tri-Cities Central Labor Union.

Arizona: City of Phoenix.

Arkansas: Pine Bluff Central Trades & Labor Council.

California: Alameda County Industrial Union Council; Brotherhood of Railway Carmen of America, Pacific Lodge, No. 1381, Los Angeles; Building and Construction Trades Council of Santa Clara County; Building and Construction Trades Council, San Mateo; Central Labor Union of Monterey County; Chemical Workers, Local No. 266; City Council, Santa Barbara, Calif.; Central Trades Council; Consolidated Building and Metal Trades Central Labor Council; Contra Costa County, Industrial Union Council; Council of Social Agencies of Los Angeles; Federation of Architects, Engineers, Chemists and Technicians, chapter 25; Federation of Architects, Engineers, Chemists and Technicians, chapter 28; Fresno Central Labor Council; Los Angeles Building Trades Council; Marine Cooks and Stewards' Association of San Pedro, Calif.; Oil Workers Union, Local No. 326; Rodeo Ladies Auxiliary, Local 326A; San Francisco District Industrial Union Council; San Francisco-Oakland Newspaper Guild; San Mateo Central Labor Council; San Mateo Painters', Local Union, No. 913; Steel Workers, No. 1440; Textile Workers Organizing Committee, No. 146; U. C. A. P. A. W. A., No. 15, C. I. O.; United Auto Workers, Local No. 76; United Electrical, Radio and Machine Workers, Local No. 1412; United Fishermen's Union of the Pacific; Warehousemen's Union, Local 1-6, I. L. W. U.; United Rubber Workers of America, Local No. 60; Vallejo Carpenters, Local No. 180; Walter A. Gordon, attorney-at-law, Berkeley.

Colorado: Colorado State Federation of Labor.

Connecticut: Connecticut Federation of Labor: Central Labor Union of New Britain; Danbury Central Labor Union; Hartford Central Labor Union; Meriden Central Labor Union; Slovak Alliance of Bridgeport; Stamford Painters' Union; Sts. Cyril and Methodius Roman Catholic Church, Bridgeport; St. Mary's Roman Catholic Church, Bridgeport.

District of Columbia: United Association of Journeymen Plumbers and Steam Fitters Local Union, No. 255.

Georgia: Executive Committee of Techwood Homes; Georgia Federation of Labor; Macon Federation of Trades; Mr. C. F. Palmer, Atlanta; Savannah Building and Construction Council; Trades and Labor Assembly.

Illinois: Belleville Trades and Labor Assembly; Belleville Building Trades Council; Child and Family Service, of Peoria, Ill.; Central Trades and Labor Council of Joliet; Cervin & Stuhr, architects, Rock Island; Chicago Federation of Settlement; City Council of the City of Chicago; City Council of the City of Peoria; Department of Public Health and Safety; Distillery Workers' Union, No. 19538, Pekin; Illinois State Federation of Labor; International Ladies Garment Workers' Union, Local 39, Chicago;

International Metal Engravers' Union, Local No. 1; International Union of Operating Engineers, Locals Nos. 965 and 965A; United Cement Workers' Union, No. 20066; Progress Club of Peoria; Social Service Employees' Union, Local 39, Chicago; Springfield Federation of Labor; Mr. R. Clyde White, Chicago.

Indiana: Bloomington Central Labor Union; Conference Continuations Conference; Fort Wayne Federation of Labor; Indiana State Federation of Labor; Kokomo Trades and Labor Council; United Brotherhood of Carpenters and Joiners of America, Local Union No. 90; Vigo County Workers Alliance; Workers Alliance, Local G-279; Workers Alliance of Indiana; Carpenters' Local No. 565; International Ladies Garment Workers' Union, No. 116, Fort Wayne.

Iowa: Cedar Rapids Federation of Labor; Central Labor Union; Tri-City Labor Congress.

Kansas: Coffeyville Central Labor Union; Hutchinson Central Trades and Labor Council; Pittsburg United Trades and Labor Council; Wichita Trade and Labor Assembly.

Kentucky: City of Lexington; Louisville Central Labor Union; State Federation of Labor.

Louisiana: Rev. Roger W. Coleman, First African Baptist Church, New Orleans; New Orleans Association of Commerce; Eva Smill, Family Service Society, New Orleans.

Massachusetts: Cambridge Central Labor Union; Central Labor Union; Federation of Architects, Engineers, Chemists, and Technicians, Boston Chapter; Federal Labor Union, 18518; Rev. Charles G. Girelius, Wayland; Massachusetts Department of Public Welfare; mayor and Council of the city of Lowell, Mass.; Norwood Central Labor Union.

Michigan: City Council of the city of Detroit, city Council of the city of Lansing; Council of Social Agencies of Kalamazoo; Mr. Barton P. Jenks, Jr., Walled Lake; M. & M. Trades Council, Menominee; Society of Designing Engineers; United Brotherhood of Carpenters and Joiners of America, Local No. 297.

Minnesota: Minneapolis Building Trades Council; Minnesota State Employees Local Union, No. 10.

Missouri: Building and Construction Trades Council, Kansas City; Building Trades Council, Springfield; Central Labor Body, Carthage; city of St. Louis; Moberley Central Labor Union, Moberley.

Montana: Cascade County Trades and Labor Assembly, Great Falls; Miles City Trades and Labor Council.

Nebraska: Miss Edith Carse, head of housing equipment division, University of Nebraska; Urban League of Lincoln.

New Hampshire: Manchester Building Trades Council.

New Jersey: Board of commissioners of the city of Camden; Catholic Daughters of America, South Orange; city council of East Orange; city of Camden; International Brotherhood of Electrical Workers, No. 102; International Ladies' Garment Workers' Union, No. 149; Newark Newspaper Guild; New Jersey Housing League, Inc.; Public Service Corporation of New Jersey; Trenton Chamber of Commerce; Union County Central Labor Union, Elizabeth.

New York: Aluminum Workers Union, No. 19256; Amalgamated Ladies' Garment Cutters' Union, Local 10, International Ladies' Garment Workers' Union; American Committee for the Protection of Foreign Born; American Federation of Musicians, Local No. 802; American Society of Sanitary Engineering; Benjamin Andrews, Columbia University, N. Y.; Mrs. James Russell Bourne, Rhinebeck; Bricklayers' Union, No. 1, Brooklyn; Bricklayers' Union, No. 34; Brooklyn Committee for Better Housing; Building Trades Council; Central Labor Council of Buffalo; Central Labor Union; Central Trades and Labor Council; Citizens' Housing Committee; Citizens' Housing Council of New York, Inc.; city of New Rochelle; Community Service Society; Consolidated Tenants' League, Inc., New York City; Consumers' Union of United States, Inc.; Dental Technicians Equity; Dressmakers' Union, Local 22, International Ladies' Garment Workers' Union; Federation of Architects, Engineers, Chemists, and Technicians, Chapter 14; Federation of Architects, Engineers, Chemists, and Technicians, Chapter 23; Federation of Jewish Women's Organizations, Inc.; Federation of Labor; Furriers' Joint Council of New York; First Presbyterian Church, Rev. Howard B. Haines; Greenwich House Settlement, New York City; International Union of Operating Engineers, Locals 138 and 138A, Hempstead, Long Island; International Union of Operating Engineers, Rochester, Local 71; Jewish Social Service Association, Inc.; Lewis Street Center, Rochester; Lower East Side Public Housing Conference, New York City; Manhasset Health Association; New York City Division of Housing; New York State Industrial Union Council, Congress of Industrial Organizations; New York Typographical Union, Local No. 6; Plumbers' Local, No. 36; Mr. Heber Smith, New York City; Rev. H. Otheman Smith, Baptist Church of the Redeemer; Mr. J. J. Sturgh, Buffalo; Union of Marine Draftsmen and Technicians, Chapter 24; United Brotherhood of Carpenters and Joiners of America, Bronx; United Electrical, Radio and Machine Workers, Local No. 1237; United Scenic Artists of America, Local No. 829; Utica Trades Assembly; Washable Clothing, Sportswear, and Novelty Workers, Local 169, Amalgamated Clothing Workers of America; Welfare Council of the City of New York; Westminster Community House; Women's City Club of New York; Yorkville Tenants' League; Yoruba Literary and Debating Club, New York City.

North Carolina: City of Wilmington, Department of Public Safety; Durham Central Labor Union.

Ohio: Amalgamated Clothing Workers of America, Coat, Suit, and Dressmakers Union, No. 63; Barberton Central Labor Union; C. J. Bushnell, University of Toledo, Toledo; Rabbi Barnett R. Brickner; Citizens' Committee on Slum Clearance and Low Rent Housing, Cincinnati; Council of the city of Cleveland; Council of the city of Toledo; Prof. Abraham Cronbach; First Presbyterian Church on Walnut Hills; Central Labor Council, Cincinnati; Marion Central Labor Union; Bleecker Marquette, Cincinnati; Operative Plasterers and Cement Finishers' International Association, Middletown, Ohio; L. A. Pechstein, president of the University of Cincinnati; W. W. Ryall, commissioner of health; Toledo Central Labor Union; Toledo, Ohio, Chapter of the National Association of Social Workers; Trades and Labor Assembly of Tuscarawas County; United Labor Congress of Mahoning County; Young Women's Christian Association, Cincinnati; Clifford R. Wright, Cincinnati.

Oklahoma: Enid City Planning and Zoning Commission; Oklahoma City Building and Construction Trades Department.

Oregon: Building and Construction Trades Council; Oregon State Federation of Labor; Portland District Council of Lumber and Sawmill Workers, Local Union No. 2532.

Pennsylvania: American Federation of Hosiery Workers, Branch No. 10; American Federation of Teachers, Local 474; Association of Philadelphia Settlements; Carbondale Central Labor Union; Central Labor Union, Philadelphia; city of Bethlehem; City Council of the city of Bethlehem; Civic Club of South Philadelphia; Council of Social Agencies; Erie Central Labor Union; L. G. Heinle, city clerk, New Kensington; Lancaster Central Labor Union; Northern Cambria Central Labor Union; Pennsylvania Federation of Labor; Pennsylvania Industrial Union Council; Philadelphia Housing Association; Philadelphia Industrial Union Council; Society for Ethical Culture, Housing Study and Discussion Group; Steel City Industrial Union Council.

South Carolina: Spartanburg Central Labor Union.

Tennessee: Knoxville Central Labor Union; S. L. Smith, director of public relations, George Peabody College for Teachers, Nashville.

Texas: Bricklayers, Masons, Plasterers International Union of America, Local No. 23, of Texas; Brotherhood of Painters, Decorators, and Paperhangers of America, Union No. 585; Brotherhood Railway Carmen of America, Local 89; Rabbi Ephriam Frisch; Houston Labor and Trades Council; International Hod Carriers' Building and Common Laborers' Union of America, Local No. 93; Pecan Workers Union of San Antonio, Local No. 172; Texas Federation of Labor.

Utah: Building Trades Council; Utah Federation of Labor.

Washington: Bellingham Building and Construction Trades Council; Board of County Commissioners, King County, Seattle; Shelton Central Trades and Labor Council; Yakima Central Labor Council.

West Virginia: American Federation of Hosiery Workers, Branch 92; Building and Construction Trades Council; Martinsburg Industrial Union Council.

Wisconsin: Aluminum Workers' Union, 19649; American Federation of State, County, and Municipal Employees, Local 58, A. F. S. C. M. E.

Brass and Copper Workers' Federal Labor Union, Local No. 19322; Central Cooperative Wholesale; Cooperative Consumers of Milwaukee, Inc; Department of Outdoor Relief; Federal Labor Union, No. 18545; Federated Trades Council of Milwaukee; Green Bay Federated Trades Council; Mayor Daniel W. Hoan, Milwaukee; Office Workers' Union, No. 16456; Waukesha Trades and Labor Council.

LOCAL HOUSING AUTHORITIES AND STATE BOARDS OF HOUSING WHO HAVE INSTRUCTED THE AMERICAN FEDERATION OF HOUSING AUTHORITIES TO RECORD THEIR ENDORSEMENT OF S. 591

Alabama: Anniston Housing Authority, Housing Authority of the Birmingham district, Mobile Housing Board.

Arizona: Phoenix Housing Authority.

California: Housing Authority of the city of Los Angeles, Housing Authority of the city of Oakland; Housing Authority of the city and county of San Francisco.

Florida: Miami Housing Authority, the Housing Authority of the city of Orlando, Housing Authority of the city of St. Petersburg.

Georgia: Atlanta Housing Authority, Augusta Housing Authority, Brunswick Housing Authority, Columbus Housing Authority, Housing Authority of the city of Rome, Housing Authority of Savannah.

Illinois: Peoria Housing Authority.

Indiana: Richmond Housing Authority, Housing Authority of the city of Vincennes.

Kentucky: City of Covington Municipal Housing Commission, the city of Frankfort Municipal Housing Commission, the city of Lexington Municipal Housing Commission, Paducah Municipal Housing Commission.

Louisiana: Housing Authority of New Orleans.

Maryland: Housing Authority of Baltimore City.

Massachusetts: Boston Housing Authority, Cambridge Housing Authority, Chicopee Housing Authority, the Holyoke Housing Authority, Lowell Housing Authority, and Massachusetts State Board of Housing.

Michigan: Dearborn Housing Commission and Detroit Housing Commission.

Mississippi: The Housing Authority of Hattiesburg, the Housing Authority of Laurel, and McComb Housing Authority.

Montana: Billings Housing Authority and Great Falls Housing Authority.

Nebraska: Housing Authority of the City of Omaha.

New Jersey: Housing Authority of Atlantic City, Housing Authority of the city of Elizabeth, Housing Authority of the city of Long Branch, Newark Housing Authority, New Jersey State Housing Authority, Housing Authority of Perth Amboy, and Housing Authority of the city of Trenton.

New York: New York City Housing Authority, New York State Housing Board, the Municipal Housing Authority for the city of Yonkers, and Tuckahoe Housing Authority.

North Carolina: Housing Authority of the city of Charlotte; Housing Authority of the city of Wilmington.

Ohio: Cincinnati Metropolitan Housing Authority; Cleveland Metropolitan Housing Authority; Portsmouth Metropolitan Housing Authority; Toledo Metropolitan Housing Authority; Youngstown Metropolitan Housing Authority; Zanesville Metropolitan Housing Authority.

Pennsylvania: McKeesport Housing Authority; Pennsylvania State Board of Housing; Philadelphia Housing Authority; Housing Authority of the city of Pittsburgh.

Tennessee: Chattanooga Housing Authority; Kingsport Housing Authority; Knoxville Housing Authority; Memphis Housing Authority; Nashville Housing Authority.

Texas: Housing Authority of the city of Brownsville; Housing Authority of the city of Dallas; Housing Authority of the city of El Paso; Housing Authority of the city of Houston; Housing Authority of the city of San Antonio.

Vermont: Burlington Housing Authority.

Washington: King County Housing Authority; Seattle Housing Authority.

West Virginia: Housing Authority of the city of Charleston; Wheeling Housing Authority; Housing Authority of the city of Williamson.

Puerto Rico: Puerto Rico Housing Authority; Ponce Housing Authority.

Amendment of Patent Laws

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

STATEMENT BY PARKER, CARLSON, PITZNER & HUBBARD

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by Parker, Carlson, Pitzner & Hubbard, of Chicago, relative to Senate bill 2688, to amend section 4884 of the Revised Statutes (U. S. C., title 35, sec. 40).

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Senate bill 2688, introduced by Senator BONE on June 23, 1939, and understood to be one of the series of bills for the amendment of patent laws recommended by Mr. Coe, Commissioner of Patents, provides for the amendment of section 4884, Revised Statutes, first, by substituting for the words "for the term of 17 years" the words "for the term of the patent", and, secondly, by inserting between the first and second sentences of the statute the following: "The term of the patent shall begin with the issuance thereof and shall terminate at a date not more than 20 years from the date of filing by the applicant in the United States of his earliest application disclosing the invention covered by any of the claims of said patent; but in no case shall the term of any patent be more than 17 years."

The proposed change in the existing law is based upon an alleged extension of the term of patent protection beyond the 17 years now provided, resulting from undue delays in the prosecution of applications for patent. At the outset it should be noted that long pendency of a patent application does not in itself result in an extension of the term of protection granted. It does, it is true, postpone the date of expiration of the patent, but during the time the application is pending the patentee is merely in the position of one asking for patent protection and has no actual protection enabling him to proceed against infringers. Not until his patent is actually granted can the inventor proceed against others for infringement.

In recommending the change, the Commissioner of Patents has cited various instances in which patents have issued many years after the applications were filed. Quite naturally he selected extreme cases. In these cases, as well as in practically all instances of long pendency of patent applications, the delay is traceable in large measure to proceedings in the Patent Office and more especially to what are known as interference proceedings. An interference is a litigation between two rival applicants for patent. It involves pleadings and motions based on pleadings which must be briefed and argued before the examiner at the time fixed by him, with attending delay until the examiner's decision is rendered. Next it is necessary to take testimony by depositions, which may be taken in various parts of the country; next the briefs and arguments of counsel at a time fixed in advance by the examiner of interferences; consideration and decision by the examiner; an appeal to the board of appeals, with a delay until the case is reached before the board and a further delay until the board renders its decision; and, finally, an appeal to the Court of Customs and Patent Appeals, which may require 2 years before it can be heard and decided. The loss of this time—often from 3 to 5 years—sometimes, in cases of successive interferences, 10 to 15 years—is manifestly not the fault of the applicant; and it would be a rank injustice to charge it against the term of his patent.

Recognizing the fact that interference proceedings are responsible for long delays in the Patent Office, the Commissioner of Patents has included among his various recommendations the proposed change in the patent laws to shorten such proceedings. But changes in these proceedings, without endangering the rights of the applicants involved, is an exceedingly difficult problem, and so the change proposed by the Commissioner is confined to the elimination of one appeal with a saving in time of probably not to exceed 1 year. Such a saving is far too small to warrant a substantial reduction in the term of patent protection granted to a meritorious inventor, and unless and until some way is found to eliminate delays for which the applicant is not responsible, the proposed cure is worse than the difficulty sought to be remedied. Thus, it is inconceivable that this bill should be passed without some adequate provision for eliminating the time consumed in interference proceedings instituted by the Patent Office.

Even if the interference practice were to be radically amended, it would still cause delay, unavoidable by the applicant, in the proceedings to obtain a patent; and the principle is the same—the inventor should not bear the loss.

The bill under consideration provides for a change in the term of a patent from the present 17 years from the date of its issuance to 20 years from the date of filing of the application, apparently on the theory that 3 years is sufficient time for the prosecution of patent applications. It may be true that in the average case 3 years' time is adequate, provided no interference is declared. But in many cases more than 3 years is required for securing for the inventor adequate protection. As anyone familiar with Patent Office practice well knows, a large part of the delay is attributable to the Patent Office, and this is so more especially in the case of important inventions where the grant of a patent might seriously affect an established industry; for experience has shown that in such cases the patent examiner is hesitant about granting protection with the result that it is necessary to resort to appeals to higher tribunals. Thus after prosecution of such application before the examiner, consuming in the average case about 3 years' time, further delays of from 1 to 3 years may ensue because of the necessity of filing successive appeals, and this through no fault of the applicant.

Again it happens not infrequently that to the delays incident to a prolonged ex parte prosecution of an application must be added delays incident to the declaration of an interference. Not until the patent application has been found to contain allowable subject matter can an interference be declared. Thus it may and does frequently happen that the applications of two rival inventors are copending in the Patent Office and after long prosecution of both applications, including perhaps appeals to higher tribunals, an interference may then be declared by the Patent Office between the two applicants. Under such circumstances the true and first inventor would receive his patent many years after his application had been filed and having had no actual protection during the pendency of the application, the duration of the term of his protection must necessarily be shortened by several years should the proposed bill become law.

The proposed bill is also objectionable for another and important reason. If enacted, it would result in great hardship to many meritorious inventors and would in many cases wholly withdraw the benefits of the patent laws in the case of inventions of the highest order conferring the greatest benefits upon the public. In this connection the proposed bill provides that the term of a patent shall begin with the date of filing by the applicant of his earliest application disclosing the invention.

No one who is familiar with the history of the development of important inventions will dispute the fact that in many instances years are required after the first concept of the broad idea, and even after reduction to practice has demonstrated its value, before the invention can be put into commercial use. The initial construction and testing of a complicated machine or apparatus involves the expenditure of a great deal of time and money. Seldom is the initial construction suitable for marketing and many changes must be made tending to simplify the construction and improving it to the point of commercial practicability. It may be that the invention forms only a part of a complete system requiring the production of many other inventions in preparation for profitable commercial operation of the primary invention. Also it may be necessary to resort to long experimentation and extended research in discovering the best materials. All or any of these matters frequently delay the actual commercial adoption of the inventors' ideas for many years. Under the present laws the inventor is permitted to file an application for patent on his original and perhaps basic concept and it is important to his protection that he do so. After filing such original application he can proceed with his developments and after he has succeeded in producing a commercially acceptable structure embodying the invention, he may file a new application on the new construction while the original

application is still pending and ultimately abandon the original application.

In the case of such important inventions requiring a long period of years for development before the invention is ready for the market, the inventor can, under the existing law, protect himself against rivals on the basis of his original concept and still have time to make such improvements or additions as may be necessary and without which the invention is of little value. To enact that the term of the patent shall begin to run with the date of the filing of the first application would serve to discourage the filing of applications based on the original concept and to take from him the protection to which he is rightfully entitled while engaged in perfecting his invention to a point where it can be placed on the market.

Most everyone is familiar with important or basic inventions of the type above referred which require long period of years and the expenditure of a great deal of money before they are perfected for use. Even under the existing law, basic inventions are made and patents issued long before commercial exploitation is possible, and an instance of this sort is found in the development of television. Farnsworth had the conception in 1922. He was in an interference in the Patent Office in 1927 and he had patents issued in 1929; 10 years have passed since then, and television, though now perfected physically at great expense and having promise of creating a great and profitable industry, has not returned one penny to its inventor or its promoters. The time when it will become profitable is still conjectural.

This is by no means an extreme case. Many developments have required much longer time. The television history is referred to here because it is set forth at length in the proceedings of the Temporary National Economic Committee, volume I, pages 489–499.

Sometimes the conception is complete but the best material is difficult to find or produce. The Sawyer-Man incandescent electric-light patent was issued in 1885 on an application filed in January 1880. The patent claims called for the use of a carbonized filament of fibrous or textile material, but the specific substance suggested by the inventors as the best embodiment of their invention was carbonized paper—which turned out to be impracticable commercially. During the same period, Edison, working on the same subject, examined more than 6,000 different vegetable growths without success and finally found a particular species of bamboo in Japan, which had walls of three-eighths of an inch in thickness but which yielded a strip of only twenty-thousandths of an inch that was suitable for the purpose; and this bamboo fiber was the basis of the first commercially successful incandescent light.

Sometimes the poverty of the inventor delays commercial exploitation for years.

In very many instances, the present term of 17 years is all too short for the protection of the inventor. That the system has worked well is undeniable. Any proposals to shorten the term of protection should be supported by stronger arguments than have yet been advanced in behalf of this bill.

In his testimony before the Temporary National Economic Committee, the Commissioner of Patents submitted a chart, No. 30, showing that in the year 1938, 116,041 applications were pending and of these 1,924 had been pending more than 5 years and 5,994 from 3 to 5 years. When it is considered that in practically all cases where a long delay occurs such delay is due to interferences and appeals and therefore to no fault of the inventors; that even in such cases the proportion to all applications filed is very small; and that in the case of many inventions of the highest order the commencement of the term of the patent with the date of filing of the first application disclosing the invention claimed would work a severe hardship and tend to discourage inventive effort, it must be evident that the change proposed in Senate bill 2668 has no adequate foundation.

Equity Financing

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ARTICLE BY H. I. PHILLIPS

Mr. BRIDGES. Mr. President, I ask to have printed in the RECORD an article entitled "Equity Financing," by H. I. Phillips, reprinted from the New York Sun.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Sun]

EQUITY FINANCING

(By H. I. Phillips)

(Henry Ford started the Ford Motor Co. 26 years ago with $2,800.—News item.)

THEN

A man demonstrates a horseless carriage and asks financial backing. He says his name is Henry Ford.

Nobody knows him.

He says he needs about $2,800.

He gets it.

The business starts.

TODAY

A man demonstrates a horseless carriage and asks financial backing. He says his name is Ford.

Nobody even asks his first name after he mentions $2,800.

He goes to some wealthy men but they tell him this is no time to take chances.

He goes to a banker. The banker says a horseless carriage might go all right, but the bank is putting all its money into Government bonds.

He goes to a close friend, who expresses the belief a horseless carriage might have a future, but that on account of the economic set-up, the unbalanced Budget, the inflation scare, etc., it is no time to launch a new project.

He goes to another close friend, who is quite delighted with the horseless buggy, but who "isn't putting any money into anything now on account of the European situation."

He goes to a politician. The politician says a horseless carriage looks O. K. on paper and might be profitable through replacing the horse and buggy; but that to replace the horse and buggy would be to throw blacksmiths, hack drivers, feed-store workers, harnessmakers, etc., out of work.

He finally locates a couple of capitalists who have imagination enough to see a future for the automobile, but he drives them out by predicting that "they will make millions." The thought of what they will pay in taxes scares them so much they order Mr. Ford to forget all about it.

He decided to try Wall Street.

The S. E. C. demands a demonstration. The car works perfectly, but the Commission cautions Mr. Ford against undue optimism, overstatement, or the use of superlatives. It holds up everything while it makes a 6-month inquiry to see if his right name is Henry Ford.

A broker agrees to float stock.

The flotation is rendered a little difficult by S. E. C. rules that lines in the advertisements such as "may ultimately become as popular as the horse and surrey" and "likely some day to take its place as a pleasure vehicle" be deleted in the interests of honesty.

Ford quits Wall Street, finally gets $2,800 from a group of friends—Heaven knows how—and starts a small shop.

Labor delegates warn him that for every man he hires to make an auto he must hire at least one livery stable worker.

There are a series of strikes. They are referred to the N. L. R. B. The N. L. R. B. investigates for a year and a half and files a report charging that a horseless carriage industry is unfair to whip makers.

Mr. Ford appeals to Washington and explains, rather pathetically, "All I am trying to do is to make some horseless carriages."

There are frenzied speeches in the Senate and House in denunciation of the new invention by orators who speak as "a friend of that noble animal, the horse."

The President names a commission "to inquire into the aspects of the horseless carriage with a view to possible effects on the economic and social system."

The committee announces it will have a report ready in 3 years.

Graduation Exercises at the University of Vermont

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ADDRESS BY REV. ZEBARNEY THORNE PHILLIPS

Mr. AUSTIN. Mr. President, at the commencement exercises at the University of Vermont, the distinguished and beloved Chaplain of the United States Senate delivered the commencement address which was entitled "The Momentous Decisions of Life." From the standpoint of scholarship,

patriotism, and national interest it has great merit, and I ask unanimous consent that it be printed in the Appendix of the RECORD, together with the introduction of the speaker by Dean J. L. Hills.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

INTRODUCTION BY DEAN J. L. HILLS

The Reverend ZeBarney Thorne Phillips, of Washington, D. C., was brought up in a village environment. Following graduation from the General Theological Seminary, he has successfully been rector of parishes in five of the great cities of our land and for 2 years was a student of Semitic languages, Biblical literature, and comparative religions at the University of Oxford, England. During the last 15 years he has officiated as rector of a downtown church in Washington, D. C., which, in a way, is the analog of Trinity in New York and St. Paul's in Boston. For 12 years he has been Chaplain of the Senate of the United States. Unusual opportunities have come to an unusual man. I am sure that the graduates who will listen to his address this morning, dealing with life's momentus decisions, will find what he has to say of help, every one of them, when they individually come to their crossroads. It is a great privilege to welcome the orator of the day, Dr. Phillips.

ADDRESS BY REV. Z'BARNEY THORNE PHILLIPS

Mr. Chairman, Dean Hills, I am exceedingly grateful for these most gracious words, even though most of them be quite undeserved, but I want you all to know what a great pleasure it is to be in this beautiful State, with almost every mile of which I am familiar, for many summers I have spent in New England and the crossings from New Hampshire to Vermont have brought a very rapt sense of joy not only of the beauties of nature but of the delightfulness of the people. I am extremely sorry that illness prevents your president from being here. I am sure that all of us remember in our hearts and minds at this hour that man who has presided so beautifully over the destiny of this university for so many years.

I would be recreant to a friendship and a sense of appreciation that is mine were I not to mention the joy that has come to me at being on the same platform with my beloved friend, the senior Senator from this rock-ribbed State of Vermont. Were I to say to you that the appreciation from the Capitol of the Nation, the appreciation of the majority now in the Senate, of him and of his work is a thing that has constantly been increasing, you would understand the importance of the position that he occupies in that very honorable body. So, Mr. Dean, members of the faculty, ladies, and gentlemen, and most particularly members of this graduating class, I want to address myself as briefly as possible under the circumstances to a title which, in view of nothing better, I have been pleased to call "The Momentous Decisions of Life."

I quite realize that in addressing an audience of this kind, on an occasion like this, one of the difficult things is to enlist attention, but, even more than that, a sympathetic interest on the part of those hearing, and I want to recall what was told to me within less than 2 years as a true story. I want to recall a situation that transpired at a commencement day at a little country crossroad schoolhouse not a great many miles from where we are gathered today. After the spring season had been inaugurated but a few days the commencement exercises of this school were held and there were three farmers, members of the board of trustees, present on that occasion in their jumpers, trousers, and boots, their beards brushed down and combed, and their hair brushed back. The young woman presiding over the school was extremely proud of her scholars, and after the opening exercises, consisting largely of music, she placed a chair on the platform and said to one of the boys who had the record and the enviable position of being one of the leaders, "George, come up here and sit down." George came and sat down and she asked him this question: "George, who signed the Magna Carta?" Looking blankly ahead, he finally turned to her and said, "I don't know, teacher; I didn't do it"; and then in some confusion resumed his seat. The chairman of the board of the three looked rather wise, stroked his beard, and said, "Teacher, I don't like that boy's looks. Call him back. I believe he did it." Happily we are not bound by anything of that kind this morning; and I greet you with the spirit of a fellow searcher after truth, for that is all that education means and that is all that life really means. One of the most sacred rights, if not the most sacred, is the right of free choice as it belongs to man, by which not only his reason but his heart as well stands pledged.

No one has the right to trespass on another's power to decide for himself what he will do or what attitude he will take on certain questions in life and it must ever be remembered that character is not the product of arguments but of choices. It is not my purpose to develop this thought further than to state its importance, as it is exercised by the individual, at times when a decision for or against a certain thing may have momentous consequences in one's life—and this is the subject to which, in the time allotted, we wish to address ourselves.

I think it may be agreed that all who are about to leave these halls are doing it to take up the problems of life where you must consider a number of things which demand of you a choice, and I want to ask first of all, What is your attitude to America, to your Government?" Are you determined to make it better, yea, the best that it can be made, or are you going to take everything for granted, even its support of you? It must be one or the other; either your hands are placed in the attitude to receive or the attitude to bestow. At a recent conference, I am informed, sponsored by the youth of this country, a resolution was passed advocating for youth a social-security act. God knows, young men, if anything is farther from the thought of youth than that, I shall be disappointed. What place has it with all the spirit of adventure, with all the lure of life holding out its beckoning hand to you? What could a social-security act bring but—in regard to material things—a sort of colorless mediocrity where spiritual ideals would not even be considered? You must decide—and I want you to listen to this pretty carefully—you must decide what you mean by "the more abundant life."

You have got to decide what it will mean to you and your generation. Does it or could it mean life without struggle, without pain, without selflessness, without the sacrament of understanding? Surely, young men and young women, this is one of the most important questions confronting you as you leave these university halls and come to grips with the real problems of life. In the first place you are bound to decide what direction you are to take, for, surely, many have lost their way. Listen to an intelligence test which we would all do well to ponder. Suppose you come to four crossroads—which is not unusual—you are without a map and the signpost is lying in a ditch, how are you to tell where the different roads lead? The answer given is that since, presumably, you know where you came from, you have only to raise the signpost and point the finger having the name of the place that you have come from in the same direction and all the other three fingers, automatically, will come into place. This is a parable of human life. If men would only pause to think where they have come from, they need never lose their sense of direction.

There is another momentous decision which you must make and that is in regard to the use to which you will put your education. This world is a cosmos, a beautiful world laid out with majesty, dignity, and ordered law. Nature, so-called, with its added charm of beauty. The lilies of the field with which Solomon, in all his magnificence, could not compare. This was the perfection denoted by that Greek word "kosmos"; and I want to say what a thrill was mine this morning when I learned for the first time that this university still believes in teaching the Greek language and in clinging to classical ideals. I have two books in my library for which I would take absolutely no price could I not duplicate them. They are of comparatively modern origin, but they are complete, suggestive, reminiscent, and they are challenging.

One book, The Legacy of Greece, the other The Legacy of Rome—and I want to address myself as well as you to that which is betokened by an age—which is only revealed by this culture, the age of Pericles, of less than 40 years' duration, that brought not only the great dramatists but the great sculptors, the great artists, the great poets, as well as the great philosophers. It began in 434 and ended with the death of Socrates in 399, but what of the world; what of the culture and the learning that has been disseminated throughout the world; what of the language by which all the sacred lore of ancient days was handed down; what of the character of thought and the precision thereof? The Greeks piled Ossa on Pelion, trying to reach unto heaven. They took their gods and placed them on Mount Olympus with all their human qualities, for the Greeks were so human. One of the great decisions of today concerns the molding of humanity into the perfect pattern of idealism begun in this age of Pericles and completed or in the process of completion in us by the incarnate Son of God. Yes, classical ideals are those to which we must cling.

I want to call your attention for one moment to an ascending scale of values, and all this grows out of the concept of that beauty of the cosmos. You are stimulated, some of you, by the challenge of architecture. It is a beautiful thing, a wondrous thing, to find those temples rearing their heads Godward. A great thing it is, but let me tell you it is the furthest of the arts from the infinite heart of the eternal. Next there comes sculpture, and you say, "Isn't it a marvelous thing; isn't it the perfection of art and beauty to stand on the Acropolis," as some of us I know have done, and see the Erechtheum, the porch of which is supported by the caryatids, one of which has never been touched since it came from the chisel of Phidias. Then to see the statue of Pallas Athena, which is one of the great gems of sculpture in the world, which seems at the same time to be in motion and at rest, and to behold the exquisite bits of sculpture, for one of which the British Museum and the Museum of Natural History have offered a fabulous sum, but which still remain in the Museum of the Acropolis.

To have seen all these, causes many to say that "the chisel of Phidias has such charm and glory that nothing can transcend sculpture." But how about the beauty of the human figure and the beauties of the earth, the sky, and the curve of the ground as it meets the distant horizon? How about color? Does not painting take us just a little nearer to the infinite heart of God? Yes, but it is not the last word of art. And you answer again, "the sound of the human voice, is that not the perfection of art, and the study of literature and poetry, for poetry is the attempt of man to bridge over the great chasm between the actual and the ideal. Isn't that the quintescence of art? It is closer to the infinite heart, it is true, but music is divinest of all, for on its wings the soul is borne upward and onward and somehow mounts up beyond Olympus, mounts up to the eternal chamber of God where the door has been left ajar by poetry. Yes, by music and

music's inspiration one goes in and touches the hem of the garments of the living God. Even Job exclaims "when the foundations of the earth were laid, the morning stars sang together and all the sons of God shouted for joy." Listen to John Dryden in his Ode to St. Cecelia's Day:

"As from the power of sacred lays
"The spheres began to move,
"And sung the great Creator's praise
"To all the blessed above;
"So when the last and dreadful hour
"This crumbling pageant shall devour,
"The trumpet shall be heard on high,
"The dead shall live, the living die,
"And music shall untune the sky."

But what of the effect of the impact of music, its charm, its lure, its challenge? Is your education merely to store up knowledge for yourself or is it to be used for the benefit of mankind and the whole world?

Under the influence of Hebrew thought, this Greek word "Kosmos" had taken on a new and sadder meaning; and in going forth to meet this world, to bring it back to its pristine glory, you must decide whether you will give to your service a completer manliness, a truer joy in your dependence upon God; and if you do, you will learn to enjoy the luxury of doing good. Remember the thrilling appeal of the modern poet, R. W. Dixon:

"Thou hast thy way to go; thou hast thy day
To live; thou hast thy need of thee to make
In the hearts of others; do thy thing: yes, slake
The world's great thirst for yet another man!
And be thou sure of this: no other can
Do for thee that appointed thee of God."

But decisions always involve temptations, and perhaps the greatest temptation that you will encounter as you leave these sacred halls is the temptation to return, or a challenge to return, to paganism. Let me give you an illustration from history itself. There were two former attempts to bring the world back to paganism. The first, under Julian the apostate, who vowed he would restore at all the pagan shrines devotees of heathen practices and issued a decree making paganism the official religion. On his deathbed, however, he said, "O Galilean, thou hast conquered"; and the world returned to Christianity. Once more, in 1453, Constantinople, the Christian capital of the east, was captured by the Moslem hosts. When I stood at the north wall of the city of Constantinople some years ago and saw the holes made by the cannon of the Moslem hosts and realized the implications of the capture of the city, it brought back a flood of memories, for all the ancient manuscripts that had been preserved from an early time had been brought to Constantinople, and after its capture scholars spread them all through the southern part of Europe, particularly Italy.

And now, young people, I want you to listen carefully for just a moment because there are certain dates in history that to an American stand only for certain things. Within 50 years after the fall of Constantinople, four events of supreme importance happened in Europe. Fourteen hundred and ninety-two is the date to which I call your attention, and you know how we commemorate that. The lure of the western world, the discovery of America—that stands out—but in the reign of Alexander VI, which began in 1492, we see all the worst side of the papacy. We note the death of Lorenzo de Medici in the same year. He had splashed beauty and blood from one end of Italy to the other, but had he not made possible the growth of the Pitti and the Uffizi galleries, thus making a permanent contribution to the spread of art, while at the same time his cruelties were unrestrained? He died in the year 1492. In that same year Savonarola condemned the awful practices in secular life. He, too, began his great reforming crusade in Florence in the year 1492. It is interesting to note that with the rise of humanism there were many things which lured men back to paganism, but again the tide was stemmed.

But today no imperial edict has been issued, no impact of an outside force like Islam threatens our modern world. It is rather the result of a very rapid extension of our knowledge of the universe and an immense growth of the means of enjoyment, together with the mechanical contrivances for the convenience of life that has numbed the souls of the present generation to the disciplinary things of life, to the things of God, and to the ways of the Christ.

I want to quote an allegory which I hope you will never forget: The spirit of modern progress one day called up a human being, and said, "I perceive that you are discontented with your life, you long for things beyond your power. Tell me, now, what it is that will make you happy and I will give it to you." The human being stopped to reflect before he replied, "If you have such wonderful power at your command, then make my life more comfortable, for I am weary of it." "You ask what is easy", replied the spirit, and thereupon he gave the human being beautiful cities, with streets that were sometimes clean and police departments that were occasionally efficient. He gave him handsome houses with modern plumbing and electric lights, and a thousand other things that made life comfortable. "Now," said the spirit, "do you wish for anything more, for you have but to ask and I will give it to you?" The man replied, "I should wish that my business life were more comfortable." "That, too," said the spirit, "is easy." And thereupon he gave him telephones and telegraphs, railroads and steamships; and then the human being asked that his pleasures be made more comfortable, so he was given motor cars, radios, airplanes, etc. Then again the spirit asked, "Do you still desire more?" And the human being replied, "Yes; make my religion more comfortable." "That," replied the spirit, "is simplicity itself." And thereupon he gave him magnificent churches, glorious choirs, and 20-minute sermons. "And now," asked the spirit, "are you satisfied at last; or is there something yet lacking to your personal happiness?" "Yes," answered the human being, "my conscience troubles me. Make that comfortable." Said the spirit, "That is the easiest thing of all." And thereupon he did away with a personal devil and gave him an easy-going summer and a hell that made a comfortable winter resort. At that the human being fell back in his easy chair and said, "Really, my dear spirit, you have made religion so comfortable that I shall hardly need to think of it," and be buried himself in his Sunday newspaper. As for the spirit, he began to float out of the window. "Where are you going?" asked the human being. "To see my father," said the spirit, "for he is dying." "Who is your father?" "The spirit of nobility," replied the spirit of modern progress, "and he is on his last legs." Address yourselves young men and women, to the recovery of the spirit of nobility, belief in those things which alone will build the ideal of one's life—that is, to restore the spirit of nobility.

Now I want to ask you a very telling question, students of the university about to receive your diplomas: Earlier in this address I asked what would be your attitude and what was your attitude to your country? I want to ask now something that is more heart-searching than that. I want to ask, "What is your attitude concerning war? Is it not the worst thing in the world?" "Just about that," you say. But is there not something just a little worse? Yes, dishonor. Even with all its horrors, the right to defend one's country, one's fireside, one's ideals, remains an inalienable right, and although I am disappointed that only last month I was retired from the Chaplains' Corps of the Naval Reserve with the rank of lieutenant commander, I have placed myself in readiness to respond to the service of my country when that country calls and that country needs me. Do not be ashamed to be a patriot. This State years ago gave to this country great and glorious souls who preserved not only Vermont but the Nation. I am not ashamed to say that I would rather, if I had to, give my life for my country than anything else. I say this, conscious of all that is involved, conscious of the terror, of the risk, of the heartaches, of the separations, of the going down. I say it in view of all that, but for God's sake, young men, let us get back to the spirit of our fathers, and if necessary let us not eschew war—for aggression—never; but for defense—always.

Life as you and I view it, if we view it properly, cannot be measured by length of days but life can be measured only by intensity. You must live to your finger tips and you must strive for those things which will bring to you and through you the highest and finest things that men may know.

Listen to the words of one who, after he wrote them, yielded up his life for his country:

"For all emotions that are tense and strong,
And utmost knowledge I have lived for these:
Lived deep, and let the lesser things live long,
The everlasting hills, the lakes, the trees,
Who'd give their thousand years to sing this song
Of life and man's high sensibilities, which I
Alone, into the face of death, can sing,
O death! thou poor and disappointed thing!
Strike if thou wilt and soon, strike breast and brow,
For I have lived: And thou cans't rob me now
Only of some long life that ne'er has been;
The life that I have lived, so full, so keen,
Is mine; I hold it firm beneath thy blow,
And dying, take it with me where I go."

And last of all, we must come to the valley of decision in regard to the greatest thing in the world. That which chooses us in order that we ourselves may welcome it to our hearts. You know already what it is. It stands for God. It stands for the highest attributes of personal conduct. It stands for selflessness, for the spirit of self-sacrifice. It welcomes, if need be, pain, sorrow, suffering. It yields to the symphony of life the major and the minor key, but it is a thing to which you must dedicate yourselves and make every other choice subservient—it must be that consideration of your fellow men, which will not only bind you closer to them but bind you both closer about the feet of God, and that thing is love.

"If Love should count you worthy, and should deign
One day to seek your door and be your guest,
Pause! ere you draw the bolt and bid him rest,
If in your old content you would remain;
For not alone he enters; in his train
Are angels of the mist, the lonely quest
Dreams of the unfulfilled and unpossessed,
And sorrow, and Life's immemorial pain.
He wakes desires you never may forget;
He shows you stars you never saw before;
He makes you share with him, forevermore,
The burden of the world's divine regret;
How wise you were to open not! and yet
How poor if you should turn him from your door."

Almighty God, who hast given the dawn its inalienable glory, midnight its quenchless stars, noonday its potentialities, and the westering sun its vesper hymn, speak to these hearts of ours, woven

as they are of human joys and cares, washed with sorrow, swift to mirth, like waters blown by changing winds to laughter, that dawn and sunset and all colors of the earth may yield to us their richest store through the kindness of the years. Light Thou our way with flaming love along the viewless streams that bear us down the dark of life, that we may beacon the world's night and set to pulsing music the unthinking silence men call death.

So in the hush of this our tryst with Thee,
Speak to our hearts, dear Lord, and set them free.

Amen.

The National Dairy Problem

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., OF WISCONSIN, MAY 4, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address by me broadcast by transcription over station WHA, Madison, Wis., on May 4, 1939, on the subject of the National Dairy Problem.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow citizens of Wisconsin, in the brief time I have on this broadcast I shall not attempt to discuss the comprehensive legislative proposals now being advocated for future treatment of the problems of the dairy industry. Instead I want to call attention to the critical situation in which this vital part of agriculture finds itself.

The economic status of the dairy farmer is of great importance to the Nation as a whole. The dairy industry produces about one-fifth of the total farm income. There are 3,000,000 farmers engaged in the production of dairy products. It is now generally admitted that buying power on the farms and in the cities is essential to an orderly functioning of our economic system. It will be seen that a drastic reduction of purchasing power on the dairy farms of the country is certain to have an adverse effect on the whole business situation.

The Bureau of Agricultural Economics reports that the number of milk cows increased in all areas during 1939. This growth in cow population will naturally increase milk production, which reached a new peak last year. The production of all dairy products in 1938 was 10 percent more than in 1937, and this trend has continued in the first part of the current year, with February showing a 5-percent increase over the same month in 1938.

The factor of increased production would be serious enough taken alone, but it is even more critical because of the excessively high storage stocks of both butter and cheese. On April 1 of this year there were 78,000,000 pounds of butter in storage, compared with only 14,000,000 pounds on the same date last year, and only 9,500,000 pounds for the 5-year average, 1934–38. Thus, surplus butter stocks were on the 1st of this month 63,000,000 pounds more than last year and 69,000,000 pounds more than the average of the past 5 years.

The butter price situation is alarming; the average price for 92-score butter in the Chicago market for the first 3 weeks of this month was 22.1 cents a pound, as compared with 26.9 cents a pound in April 1938, 31.2 cents in 1937, 29.7 cents in 1936, 32.8 cents in 1935, and 22.4 cents a pound in 1934. This month's prices are the lowest average price since 1933.

The price of cheese is equally deplorable. The average price of American cheese twins, for example, was 11.2 cents per pound for the first 3 weeks of this month. This is the lowest average price since 1934.

What the present decreases in prices mean to Wisconsin dairy farmers can be seen from the following figures:

One cent a hundred pounds on the average price of milk means a million dollars to our farmers. The average price for the State is 38 cents below that of a year ago.

One cent a pound on the price of cheese at the factory means $3,500,000 to Wisconsin producers. The price this winter and spring is 4 cents below last year. This means a loss of $14,000,000 in farmers' buying power.

These disastrously low prices prevail just as the dairy farmers are entering their period of flush production. It is too late to enact comprehensive legislation which will meet the immediate problem of surplus products and bankrupt prices for the balance of 1939. There is only one way to avert the present dairy crisis right now. Under section 32 of the Agricultural Adjustment Act the Federal Surplus Commodities Corporation has authority to purchase surplus commodities for distribution to needy persons on relief. This section provides that 30 percent of the customs receipts shall be available for this purpose and for the export of surplus commodities. During the last fiscal year the Corporation had available for all purposes $144,000,000, but because of a decline in the customs receipts only $90,000,000 will be provided for the fiscal year beginning on July 1. It is clear that this smaller sum will be woefully inadequate to meet the problem of the dairy farmer and also to deal with the impending surpluses in poultry, eggs, meat, and meat products, fruits, nuts, and truck crops, and for the export of surpluses.

The agricultural appropriation bill passed the House of Representatives without appropriating one dollar for parity payments to the five basic commodities designated in existing law—namely, cotton, corn, wheat, tobacco, and rice. Likewise the bill did not contain any appropriation for additional funds to be used under section 32 to purchase surplus commodities for distribution to those on relief and for the export of surplus commodities.

Soon after the agricultural appropriation bill passed the House a group of Senators representing States which produce dairy products, corn, and wheat met to discuss the measure. It was clear that unless some comprehensive program of appropriations was worked out and a determined fight made in the Senate, a repetition of what happened in the House would take place in the Senate. As a result of this meeting I was appointed with Senators CLARK of Missouri and LUCAS of Illinois to meet with the Senators who come from cotton-producing States in an effort to work out a unified program of appropriations which would provide adequate funds for section 32 and for parity payments.

Following this meeting and realizing that a disastrous situation confronts farmers who are not receiving parity payments under the present farm law, Senator LUCAS, Senator CLARK, and I introduced an amendment to the agricultural appropriation bill, now pending in the Senate Appropriations Committee, to provide $150,000,000 additional for the purposes of section 32. The adoption of this amendment would make a total of $240,000,000 which would be available to inaugurate and carry on projects for surplus purchase and relief distribution. It would help to prevent disastrously low prices for dairy farmers and for producers of crops other than cotton, wheat, corn, rice, and tobacco. It would also provide funds to finance the export of wheat and cotton if cotton producers desire such a program.

This amendment will remove surpluses which are driving farm products to low levels. It will distribute those surpluses to men, women, and children who are in dire need of an improved dietary standard. It will help to maintain the buying power of millions of farmers whose welfare is absolutely essential for prosperity in the cities.

Since Congress has enacted the Agricultural Adjustment Act of 1938, Congress is duty bound to make appropriations for parity payments on the basic products designated in the act. I want to make it clear that I favor adequate appropriations for that purpose, but it would be grossly unfair not to provide assistance to the farmers who produce commodities other than corn, wheat, cotton, rice, and tobacco. In short, I am urging a program of appropriations which will, in some measure at least, meet the serious situation confronting the farmers in all sections of the country.

It will be said that these large sums are not provided for in the Budget. I grant that but hasten to point out that Congress has been making huge increases in the appropriations for national defense. I do not oppose them, but no one has objected on the grounds that taxes were not levied to pay for these extraordinary expenditures.

I have consistently advocated increased taxes in accordance with ability to pay, and I stand ready to support increased revenue legislation.

I contend that large agricultural appropriations are essential at this time to meet an increasingly critical situation which is facing dairy and other farmers. More important still, a sharp decrease in farm buying power will mean a sharp decline in business activity, which in turn will depress farm markets still more and thus precipitate another vicious downward spiral in our whole economic life.

We face a situation and not a theory. Only by providing adequate appropriations for the purposes of section 32 and for parity payments can we avert a most critical situation for the dairy farmers and the producers of other agricultural crops.

The gravest danger which threatens appropriations for agriculture in the long run is the drive being made to divide the farmers and those who live in the cities and towns. This effort has manifested itself in many States including Wisconsin. It is in large measure responsible for the failure of the House of Representatives to provide the money which is needed to meet the critical problem of farmers. I close this talk with an appeal to farmers and workers to resist this effort to divide and thus to defeat them. Only by uniting and pulling together can the struggle to increase buying power on the farms and in the cities be won.

Increase in Government Agencies

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ARTICLE FROM THE NATION'S BUSINESS

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the RECORD an article from The Nation's Business for August 1939, under the title "The State Versus the Citizen. Tragic Chronicle of the Quickening Pace of Political Control."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The Nation's Business for August 1939]

THE STATE VERSUS THE CITIZEN—TRAGIC CHRONICLE OF THE QUICKENING PACE OF POLITICAL CONTROL

"The mind of man is fond of power; increase his prospects and you enlarge his desires."—Gouverneur Morris, lawyer, merchant, urging limitation of Executive powers, as a delegate from Pennsylvania to the Constitutional Convention in 1787.

REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. LELAND M. FORD. Mr. Speaker, this is a statement from a group of people who, in my opinion, are exemplifying all of the standards of American fortitude, American right-thinking, and real Americanism. This group of people have been too proud to go on relief and have consistently kept off of it, choosing to help themselves rather than to become charges of the Government.

I think that every Congressman should read this statement which I am putting into the RECORD, showing what can be done where people are really sincere and willing to help themselves.

I could say a great deal in this connection, but will just give you one or two illustrations as to what they are doing: These people, for instance, will go into the orchard country, get surplus fruit, bring it into their small cannery, and can it. They do all of the work, transportation, and so forth, and for their work are given certain credits in the association. These credits, of course, are exchangeable for any of the commodities, all of which commodities, including barber shop, medical-dental aid, recreation and entertainment, clothing, housing, and so forth, go only to their own people or others who might be stranded. I think that this group of people deserve the congratulations and commendation of every Member of this House.

The statement is as follows:

CUMULATIVE STATEMENT OF THE UNEMPLOYED CITIZENS' LEAGUE, UNIT NO. 239, J. H. HARNLY, AUDITOR

An examination of the official records of the league from July 1932 to July 1, 1939, reveals the following statistical information, under the respective captions:

	Cash received	Cash disbursed
1932	$588.25	$295.06
1933	1,823.21	1,981.72
1934	1,121.46	1,198.87
1935	1,692.61	1,730.73
1936	1,920.86	1,867.09
1937	2,441.66	2,249.31
1938	3,152.78	2,811.88
1939, July 1	1,352.50	1,558.81
Total	14,093.33	13,693.47
July 1, 1939, balance	399.86	

Relative distribution of bread and milk from July 1932 to July 1, 1939, 500,000 loaves of bread and 70,000 gallons of milk.

Food production

	Pounds
July 1, 1932 to Dec. 1, 1932	525,000
1933	1,100,000
1934	775,000
1935	650,000
1936	515,000
1937	600,000
1938	835,000
Jan. 1, 1939 to July 1, 1939	700,000
Total	5,700,000

DISTRIBUTION

This 7 years' cooperative, coordinated, conservation of surplus food—bread, milk, vegetables, and fruit, and its relative distribution—involved over four thousand members, with more than

12,000 dependents, who are enrolled regardless of age, race, creed, or citizenship. During these 7 years this self-help organization also served about 250,000 meals, including thousands of meals to transients, free.

RELATED PROJECTS

Administration and management: Coordinated division of employment, and executive integrity.

Auditing and publicity: Systematic accounts, statistics, and reports, office integrity.

Employment service: Periodic, short, and permanent pay jobs secured for members.

Barber shop: Serves about 200 men, women, and children each month.

Dormitories: Living and sleeping quarters for 50 men, and several families.

Professional aid: Medical, dental, legal, educational, vocational, and social.

Library and reading: Three thousands books and periodicals circulating.

Recreation and entertainment: Weekly assembly, reports, music, dancing, pictures, and games.

Rehabilitation: Free supply of fuel, shoes, hats, clothing, furniture, etc.

Commissary: Supplies an adequate variety and abundance of food for all.

Fish, fresh and smoked: A fleet of boats bring in tons. The surplus is smoked—75 tons.

Cannery: 100,000 quarts of vegetables and fruit; 100 barrels of kraut.

Salvage department: Collects old clothing, papers, furniture, bottles, junk, etc.

Sewing room: Repairs old clothing; made 200 rugs, 300 quilts and comforts, etc.

Wrecking equipment: Salvaged 100,000 feet of lumber and 1,500 loads of kindling.

Wood yard: Equipped with hand and power saws, axes, wedges, etc., 1,000 cords cut.

Garage and repair shops: Care for a fleet of trucks, repair shoes, radios, furniture, etc.

INDIVIDUAL DEPENDENCE VERSUS COLLECTIVE INDEPENDENCE

Individually we were economic liabilities, impotent, helpless, dependent victims of sophisticated paternalism through subversive sycophants. Collectively we are an economic asset, potent, helpful, independent, commending coordination with industrial enterprise, commercial ingenuity and professional integrity, which propels our world of culture and affairs, the inevitable factors and invaluable benefactors in a united endeavor to achieve economic, social security.

Public-spirited modern bakeries exchange their surplus bread for the coordinated labor of collective self-help; the dairies, milk; the gardens, vegetables; the orchards, fruit; and wardrobes supply shoes, hats, and clothing; buildings, shelter; and utilities, gas, light, water, and transportation.

It is coordinated enterprise that educates our children, pensions the aged, and cares for the indigent. It builds our roads, gives us fire, police, and sanitary protection, and maintains our public beneficent institutions as collective self-help blazes the economic way to rehabilitation in every community of the American Commonwealth. The jobless who can and ought to work are our greatest potential resource, and local helf-help industry the logical solution for unemployment and rehabilitation—blazing the "Santa Monica way" in the economy of God for the kingdom prepared from the foundation of the world. Our creed is service; our faith, work. Let the 300,000 employables, on relief in California, do what the 300 unemployable, but experienced leaders of the U. C. D. A. are doing to keep off of relief, and the cumulative failure of subversive paternalism will end, saving the taxpayers of our State millions of dollars every month.

Just pure horse sense places all who ought to work in reach of jobs where each for all and all for each can do their best for all. All to get a fair share of all there is is done, and all need that they may be free, pure, bright, lives full of light and health, of joy and peace, with love and good will for all. The will to do the will, will know Jesus.

J. H. HARNLY, *Publicist.*

1604 Seventh Street, Santa Monica, Calif.

Independence Day Address

EXTENSION OF REMARKS

OF

HON. B. FRANK WHELCHEL

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

ADDRESS BY HON. EDGAR B. DUNLAP, OF GAINESVILLE, GA.

Mr. WHELCHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Edgar B. Dunlap, of Gainesville, Ga., which was delivered to the Legion of my State on July 4:

Mr. Chairman, comrades of the Legion and auxiliary, fellow citizens of north Georgia, I gratefully acknowledge the kind introduction. When I received the special-delivery letter from Judge Frank Allison requesting me to be your speaker on this Independence Day program, my mind immediately turned back to that time when it was my great pleasure, in company with my comrades of Hall County, to help you organize the Ira Weaver Post, No. 121, at Blairsville. I was introduced by the friend of my school days, one of the distinguished citizens and representatives of Union County as "Maj. Edgar B. Dunlap, candidate for Congress from the Ninth District." I disclaimed the introduction then, and do so now, in order to state that aside from not being a major in the Army, I have never been and don't expect to be a candidate for Congress. My visit then and my visit today is without personal political significance. The memories of my introduction on the occasion of the organization of this post recalls an unusual presentation, which has always appealed to my sense of humor. In the year 1924, when I was department commander of the Legion, the national commander, John R. Quinn, of California, paid the State a visit. Since he was coming into the State at Augusta, it was fit and proper that we extend him a welcome in keeping with the high position which he held. Accordingly the then Governor of the State, Hon. Clifford Walker, and the then chief justice of the State, Hon. Richard B. Russell, accompanied me to Augusta to welcome him to Georgia. The citizens of Augusta, wishing to do proper honor to these dignitaries, gave a beautiful banquet, attended by more than 700 citizens, at which an eloquent speaker, versed in all the traditions and history of the State, presided as toastmaster.

On this occasion, he seemed to have been inspired and his eloquent language and musical voice held his audience spellbound. He first introduced that "distinguished citizen of Walton County, who had served his State so well as solicitor general of his circuit, later as attorney general of the State, and now as Governor of the State, the Honorable Clifford Walker." He then introduced the "distinguished son of Barrow County, who has been raised in the County of Clarke and educated at the University of Georgia, one who had served his State in various capacities and was now the supreme court chief justice, the Honorable Richard B. Russell." And then he introduced that "distinguished son of California who had travelled 3,000 miles to pay his respects to his comrades in the Legion in Georgia, one whose brilliant record as captain of artillery, Ninety-first Division, American Expeditionary Forces in France, assured his future as a leader of men in the Nation, the Honorable John R. Quinn." And then his fancy seemed to take flight and his eloquence became shaded as if by the rose-tipped fingers of the early dawn; in this atmosphere of height and color, he said, "last but not least, I want to introduce to you one whose name is known from Rabun Gap to Tybee Light, one whose name is a household word in this State of Georgia, one whose name is known to every ex-service man of the World War, one whose name is known particularly to those disabled soldiers of the World War in whose behalf he has been working night and day, week in and week out since the days of the Armistice, one whose name, we in Augusta particularly know, love, and cherish, the commander of the Georgia department of the American Legion, the Honorable 'Edgar B. Burlap,' of Gainesville, Georgia."

And so today, although I may be literally as unknown as was indicated by the introduction of the toastmaster, and although I hold no public office or policy-announcing position with any organization, either lay or church, I speak to you humbly from the ranks of the people as a plain but free citizen of this State. The exercise of my right of free speech may be offensive to some, but it is a right guaranteed me and also guaranteed all other citizens by the Constitution of the United States under which we live, under which we progress, and which as soldiers of the United States we did swear to "uphold and defend," and as Legionnaires, we have pledged ourselves to "uphold and maintain." The words that my mouth utter today come from my heart as well as my mind—they are not prompted by political considerations, they are not prompted by "fear of punishment or hope of reward," but they are and will be the expressions of my sincere and honest opinion which I have a right to hold and the courage to defend. I sincerely hope that these thoughts will find a resting place in your own minds and influence your future actions as citizens of this great State.

Within the last month, I stood at the Natural Bridge in the mountains of Virginia and noticed a tablet there inscribed with the historical fact that the lands upon which this great natural wonder stands was granted by the King of England to Thomas Jefferson on July 4, 1774. It was only 2 years later that the same Thomas Jefferson was the author of that Declaration of Independence to the people of the Thirteen Colonies, officially announced on July 4, 1776. It was this great Declaration which enunciated the hopes and the aspirations of the people of the Thirteen Colonies for independence that became the announced bridge from a monarchial form of government to a democratic form of government. It became the firm foundation of transition from dictatorial government to free expressions of the people, and it finally became the foundation of the Constitution of the United States and its accompanying Bill of Rights under which we now live and have our being and exercise our Government.

It is in celebration of the proclamation of this great human document that we are gathered here on this mountain top which overlooks the thirteenth colony, which later became the great State of Georgia, that we are gathered here today, as a free people

under laws that recognize the right of the free exercise of any religion of our choosing, the right to keep and bear arms, the right of life, liberty, and private property, the right of free speech and peaceful assemblage, and all the other rights not specifically delegated or prohibited which are reserved in the State or in the people.

Today there is engraven in our hearts those immortal words, "We hold these truths to be self-evident, that all men ar created equal, that they are endowed by their Creator with certain inalienable rights, that among these life, liberty, and the pursuit of happiness, that to secure these rights governments are instituted among men deriving their just powers from the consent of the governed" * * * and so, on and on, to the end of that great, magnificent Declaration of Independence that stands as our guiding light throughout the years, preserving our democratic institutions and our integrity as free men. It is in sacred memory of that great Declaration that we, today, as free Americans, assemble to do honor and pay respectful tribute to the Government which has been, is, and may God grant, ever remain, "a government of the people, by the people, and for the people" concerned "with equal justice to all and special privileges to none." A Government of principles and laws and not a government of men.

The reiteration of these phrases learned so long ago, but held so closely to our hearts, may subject me to the criticism that I have indulged in bromides, platitudes, and trite phrases that are commonly known to all men, but if it is wrong to declare again the universal truths of the foundation of our country, then I am a wrongdoer; if it is wrong to refresh your memory as to the inalienable rights that we possess under the written and unwritten laws of this country, then I am a wrongdoer, but at the same time, in this day of change and transition, in this day of communism and fascism, the day of corporate states and totalitarian states, I must recall the simple self-evident truths that guided the formation of our Government, the plain factual sayings that have marked the preservation of our freedom.

In order to illustrate this desire to go back to the fundamental self-evident truths of our Government I suggested in a recent speech that the time had come in the government of Georgia when we should go back to a simple governmental diet of "turnip greens, corn bread, and fat meat," something that our State pocketbook could afford; and that the State itself should be supported by all the people according to their ability, without exemption to any man from doing his duty, either in peace or in war; this statement of mine was construed in certain circles to mean that I was advocating literally a simple diet for our people. Far be it from me to advocate the lowering of the standards of living or the lowering of the educational opportunities of our children or the lessening of proper State care of our sick, aged, or insane, but I do say that our State program should be so shaped and confined to those things that we are able to pay for without undue hardships on the taxpayer; I do say that every citizen should pay taxes according to his ability and do his duty as a citizen in support of his Government and its ideals, without exception and without exemption.

There is a lot of loose talk throughout this country, particularly in the East and in the centers of foreign immigration concerning a change in our form of government and in the traditions of our Government. Our democratic form of government may not be the strongest form, but it is the freest form; it may not be the most efficient form, but it is the happiest form of government, and regardless of what the benevolent, if they be benevolent, tyrants of Europe, Stalin, Hitler, and Mussolini may do or say regarding our system of government and the conditions of our people under our democratic government, regardless of the fact that our national debt stands at $40,000,000,000 and our unemployed more than 11,000,000 persons, and our situation does not promise immediate future relief from this intolerable situation, I cannot help but recall that old story of my own home town, Gainesville, which boasts of a very beautiful and impressive statue of a soldier of the Confederacy, with his face toward the North, standing in the public square.

On one occasion, one of those large ornate automobiles with a northern license tag stopped at a corner of the square and called our local policeman to the side of the car, and with pronounced brogue, asked him the question, "I say, my man, whose statute is that in the park?" The policeman answered, "What?" and the automobilist again asked, "I asked, whose statue was that in the park?" and the policeman replied with assurance and with pride, "By gad, it's ourn." And now, it matters not to me or to you, what the dictators or kings or the potentates of the world may ask or say regarding the Government of these United States, we say to them, with pride and assurance, whether they like it or not, "By gad, it's ourn"; and furthermore, we are going to keep, uphold, and maintain the laws that preserve our rights and the traditions that protect our privileges now and forevermore.

In this celebration of the declaration of rights and purposes of a free people which have now become the statute laws of the land, I call your attention to two traditions of this country and State. These traditions, or precedents, by continued observance, are as sacred to our people as the written laws of our country. They should have been crystallized into written laws and ought now to be on the statute books. They are political in their significance but they affect the rights of the people and our loyal adherence to them and all they imply is unquestioned, regardless of the efforts of certain politicians to violate them to their own ends.

I first want to talk to you about the "no third term" tradition in this country. In this, our day and time, when leaders take such delight in destroying customs and precedents, when they interfere with their personal selfish motives or stand in the way of their self-chosen objectives, it is fit and proper to go back to the early days of the Republic and take advice from him, who was first in war, first in peace, first in the hearts of his countrymen—its first President—George Washington. What did he say regarding a third term? I quote you from his Farewell Address, delivered September 17, 1796: "The period for a new election of a citizen to administer the executive Government of the United States being not far distant, and the time actually arrived when your thoughts must be employed in designating the person who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed to decline being considered among the number of those out of whom a choice is to be made.

"I beg you at the same time to do me the justice to be assured that this resolution has not been taken without strict regard to all the considerations appertaining to the relation which binds a dutiful citizen to his country; and that in withdrawing the tender of service, which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest, no deficiency of grateful respect for your past kindness, but am supported by a full conviction that the step is compatible with both."

And so it was that Washington prepared the foundation upon which Jefferson later builded the definite tradition or third-term prohibition which is now considered as a definite custom and usage which experience has shown to be good and useful.

Thomas Jefferson, the friend of the people, the founder of the Democratic Party, followed Washington in refusing to run for a third term. Long before the end of his second administration, Jefferson informed his friends of his determination to retire. By the mere nodding of his head, by silence even, he could have been elected for a third term. But it was more natural for Jefferson to think of retiring than of breaking the precedent set by Washington. He had strongly regretted the absence of a constitutional prohibition of reelection to the Presidency, fearing that ambitious and unscrupulous men, once entrenched in power, might continue themselves indefinitely, but Washington's voluntary retirement at the end of a second term had reconciled him to the absence of a clause of limitation. Jefferson wrote a friend, "If the principle of rotation is a sound one, as I conscientiously believe it to be in respect to this office, no pretext should ever be permitted to dispense with it." I have quoted Claude Bowers, one of the ranking diplomats of the present administration and the ranking Democratic political historian of America.

In the declining years of Jefferson's life, this patron saint of the Democratic Party wrote in his autobiography "The example of four Presidents voluntarily retiring at the end of their eighth year, and the progress of public opinion that the principle is salutary, have given it in practice the form of precedent and usage; insomuch that should a President consent to be a candidate for a third election, I trust he would be rejected on this demonstration of ambitious views."

The principle of rotation in the Executive Office was repeatedly before the people from the days of Jefferson, for 60 years, but never during that time as to a particular man until the second administration of Grant when it became a serious political question and then after the Democrats and Republicans in New York joined in the sentiment of unalterable opposition to the election of any President for a third term—Congress in 1875 adopted a resolution which reads:

"*Resolved*, That in the opinion of this House, the precedent established by Washington and other President of the United States in retiring from the Presidential office after their second term, has become by universal concurrence, a part of our republican system of government, and that any departure from this time-honored custom would be unwise, unpatriotic, and fraught with peril to our free institutions."

This no-third-term tradition is now the unwritten law of the land and I am confident that the people of the United States will preserve it, regardless of the efforts of self-seeking politicians to retain themselves in office. No President of the United States has tried to serve more than two terms, save and except Theodore Roosevelt (who, in fact was only elected President one time), but he utterly failed and destroyed his party for that time being in making the attempt. Two terms—8 years—is long enough for the people to ask any President to serve and long enough for any President to ask to govern the people. The people know this and the President knows it—it is now after 150 years a tradition and precedent which must be, ought to be, and will be respected.

Any deviation from this tradition is dangerous to our form of government and in this day of centralization of power in the executive, it is particularly dangerous. May I quote Senator BURKE of Nebraska: "The temptation toward a perpetuation of the power of an existing administration never was so great as at present. Never has a comparable bureaucracy existed or its members had more reason to pull political wires to insure the security of their jobs. At no time in our history has an administration had such tremendous political powers through the distribution of public works, agricultural and other benefits, and jobs. No political organization likes to relinquish power. In the light of prevailing

trends, should the third-term tradition be broken in 1940, no man can safely predict the fate of our form of government."

Be not afraid—a majority of the people of the United States will not vote for any man for a third term and if the Democratic Party is so controlled as to nominate the President for a third term, he will be defeated. The people of the United States will no more violate the third-term tradition than they will perimt the violation of our Monroe Doctrine. Our traditions and our doctrines are our policies, and will be defended to the utmost.

For emphasis, I repeat, no third term for any President is an established national custom, precedent and tradition for more than a hundred and fifty years in the minds and hearts of all citizens, as sacred as law, whether it be written or unwritten, and will be enforced by the people at the ballot box.

Secondly, I want to talk to you about the tradition that has existed in this State for more than three decades—of the right of the people to express themselves in a Presidential preferential primary as to the nominee of the Democratic Party. Within the past 2 weeks Hon. Zach Arnold, the vice chairman of the Democratic committee, also an articulate and brilliant official of the State government, for whom I have the greatest personal esteem, reportedly made the statement before the banquet at the women's division of the Democratic Party in Atlanta, "We don't want anything to worry us. We want to go to the national convention uninstructed." In other words, the executive committee of the Democratic Party, appointed by the Governor of this State, desires not to be worried, not to be disturbed, not to be interferred with, but desires to appoint their own delegation to the national convention and vote for any man they see fit as the nominee of the Democratic Party in 1940 without referendum to and without reference to the wishes of the people of this State. The following morning the Atlanta Constitution, in an editorial regarding this speech, stated that "such a proposal is repugnant to the theory of Democratic practices as understood in Georgia. The Democratic Party has never been willing to delegate the authority to any select group, hand-picked or otherwise." And another distinguished public servant, Hon. John B. Wilson, secretary of state, immediately wrote in commendation of that editorial: "In the nomination and election of a President of the United States the Democrats of Georgia exercise the highest privilege which carries with it the greatest responsibility in our entire system of government. There should always be a free, full expression, and that expression cannot be had except through a direct primary. If the Democrats of Georgia want it, they should have it—and they will."

Senator WALTER F. GEORGE, who defeated both Talmadge and Roosevelt in the last general election for Senate, stated, "The people are certainly entitled to a preferential primary to say who shall receive the delegates * * * nothing else will satisfy the people of the State." And so, the various public leaders will announce themselves and the people will demand, of a right, a presidential preferential primary in 1940 regardless of the obedience of the present State administration to the demands of the New Dealers in Washington.

In order that we may know the history of the presidential preferential primary in Georgia upon which the primary tradition is founded, I give you as briefly as possible, the facts which have been unearthed and exposed in the public print by Hon. Charles J. Bloch, of Macon, and Hon. W. T. Anderson, of the Macon Telegraph, to whom I give full credit for their intelligent and patriotic efforts.

Under the present law of Georgia, the State Democratic Executive Committee is the only body that has a right or a voice in determination of the person to be nominated as the nominee of the Democratic Party. Under the present law, the State Democratic Committee can name the delegates to the National Convention without reference to the people and without giving the people an opportunity to express their free choice. The right of a primary, the rules of the primary, under the present law, are all in the control of the State Executive Committee, which committee is appointed by the Governor, therefore, it is possible under the present law in Georgia, for the Governor of this State to dictate who are the delegates from the State of Georgia and who they vote for as the nominee of the Democratic Party in 1940, and since we are historically and traditionally a Democratic State, it is thus possible, under the present law, for the Governor of Georgia to vote the Democratic Party in Georgia in the general election for the nominee of his own personal choice.

This is not as it should or ought to be. This fact was recognized at the last session of the general assembly, when senate bill No. 167 was introduced on March 3, 1939, by Senator Palmour of the thirty-third district and 27 other senators (being a majority of the senate) "to require the holding of a Presidential preference primary, fixing the time of such primary, providing the machinery therefor, and for other purposes." This bill was never called for a vote and it was rumored and reported in the press of the State that word from "above" had come to the senate to the effect that nothing was to be done about that bill. The Macon Telegraph asked, "Upon what meat does any political Caesar feed, if it be true that he thinks himself strong enough to obstruct the fair and honest will of the people." The bill, as written, would make it mandatory to hold a Presidential preferential primary in Georgia in 1940, and every 4 years thereafter, and that the candidate receiving a plurality of the popular vote shall be allowed to name the delegates to the national convention. It is a fair bill, a Democratic bill, and it should have been passed because it guarantees and crystallizes into law the traditional right of the people of Georgia to vote for their choice for the Democratic leadership in 1940—such a bill should be passed at the next assembly convened, whether special, extraordinary, or regular session of the general assembly, and if not included in the call, then certainly the general assembly may demand of, by resolution, the executive committee to call a primary, and thus preserve this tradition; but whether or no the general assembly enacts such a bill or passes such a resolution, the people of Georgia will demand and will exercise their right to vote whether such a primary be called by the executive committee or by the Democrats of Georgia as individuals—the will of the people will be served. In order to more clearly set forth the factual matters that established this tradition and demand its enactment into law, I must take you back through the pages of history for more than 6 Presidential years covering a period of more than three decades in this State.

In 1912 a Democratic Presidential preferential primary was held in Georgia because the State Democratic executive committee saw fit to call it. The candidates in that primary were Oscar Underwood, of Alabama, and Woodrow Wilson, of New Jersey; it was held under a rule of the State committee that the candidate receiving a plurality of the popular vote should be Georgia's choice for the Presidential nominee of the Democratic Party. It so happened that Oscar Underwood received a plurality of popular votes as well as a majority of the county-unit votes. Delegates were selected to the national convention at Baltimore, instructed to vote for Oscar Underwood, which they did. Woodrow Wilson was nominated and elected, as you well know.

In 1916 no primary was held, for the fact that President Wilson was the unanimous choice of the Democratic Party to succeed himself.

In 1920 the committee called a primary and provided: "The State delegation shall be selected from among the friends and supporters of the candidate receiving the plurality of the county-unit vote in the State." The primary was held on April 20; the candidates were Senator Thomas E. Watson and Senator Hoke Smith, of Georgia, and Attorney General A. Mitchell Palmer, of the State of Pennsylvania. Senator Watson received 49,420 popular votes, Palmer received 46,710 popular votes, and Senator Smith received 43,244 popular votes; but Palmer received 136 county-unit votes, Watson 70 county-unit votes, and Smith 63 county-unit votes; under the rules of the committee, Palmer received the plurality of the county-unit votes and was clearly entitle to the State delegation, but in the convention Senators Watson and Smith combined and elected delegates to the convention uninstructed as to candidates and unfavorable to the principles of the administration of Woodrow Wilson. After the convention had adjourned, the Palmer supporters elected a delegation instructed to vote for Palmer, the winner of the Georgia primary, and on June 28, in San Francisco, Calif., the Georgia delegation pledged to Attorney General Palmer were seated without a dissenting vote; however, that delegation, although legally elected and legally seated, received in round numbers only 46,000 popular votes as against 92,000 popular votes for those opposed to him, and by reason of the rule of the State committee the will of the people was defeated.

In 1924 the State committee provided for a primary and fixed the rule that the candidate receiving the majority of the popular vote should be entitled to the delegates from Georgia. The candidates were William G. McAdoo, of California, and Oscar Underwood, of Alabama. McAdoo received 91,682 votes and Underwood received 49,945 votes, and the will of the people was, as expressed in the primary, carried out by the selection of the delegates instructed to vote for McAdoo.

In 1928 Senator WALTER F. GEORGE was the favorite son and the only candidate filing his name with the State executive committee. However, Senator GEORGE insisted that if the name of any other person was presented to the committee by a date fixed that a primary must be held. The delegates were selected from his friends by the State committee without a vote by the people, and the Georgia delegation presented the name of our distinguished Senator to the convention at Houston, where he received the entire vote of Georgia, Florida, and a portion of the vote of Alabama and West Virginia.

In 1932 the State committee called a Presidential primary and fixed an entrance fee of $1,000. Governor Roosevelt, of New York, and Judge Gus Howard, of Georgia, qualified in that primary. Governor Roosevelt was selected as Georgia's choice by a tremendous popular majority. A convention was held and elected delegates, friends of Governor Roosevelt. These went to the convention in Chicago and voted for Governor Roosevelt, and he was nominated.

In 1936 the State committee, headed by Hon. Hugh Howell, after much talk and after the entire Georgia delegation in Congress demanded a primary of the State committee, they finally called a Presidential primary and fixed the entrance fee at the exorbitant sum of $10,000; the $10,000 was raised; the primary was not held, as President Roosevelt's name was the only one submitted to the committee and therefore he was declared the nominee and permitted to name the delegation to the Philadelphia convention; the $10,000 was returned.

The history of these Presidential years show the haphazard operation under our present system. The State committee can call, or not call, a primary. It can fix an entrance fee at $500 or $50,000. It can determine whether the results shall be governed by popular vote or county-unit vote. It may or may not, select its own delegates. There is too much left to chance and politics.

There is too much opportunity to defeat the will of the people, and a law should be written upon the statute books as heretofore suggested, which would assure the people of the rights of free expression, fix reasonable rules of the primary, assure the candidate of a reasonable entrance fee and remove the peoples' right from the whim of politics or politicians. Regardless of the legality of the committee's powers, the tradition and custom as followed over this long period of years, is that we have a Presidential preferential primary, that the popular will of the people shall decide who the nominee shall be. It is up to you and to me and to the other citizens of this State that we make our demand that our rights be observed.

In conclusion, permit me a personal reference which perhaps will clarify my statement here today. I am a Democrat and my record of loyal service to the party is known, but be it said, I am a free Democrat and, above all else, a free American. I have followed Democratic doctrines and expect to follow them, but I have respect for and obedience to the traditions, as well as the rules of the party, and I expect to do all in my power to uphold and maintain them.

I call upon all loyal Americans to attend the standards of democracy, for there are forces foreign and unfriendly, domestic, and self-seeking, that desire to tear down our traditions and deny us our privileges. You men of the mountains, attend the standards of our Government and hold high those banners of our rights, both written and unwritten, and these privileges and customs that have become the established precedent and instinctive procedure of our democracy. As I stand here today, inspired by the panorama which extends from the Great Smokies on and on to the sea, in this home of purebred Anglo-Saxon people, where the mountains in their purple majesty rise high above the fruited plain, where the people have maintained the purity of democratic principles of government, as well as their race, I paraphrase and quote that beautiful poem by Ernest Neal:

"In this rhythmical land of the Cherokees,
With its wonderful streams and beautiful trees,
In music shall roll the Indian's proud soul
As long as its rivers flow into the seas.

"In the laughing of the ripples of the sweet Salacoa,
In the falling of the current of the silvery Toccoa,
In the roarings of Tallulah, and the splashings of Yahoola
Are the wild and varied volumes of a never-written lore."

Now, in saying good-bye and expressing my thanks for this privilege, may this land of the Cherokees always be the home of and maintain a people who are patriotic, democratic, brave, and free. I thank you.

Pensions for Dependents of Deceased World War Veterans

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. VAN ZANDT. Mr. Speaker, there now is pending before the Committee on World War Veterans' Legislation of the House a bill (H. R. 2726) providing pensions for the dependent widows, orphans, and parents of all deceased World War veterans. I wish to present for the RECORD a compilation showing the number of such children, widows, and parents in all the States and the amount of money which would go to each State during the first year under the provisions of H. R. 2726. This information, compiled by Mr. Millard W. Rice, legislative representative of the Veterans of Foreign Wars of the United States, follows:

Estimated number of dependents of deceased World War veterans who would be entitled to pensions during first year under the provisions of H. R. 2726

State	Children	Widows	Parents	Total	Annual cost
United States	376,400	193,400	43,000	612,800	$111,390,000
Alabama	5,490	2,745	765	9,000	1,629,000
Arizona	1,165	585	160	1,910	345,710
Arkansas	4,660	2,330	650	7,640	1,382,840
California	22,000	11,000	3,000	36,000	6,516,000
Colorado	3,550	1,750	600	5,900	1,067,900
Connecticut	4,700	2,350	650	7,700	1,393,700
Delaware	530	265	75	870	157,470

Estimated number of dependents of deceased World War veterans who would be entitled to pensions during first year under the provisions of H. R. 2726—Continued

State	Children	Widows	Parents	Total	Annual cost
District of Columbia	3,020	1,510	420	4,950	$895,950
Florida	4,370	2,130	600	7,100	1,285,100
Georgia	6,280	3,140	880	10,300	1,864,300
Idaho	1,460	730	210	2,400	194,400
Illinois	27,160	13,560	3,780	44,500	8,054,500
Indiana	10,035	5,015	1,400	16,450	2,977,450
Iowa	8,460	4,200	1,100	13,700	2,479,700
Kansas	6,100	3,050	850	10,000	1,810,000
Kentucky	5,980	2,990	830	9,800	1,773,800
Louisiana	5,850	2,930	820	9,600	1,737,600
Maine	2,290	1,140	320	3,750	678,750
Maryland	5,140	2,560	700	8,400	1,520,400
Massachusetts	14,500	7,200	2,000	23,700	4,289,700
Michigan	14,400	7,200	2,000	23,600	4,271,600
Minnesota	9,100	4,550	1,250	14,900	2,696,900
Mississippi	3,125	1,550	425	5,100	923,100
Missouri	11,600	5,900	1,500	19,000	3,439,000
Montana	1,950	980	270	3,200	579,200
Nebraska	4,270	2,135	595	7,000	1,267,000
Nevada	350	175	50	575	104,075
New Hampshire	1,300	655	185	2,140	387,340
New Jersey	12,500	6,000	1,500	20,000	3,620,000
New Mexico	10,800	5,400	1,500	17,700	3,203,700
New York	40,000	20,000	5,000	65,000	11,765,000
North Carolina	6,750	3,350	900	11,000	1,990,000
North Dakota	1,700	850	250	2,800	506,800
Ohio	18,500	9,000	2,500	30,000	5,430,000
Oklahoma	6,700	3,400	900	11,000	1,990,000
Oregon	3,875	1,935	540	6,350	1,149,350
Pennsylvania	33,590	17,650	3,850	55,000	9,955,000
Rhode Island	215	105	30	350	63,350
South Carolina	3,750	1,870	520	6,140	1,111,340
South Dakota	2,380	1,195	325	3,900	705,900
Tennessee	6,220	3,105	865	10,190	1,844,390
Texas	15,850	7,930	2,220	26,000	4,706,000
Utah	1,530	760	210	2,500	452,500
Vermont	875	485	70	1,430	258,830
Virginia	6,650	3,325	925	10,900	1,972,900
Washington	6,100	3,050	850	10,000	1,810,000
West Virginia	4,570	2,300	630	7,500	1,357,500
Wisconsin	9,100	4,600	1,200	14,900	2,693,900
Wyoming	1,190	595	165	1,950	352,950

May I call attention to the fact that if such pensions were granted to the dependent widows, orphans, and parents of deceased World War veterans, they would receive the same amount individually, whether they lived on farms, in villages, or in cities in Eastern or in Western States and in Northern or Southern States.

No matched funds would have to be paid out by the State governments, such as is the case as to public-assistance benefits under social-security benefits.

These widows, orphans, and parents are now more or less dependent upon their local communities and States—in effect, local liabilities. Such local human liabilities would be converted into local human assets by the adoption of such pension laws.

Moreover, even more important, by transferring the burden of the care of such dependent widows, orphans, and parents from their own States to the Federal Government through the Veterans' Administration, as provided in H. R. 2726, then State social-security funds would become available in larger sums for other destitute citizens, thereby curtailing such States to a greater amount of matched funds from the Social Security Board.

Exports and Imports of Agricultural Products

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 21, 1939

Mr. BUCK. Mr. Speaker, for some time past I have been watching with interest the insertion in the RECORD of various tables of agricultural imports, inserted by the minority Members. These tables have purported to show increases of

imports, and lists of agricultural exports have frequently been inserted as well, so grouped that for the most part declines are shown for the first 5 months of 1939 over 1938. Occasionally one or two decreases in the agricultural imports are shown in the select or picked list. The whole list is presented under the guise of products which have been affected by trade agreements.

It seems to me that for the sake of accuracy someone of us ought to insert what are the actual figures in connection with imports and exports of agricultural products, and therefore I am calling the attention of the Members of the House to what is the actual state of affairs, as far as our import and export trade is concerned.

Of course, for those who have no regard for accuracy, it does not matter that about half of the items in the inserted lists have not been the subject of concessions by the United States in trade agreements. Opponents of foreign trade have a weak case and therefore have to pad the list to make what they consider an unfavorable showing. In order to keep the record straight, I present a few of the agricultural imports which have decreased during the first 5 months of 1939 over 1938.

Product	Unit	1938	5 months, 1939
Butter	Pound	923,000	458,000
Swiss cheese	Pound	5,664,000	5,141,000
Eggs and egg products	Pound	903,000	383,000
Pork, fresh	Pound	2,169,000	843,000
Tallow	Pound	632,000	452,000
Corn	Bushel	227,000	164,000
Barley malt	Pound	45,746,000	43,988,000
Sugar	Ton	1,331,000	888,000
Molasses	Gallon	89,624,000	86,231,000
Tung oil	Pound	43,188,000	32,838,000

In giving the above list I want to say that in either year the quantity of imports of the products in comparison with the production in the United States was generally so small as to have little effect on the domestic producers. Shown alone without reference to production and prices the figures of imports mean very little except, as the opposition hopes, a political effect.

It is interesting to note the changes of the products from time to time. Formerly butter headed their list. Now that that product has shifted to an export basis it is omitted from the list.

I also want to complete the record and show a few agricultural products the exports of which increased for the first 5 months of 1939 over 1938.

Product	Unit	1938	1939
Bacon	Pound	3,237,000	3,543,000
Hams and shoulders	Pound	21,322,000	27,951,000
Lard	Pound	88,633,000	117,996,000
Milled rice	Pound	104,721,000	139,399,000
Wheat	Bushel	43,268,000	44,034,000
Flour of United States wheat	Barrel	1,595,000	2,464,000
Apples	Bushel	5,472,000	5,849,000
Oranges	Box	3,786,000	4,131,000
Grapefruit	Box	483,000	689,000
Apples, dried	Pound	5,483,000	12,542,000
Raisins	Pound	38,164,000	39,581,000

These increases are not as large as some of us, who are interested in export trade, would like to have them. There have been concessions obtained on all these items in trade agreements, but no one maintains that these increases in all cases were brought about as a result of trade agreements. This table merely presents a more favorable situation than the opponents of trade agreements show in their monthly presentation for the CONGRESSIONAL RECORD, and which go out over the country to misinform the farmers of the true situation.

Thomas A. Edison and Mrs. Mina M. Edison Hughes

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, July 21 (legislative day of Tuesday, July 18), 1939

ADDRESSES IN HONOR OF THOMAS A. EDISON AND MRS. MINA M. EDISON HUGHES

Mr. BARBOUR. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the remarks delivered by the honored guests at a dinner sponsored by the Livingston, North Newark, and West Hudson Kiawanis Clubs to honor the late Thomas A. Edison and Mrs. Mina M. Edison Hughes, held at the Newark Athletic Club Wednesday, May 31, 1939.

I point out the fact that mayors of 11 communities in northern New Jersey and Governors of 22 States of the Union issued proclamations proclaiming February 11 of this year as Edison Day in recognition of Mr. Edison's contribution to civilization. Mr. George E. Stringfellow, vice president of Thomas A. Edison, Inc., later collected the original proclamations, together with the autographed photographs of those issuing them, and had them bound and presented to Mr. Edison's widow at the dinner.

In view of the great contributions of the late Thomas A. Edison to mankind, and the significance of this particular occasion, I trust that the Senate will consent to the publication of this interesting material.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

INVOCATION

Maj. RALPH MILLER, State Commander, Salvation Army. Our Father God, the giver of every good gift, we come to Thee tonight with a deep sense of gratitude in our hearts. We thank Thee for all Thy blessings to us, but this evening we are specially mindful of the gift of science and invention as personified in the life and achievements of Thomas Edison. We thank Thee for all he has been able to do to make the world brighter, both physically and spiritually, and the hard road easier for many feet. We pray that Thou shalt sensitize our hearts as well as our minds that we may be increasingly mindful of our blessings as manifest through Thy children.

We thank Thee for the presence at this gathering of her who was the inspiration of all his efforts and achievements for humanity, and beeseech Thy continued guidance for her and her loved ones.

Bless the food that has been provided for us, and may we spend the strength derived from it for Thy honor and in service to our fellow men. Amen.

WELCOME

ARTHUR E. BLUMENSCHINE. Honored guests, ladies, and gentlemen, on behalf of the Livingston, North Newark, and West Hudson Kiwanis Clubs, may I extend to each of you a sincere welcome on this occasion to honor one of America's greatest men, Thomas Alva Edison.

I take great pleasure in presenting to you the public relations chairman of the North Newark Kiwanis Club, a man of action, our toastmaster for the evening, Mr. Emil G. Meyer.

EMIL G. MEYER, toastmaster. President Blumenschine, President De Camp, President Diver, honored guests, ladies, and gentlemen, among the few enduring satisfactions of life is the attainment of the respect of one's fellow man. Tonight we are paying respect to the living, Mrs. Mina Edison Hughes, and respect to the departed, Mr. Thomas A. Edison.

Without mental reservation, these two are worthy of the respect that we are paying them tonight. What a strange coincidence. A few moments ago I heard that we are also adding our respect to Mr. Edison's daughter, Mrs. John E. Sloane, whose birthday is today.

There are upward of 530 people here tonight. Had we accommodations five times the size of this dining hall, we would have had 3,000 people paying tribute. The size of the room determined the capacity of the industrial cross-section of the community paying respect to the great inventor, Mr. Thomas A. Edison.

An additional purpose of the gathering here tonight is to know one another better. You know what the world needs today more than anything else is greater understanding, and greater understanding can only be obtained through contact. May I suggest that, at the conclusion of this gathering, we again reassemble in Duffield Hall and further fraternize?

We may not be able to do the things that Mr. Edison has done, but we can say a kind word to our neighbor, and, through that kindness, we can carry on by word of mouth the very thing that Mr. Edison has done. He has made and is still making people happy. Let us know each other better; and if we know each other better, I am sure we will love each other more.

In the words of the Honorable John W. Bricker, Governor of the State of Ohio: "What America needs is another Thomas A. Edison."

It may interest you to know that the entire proceedings of this evening are being automatically recorded on a device invented by Mr. Edison and later perfected by his engineers—the Ediphone. On these records, your singing and the spoken words of the people at the head table are being recorded—all to go down in the archives, a permanent record of the tribute we are paying Mr. Edison here tonight.

There are four messages printed in the program—one from the President of the United States—which reads as follows:

"MY DEAR MRS. HUGHES: It must be with a sense of triumph that you will receive the tribute in honor of your late husband which will be presented to you on May 31.

"It gives me great pleasure to join with those who would thus acclaim the memory of a man who devoted a long life so assiduously to the practical application of science to everyday needs. His claim upon our remembrance for the works he wrought is his best monument.

"Very sincerely yours,

"FRANKLIN D. ROOSEVELT."

One from past President Herbert Hoover, and this reads as follows:

"MY DEAR MRS. HUGHES: I am, indeed, glad to see the movement that has been gotten under way to honor Thomas Alva Edison. For this I am grateful. No man in any civilized part of this earth can live his day through without enjoying in some measure benefits created by Mr. Edison.

"It is fitting that a day be set aside in specific recognition of these benefactions. They are more than personal comforts. He added to the productivity of the earth. He added to human freedom from drudgery and toil. He created new provinces of human thought and human liberty.

"It is unfortunate that I have an engagement scheduled elsewhere, as I should like to be with the gathering that will honor your late husband on May 31.

"My warm personal regards to you,

"Yours faithfully,

HERBERT HOOVER.

A message from Alfred E. Smith, which I will read to you:

"MY DEAR MRS. HUGHES: I am delighted to know that the New Jersey State Legislature has petitioned Congress to proclaim an annual 'Edison Day,' and sincerely hope that favorable action will be granted in Washington. Certainly there is no honor too great for the memory of Thomas A. Edison, who left behind him so much that has contributed to the progress and comfort of present-day humanity.

"Rest assured that you can count me as one of those favoring every thought of respect and homage to the memory and achievements of Thomas A. Edison.

"I sincerely regret my inability to be with you and your many friends on the occasion of the presentation to you of the proclamations issued by the various mayors and governors.

"Sincerely yours,

"ALFRED E. SMITH."

I will also read this to you from Governor Bricker, of Ohio:

"DEAR MRS. HUGHES: As Governor of the State in which Thomas A. Edison was born, it gives me great pleasure to extend greetings in behalf of the citizens of Ohio to those in attendance at the dinner meeting at which you are to receive the proclamations issued by governors and mayors in connection with Edison Day.

"Thomas A. Edison was born Februry 11, 1847, in Milan, Ohio. He is rightly entitled to the title of the country's greatest inventor. The people of Ohio will always remember the greatness of Mr. Edison and the contributions he made to the advancement of this country.

"What America needs today is another Thomas A. Edison.

"Assuring you of my regret at not being able to attend the meeting, and with kind personal regards, I remain

"Cordially yours,

"JOHN W. BRICKER,
"Governor, State of Ohio."

I also have a telegram from Senator BARBOUR, which reads:

"Regret exceedingly will not be able to be with you, but important conferences of long standing in connection with legislative program demand my presence here in Washington. I assure you if the situation were otherwise Mrs. Barbour and I would not fail to attend. Please accept our respects and kind regards.

"W. WARREN BARBOUR."

In like manner I have a telegram of congratulation from Mr. Henry Ford, and I think you will all be interested in my reading this to you:

"It is very gratifying that so many of the Governors of States and mayors of cities are proclaiming February 11 as Edison Day. Mr. Edison's service to mankind will be remembered the world over wherever power and light and sound are made and used for human welfare. It is with much regret that Mrs. Ford and myself are unable to join in your celebration tonight, but we are glad to report that today, as every February 11 since Mr. Edison's passing, has been kept at Dearborn and by the Edison Institute of Technology. So that we are in reality joined with you in remembrance of that great man.

"Mr. and Mrs. HENRY FORD."

I also have one from Congressman VREELAND, in which he says:

"Regret congressional activities compel my absence. Hope Congress will officially recognize Edison Day next year."

Oh, how I wish we had the time to read all the letters and telegrams of tribute lying before me—tributes real, genuine, heartfelt in their expressions of Mr. Thomas A. Edison's greatness.

The printer has made an excellent formal presentation of our honored guests at the head table. I refer you to the printed program for their background and affiliations. A splendid group, don't you think so?

Genius as Mr. Edison was, you know he, too, had a very human side. He loved mankind. He loved flowers. He loved music. Would you like to hear some of Mr. Edison's favorite music?

(There follows the toastmaster's introduction of the musical program which included some of Thomas A. Edison's favorite selections.)

Mr. Herbert J. Pascoe has been a member of the New Jersey House of Assembly for 12 terms. In 1937 he was minority leader and at the present time he is speaker of the house. I take pleasure in presenting to you the Honorable Herbert J. Pascoe.

Hon. HERBERT J. PASCOE (speaker of the House of Assembly of New Jersey). Mr. Toastmaster, honored guests, ladies, and gentlemen, my few remarks are to be addressed chiefly to Mrs. Hughes.

Mrs. Hughes, history was made in the Legislature of the State of New Jersey when on May 17 it was my happy privilege to present you to the house of assembly while in session. I believe this is the first time that a distinguished lady citizen was so presented to the State legislature.

On that occasion your gracious manner and personal charm won the hearts of the members. They have commissioned me to bring to you tonight a message of deep appreciation and respect.

So many of the wonderful achievements of your distinguished husband, Thomas A. Edison, were accomplished on the soil of our beloved State of New Jersey that the legislature has felt it desirable that they should in some manner assist in commemorating his memory.

The first such occasion was during the legislative session in 1938, when the Honorable Edgar Williamson, Jr., assemblyman from Essex County, then sponsored a resolution calling on the Federal Congress to set aside February 11 as Edison Day. New Jersey thus initiated a movement which has since been generally adopted by the various States of the Union.

The second instance was this year when the Honorable Bernard W. Vogel, assemblyman from Middlesex County, sponsored a resolution naming the new bridge to be constructed across Raritan Bay, as the Thomas A. Edison Bridge. This resolution having been adopted, the bridge soon to be constructed will be a lasting memorial of the regard of the people of New Jersey for the memory of Thomas A. Edison.

Mr. Edison, always mindful of his fellow man, was just such a citizen as the poet had in mind when he penned his beautiful lines:

"Oh, God; give us men, determined, brave and strong,
Who dare to do the right and smite the wrong;
Wholehearted men, unselfish, fearless, bold,
Whose love of truth outweighs the greed for gold.
Devoted men, who think and pray and plan
How best to live and serve their fellow man."

They tell the story that when someone asked Mr. Edison whether he attributed his wonderfully successful achievements to inspiration or perspiration, he replied, "A full measure of both."

When he thought of inspiration, it must have been that patient encouragement that he received from you; your constant source of aid and help that inspired him to persist in his endeavors even when the outlook was most discouraging.

This audience tonight, in appreciation of the aid and inspiration that you gave to one of New Jersey's former outstanding citizens, has asked me to present to you and your daughter, Mrs. Sloane, these beautiful bouquets of red roses. As these roses are living manifestations of God's mysteries of creation, may they remind you tonight that it was from the same mysteries of creation that Thomas A. Edison brought forth his great accomplishments to lighten the burdens of humanity.

EMIL G. MEYER, toastmaster. Confidence downward begets confidence upward. Many years ago I heard Mr. Charles M. Schwab say: "My young partners do all the work and I do the laughing and I recommend to you that there is little success where there is little

laughing. In leading men there is more stimulus in a smile than in a thousand harsh words." Mr. Schwab is an internationally known captain of industry, whose advice and wisdom is sought by industrialists, financiers, and Government leaders. He is chairman of the board of the Bethlehem Steel Corporation. I present Mr. Charles M. Schwab.

CHARLES M. SCHWAB, chairman of the board, Bethlehem Steel Corporation, I tried to remember the names mentioned by Mr. Meyer of the various guests present here tonight, because I do not know all of them. But I've forgotten them, and I think at this time I can very well and appropriately say to you, in anticipation of the few words I may say, "My dear Mrs. Hughes, ladies, and gentlemen."

Now, when I saw this kindly and eloquent gentleman present the roses to Mrs. Hughes and her daughter, my mind turned back in reminiscence of years ago. This seems to me to be a night of reminiscences. And I remember one of my first experiences in life was with Mr. Carnegie, who gave his first library to the town of Braddock, Pa. We had a great celebration to honor Mr. and Mrs. Carnegie, and I thought it would please them both if I had some typical steelworker present Mrs. Carnegie with a bouquet of roses. And so, looking over our workmen, I finally selected one, John Noyes, a typical rugged steel man, to make the presentation speech to Mrs. Carnegie.

I had John on the carpet at my office for about 3 weeks until I had him letter perfect in the speech he was to make.

The auspicious moment arrived, and when John came to the stage to present the bouquet of flowers I saw him turn pale, and disaster appeared imminent. However, John started his speech and got as far as saying, "Mrs. Carnegie," and then stopped. He couldn't go any further, but with true American spirit he handed the roses to Mrs. Carnegie, and she accepted them with appropriate remarks. After Mrs. Carnegie had finished speaking the rest of John's speech came back to him. He then remembered what he was to have said in the first place. And he took the roses back from Mrs. Carnegie and started his speech again.

That's how I feel tonight. When your good president and others asked me to come over here to present the book to Mrs. Hughes, I thought that was all I had to do. I would present the book with the same sentiment, love, and esteem that I had for Mr. Edison and Mrs. Hughes during all these years, and that my duty would be ended. But I find that I have been asked to say a few words. Because the speeches have been so brief, and the music so good, I'm inclined to let my soul outpour tonight with reference to this great man, whom I first met in 1886, a long time ago, and have been his friend during all the years of his life. Yes; more than merely a friend. I had great affection for him. Perhaps few men in this country have known intimately more men, and great men, throughout the world than I've known. Circumstances of life placed me in that position, and I am glad in this, the home of Mr. Thomas Edison, to say frankly, and with the truth of age, that Mr. Thomas Edison, to my mind, was the greatest man I ever knew in my long life.

I worked on some problems with Mr. Edison, and as time went on I learned to admire him all the more. I even learned his language, and used it frequently. I remember one night in New York when I coaxed Mr. Edison to make a speech before the microphone; he wouldn't do it. We were recording speeches of the great men of our time, and I asked Mrs. Hughes to prevail upon her husband to make the speech, and we finally reached a compromise. Mr. Edison said, "Well, Charlie, I'll stand for the picture if you'll make the speech." I said all right. So we stood together, my arms about him. I suppose I was a little long, and he was a little nervous and he didn't hear very well what I said, and not being familiar with the fact that the radio was recording everything, he said, "Don't be so damned long, I'm tired." I said, "All right, Mr. Edison, we'll cut it short." And that's all in the record preserved at Columbia University.

I think I was the first to show Edison—Mr. Edison—the opinions of people by asking them instead of applauding with their hands to cheer with their handkerchiefs. The great universities of the United States gave a dinner to the pioneers of industry, of which Mr. Edison was, of course, head and shoulders above all; and he was the center of attraction. I said to the people, "Now, he can't hear your applause. Stand up and wave your handkerchiefs until you're tired, and I'll explain to him that that's your way of showing your appreciation of him."

Now, let me say a few things about these troublous times. I've been in industry 60 years. I have never seen times that are so inexplicable, so difficult, as today. We don't know where we stand. We don't know whether business is going to be successful or not. We don't know whether our lives are going to be successful; but there's one thing I'm sure, that if we had a few Thomas Edisons alive today we could be certain that we would be nearer the solution of our troubles. In my opinion, business does not depend upon legislation, but business depends upon the initiative of men, and the greatest example in this direction was Mr. Edison. Moreover, business requires that men be paid their due for unusual endeavor and service to their fellow man. Men who are leaders must be acknowledged as leaders, and our faith in men of this caliber will serve in great measure to put this country of ours in the position it well deserves.

There is no nation in the world that has the natural resources of this great United States of ours. Combine these resources with the unhampered initiative of our people, and you may be sure of wonderful results.

If I were writing a title for Mr. Thomas Edison, however, I would be reminded of what is said of the architect of St. Pauls in London, when they wrote above his tomb: "If you would see—if you would know this life—look about you." And so with Mr. Edison. We can use all the words we like in praise and admiration of Mr. Edison, but all you need to do when you think of this great man is look about you. Where would we be without the things that he has developed?

One of the proudest things at my time of life is to have the realization that in the earlier days I could call Mr. Edison my friend, and we were real friends, Mrs. Hughes, until the last, as you well know. I loved him as I loved a father. I admired him to such an extent that it would be indescribable. He was intuitively, and by nature, a great man. When President Butler introduced us to the heads of all the universities of America, he said, "Not one of the men we are honoring as pioneers of industry has ever been to a college. So you can imagine my embarrassment."

I could go on talking in this vein. I could talk forever about the virtues and the wonders of this great man. I would have you remember I came over from New York in 96 degrees of heat—but when you said that this was for Mr. Edison, I said, "If it's the last act I do in my life, I'll go and pour forth the admiration that I have for this great man."

Now, I haven't said much about Mrs. Hughes. Knowing her for many years, I have said a great deal more to her privately than I'm going to say to you people publicly. And after many years, we have both reached the age where we are rather insusceptible to flattery, but I do say that she must be remembered in this community as a great help and inspiration to this wonderful man, and with all that she's mighty good to look upon. I know Mr. Hughes is here, but when people said things like that about my wife I certainly took it to myself and said, "Well, you're a pretty good judge, after all." So when I say it to Mrs. Hughes publicly and privately, I admire her for what she's done and for her kindly disposition, and there's no greater pleasure that could come to me than to have been selected to present you, Mrs. Hughes, with this lovely volume that has been prepared by your friends with so much care, that contains the records of the messages of 27 or 28 Governors; of resolutions entered into in our own Congress; and the tributes of affection and admiration from the leading newspapers of the world. I've read them all with care. There's nothing very new about it. It doesn't half do the subject justice, but it's the best that human nature could do; and, therefore, at the request of the gentlemen who have compiled this beautiful book for your records of the years to come, it gives me untold pleasure, Mrs. Hughes, to be the medium for presenting you, before your various friends here tonight, this volume.

Mrs. HUGHES. Mr. Schwab, I thank you for coming to us tonight, as Mr. Edison always so greatly admired you, and I deeply appreciate your graciousness in presenting to me this valued book, which I shall ever treasure.

And I want you particularly, Mr. Stringfellow, to know that I am grateful to you for your loyal and untiring effort to bring about this well-deserved recognition.

I want to express my appreciation and thanks to you all who are instrumental in honoring Mr. Edison in this wonderful way.

I humbly accept this tribute in the name of my great and beloved departed one. No one knows so well as I the hours and tireless energy spent for the accomplishment of his desires to give the best to his fellow men. Nothing satisfied him but perfection. He was Nature's man in his simplicity, and I always felt that he was truly God's instrument, of whom He could say: "Well done thou good and faithful servant. Enter thou into the kingdom of heaven."

Mr. MEYER. We have many dignitaries gracing our head table who saw fit to break bread with us tonight, but I'm just going to take time out to introduce one who's traveled a considerable distance, and I take great pleasure in introducing the Honorable Richard C. McMullen, Governor of the State of Delaware.

In Delaware the Governors don't speak.

You know the great teacher is not the man or the woman that supplies the most facts, but the one in whose presence we become different. The next speaker is such a personality. He is capable, interesting, dynamic, long-visioned, and has a splendid national reputation. He will address you on The Pioneer Spirit. He needs no introduction. I present to you Gov. Harold G. Hoffman.

Governor HOFFMAN. Mr. Toastmaster, guest of honor, Mrs. Hughes, Mrs. Sloane, Governor McMullen, Mr. Schwab, distinguished guests, ladies, and gentlemen, I feel entirely inadequate in approaching the subject that has been assigned to me, The Pioneer Spirit—something that was woven so closely into the life and work of the man whose memory is being honored tonight. And I approach this task with some degree of humility, particularly in view of the fact that several people are here who have been so closely associated with the late Mr. Edison in his work that they could tell you much more capably than I of that work and of his beneficent influence upon humanity.

I am particularly appreciative of the fact that tonight we have with us the beloved daughter, and that woman, particularly, Mrs. Hughes, who for so many years shared the companionship of Thomas Alva Edison. It was Everard Jack Appleton who once expressed, in words far more appropriate than I could pass on to you, the thought that inspiration, courage, and incentive come to every man whose deeds are recorded in history, through a mother, a wife, a sister, a sweetheart, a daughter, or some good woman. He said:

"This is the story of ages—this is the woman's way;
Wiser than seer or sages—leading us day by day.
Facing all things with a courage nothing can daunt or dim,
Treading life's pathway wherever it leads;
Lined with flowers or choked with weeds.
Guide, comrade, golden spur; the men who win are helped by her."

I think that this occasion is particularly well timed. We pay tribute to the memory of this man immediately following that day which is set aside in the lives of all Americans—Memorial Day, dedicated to the past, a day rich in memory, a day when we pause and go back over the paths that America has traveled, enshrined in our memory as sweethearts preserve a flower, a rose perhaps, between the leaves of a beloved book.

And as we go back over the paths that America has traveled we find that long road of a century and a half filled with pictures. We think of the minutemen at Lexington, there upon the green; not yet defying their King, and yet insisting upon fighting for their rights. We think of Yorktown; we think of Saratoga. Those of us living here in New Jersey think of Princeton, of Trenton, of Monmouth, and Molly Pitcher. And then there are the pictures of flags, the pictures of pride, the pictures of freedom, of victory. There's a picture that comes to us of the old *Constitution* sailing its way between the British vessels, the *Cyane* and the *Levant*, the guns booming under the moon and with victory coming at dawn. Then there's the long epic struggle of the Civil War. The stone fence at Gettysburg, the long, skilled, cool fight of Robert Lee with a dying army, and finally the victory, with Lee sheathing his sword, and with Grant saying, "Go ye in peace, my brethren." And then just as in a crucible, the refined metal comes out pure and shining, separated from the dross, so, too, from the trials and the fire of battle and war a great new Nation emerged.

There are other pictures—Custer dying with his men of the Seventh Cavalry; with their noses filled with the acrid smell of gunpowder, of thick blood, and the dust of the hooves of the circling Sioux ponies. Then 1898—Dewey at Manila Bay, pausing in the middle of a battle as he was winning an empire 6,000 miles away from home, to have breakfast. The cry, "Remember the *Maine*," and old Spain, gallantly losing the fight for the golden Indies in the bright waters of the Spanish Main. And then there are the more recent memories of 1918 when we raised a fine young army, developed practically a new Navy, with the substantial aid of the men of industry, and this Navy carried the men overseas. Here at home again it was the mothers, wives, sisters, and sweethearts who made a great sacrifice. We know that in their hearts the fires of patriotism burned just as brightly as in the hearts of the most intrepid soldiers upon the far-flung battle lines.

But the thing I would like to impress upon you tonight is that the pictures enshrined in the minds and in the hearts of Americans are not all pictures of war; not all pictures of battle; because there also has been a long epic struggle of industry in the United States. We have pictures of the early founders, the pioneers who labored to wrest the grain from the reluctant soil, fighting against the beast, fighting against hardship, fighting against weather. There are pictures of men who were valiantly making an effort to build up America, whose spirits still live in the present day, captains of industry, some whose names have been mentioned and some seated at this very head table tonight. All have helped to build up America; the men who created the railroads that penetrated the wildernesses; the men who established the cities upon the prairie and made them grow.

When you consider the growth of America in times of peace you'll find, too, that most of these men have been inspired by that quality chosen as the subject for my talk to you tonight. And that is the pioneer spirit. We recognize, as Mr. Schwab has already said, that here in the United States we do have some troubles; conditions seem to be unsettled; and yet we recognize, too—and I'm sure he will agree with me in this statement—that here in the United States, as compared to the other countries of the world, we are standing at an advanced point on the high road of civilization. And you'll find that the initiative in striving to reach higher attainments was taken by our pioneer forbears, the ones who were willing to go out to do the things that hadn't been done before. They had that old passion to discover, the passion to explore. Joseph Husband tells us that it's that passion that's responsible not alone for the fact that today we are enabled to ride across the continent in fast trains, that we can now speed through the air, that we can go across the ocean on great steamships with palatial accommodations, but that it's responsible, too, for the skill that enables the surgeon to save the lives of countless thousands of people throughout the world. All these things arise out of that passion to discover, one of the earliest emotions, Husband says, that men experienced.

He gives us a picture of a cave boy, born and living in a quiet wooded valley that represented his entire universe. Each morning he would see the sun rise above the eastern hills and melt the night mist from the valley. During the day he hunted, fished, or swam the stream that came tumbling down from the mountains through cascades of white water and successions of dark, deep pools. Then at evening, as his mother cooked the meal over the embers of a wood fire, he squatted and watched the sun set in red and yellow flame behind the black wall of the mountains in the west. Those encircling mountains represented his world. He knew of nothing that existed beyond them the size of which would dwarf his surroundings into insignificance. Then, one day there came a new and a strange emotion, a desire to climb to the top of the mountains. When he reached the pinnacle he saw his home valley far below him on the right with the smoke from the fire before his father's cave rising like a tiny thread of gray against the green. But here on the other side was another valley, a new world that he had never glimpsed. For years he had lived in his own little world, ignorant of the existence of anything beyond. For the first time he felt the urge of the romance of exploration burning within him—he had heard the whisper calling him into strange and hidden lands.

In the years that followed, his children and their grandchildren went on and on, always the more venturesome ones climbing the highest mountains, finding some way to get across the deepest streams or nature's barriers.

Thus from small beginnings came civilization, the wonderful civilization of Greece, and Rome, and Europe, with its seaport towns and the challenge of the broad Atlantic as an avenue for new discoveries. Columbus dared to search the uncharted seas, yielding to the lure for all the mariners of his time, the northwest passage to India. In three tiny, unseaworthy vessels, as you know, he set sail into the vast unknown. Joaquin Miller pictures that last night in the triumph of Columbus, as follows:

"Then, pale and worn, he kept his deck
And peered through darkness. Ah, that night
Of all dark nights! And then a speck—
A light! A light! A light! A light!
It grew, a starlight flag unfurled!
It grew to be Time's burst of dawn.
He gained a world; he gave that world
Its grandest lesson: 'On! Sail on!'"

And so in the years that followed, other men went out upon the sea; other men went up the mountains, crossed the mountain passes, and discovered new lands, and finally there came a time when it seemed that geographical exploration had ended. Today we cannot imagine our boys and girls looking upon any part of the earth's surface that never before has been seen by man. In the past it was geographical exploration.

But it seems to me that it's a wonderful thing to know that there are still so many avenues open for exploration, and that for our boys and girls the land of romance lies just around the corner; that the urge to explore, to do things that are new, may come to them just the same as it came to Magellan, to Sir Francis Drake, or to young Byrd, who flew the American flag to the poles.

Perhaps there's nothing I could pass on to you that would better express the thought that I have in mind than Rudyard Kipling's poem, The Explorer:

"'There's no use in going further—it's the edge of cultivation,'
So they said, and I believed it—broke my land and sowed my crop,
Built my barns and strung my fences in the little border station,
Tucked away below the foothills, where the trails run out and stop.

"Till a voice, as bad as Conscience, rang interminable changes,
On one everlasting Whisper day and night repeated—so:
'Something hidden. Go and find it. Go and look behind the Ranges—
Something lost behind the Ranges. Lost and waiting for you. Go!'

"So I went, worn out of patience; never told my nearest neighbors—
Stole away with pack and ponies—left 'em drinking in the town;
And the faith that moveth mountains didn't seem to help my labors,
As I faced the sheer main-ranges, whipping up and leading down.

"March by march I puzzled through 'em, turning flanks and dodging shoulders,
Hurried on in hope of water, headed back for lack of grass;
Till I camped above the tree line—drifted snow and naked boulders—
Felt free air astir to windward—knew I'd stumbled on the Pass.

"Thought to name it for the finder; but that night the Norther found me—
Froze and killed my plains-bred ponies, so I named the camp Despair
(It's the Railroad Gap today, though); then my Whisper came to hound me—
'Something lost behind the Ranges. Over yonder. Go you there!'

"Then I knew the while I doubted—knew His hand was certain o'er me,
Still—it might be self-delusion—scores of better men had died—
I could reach the township living, but, He knows what terrors tore me,
But I didn't, but I didn't. I went down the other side.

"Till the snow ran out in flowers and the flowers turned to aloes,
And the aloes sprung to thickets and a brimming stream ran by;
But the thickets dwindled to thorn scrub, and the water drained to shallows—
And I dropped again on desert, blasted earth and blasting sky.

"I remember lighting fires; I remember sitting by them;
I remember seeing faces—hearing voices through the smoke;
I remember they were fancy, for I threw a stone to try 'em
'Something lost behind the Ranges,' was the only word they spoke.

"I remember going crazy, I remember that I knew it
When I heard myself hallooing to the funny folk I saw,
Very full of dreams that desert. But my two legs took me through it
And I used to watch 'em moving with my toes all black and raw.

"But at last the country altered—white man's land beyond disputing—
Rolling grass and open timber, with a hint of hills behind—
There I found me food and water, and I lay a week recruiting,
Got my strength and lost my nightmares, then I entered on my find.

"Thence I ran my first rough survey, chose my trees and blazed and ringed 'em
Week by week I pried and sampled, week by week my findings grew.
Saul he went to look for donkeys, and by God he found a kingdom!
But by God who sent his Whisper, I had found the worth of two!

"Up along the hostile mountains, where the hair-poised snowslide shivers—
Down and through the big fat marshes that the virgin ore-bed stains,
Till I heard the mile-wide mutterings of unimagined rivers
And beyond the nameless timber saw the wide and fertile plains.

"Plotted sites of future cities, traced the easy grades between 'em;
Watched unharnessed rapids wasting 50,000 head an hour;
Counted leagues of water frontage through the ax-ripe woods that screen 'em,
Saw a plant to feed a people—up and waiting for the power.

"Well I know who'll get the credit—all the clever chaps that followed—
Came a dozen men together—never knew my desert fears;
Tracked me by the camps I'd quitted, used the water holes I'd hollowed,
They'll go back and do the talking, they'll be called the pioneers!

"They will find my sites of townships, not the cities that I set there.
They will rediscover rivers, not my rivers heard at night,
By my own old trails and markings they will show me how to get there,
By the lonely cairns I builded they will guide my feet aright.

"Did I name a single river; did I claim a single acre,
Have I kept a single nugget (save for samples)? No, not I.
Because my price was paid me 10 times over by my Maker
But you wouldn't understand it. You go up and occupy.

"Ore you'll find there; wood and cattle; water transit sure and steady
(That should keep the railway rates down) coal and iron at your doors,
God took care to hide that country 'till he judged His people ready,
Then He chose me for His whisper, and I've found it, and it's yours!

"Yes, your 'never, never country'—yes, your 'edge of cultivation'
And 'no sense in going further'—'till I crossed the range to see.
God forgive me! No; I didn't. It's God's present to our Nation.
Anybody might have found it, but His whisper came to me!"

So it was, I think, that the whisper of God came to Thomas Alva Edison. It was that same whisper, perhaps, that came years before to the boy, Benjamin Franklin, who looked up at the lightning that perhaps might have terrified that cave boy centuries and centuries before, but with just a kite and a key and a bottle he brought down and gave to us the discovery of electricity. Mysterious and unknown was this undiscovered realm of electricity, but other pioneers in laboratories and in experiment stations toiled and directed it into courses useful to mankind. Today we can sit in our homes and turn little knobs and have brought to us news of war, and of peace, and music from distant lands. Wonderful thing, isn't it? Yet it is just one of countless results of this pioneer spirit, the urge of people to do the things that haven't been done before. And it was that urge that came, as I've said, to Thomas Alva Edison.

Tonight I couldn't attempt to tell you of all the things that have made mankind the beneficiary of Thomas Alva Edison. I've heard people who have been closely associated with him, such as George Stringfellow, tell of many of those things. One thing particularly impressed itself upon my memory, and that was the fact that when Mr. Edison died in 1931, in the industries arising from his inventions there was an investment of over $25,000,000,000, employing over 2,000,000 men, to say nothing of millions who had been employed in collateral lines. This vast army of wage earners found jobs, found happiness for their families, and are continuing to carry on that work because of this man who had believed in them. It would be hard today to envision, I think, a world without these inventions, without these blessings that have been given to us by Thomas Edison.

I like to think this, that it's a whisper, a divine whisper, that seems to come to men to urge them to get out of the beaten path, to do the things that haven't been done before.

Once God spoke to men through Moses, the Bible tells us, and through him gave us the Ten Rules for all human conduct.

Perhaps, after 4,000 years of silence, God spoke again—to Thomas Alva Edison. Maybe He said to him:

"My people are ready to live with miracles. So give them the miracles in My name.

"Let light flood their homes and their streets. Let invisible power perform their daily tasks. Let their words be carried, one to the other, to the ends of the earth in the twinkling of an eye.

"Let them preserve their voices on cylinders and plates of wax, so that the dead may be heard by the living, the spoken wisdom of yesterday be repeated tomorrow.

"Let all the events of the world be gathered together and fixed upon a film thinner than the thinnest parchment, and then let them be reenacted before the eyes of all men. Let men know the appearance of far places. Let landsmen see the waves of the ocean and seamen see mountain forests in the wind.

"Let there be great cities built in all the lands—cities which shall live and move and have meat and drink through unseen powers.

"Let these be common miracles. Let them not be put upon high altars and worshiped from afar in awe. Let them be for all men and for the uses of all men.

"Like Moses before you, you may see the beginning but not the end or even the beginning of the end, for I will gather you to My bosom before that comes to pass."

It seems to me that all Americans are beneficiaries of these wonderful things that came to Thomas Alva Edison through this divine inspiration. There is nothing that could give to us a greater urge to carry on, to do our part in this world of today, and in this Nation that he loved so well, than to follow this last message of Thomas Alva Edison to the American people. It was a message that he had written to be read over the radio. He said: "My message to you is to be courageous. I have lived a long time. I have seen history repeat itself over and over again. I have seen many depressions in business. Always America came through strong and more prosperous. Be brave, as your fathers were brave before you. Have faith. Go forward."

Thank you.

Mr. Meyer rose to conclude the program with a final musical selection.

Philippine Market

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 25, 1939

ADDRESS BY HORACE M. POND

Mr. GIBSON. Mr. President, I ask unanimous consent to insert in the RECORD a speech delivered at Manila during the Foreign Trade Week, on May 27 of this year, by Mr. Horace M. Pond, president of the Pacific Commercial Co., the largest importer of American goods in the Philippines.

The speech is a clear, impartial, and brilliant exposition of the importance of the Philippines to the United States by an American who has earned the respect and admiration of both Americans and Filipinos during his stay of over a third of a century in the Philippines.

Mr. Pond's speech, together with the speech delivered by Hon. Paul V. McNutt at Charlottesville, Va., which has been inserted in the RECORD, constitute a most illuminating exposition of Philippine-American economic relations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Philippine tariff door is open to the products of the United States, and the United States tariff door, with certain quantitative limitations as to some products, is open to the products of the Philippines. These open doors, I believe, are not only vital for the Philippines but are most advantageous to the United States. I believe, therefore, that they should not now be closed but, on the contrary, should be left open indefinitely.

In 1938 the United States passed through the Philippine open door goods to the value of about $90,000,000. Generally there are but about seven other countries in the world that buy more from the United States than does the Philippines; during the first quarter of 1939 there were but four countries that bought more—the United Kingdom, Canada, Japan, and France. During that quarter the United States shipped to the Philippines goods to the value of about $23,228,000, and this was more than the value of goods received in the United States from the Philippines during that quarter.

BUYS PROCESSED GOODS

The value of goods sold does not, however, tell the whole story. The Philippines is not an industrial country. Most goods purchased of the United States are, therefore, not raw products but goods which have been processed or manufactured. Instead of raw cotton, the Philippine purchases large quantities of cotton textiles, being the best customer of the United States. Instead of wheat, the Philippines purchases large quantities of wheat flour; and here again the Philippines is the best customer of the United States. Instead of scrap iron to be used for war purposes, the Philippines purchases large quantities of finished iron and steel products, hardware, machinery of all kinds, and automobiles and trucks. Of each dollar of sales to the Philippines far more United States labor and capital are employed than, generally speaking, is the case of exports to foreign countries.

United States agriculture, which from time to time has opposed Philippine-American trade preferences, is also a large beneficiary of the present trade preferences in the Philippines. The Philippines buys in the form of wheat flour each year the equivalent of about 6,000,000 bushels of wheat, the product of about 400,000 acres. On such of this wheat flour as is brought into the Philippines from the United States the Philippines gives to the wheat farmers of the United States a duty preference equal to about 10 cents (United States currency) a bushel.

OUTPUT OF 25,000 COWS

The Philippines buys from the United States each year cotton textiles which take the product of about 135,000 acres of southern cotton fields; and all of these cotton textiles have in the Philippines the advantage of a substantial duty preference over foreign textiles.

The Philippines consumes each year in the form of canned milk the equivalent of about 100,000,000 pounds of raw milk, or the product of about 25,000 cows. Such part of this canned milk as comes from the United States is admitted into the Philippines free of duty, while canned milk from foreign countries must pay duty.

These are but a few concrete examples of the value of the Philippines as a market for the agricultural and industrial products of the United States.

PAID IN DOLLARS

The sales which United States producers, manufacturers, and merchants make to the Philippines give them none of the headaches—none of the difficulties and problems which result from their trade with many other countries of the world. Philippine buyers generally either pay in the United States United States dollars for the goods purchased before they are shipped, or banks collect from the buyers in the Philippines and promptly remit United States dollars to the sellers. In the Philippines no bothersome quotas are imposed, there are no blocked currencies of doubtful value and more doubtful convertibility to contend with, no exchange controls, no barter problems, no delays in converting Philippine pesos into United States dollars, and no exchange fluctuations of any importance.

The Philippine peso is tied to the United States dollar and so backed by reserves of United States dollars that there is no question, under present conditions and currency laws, that for Philippine pesos United States dollars can be promptly secured at a fixed and stable rate of exchange. In much of South and Central America, and in such countries as Germany, Italy, Turkey, and Japan, it may be possible to find buyers who desire American goods but it is another matter to get an important permit or to secure exchange so that goods purchased and shipped can be paid for. Sellers in the United States well know from bitter experience that reichmarks in Germany, pesos in the Argentine, or yen in Japan may be of little or no value to them in the United States. What they want for the goods they sell is dollars in the United States; those dollars they get for the goods they sell to the Philippines.

INVESTMENT FIELD

Another advantage to the United States of Philippine-American trade preference is in the investment field. According to the United States Tariff Commission, investments by United States citizens in the Philippines totaled in 1935 about $200,000,000, of which about $32,000,000 was in government and semi-government bonds and about $165,000,000 was in Philippine business and industry. The depreciated book value at that time of the fixed assets of such business and industry was about $110,000,000.

Many of these investments were made because of the trade preferences in the trade relations between the Philippines and the United States, and particularly for such products as sugar, coconut oil, buttons, cigars, and pineapples and embroideries. These investments have generally brought substantial profits to those making them. Continued trade preferences, and especially if the uncertainties as to future Philippine-American trade relations were to be removed, would most likely make the Philippines a fertile field for investments of United States citizens.

ACT RESTORES TARIFF

The economic provisions of the Philippine Independence Act will change all this, for, beginning July 4, 1946, the date for the recognition of Philippine independence by the United States, not only will Philippine products be dutiable on entry into the United States, but United States products will be subject to the full Philippine duties. Investigations by representatives of the United States Tariff Commission, and studies made by a joint committee of Americans and Filipinos clearly show that these provisions of the independence law will be disastrous to the Philippines and most disadvantageous to the United States.

Recommendations were, therefore, made by the joint committee for an extension of trade preferences until 1961. Beginning July 4, 1946, it was recommended that Philippine products on entry into the United States pay 25 percent of the full United States duties, and United States products on entry into the Philippines pay 25 percent of the Philippine duties, in 1947, 30 percent in 1948, 35 percent, and so on until 1961 and thereafter when the committee recommended that they pay, in each case, the full duties. Thus, the termination of the trade preferences in the trade relations between the two countries was recommended. A bill to give effect to these recommendations was presented to Congress, but it has been tabled by the Senate Committee on Insular Affairs, and is now generally considered to be dead.

GLAD BILL KILLED

From the point of view of the United States, and of a citizen of the United States who cast his lot with that of the Filipino people and prospered as they have prospered, I am glad that that bill is dead. I am glad because I am convinced that its provisions would have been disastrous to the Philippines and disadvantageous to the United States. The application of the principle on which the provisions of that bill were based to the trade relations between the two countries was, I believe, unwise, unnecessary, and even disastrous.

That principle was set forth in the instructions to the joint committee. It is that "preferential trade relations between the United States and the Philippines are to be terminated at the earliest practicable date consistent with affording the Philippines a reasonable opportunity to adjust their national economy," and that thereafter "trade relations between the two countries will be regulated in accordance with a reciprocal-trade agreement on a nonpreferential basis." That made it impossible for the committee to present a sound and satisfactory program for Philippine-American trade relations after independence. The approval of the bill would have applied, by an act of Congress, that principle to future Philippine-American trade relations.

CONSISTENCY NOT JEWEL

There may be a reason for this principle: Trade preferences for one country constitute discriminations against all other countries, and it has long been the policy of the United States to treat alike the products of all countries (except Cuba) which do not discriminate against the products of the United States. This is known as the most-favored-nation principle. That reason I do not consider valid when applied to the trade relations between the Philippines and the United States. In this case consistency is by no means a jewel. Not only are there precedents for excepting the Philippines in the application of the principle, and especially considering that most commercial treaties between the United States and foreign nations contain exceptions, either regional or as to specific articles, but in practically every trade agreement entered into in recent years between the United States and foreign countries the Philippines has been specifically excepted from the operation of the most-favored-nation principle, and this regardless of the future political status of the Philippines.

The purpose of the present trade policy of the United States is not to destroy trade which already exists, but rather to increase trade and commerce throughout the world. Consistency surely does not dictate that the mutually advantageous trade between the Philippines and the United States shall be destroyed, and especially when its destruction may well bring disaster to the Filipino people, the loss of a large market for the United States, force the adoption of bilateralism by the Philippines, and further menace peace in the Far East.

WOULD HIT INVESTMENTS

Had this principle been applied to Philippine-American trade relations by the approval by Congress of the bill, the large and increasing trade with the Philippines, a trade laboriously built up over a period of more than a generation, would have been practically destroyed. It also would have wiped out a substantial part of the investments in the Philippines by United States citizens and the income from such investments. Investments of United States citizens in sugar and coconut oil mills and in a number of other industries would have been made practically valueless. By the termination of trade preferences others probably would have been much less valuable than they are today. It also would have destroyed the Philippines as a future field for investment. This was recognized by the Tariff Commission, which stated in its report that the "provisions of the Independence Act make it practically certain that the Philippines will become less attractive as a field for investment by United States citizens."

The reduction in trade with the Philippines, had the bill been approved, would have been accomplished in two ways. In the first place, the Philippines can buy only as it can sell, and, as the increasing export taxes or the decreasing export quotas would have reduced the total value of all Philippine exports, the total purchases by the Philippines would have decreased. While theoretically trade preferences in the trade relations would have continued until 1961, practically that would not have been the case, for long before 1961 the trade preferences would have been of little practical value to the Philippines. The increasing duties imposed on Philippine products by the United States probably would have destroyed, or at least greatly curtailed, the industries which have been dependent, either in full or in part, on duty preferences. It has been estimated that the total value of Philippine exports would, long before 1961, have been reduced by about 50 percent. This would have had the effect of reducing total Philippine imports by about 50 percent, for, as stated above, the Philippines can buy only as it can sell. Thus, instead of the United States selling to the Philippines goods to the value of about $90,000,000, as was the case last year, the United States would have been able to sell to the Philippines (disregarding for the moment the other factors which I shall next outline) goods to the value of but about $45,000,000 a year.

WOULD CUT EXPORTS

This, however, is but part of the story; other factors would have forced a much greater reduction in the sales by the United States to the Philippines. As stated above, beginning July 4, 1946, United States products would have been required to pay on entry

into the Philippines 25 percent of the Philippine duty in 1947; 30 percent in 1948; 35 percent and so on until 1961 there would have been no duty preferences whatever in the Philippines for the products of the United States.

UNITED STATES NEEDS PREFERENCES

Any person who does business with or in the Philippines knows that in spite of United States products being admitted into the Philippines free of duty, while foreign products are required to pay duty, United States producers and manufacturers find it difficult, and at times impossible, to compete with foreign producers and manufacturers. Before Japan became involved in China, United States textile manufacturers lost to Japan a considerable part of the Philippine textile market, and further encroachments were checked only by gentlemen's agreement to limit shipments of cotton textiles to the Philippines by Japan to a quantity equal to about one-half of total Philippine requirements. For a time the United States practically lost the Philippine market for wheat flour to Canada and Australia; and even today the United States is able to hold a fair share of the Philippine market for wheat flour, in spite of a duty preference of 42 cents (United States currency) a barrel over Canadian and Australian wheat flour, only by the payment of substantial subsidies.

Again, a considerable part of Philippine canned-milk requirements come from Europe in spite of the fact that canned milk from the United States has a duty preference of 10 percent over canned milk from foreign countries. Many other examples might be cited. It is, therefore, obvious that when in 1946 United States products would have been subject to but 25 percent of the Philippine duties, many United States products would have been almost immediately eliminated, and as the duties were progressively increased more and more United States products would have been eliminated. As in the case of Philippine products, long before 1961 the trade preferences for United States products probably would have been of little value to the United States, and long before 1961 the participation of the United States in the Philippine market would have been but a fraction of the present participation. Without duty preferences not only would United States producers and manufacturers have been unable to compete, but reduced Philippine purchasing power would have required a considerable shift by consumers from the high quality and high-priced goods from the United States to cheaper goods from foreign countries.

TRADE OR DOLES?

While it is almost impossible to estimate accurately what the effect would have been, for there are many factors to be considered, nevertheless, on the basis of the figures for 1938, it seems probable that the United States, instead of getting about 65 percent of the available Philippine business would have secured but about 20 percent of it. This 20 percent cannot be figured on the present value of Philippine imports for, as has been pointed out above, with the closing of the United States market to Philippine products, total Philippine imports probably would have been but about one-half of the present volume. Thus, instead of being able to sell to the Philippines in a single year goods to the value of about $90,000,000, total sales probably would have been not more than about $16,000,000, loss of $74,000,000 a year, or about 80 percent. Surely, therefore, no one can say that the Philippine trade preferences are not valuable to the United States, or deny that they are well worth retaining and should not be lightly sacrificed.

There are people who say that Philippine-American trade preferences are more valuable to the Philippines than they are to the United States. By sophistry and ingenious arguments and by learned discussions of economic theories, they make out a good case. They probably are right. But it seems to me idle to argue whether the United States or the Philippines is getting the better deal, for the cold fact remains that the Philippines need the United States market and the United States can ill-afford to sacrifice a market so valuable as is the Philippines. Which is better, for the United States to have $74,000,000 more trade a year—a trade which may well be much greater in the year to come, a trade which gives wide employment in all parts of the country to both capital and labor, and to both industry and agriculture—or to kick that trade over the United States tariff wall and then spend a like amount for doles to the unemployed and increased subsidies to farmers?

CAN FIND SOLUTION

Furthermore, even though it were to be admitted that the Philippines profits more than does the United States, there is no basis for believing that will always be so. If there is unfairness, or if the trade preferences are not mutually beneficial, there is no reason to believe that fair-minded men on both sides cannot find a solution. It must also be considered that the Philippines is rapidly increasing in population, and that the average level of living of the Filipino people is slowly but steadily increasing. Natural economic adjustments are quite likely to eliminate any present disadvantages, if any there be, which one country may have in relation to the other.

The bill which was based on the recommendations of the joint committee would, of course, have been an improvement over the economic provisions of the independence act, for, instead of all trade preferences in the trade relations between the two countries terminating on the recognition of Philippine independence on July 4, 1946, decreasing trade preferences would have continued for another 15 years. While this would have been slow death to the greater part of the Philippine-American trade, final disaster might have been, in some cases, postponed for a few years.

MIGHT HAVE BROUGHT GRIEF

The Philippine Independence Act contains a provision for a conference between representatives of the United States and of the Philippines within not less than 1 year before the date for the recognition of independence for the purpose of considering and submitting recommendations regarding the trade relations between the two countries after independence. This provision indicates that the authors of the Independence Act had in mind that some mutually satisfactory system of trade preferences might be worked out for the trade relations between the two countries after independence. Had the bill which was based on the recommendations of the joint committee been approved, it would in effect have repealed this provision for a conference for the purpose of considering trade relations after independence. Thus, the question of future Philippine-American trade relations would have definitely been determined now, and on a basis which in a few years would have completely eliminated all trade preferences.

I am, therefore, glad for this other reason that the bill has been killed, for to determine at this time, when international relations are unsettled and rival political and economic systems are fighting for domination, the termination of trade preferences in the trade relations between the Philippines and the United States in accordance with an arbitrary formula to be operative over a period of 20 years, is to ignore world conditions and to give more importance to a theory than to the facts. Such action might well have brought grief and disaster to the peoples of both countries.

MISCONCEPTIONS OF PHILIPPINE ISLANDS

A new bill, unanimously reported by the Senate Committee on Insular Affairs, is now before Congress. That bill makes the necessary amendments to the export-tax provisions of the Independence Act, which are to be effective from November 15, 1940. It does not, however, in any way cover the trade relations between the Philippines and the United States after independence; and it retains the provision of the Independence Act for a conference to be held not less than 1 year prior to the date for the recognition of independence regarding the trade relations between the two countries after independence.

As the law now stands, and as it will stand even though this new bill is approved, trade preferences in the trade relations between the two countries are to terminate on July 4, 1946. Again, as the law now stands, and as it will stand if this new bill is approved, a joint conference is to be held for the purpose of formulating and submitting to Congress recommendations as to the trade relations between the two countries after independence. While Congress must approve any plan for trade preferences after independence, nevertheless that question has been left open for future consideration.

I have endeavored to show that the indefinite continuation of Philippine-American trade preferences would be advantageous to the United States. We know that would be advantageous to the Philippines. Unfortunately, however, agriculture and industry, capital and labor, in the United States do not know, generally, that Philippine trade preferences are advantageous to them. This is not surprising, for the Philippines purchases such a wide range of products of the United States that business with the Philippines is widely scattered and any united thought or action is difficult to secure. Again, the producers, merchants, and manufacturers of the United States have been so absorbed in their own problems—labor, taxes, government control and reports, bad business—that they have had little time to give any thought to the Philippines. Still again, pressure and propaganda groups have tended to establish a widespread belief that the Philippines is a financial burden on the United States, that Philippine producers compete with the beet sugar and dairy farmers of the United States, and that any association with the Philippines, political or economic, is a menace to the peace of the United States. This misinformation and these misconceptions regarding the Philippines should be overcome.

STAND IDLE OR SELL IDEA

Cuba, Puerto Rico, and Hawaii have long carried on campaigns in the United States to win for themselves the sympathy and interest of the people of the United States. We have done nothing. Perhaps in recent years there was not much that we could have done. The executive agreement, which constituted the instructions of the joint preparatory committee providing for the termination of the trade preferences in the trade relations between the two countries at the earliest practicable date, was an effective bar to any campaign to sell the Philippines to the United States. It would have been suicidal to have tried to sell to the people of the United States a program which would have ruined us and have destroyed the Philippines as an important market for the products of the United States. But the bill which was based on the recommendations of the joint preparatory committee probably is dead, and let us hope that with it the executive agreement on which those recommendations were based will also be interred. The way apparently has been cleared—the door to a continuation of the mutually profitable Philippine-American trade has been left open—and the question for us now to decide is whether, as in the past, we shall stand idly by and do nothing, drifting toward economic disaster and social distress, or by appropriate action endeavor to sell the people of the United States the idea that the indefinite continuation of Philippine-American trade preference will be to their advantage. If we do the latter, when the time comes again for Congress to consider the future trade relations

between the two countries, there may be adequate support for a continuation of trade preferences.

WHAT TO DO?

At no time in recent years has the background for such a campaign been more favorable than it is today. Recent events in the world, and in the Far East in particular, have aroused the interest of the people of the United States in the problems of the Far East. The sentiment of the people of the United States is with the democracies and against the authoritarian governments because of their destruction of liberty, their racial persecution, their violation or repudiation of treaties, their economic policies, and their aggressions. That the interest of the people of the United States in the Philippines is aroused and is increasing is shown by the results of several Gallup polls. There is a growing belief that in the determination of future Philippine-American trade relations the United States should not, either by action or inaction, weaken the democracies or strengthen the authoritarian states. There is a growing belief in some quarters that the economic treatment of the Philippines should be such as to avoid social distress or the forcing of the Philippines to sustain its economy into bilateral trade or political agreements with the authoritarian states.

This does not mean that this increasing interest in the Philippines and in its problems has yet developed to a point where Congress will approve for the Philippines a satisfactory program for trade relations. It does, however, mean that interest has been aroused. To arouse interest is the first, and often the most difficult, step in any selling campaign. After interest has been aroused, desire must be created. Our problem is to implant in the minds of the people of the United States the fact that Philippine trade is valuable to them, and thus create a desire to retain it. If that can be done before the question of Philippine-American trade relations is again considered by Congress, it may be possible to secure an indefinite continuation of the present mutually profitable trade preferences in the trade relations between the two countries.

The question is, therefore, Are we going to do anything about it, and, if so, what?

The Executive—Tradition or Initiative

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. HESS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following radio address by the junior Senator from Ohio, Hon. ROBERT A. TAFT:

Citizens of the United States of America: "The Executive power shall be vested in a President of the United States of America. He shall hold his office during the term of 4 years." So says article II of the Constitution, after article I provides for a Congress and defines its powers. To this broad grant of power are added a very limited number of more specific powers, among which principally are the following:

"The President shall be Commander in Chief of the Army and Navy of the United States * * * and he shall have power to grant reprieves and pardons for offenses against the United States. * * * He shall have power by and with the advice and consent of the Senate to make treaties * * * and * * * by and with the advice and consent of the Senate shall [make appointments]." And then we come to initiative. "He shall from time to time give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient." Finally, "He shall take care that the laws be faithfully executed."

The powers of the President are granted in such general terms that undoubtedly any President has a wide possible range of policy. As the title to this discussion suggests, he may be guided solely by tradition, and he may confine himself to the simplest possible administration of the laws passed by Congress, or he may display any amount of initiative, adopt many policies through his administrative powers under the Constitution or existing law, and recommend more important changes in policy to Congress.

There can be no doubt that the American people have approved the policy of initiative pursued to a greater or less extent by every President. The Presidency was created because under the Articles of Confederation the weakness of a government without an executive head had been revealed. It is clear that the founders of the Constitution expected the Executive to assume the initiative, or they would not have written the clause I have quoted, calling on the Executive to recommend to Congress a legislative program. Of course, this does not mean that Congress is in any way bound to follow the recommendations. Much of the criticism directed at the President in recent years, the charge that Congress had become his rubber stamp, was no criticism of the initiative of the President; it was a criticism of Congress itself for adopting his proposals without consideration, and a criticism of the President for his policy of "must" legislation, his insistence that his recommendations represented a mandate directly from the people which Congress must obey without discussion.

No one can question today the duty of the Executive to propose a definite program. The importance of a Presidential program has exceeded the importance of political platforms. The New Deal program of Franklin Roosevelt was developed in defiance of the Democratic Party platform of 1932, although he had run on that platform. In fact, the President's power to propose a program has changed the whole nature of the Democratic Party and caused it to abandon its tradition of State's rights, local self-government, and the freedom of the average man from Government interference. We may disagree with and criticize the program and initiative of any President, but we cannot doubt that the policy-making power of the Presidents has always been the most dynamic force in American progress.

But, after all, the principal duty of the President is to wield the executive power and execute the laws of the United States. This is a long way from mere tradition. It is a far more complicated task than it once was, and a much more important one. The Government's activities touch the ordinary citizen in 10 times as many places as they did in the days of Washington. It has become an elaborate problem of administering an institution costing $9,000,000,000 a year and of directing a force of more than 800,000 employees. Whereas it is reasonably easy to propose to Congress broad general policies, it is a much more difficult task to administer those policies so that they carry out their purposes without doing more harm than good in constant interference with every man's life and every man's affairs, and with the progress which has always sprung in America from individual enterprise. A failure in administration can do the country an infinite amount of harm. A combination of too much initiative and too little administration may be a good deal worse even than a simple following of tradition.

That, frankly, has been one of the main reasons for the growing criticism of the President. He proposes scheme after scheme intended for the ultimate benefit of the people, but he has no interest in the manner in which each scheme is worked out, no concern to see that it fits in with other schemes carried out by other departments. His interest is always flitting into new fields before the plowing of the old field is finished. Such is the present proposal to extend Federal activity into health and education, before we have begun solution of the problems of social security and relief. Good administration is still the paramount if humdrum duty of the Executive, but there is hardly a field of New Deal activity today where the administration of a policy is satisfactory. Often there is an overlapping of departments in the same field, each administrator operating in a water-tight compartment of his own. Often their policies are guided by radically opposed theories, and there seems to be no effort or interest on the part of the President to reconcile their views, surely a task for the Chief Executive.

For instance, consider social security, withdrawing from the productive enterprises of this country today, through pay-roll taxes, a billion and a half dollars a year. No persons are yet being paid from the old-age security fund; all those receiving pensions receive them under State laws. Unemployment-insurance benefits are still far below the taxes paid in to the Government, and are so inadequate that the recipients must still be given relief or put on W. P. A. Meanwhile the workers and the employers of the Nation are building up so-called reserves, sacrificing real purchasing power, and their cash is being used to pay the huge deficits of an extravagant national administration.

The problem of relief and unemployment is wholly unsolved. There are still more than 10,000,000 people unemployed, and the administration of W. P. A. became so involved in politics that it has utterly forfeited the confidence of the Nation. The administration of relief is intimately connected with social security, but it is administered by numerous independent departments, the W. P. A., the C. C. C., the N. Y. A., the Surplus Commodities Corporation, and various farm-security organizations; and now the Department of Agriculture is going to step into the field with a new kind of currency based on orange and green stamps. I believe that the whole relief problem should be turned back to the States and local governments, with a Federal grant and a supervision, probably by the Social Security Board, to see that State administration of relief is free from politics and coordinated with the social-security plan.

Take the problem of the control of credit and banking. The banks are supervised by the Federal Reserve Board, the Federal Deposit Insurance Corporation, and the Comptroller of the Currency, all with separate powers of inspection and control. In theory, the Federal Reserve Board is supposed to be a supreme court of credit to prevent the recurrence of depressions like that of 1929, and yet those powers may be completely nullified by the powers granted to the Secretary of the Treasury to buy and sell Government bonds, to control a secret stabilization fund, and change the value of the dollar. Surely it is part of the executive function to work out a coordinated plan of control in this field, which is so essential to business stability.

The administration of the Wagner Labor Relations Act has provoked almost universal condemnation, and it is generally agreed

that proper administration might have cured the difficulties produced by the law itself. Amendments are sought by business organizations and by the American Federation of Labor, but the President fails to make any recommendation and protects and defends the faulty administration of the law.

The confusion in the administration of farm policies is even more pronounced, and the policy intended to eliminate surpluses and raise the price of crops has resulted in starvation prices and a surplus of 11,000,000 bales of cotton, in effect owned by the Government. The present Farm Act confers on the President and the Secretary of Agriculture power to carry out almost any kind of farm plan, so that the problem is almost entirely one of administration. But no one has heard a word from the President with regard to any change in the administration of the law to solve the growing problems of the farmer.

Housing is another field where a thoughtful, comprehensive administration is impossible because of a confusion of hastily conceived policies. We have the Home Loan Bank Board financing homes through the building and loan associations and liquidating the old H. O. L. C. We have the F. H. A., guaranteeing mortgages on new homes up to 90 percent of their value and old homes up to 80 percent of their value. We have the U. S. H. A., eliminating slums and building great housing projects in our cities. We have the Resettlement Administration liquidating the old Tugwell projects.

Only this week representatives of these different organizations have presented to the Banking and Currency Committee of the Senate diametrically opposing views on Government policy. Certainly no one has sat down and thought out the problem of just where the Government is going in its housing program, what its ultimate purposes are, and which line of activity is the most effective to accomplish the ultimate objectives. That is the duty of the Executive.

Some of the problems I have suggested can be met by an improved administration; others can only be met by a reorganization of the Government departments. Through such a reorganization, properly done, expense can be reduced, overlapping and conflict eliminated. Everyone agrees on the necessity of reorganization, and it is unfortunate that it has become such a center of political controversy.

Last year the President demanded a reorganization bill which would have greatly increased his powers. It eliminated the office of Comptroller of the Currency, established by Congress to prevent the expenditure of public money by executive departments except in strict accordance with the appropriations made by Congress. It provided for a reorganization of the Civil Service Commission, which would have given the President much greater power in making civil-service appointments. It subjected many of the semilegislative and semijudicial commissions to the power of the President. It was not even claimed that it would reduce the expense of government. Congress objected violently to any increase in the already extraordinary powers granted to the President, and the bill was beaten.

This year reorganization bills have been proposed in both Houses eliminating the more controversial features. A bill has passed the House giving the President power to rearrange all of the departments unless Congress acts adversely on his proposals within 60 days. Anyone who knows the ease with which congressional action can be delayed will realize that this gives the President almost unlimited power to rearrange departments as he sees fit. The Byrd bill in the Senate, on the other hand, authorizes the President to submit complete or partial plans of reorganization, to go into effect if approved by Congress, and changes the rules of Congress so that the proposals submitted must be considered, and accepted or rejected, without becoming involved in all kinds of amendments.

The reorganization of Government departments is a legislative matter. It may change the whole character of certain Government activities, or combine them, or abolish them altogether. Logically there can be no question that Congress ought to debate and decide on reorganization proposals. Senator BURTON WHEELER, the able Democratic Senator from Montana, stated Saturday that these changes involve fundamental principles of government, and that Congress would be abdicating its powers by turning them over to the Executive if it adopts the House bill. If the President will accept the Byrd bill and submit plans for reorganizing the relief, social security, banking, housing, and other activities, he can count on the earnest support of Republicans as well as Democrats, in improving the economy and efficiency of the United States Government.

I do not intend tonight to discuss the wisdom of the objectives of those Government policies I have used for illustration. With some I heartily agree; for others I would substitute a different policy. But there is hardly one in which the administration is accomplishing its objectives. In discussing the character of the office of President of the United States, I have suggested these examples because they show so clearly how much today, perhaps more than ever before, we need in that office an executive who is a great administrator. He need not lack initiative, but that initiative must be directed far more to the solution of existing problems than to the suggestion of new kinds of Government activity. It is a tribute to Mr. Roosevelt that he has suggested methods of dealing with the most serious problems of American civilization, but he is not interested in performing that essential constitutional duty of seeing that the laws are properly executed.

The Governor of Michigan

REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. HOOK. Mr. Speaker, the gentleman from Michigan [Mr. HOFFMAN] has indirectly promised to refute the truths that I am about to present. This Michigan Savanarola will find himself in the unsavory position of either admitting his errors or in lieu of that we must expect from him a tirade of the weasel words in which he will evade the subject completely.

Allow me to start with the beginning of the Murphy administration and point out to you how that able executive handled the problems of the State of Michigan. At the same time, let me draw the comparison between his administration and the bungling methods of the present Dickinson administration. From the facts that I will give you, I am certain of the conclusions that you will draw.

During his administration, Murphy alone was Governor. He was the duly elected executive performing the duties of that office forcefully enough, ably enough, and intelligently enough to rid the State of political gamblers and leeches. He was action personified. He did not just "pass, punt, and pray." He was Governor in the fullest sense of the word. Now, everyone knows, not only in Michigan, but throughout the entire country, that the present incumbent of the highest office in the State of Michigan is only a front for a vicious political machine—a man who owes his office not to the electorate but to a turn of fate and an untimely death. There is a very serious question whether Dickinson is legally Governor of Michigan.

However, leaving aside the legal question, we can safely say that he is not actually Governor in fact. The Governor's chair in the great State of Michigan may be said to be vacant both legally and in fact. There is no doubt in my mind that if Luren Dickinson had the ability he would break away from the Republican machine and stand on his own feet. He surely knows that this machine, streamlined as it is, has caused the downfall of many a good man and brought about the untimely death of others. Most of us believe that he is sincere and honest, but the Old Guard is so entrenched around him that a far more capable man would have great difficulty in extricating himself from the machine politics of the Republican Party. I cannot but believe that if he were acting in his own right, and if he had his own way, he would carry on in the best interests of humanity, following the program inaugurated by Frank Murphy. It seems he is just at the point in life, however, where he can be used and is used as the tool of self-seeking politicians. Any criticism of Dickinson must necessarily, therefore, be a criticism of the machine behind him and the men surrounding him. It is more than apparent to the most disinterested and casual observer that Murphy was a Governor, while Dickinson is a mere front, a tool. During Frank Murphy's term as Governor he looked at the human side of life in a practical way. He met the labor problems of the day in a manner that even his deepest enemies admit will go down in history as one of the greatest achievements in labor conciliation—one of the greatest achievements in protecting the interests of the common man while at the same time protecting and fortifying our democratic processes of government.

He met the health problem with all its intricacies, and especially he did not neglect the crippled children, the aged, and the blind. He recognized the acute prison problem and met it through the appointment of capable, honest men who, with the civil service, took politics out of the prisons.

He met the relief problem admirably, alleviating untold misery and suffering. Governor Dickinson and his coterie are responsible for a tremendous reduction in welfare relief—their reduction was to such an extent that human want and misery are rampant throughout the State. But let us be specific. Let us take each of the important State problems and examine them closely. Here are the cold, hard facts:

Civil service: Governor Murphy, upon taking office, immediately proposed sound civil-service legislation. Upon his strong insistence there was enacted a civil-service law that was perhaps the finest in the country. Proponents of sound, efficient government praised the law, calling it one of the greatest contributions to clean administration in State government that had ever been produced in the Nation. The huge task of putting this law into successful operation was a herculean undertaking in view of the entrenched greed and malpractice of the previous administration. Governor Murphy appointed as personnel director one of the leading personnel technicians in the United States to administer this merit system. He made no compromise or concession to politics. The result was the finest civil-service system in the country. This is not just a statement but a matter of record. Murphy's civil-service reforms were in themselves sufficient to bring to him the justly deserved title of "Michigan's greatest Governor."

Now, let us look at the present Governor and his actions in regard to the merit system. "Luren the Ripper," after conducting an investigation of the civil-service commission's work, could not partake of the communion of good government and promptly ground a model law under the heel of arbitrary spoilsmanship. "Luren the Ripper" removed approximately 11,000 qualified, capable employees from civil-service protection. In order to prevent a referendum on this move and to prevent the people from having a voice in this perfidious action, this law was given immediate effect. It is interesting to note that on the present civil-service commission there were two alleged public servants who were Republican district campaign managers in the last election. Dickinson not only destroyed the merit system in Michigan, but he turned the civil-service commission into a patronage headquarters. I ask you to draw your own conclusions as to the actions of these two men on this important question.

State purchasing: In all State governments the procurement and purchasing agencies are always open to evils. When Murphy assumed the governorship he brought State buying into the light of day by introducing open competitive bidding. The results were that 10,000 more invitations to bid were sent out annually than under the former Republican administration. Four times as many firms shared in State business. Under the Murphy administration the State bought from the lowest qualified bidder and not from political favorites. I ask you to contrast this record with the Dickinson clique operating now, where reports of grossly inefficient, wasteful squandering of public funds has resulted not only in improper buying but in a gladiatorial demonstration among members of the administration for the iniquitous honor of bleeding the State treasury. During this turmoil Dickinson removed the purchasing agent appointed by Fitzgerald. The blundering now goes on under a personal friend of Governor Dickinson, whose qualifications appear to be limited to the fact that he opposes alcoholic beverages. This Dickinson purchasing agent is also not averse to selling a little insurance now and then if the occasion presents itself.

Pay rolls: During the 1938 campaign the Republicans promised to cut pay rolls by eight and one-half million dollars a year, claiming the Murphy administration had built up a huge pay roll for patronage purposes. Yet during the first 3 months of 1939—the Republican administration—State pay rolls were nearly a million dollars higher for the same period of 1937. Allowing for new agencies, they were nearly $300,000 higher than in 1937. I again ask you to make the comparison—Murphy's economical and efficient government; the Republican administration, with false promises and notorious squandering.

Education: Likewise, during the 1938 campaign, Republicans charged that the Murphy administration had neglected schools even though in 1937 the Murphy administration provided $4,000,000 more for the schools than in any other year in the State's history. The Republicans, making promises with utter abandon, pledged themselves to provide $45,000,000 for educational purposes but again broke faith with the voters, providing $39,000,000 instead. There is one school, however, that the Republicans have not neglected, and that is the Michigan State College. They have bled that glorious old institution to the bone. I have called this to the attention of the Members of this House upon previous occasions. All of you by this time are surely familiar with our Michigan "Louisiana State College." Mr. Hoffman will do well to answer my charges as to the Republican administration of that institution.

Correction system: In the administration of the correction system Governor Murphy quickly sensed the need for reform. There was enacted during his term legislation creating a correction system recognized as one of the finest in the Nation. Governor Murphy cooperated with the Federal Government in conducting a complete and comprehensive survey of Michigan penal institutions and the administration of parole, pardons, and probation. Prison management in Michigan under the Murphy administration was heralded throughout the country as the most scientific and nonpolitical, excepting perhaps the long-established system in New York State. Hilmer Gellein was appointed by Governor Murphy as State correction director. This program was ably executed under his direction. Col. Joel Moore, recognized by penologists as one of the best qualified men in prison administration, was selected by Governor Murphy as warden for one of the State prisons. The other two wardens for the other two State prisons were recognized penologists, perhaps not of the fame or standing of Colonel Moore, but head and shoulders above the Dickinson politicians who replaced them. This fine, studied, well-conceived penal program, inaugurated by Governor Murphy has gone down under the grim onslaught of Dickinson and his political henchmen. Colonel Moore has long since been removed by the spoilsmen and in last week's paper I noticed that Mr. Gellein was dismissed. The progressive-corrections program of Governor Murphy has been completely wrecked.

Hospital program: The mental hospitals in the State were badly overcrowded, and the previous administration had made no attempt at correction. Four thousand mental patients were walking the streets, endangering the lives of others as well as their own, simply because adequate facilities for their hospitalization had never been provided. Governor Murphy launched an $11,000,000 hospital building program and appointed as director of the hospital commission one of the ablest specialists in the country. Under the present Republican administration this able director has resigned "at the wish of the Governor," and the administration has announced its intentions to abandon the building program. We must assume that the Dickinson administration will return to the medieval methods of treatment of the unfortunates who are mentally ill or mentally defective. I ask you in the name of humanity which of these two courses would you pursue?

Health program: Governor Murphy, after a wide search, obtained the best available man for health commissioner. He was an alert, progressive, highly trained expert. Murphy instructed him to do everything within his talents to energize and improve the State's health services. Work in this field under his direction moved forward rapidly. It is common knowledge throughout the Nation that Murphy sponsored the first State health conference ever held. This conference was undertaken with a view to finding ways of providing medical care for the poor. Other States quickly realized the importance of this conference and immediately took advantage of Governor Murphy's pioneering. Governor Dickinson has removed the able health commissioner and has appointed in his place his personal physician, an

old political adviser, a general practitioner utterly without training in public-health work. Under the political adviser's management the health program will return to its old reactionary status. If the poor or sick need medical attention, they will find that it is a luxury which they must forego. They simply are not supposed to get sick.

Appointments: Governor Murphy for key positions endeavored to obtain the best qualified man regardless of political affiliations. His able budget director, now United States Budget Director, was said to be a Republican as were both his appointees to the banking commission. He searched far and wide in order to get the best, ignoring political considerations at every turn. His selections of the hospital director and his civil-service director are only two examples indicating the caliber of his appointees. Without exception, all appointments were made solely on the basis of merit. Governor Dickinson's appointments have been made strictly along party lines and in accordance with Republican machine politics. Although he admits no responsibility to the Republican organization, I defy you to name a single instance in which a Dickinson appointee has any qualifications other than that he is a Republican vote getter. Republican newspapers throughout the State—all of which vigorously opposed Governor Murphy in the 1938 campaign—now report of Dickinson, "Only those who contributed money or time during the last campaign have been rewarded." The press is without a dissenting voice in admitting and in condemning the Dickinson methods of appointment.

Welfare: Governor Murphy fought relentlessly for a model welfare-reorganization program which had been recommended by a previous commission. Political scientists have said that this reorganization program was badly needed to effect any intelligent welfare administration. Republicans fought the plan down the line despite the fact that there was a group of their own number that were first to see the need of such a program. The leader in this fight was the Republican boss of the rural State supervisors who were against giving up their control of welfare money. Governor Dickinson told the legislature in May that as far as he was concerned it could scuttle the new reorganization bills unless a plan suitable to this Republican boss could be worked out. Welfare reorganization is badly needed in Michigan. Untold suffering and want is prevalent throughout the State. Despite Governor Dickinson's claims of devout adherence to the Bible he apparently has not considered this verse from Matthew: "Suffer little children to come unto me for such is the kingdom of God" as bringing within its spirit the crippled children of Michigan. His reduction of the fund for crippled children is brutally inadequate. When Governor Murphy said no one should suffer if the State could permit it, Dickinson said those on relief must cut down further even though their present rations were pitifully small.

Old-age assistance, aid to dependent children, and aid to the blind have been cut unmercifully by Dickinson. You cannot make me believe that the Governor via "his pipe line from God" received a command to perpetrate such human suffering and such misery. That kind of action is not the command of the God I know.

Strikes: The greatest strikes and some of the most dangerous labor difficulties in American history were settled by Governor Murphy without the loss of a single human life. At the termination of the crisis of the strike which followed the General Motors strike a spokesman of the Michigan Manufacturers' Association said, in a public address, "Perhaps history will say that Murphy was wise, that he was right. I think it will." It is ridiculous for anyone to attempt to compare the recent picketing engaged in at Pontiac with the huge industry-wide strike that Governor Murphy faced and so wisely settled. The Pontiac affair was a matter of a relatively small number of men engaged in picketing, while at Flint there were thousands of determined workers participating in a "sit down" strike—something which in itself was entirely different in our country. Where the State police alone were able to end the Pontiac disturbance the Flint situation was so critical that the military advised Governor Murphy against the use of force.

Gambling: Under the Murphy administration the gambling houses closed up shop, knowing that they could expect no protection. The attorney general and State police conducted a vigorous and unrelenting drive against slot machines. Contrast this with the fact that the moment the Republicans came into office the gamblers came back at the same time and the slot-machine racketeers flooded the highways with his trucks. The front pages of every Detroit paper were covered with stories of gambling houses opening up and resuming full operation as in the "good old days" before Murphy became Governor.

Murphy has proven himself worthy of the many high offices which it has been his privilege to serve. He is the enemy of corruption and a friend of good, clean government.

Our Interest in Paper-Mill Employees

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. MURRAY. Mr. Speaker, it is interesting to note that the South is beginning to extend itself into the manufacture of print paper. This infant industry may need the protecting hand of those who believe in the American market for American labor and American businessmen.

The labor unions of my district are writing, asking me to help them protect their jobs. There is a great opportunity for domestic production of our paper industry when we realize that in 1938 we imported over $101,000,000 worth of standard newsprint duty free.

The following article from the Washington Star of May 28 is evidence that we can supply a larger part of the domestic market:

PUBLISHERS DEDICATE PAPER MILL TO USE SOUTHERN PINE—50,000 TONS OF NEWSPRINT TO BE MADE ANNUALLY, STARTING ABOUT DECEMBER 1

LUFKIN, TEX., May 27.—East Texas saw today its pine forests cradle a new industry—one that brings fresh economic hope to the South and may revamp the newsprint industry of the world.

Southern newspaper publishers stood inside unfinished walls of a great paper mill and dedicated a plant that will convert native pine into newsprint.

Fifty thousand tons of newsprint annually will begin to roll from the $6,000,000 mill about December 1. The publishers, who now buy most of their paper from Canadian and Swedish markets, months ago signed contracts for the first year's output.

The softwood of the great Coastal Plain, which extends from Georgia westward to mid-Texas, in the future may furnish the United States much of the 4,000,000 tons of newsprint used annually.

The plant of Southland Paper Mills, Inc., is being built with funds subscribed by southern publishers and a $3,425,000 Reconstruction Finance Corporation loan.

E. L. Kurth, president, said east Texas alone grows enough yellow pine yearly to supply five or six mills the size of this one.

Publishers from six States said there was a strong possibility other mills would be built in Louisiana, Mississippi, Tennessee, Arkansas, Alabama, and Georgia.

However, the question arises as to the advisability, desirability, or fairness in having Federal funds used to start new paper plants in competition to the paper mills already in existence.

The labor unions in the established paper mills have every reason to be interested, first, in having jobs for American labor, and, second, to exercise concern as to what will happen to their own jobs if the Federal Treasury is going to be used for financing new paper mills in competition to the mills that are already employing them.

These are fundamental questions of governmental policy, and are of deep concern to every laboring man, every farmer, and every businessman in America.

Operations of Foreign Insurance Companies in the United States

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. DIRKSEN. Mr. Speaker, the investigation of the whole field of insurance and insurance companies by the Temporary National Economic Committee very recently suggests that some attention be devoted to the activities and operations of foreign insurance companies in the United States to determine whether the income and assets of such companies are properly taxed and whether they enjoy competitive advantages over domestic companies.

This matter commended itself to my attention in the course of a perusal of a bulletin from the Department of Commerce relating to insurance transactions in the balance of international payments of the United States. It is interesting to note that in 1935 foreign insurance companies maintained 68 active branches in the United States. Thirty-six of these were British, 15 were from the continental European countries, 5 were Canadian, 1 was Cuban, 4 were Chinese, 2 were Indian, 3 were Japanese, and 2 were Australian. This, of course, is not so unusual in itself in view of the fact that United States companies also operate in the foreign field. United States companies must manifestly pay all taxes imposed by foreign countries and operate on a strictly competitive basis. It would, therefore, be proper and advisable that a survey be made to determine whether the same condition obtains in our own country; and if not, what remedial legislation would be necessary to effectuate that condition.

A brief comparative statement of operations of foreign companies in our country and of our companies in foreign countries is quite interesting. In 1937 the premium income of foreign companies doing business in the United States was $418,000,000, whereas the premium income of United States companies doing business in foreign countries was but $113,000,000. Admitted assets of foreign insurance companies in the United States for 1937 was $1,140,000,000, whereas the admitted assets of United States companies doing business in foreign lands was but $592,000,000.

It is to be assumed that the admitted licensed foreign insurance companies doing business in the United States are properly taxed and that all premium income and assets are taxable under existing Federal revenue laws. But I observe that there is listed in the bulletin issued by the Department of Commerce on this subject an item which is set down as "Nonadmitted foreign companies" and that the premium income of these companies is estimated at $38,000,000 for 1937 and $33,000,000 for 1938. Since these companies are nonadmitted and unlicensed, no assets are admitted and none is shown in the reports of the Commerce Department.

Insofar as my information extends, the so-called nonadmitted companies are admitted in only two States of the Union, namely Illinois and Kentucky. It would be both interesting and informative to know whether such companies pay all Federal and State taxes to the same degree as are imposed upon domestic companies including social-security taxes and why such a practice as the conduct of insurance business in this country by nonadmitted companies should obtain at all.

I merely suggest this problem to the attention of the Treasury Department, the Ways and Means Committee of the House, and the State insurance commissioners. Meanwhile, I hope to assemble some data on the subject and make such investigation of the matter as time will permit.

Coinage of Domestic Silver

EXTENSION OF REMARKS

OF

HON. JAMES G. SCRUGHAM

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. SCRUGHAM. Mr. Speaker, by the Presidential proclamation of December 21, 1938, the coinage price to be paid by the Treasury for newly mined domestic silver was continued at 64.64 cents per fine ounce to midnight of June 30, 1939.

The Treasury regulations issued under this proclamation provided that to qualify for the 64.64-cent price, either the actual silver or a "duly executed instrument of transfer" covering such silver must be delivered to a United States coinage mint on or before June 30. The regulations also required that the "instruments of transfer" must be accompanied by the usual miner's affidavits, which, in the ordinary course, were not executed by the miner until after the silver-bearing ore had been received by the smelter, weighed, sampled, and assays agreed upon. Obviously a period of several days, or even weeks, was generally required following the actual mining of the silver-bearing ore, before the assays could be agreed upon and the miner's affidavits and instruments of transfer delivered to the mint; and this was particularly true in the case of many smaller mines located in remote sections.

As a result a substantial portion of the silver mined in the several weeks preceding midnight, June 30, could not be transferred to the mints before the June 30 deadline, and under the regulations such silver was not eligible for the 64.64-cent coinage price. It is estimated that there are 2,000,000 ounces of such silver awaiting acceptance for coinage.

The Treasury advises that under the powers contained in the old law, which expired at June 30 midnight, it could not accept this silver for coinage after June 30, even though it was mined on or before that date. Under the recently enacted monetary bill, however, extending various powers of the President, authority now exists to remove the existing discrimination by a further proclamation, making all domestic silver mined on or before June 30 eligible for coinage at the 64.64-cent rate, regardless of date of delivery to the mints.

Such proclamation should also provide a similar price for silver mined during the 24 hours of July 1, for which no specific provision was made in the monetary bill. The 71.11-cent statutory price provided in that bill applies only to silver mined from domestic deposits subsequent to July 1.

At the present writing the smelting companies have offered the miner the option of deferring settlement on silver-bearing ores produced up to June 30, and on July 1, until August 31, in the hope that before that date a suitable Presidential proclamation will be issued. If this relief by Presidential proclamation is not forthcoming, the silver producer will receive only the open-market price of approximately 35 cents per ounce; he will lose the difference between this price and the coinage price of 64.64 cents at a time when he badly needs all of his earnings for pay roll, powder, and supplies. Meanwhile, the uncertainty and delay in making settlement are seriously affecting the smaller producers throughout the West, and have already resulted in some shut-downs. The situation is not of serious concern to the smelters, who treat the silver-bearing ores on a smelter charge or toll basis, nor does it affect the larger producers, who were able to clear their full production through the mints.

Numerous representations have been made by the silver producers of the West to the President and to the Secretary of the Treasury and to their Senators and Representatives in Congress praying for the relief which the law authorizes and which the President and the Secretary of the Treasury can

give. With 2,000,000 ounces of silver involved, there should in all fairness be no discrimination against these producers who mined the ore and paid their workmen in good faith in the full expectation that a just administration would see to it that the proclaimed price of 64.64 cents per ounce was paid.

Federal Spending

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

ARTICLE FROM AMERICA'S FUTURE

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief article on Federal spending:

[From America's Future, summer issue 1939]

THE FOLLY OF FEDERAL SPENDING

(By Franklin Delano Roosevelt)

[Extracts from four addresses and one message to Congress]

We are not getting an adequate return for the money we are spending in Washington, or to put it another way, we are spending altogether too much money for Government services that are neither practical nor necessary. And then, in addition to that, we are attempting too many functions. We need to simplify what the Federal Government is giving to the people.

I accuse the present administration of being the greatest spending administration in peacetimes in all our history. It is an administration that has piled bureau on bureau, commission on commission, and has failed to anticipate the dire needs and the reduced earning power of the people. Bureaus and bureaucrats, commissions and commissioners, have been retained at the expense of the taxpayer.

If we do not halt this steady process of building commissions and regulatory bodies and special legislation like huge inverted pyramids over every one of the simple constitutional provisions, we shall soon be spending many billions of dollars more.

The credit of the family depends chiefly upon whether that family is living within its income. And that is equally true of the Nation. If the Nation is living within its income, its credit is good.

If, in some crises, it lives beyond its income for a year or two, it can usually borrow temporarily at reasonable rates. But if, like a spendthrift, it throws discretion to the winds and is willing to make no sacrifice at all in spending; if it extends its taxing to the limit of the people's power to pay and continues to pile up deficits, then it is on the road to bankruptcy. * * *

And on my part I ask you very simply to assign to me the task of reducing the annual operating expenses of your National Government. We must move with a direct and resolute purpose now. The Members of Congress and I are pledged to immediate economy. When a great danger threatens our basic security it is my duty to advise Congress of the way to preserve it. In so doing I must be fair not only to the few but to the many. It is in this spirit that I appeal to you. If the Congress chooses to vest me with this responsibility it will be exercised in a spirit of justice to all, of sympathy to those who are in need, and of maintaining inviolate the basic welfare of the United States. * * *

Just one word or two on taxes, the taxes that all of us pay toward the cost of Government and all kinds.

Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are reflected in idle factories, in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain.

I know something of taxes. For 3 long years I have been going up and down this country preaching that government—Federal and State and local—costs too much. I shall not stop that preaching.

And I propose to use this position of high responsibility to discuss up and down the country, in all seasons and at all times, the duty of reducing taxes, of increasing the efficiency of Government, of cutting out the underbrush around of governmental structure, of getting the most public service for every dollar paid in taxation. That I pledge you, and nothing I have said in the campaign transcends in importance this covenant with the taxpayers of the United States.

Another Career Man Recognized—Hon. William H. McReynolds Selected by the President as Special Secretary to Handle Administrative and Personnel Problems at the White House

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. COCHRAN. Mr. Speaker, William H. McReynolds was one of the three public servants recently selected by the President to occupy the very important assignment as assistant.

The reorganization bill provided for six additional assistants for the President. Mr. McReynolds was selected, because of his long experience in public affairs, to handle administrative and personnel problems which daily confront the President.

I have had the pleasure of knowing Mr. McReynolds for over 25 years. When I made his acquaintance he was an employee of the Post Office Department. He is a civil-service career man and has reached the highest grade that can be obtained under the Classification Act.

It might be of interest to mention at this time that five men who were associated with Mr. McReynolds in the Post Office Department during his period of employment there have attained similar recognition and occupy important positions with various Government agencies. They are Ebert K. Burlew, First Assistant Secretary of the Department of the Interior; Malcolm Kerlin, Assistant to the Secretary of Commerce; Harold N. Graves, Assistant Secretary of the Treasury and at the present time Acting Commissioner of Internal Revenue; Elmer L. Irey, Chief of the Intelligence Unit of the Bureau of Internal Revenue, and coordinator of the Treasury enforcement agencies; and W. H. Woolf, who is assistant to Mr. Irey.

Mr. Speaker, under leave to extend my remarks I include a very interesting article published in the Federal Employee concerning Mr. McReynolds. The article follows:

W. H. M'REYNOLDS GETS DEGREE AS "OUTSTANDING CIVIL SERVANT"

At its annual commencement exercises on Monday, June 5, the American University, Washington, D. C., conferred on William H. McReynolds, administrative assistant to the Secretary of the Treasury, the honorary degree of doctor of laws.

Approximately 40 outstanding leaders in the field of personnel administration and public administration were asked by the board of trustees of the American University to nominate for consideration by the board a "career civil servant" who has made an "outstanding contribution to sound governmental administration." Mr. McReynolds' selection is the result of the nominations which were received by the board.

In conferring the degree, Chancelor Gray used the following citation:

"A servant of the public in offices in which diverse procedures make unremitting demand upon responsibility; you have joined wide experience with precise knowledge, among personal leadership with scientific technique, and have won from those most competent to appraise your achievements an unqualified distinction. Accordingly, by authority of the Congress of the United States, vested in the trustees of the American University and by them delegated to me, I confer upon you the degree of doctor of laws, and admit you to all the rights, duties, and privileges to that degree appertaining."

Born in Wilson County, Kans., on January 24, 1880, Mr. McReynolds was appointed to the Federal service on July 16, 1906, in the office of the Chief Post Office Inspector, at Washington, coming from the law office of Hon. Jesse Arthur Smith, of Battle Creek, Mich.

He served on various investigating committees studying organization and procedure in the Post Office Department and Postal Service and acted as head of the Review Unit in the Chief Inspector's office, handling all inspectors' reports until May 1913.

Mr. McReynolds was detailed by the Postmaster General to work with the newly created Division of Efficiency which took over some

of the functions formerly delegated to the President's Commission on Efficiency and Economy, then being discontinued. In cooperation with other members of this group he made studies of the organization and procedure in all bureaus of the Post Office Department which were utilized by the Postmaster General in effecting improvements in administration. He subsequently was transferred to the rolls of the Bureau of Efficiency after it became an independent bureau and participated with other staff members of that Bureau in organization and procedure studies in all Government departments and practically all bureaus. These studies involved the development and installation not only of new procedure and methods of office routine and the elimination of duplication and the installation of modern equipment, but also the development and installation of new systems of accounting and fiscal procedure.

One of the incidents to the work on procedure was the development of equitable standards of compensation for employees. The first concrete evidence of the development of this idea is contained in the provisions of the appropriation act for the Post Office Department at the time when the studies were being conducted there. While salaries were then uniformly provided in specific amounts for a definite number of positions, the Congress authorized the Department to adjust such salaries $100 above or below the specified rate to conform to the earnings shown to be due on the basis of the standard set-up. Subsequently, this principle was carried into the Personnel Classification Act of 1923.

Mr. McReynolds acted as director of the staff of the Personnel Classification Board established by that act, having direct charge and responsibility for the installation of that system and the determination of the appropriate services and grades for all positions in the departmental service. After this installation he was made an active member of the Personnel Classification Board, representing the Bureau of Efficiency, and he conducted the classification survey of all positions in the field service of the Federal Government in pursuance of the amendment to the Classification Act of 1928.

He proposed and successfully supported the amendment to the Classification Act of 1930 which abolished the alternate members of the Personnel Classification Board and created the position of Director of Classification as the operating head of that organization. Mr. McReynolds was appointed Director of Classification and occupied that position until the work was consolidated with the functions of the Civil Service Commission and placed under its jurisdiction, and then was appointed as Special Assistant Director of the Bureau of the Budget with the primary duty of recommending what changes should be made in the organization of the executive branch of the Federal Government with a view to eliminating jurisdictional confusion, and overlapping and duplication of effort.

Directly after the present administration was inaugurated he was appointed by the then Governor Morgenthau, of the newly created Farm Credit Administration, as his administrative assistant and given the responsibility for developing this new unit, composed of several different bureaus and services taken from other departments, into a consistent and functioning organization. He came to the Treasury Department in November 1933 with Mr. Morgenthau when the latter became head of that Department, and since has functioned as his administrative assistant and budget officer. On January 31, 1939, Mr. McReynolds was appointed by President Roosevelt as a member of the President's Committee on Civil Service Improvement.

Veteran Relief Legislation

EXTENSION OF REMARKS

OF

HON. JOHN H. TOLAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. TOLAN. Mr. Speaker, I desire to call to the attention of the House that the President has signed the two veterans' bills passed by the House a few days ago, H. R. 2296, with reference to correction of misconduct restrictions, and H. R. 5452, with reference to additional care for disabled veterans and their dependents.

While these measures do not go as far as many of us would like to have them go, this is the very best we could do under the circumstances. The Senate amended the House bills in several respects, thereby limiting the benefits which the House bills provided.

For the benefit of the membership of the House I insert the following analysis prepared by the Veterans' Administration:

ANALYSIS PREPARED BY THE VETERANS' ADMINISTRATION

RANKIN BILL, H. R. 2296

(Act of July 19, 1939, Public, No. 196, 76th Cong.)

Public Law No. 196, Seventy-sixth Congress, "An act to restore certain benefits to World War veterans suffering with paralysis, paresis, or blindness, or who are helpless or bedridden, and for other purposes," was approved by the President July 19, 1939.

This act, with certain limitations, restored to the compensation rolls those World War veterans on the rolls March 19, 1933, under that part of section 200, World War Veterans' Act, 1924, as amended, which provides as follows:

"* * * no person suffering from paralysis, paresis, or blindness shall be denied compensation by reason of willful misconduct, nor shall any person who is helpless or bedridden as a result of any disability be denied compensation by reason of willful misconduct."

The act further provides death compensation for widows and children of such veterans who die or have died from disease or injury, service connection of which is or would have been established under the provisions of this act. These benefits are payable under Public Law No. 484, Seventy-third Congress, June 28, 1934, as amended, which act provides compensation at rates somewhat lower than war service-connected death rates where the veteran at time of death was suffering from World War service-connected disability.

The service-connected blind cases on the rolls March 19, 1933, were restored to the rolls by section 26 of Public Law No. 141, March 28, 1934.

The limitations heretofore referred to are: (1) The act restores only those veterans who were on the rolls March 19, 1933, and who entered the service prior to November 12, 1918; (2) the presumptively service-connected cases do not have the full amount of compensation restored but same must be reduced by 25 percent under the provisions of sections 27 and 28 of Public Law No. 141, Seventy-third Congress; (3) by making the restoration subject to sections 27 and 28 of Public Law No. 141, Seventy-third Congress, cases of fraud, misrepresentation of a material fact, or unmistakable error as to conclusions of fact or law are excluded and the act does not apply to persons as to whom clear and unmistakable evidence discloses that the disease, injury, or disability had inception before or after the period of active military or naval service, unless such injury, disease, or disability is shown to have been aggravated during such service; and in any review of the case of any veteran to whom compensation was being paid on March 19, 1933, for such service-connected disability reasonable doubts shall be resolved in favor of the veteran, the burden of proof being on the Government.

Payments to veterans restored to the rolls under the provisions of the act are effective the date of enactment of the act, and payments to widows and children are effective from the date of enactment or date of filing claim therefor, whichever is the later.

It is estimated that the act will restore approximately 1,100 veterans to the compensation rolls, at an estimated cost of $1,198,000 for the fiscal year 1940. It has not been possible to estimate the cost of providing death compensation benefits to widows and children under Public Law No. 484, Seventy-third Congress, as amended.

RANKIN BILL—H. R. 5452

(Act of July 19, 1939; Public, No. 198, 76th Cong.)

Public Law No. 198, Seventy-sixth Congress, "An act to provide certain benefits for World War veterans and their dependents, and for other purposes," was approved by the President July 19, 1939.

Section 1 of this act amends section 1 of Public Law No. 484, Seventy-third Congress, June 28, 1934, and pertains to payment of compensation to dependents of deceased World War veterans where the veteran's death is not shown to have been due to service.

Section 1 liberalizes the existing laws in those cases where the veteran was honorably discharged after having served 90 days or more, or having served less than 90 days, was discharged for disability incurred in service in line of duty, so that compensation is payable if at the time of the veteran's death he had a disability directly or presumptively incurred in or aggravated by service in the World War for which compensation would be payable if the disability were 10 percent or more in degree. In other words, in those cases where the veteran had 90 days' honorable service or was discharged for disability incurred in service in line of duty, it will not be necessary that he have a service-connected disability 10 percent or more disabling, but he must have a disability for which compensation would be payable if 10 percent or more in degree.

This section establishes a new income limitation providing that payment of compensation shall not be made to any widow without child or a child whose annual income exceeds $1,000, or to a widow with a child or children whose annual income exceeds $2,500 and exempts payments of war-risk term insurance, United States Government life (converted) insurance, and adjusted compensation from consideration as income. This income limitation is similar to that employed under existing law for non-service-connected benefits under Veterans Regulation No. 1 (a), as amended, part III. This new income limitation is substituted for the preexisting limitation of requirement for exemption from payment of a Federal income tax.

This section provides for payment of benefits of sections 1 to 3, inclusive, from the date of death where application is filed within

1 year thereafter and in other cases from the date of application, except that compensation authorized cannot be effective prior to the date of enactment.

Section 2 of the act provides for increased rates of death compensation to widows under Public Law No. 484, Seventy-third Congress, as amended. The prior rate to widow alone was $22 per month, and the rate to widow with one child was $30. Section 2 provides a rate of $30 per month for a widow but no child, and $38 per month for a widow with one child. No change was made in the rates for children. The total compensation limitation was changed from $56 to $64 in view of the increase for widows.

Section 3 of the act made formal changes in section 4 of Public Law No. 484, Seventy-third Congress, so as to conform with the amendments made by the act.

It is estimated that sections 1 to 3, inclusive, of the act will add 2,900 new cases to the rolls during the fiscal year 1940, at a cost of $1,268,000, and will provide increases for approximately 14,850 widows on the rolls at the date of enactment, at a cost of approximately $1,426,000 for the fiscal year 1940.

The total estimated cost for sections 1 to 3, inclusive, for the fiscal year 1940 is $2,694,000.

Section 4 of the act provides hospitalization and domiciliary care in Veterans' Administration facilities for retired officers and enlisted men of the Army, Navy, Marine Corps, and Coast Guard who served honorably during a war period as recognized by the Veterans' Administration on a parity with other war veterans.

Under Veterans Regulation No. 6 (c), paragraph 1 (f), in effect prior to date of enactment of this act, hospital treatment of retired officers and enlisted men was granted providing that part of the retired person's service was in wartime. That treatment was provided only in facilities under direct and exclusive jurisdiction of the Veterans' Administration and with due regard to available beds. A per diem rate was charged to such patients for treatment of tuberculosis—officers, $1.50; enlisted men, $1; general medical and surgical disorders or psychoses—officers, $1; enlisted men, $0.65.

Retired officers or enlisted men, except emergency officers of the World War, while being furnished hospital treatment were not formerly subject to reduction of retirement pay as provided by paragraph VI (A) of Veterans Regulation No. 6 series, which provides in effect that where any disabled veteran, who has neither wife, child, nor dependent parent, is being furnished hospital treatment, institutional, or domiciliary care by the United States or any political subdivision thereof, pension, compensation, or emergency officers' retirement pay shall not exceed $15 and the amount payable to such disabled veterans entitled to pensions for disability, non-service-connected, shall not exceed $6. Section 4 of the act makes the retired pay subject to the reductions heretofore explained under Veterans Regulation No. 6 (c), paragraph VI (A).

It is estimated that the cost to the Veterans' Administration will approximate $37,700 for the fiscal year 1940. It is expected that approximately 26 of the constant group of 140 officers and enlisted men will be subject to reduction.

Section 5 of the act provides increases of death compensation to the widows of veterans whose death was due to World War service. The prior rate of $30 per month for a widow under 50 years of age was increased to $38 per month. The prior rate of $37.50 for widows, age 50 to 65 years, was eliminated and those widows became entitled to $45 per month on a parity with widows, age 65 years or over. These increases are subject to the limitation contained in Public Law No. 304, Seventy-fifth Congress, that they cannot be paid in the event the monthly payment of compensation under Veterans Regulation No. 1 (g), and the monthly payment of yearly renewable term insurance or automatic insurance aggregates or exceeds the amount of compensation authorized by the act. United States Government life (converted) insurance has been eliminated from the limitation. It is to be noted that there is no change made in the rates for children or dependent parents, although by the removal of the United States Government life (converted) insurance limitation it is possible that some will become entitled to increased rates who were formerly barred.

It is estimated that this section will affect approximately 27,800 widows at a cost for the fiscal year 1940 of approximately $2,628,000.

Section 6 of the act contains an amendment to Veterans Regulation No. 1 (a), as amended, part I, paragraph II (k), which formerly provided that if a disabled person as the result of service-incurred disability had suffered the anatomical loss or the loss of the use of only one foot, or one hand, or one eye, the rate of pension would be increased by $25 per month. This section of the act increases the additional compensation from $25 to $35 per month. This provision applies to World War and Spanish-American War, including the Boxer Rebellion and Philippine Insurrection, service-connected cases. It also includes those Regular Establishment cases where the disability resulted from an injury received in line of duty in actual combat in a military expedition or military occupation.

It has been estimated that section 6 will provide increases for 9,000 World War veterans and 240 veterans of the Spanish-American War, including the Boxer Rebellion and Philippine Insurrection, at a cost for the fiscal year 1940 of approximately $1,113,000.

Section 7 of the act provides that on and after the date of enactment the rate of interest charged on any loan secured by a lien on United States Government life (converted) insurance shall not exceed 5 percent per annum. Under section 301 of the World War Veterans' Act, 1924, as amended, loan privileges under United States Government life-insurance policies are provided for, but the law does not provide for any specific rate of interest to be charged on any loan secured by a lien on such insurance. The determination of this rate is, therefore, made by the Administrator of Veterans' Affairs. Up to the passage of section 7 of this act the rate of interest on such loans was always 6 percent per annum. It was stated in regard to this section that the provision would not impose any cost on the Government immediately; however, that there would be a decreased amount of income to the United States Government life-insurance fund of $1,500,000 per year on outstanding loans and thus there would have to be a corresponding reduction in dividends payable to policyholders.

The total estimated cost of the act for the fiscal year 1940 is estimated at $6,472,700.

It seems to me that these measures constitute long steps toward correcting many of the injustices in the present laws concerning our disabled veterans and their dependents.

Pollution Problems Presented Along the Ohio River

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. BENDER. Mr. Speaker, for years the United States Public Health Service has been urgently requesting that some constructive action be taken to free the Ohio River and its tributaries from the dangers incident to extensive water pollution. They have pointed out the expensive nature of the processes which have created conditions highly dangerous to human health at many points. From the standpoint of public health, the presence of increasing concentrations of polluted water makes possible the passage of intestinal disease conditions. Intestinal irritants, too, increase in number as water pollution in our great streams goes unchecked.

The legislation now before Congress seeks to continue and improve the work now being done to check the progress of water-carried disease, and to avoid the difficulties created by nuisance conditions along water fronts. In 1937 it was declared at the opening sessions of the American Institute of Mining and Metallurgical Engineers that abandoned coal mines on the Ohio River headwater pour almost 20,000,000 tons of concentrated sulphuric acid into the stream. This vast deposit of acid affects docks, dams, locks, and even vessels themselves. Our Army engineers have estimated that the losses suffered by navigation interests from this one case is greater than the amount spent in sealing abandoned mines to prevent the seepage of these acids into the water.

Nor is this the only major source for pollution of the Ohio River. From Portsmouth to the mouth of the river, the pollution product is caused by the presence of tremendous quantities of untreated domestic sewage and manufacturing wastes. At Cincinnati the stream pollution of the Ohio River has at times reached so intense a concentration as to cause an actual depletion of oxygen. And any future increases in the pollution of the stream are regarded as certain to give rise to serious conditions along the water-front area.

The senior sanitary engineer of the United States Public Health Service, Mr. H. R. Crohurst, has presented these problems in complete detail in the course of a paper to the Ohio Valley Improvement Association. Mr. F. H. Waring, chief engineer of the Ohio State Department of Health, has made it evident in his researches that in spite of the fact that we have had State legislation regulating water pollution for 30 years and more our States have made relatively slow progress. Federal aids in the form of loans and grants-in-aid have been vitally important factors in stimulating the most modern treatment of sewage in the last few years. Here is a proper place for the expenditure of public funds.

In the interests of the public health few projects could be more easily justified than the present proposals. It is recognized by the Federal Government's highest officials that here is a sphere in which State health authorities should retain complete control. The supervision of stream pollution rests almost completely in the hands of the State health officials. They, in cooperation with Federal engineers, are in the best position to determine the use of funds made available by this legislation. Here is a perfect illustration of the type of harmonious action which should be the rule in the interrelationships of State and Federal authority.

In the last 12 years tremendous strides have been made in treating this important problem. Ohio has constructed 160 sewage-treatment plants in this brief period, costing approximately $40,000,000 and serving more than 3,000,000 people. But this is not a purely local matter.

It is one of the most pressing problems which has concerned a large group of States. Eight States are directly concerned with the treatment of the waters of the Ohio River. Five of these eight have already passed legislation which pledges their cooperation to control any further polluting of this great stream. An Ohio Valley Compact Commission has been working for 5 years to construct a practical problem which is to be achieved by the passage of compact legislation by each interested State.

A beginning has already been made on the problem of acid mine drainage. The sealing of abandoned mines has been going on in West Virginia and in eastern Ohio for some 5 years. Wherever this process has been started, streams which were formerly incapable of supporting life have made rapid recoveries. Indiana is already stocking some of its small lakes with fish as a result of its mine-sealing program.

The report of the Special Committee on Water Pollution declares on page 8 of House Document No. 155 that some 28,000 active and abandoned mines discharge 3,000,000 tons of acid mine drainage into the Ohio River Basin every year. The mine-sealing program has already eliminated 370,000 tons of this pollution.

Altogether, the 8 States in the Ohio River Basin, including 400 cities, have spent more than $100,000,000, including Federal assistance, in the battle to reduce noxious stream pollution.

There can be no let-up in the effort to combat this nuisance. As the Nation recovers industrially, more and more waste will be added to the existing pollution in our streams. The dangers to public health inherent in the perpetuation of vicious water pollution cannot be overestimated. It is always possible to overload the existing water-treating devices in many of our municipalities to the point where they break down. There are present equally grave dangers to property. Streams become affected by acids to the detriment of navigation and to the great loss of those who earn their livelihoods along their courses.

Under these circumstances the passage of legislation designed to safeguard health and property becomes a privilege rather than a duty. We have the assurance that the funds appropriated for this purpose will be wisely spent in the interests of true economy. Their use will make possible the employment of many men in a highly constructive task. Their results will furnish a convincing illustration of the possibility for perfect teamwork between Federal and State agencies within the framework of the Constitution. And the benefits to be derived from this legislation will spread themselves throughout the entire Ohio River Valley on a basis which will achieve notable results without creating hostilities. Unlike the developments of other valleys, the proposal before Congress offers no challenge to private industry; on the contrary it presents an opportunity for splendid and effective cooperation upon a vast and important industrial front.

In inviting the support of Congress for this measure, we are convinced that its passage will be a source of really constructive effort and a notable contribution to the development of the Ohio River Basin.

Father Gabriel Richard To Be Honored—Only Priest Ever Elected to Congress

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. RABAUT. Mr. Speaker, on March 4 of this year the Congress of the United States celebrated its one hundred and fiftieth anniversary. It is interesting to note that during all these years only one Catholic priest has ever occupied a seat in this body, and the Members from Michigan are his successors in office. This year, in the city of Detroit, there is to be dedicated a monument to the honor of this man—Father Gabriel Richard.

MONUMENT TO HIS MEMORY

It is little wonder that the occasion of this dedication should be a time for great celebration. It is little wonder that the Governor of our State and the mayor of our city will issue proclamations. Nor, when we consider the holy and valiant life of Father Richard, is it unusual that the Senators and Representatives, as well as the prominent clergy and laity, of the whole State of Michigan should join in paying tribute to the honor of a true soldier of God and country.

On October 14 of this year in Richard Park on the banks of the Detroit River at the approach to the beautiful Belle Isle Bridge there will be dedicated a monument to Father Richard. This is not the only token of esteem for his excellence of character. Among other manifestations of respect are the naming of a street, a library, a public school, a council of the Knights of Columbus, and his statue on the City Hall of Detroit.

HIS DIVERSIFIED INTERESTS

The life of Father Richard was one of the most picturesque and inspiring in the history of our Nation. First of all, he was a priest; but in addition to ministering to the spiritual needs of his people, he likewise worked for their social and economic betterment. In addition, knowing that men live not by bread alone, he concerned himself deeply with the intellectual needs of his fellow man. Like many of the other great leaders of our country, he used his talents in many and varied fields—religion, education, politics, charity, and publishing.

HIS EARLY LIFE

Concerning his earlier life and education before coming to Detroit, the Biographical Directory of the American Congress, 1774–1927, states the following:

> Father Richard was born in La Ville de Saintes, France, October 15, 1767; pursued classical studies; studied theology in the Seminary of Augers, France, and in Paris, and was ordained a priest on October 15, 1790; emigrated to the United States in 1792, and settled in Baltimore, Md.; professor of mathematics in St. Mary's College, Md.; sent by Bishop Carroll as a missionary to the Indians in the northwest territory and was stationed in what is now Kaskaskia, Ill.

Father Richard came to Detroit in 1798.

TEACHER AND CHAPLAIN

In 1804 he started a young ladies' academy and a seminary for young men studying for the priesthood, these being the first Catholic schools in Michigan. In 1805 he was appointed chaplain of the first regiment of Michigan militia. After fire had destroyed Detroit later in that same year, it was Father Richard who organized the relief work. In 1807, in response to a request of the Governor and other State officials, he delivered a series of religious lectures to non-Catholics, the first of the kind in the New World.

CHAMPION OF MUSIC AND EDUCATION

It was about this time that he brought the first organ and the first piano into Michigan. By 1808 he had half a dozen

schools in operation, teaching not only the ordinary studies but also knitting, sewing, spinning, and weaving. In this same year he established the first printing press in Michigan and printed the first newspaper in the State. From this same press likewise issued textbooks, religious tracts, and the Territorial laws. During the War of 1812 he was a prisoner of the British Government in Canada because he refused to take the oath of allegiance to the British. His great desire to spread education caused him to become one of the first ever to organize instruction for deaf-mutes.

COFOUNDER OF THE UNIVERSITY OF MICHIGAN

In 1817, with the Reverend John Monteith, a Presbyterian clergyman, he became cofounder of the University of Michigan. He was appointed vice president and professor for 6 of its 13 departments.

ELECTED TO CONGRESS

In 1823, Father Gabriel Richard became the third Delegate to the Congress of the United States from the Territory of Michigan, the first and only priest ever to be a Member of this body. In Congress he was silent but influential. Among other things he was responsible for an inquiry into the expense of constructing a post road from Mount Clemens to Fultonville. He secured passage of a bill that provided for the first of the territorial roads constructed in Michigan from the lower rapids of the Maumee to Detroit. Likewise he advocated the appropriation for opening the famed road from Detroit to Chicago and his name is permanently associated with this measure. Also he furthered the matter of establishing a district court in Michigan. The salary which he earned as a Member of Congress he devoted to the support of Detroit's first educational institutions.

VICTIM OF CHOLERA

In the summer of 1832 a cholera epidemic broke out in Detroit. Regardless of the consequences, Father Richard ministered to the sick and dying until he was stricken with the scourge himself. On September 13, 1832, he died, the victim of his own charity.

There have been many outstanding men in the history of the Nation, of Michigan, and of the city of Detroit. But there have been few who have devoted themselves so completely and so fearlessly to the cause of their fellow man. As a priest, he was a spiritual father; as an educator, an intellectual leader; and as a citizen, a progressive neighbor. Truly we are privileged to pay honor to the memory of this charitable, intelligent, patriotic, and energetic crusader—Father Gabriel Richard.

A Vast Development

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

Mr. BROOKS. Mr. Speaker, a few days ago, in Denison, Tex., there was great rejoicing. Bonfires were lighted and celebrations occurred. The occasion of all this merriment was the final adoption by Congress of appropriations sufficient to begin the $54,000,000 Red River Dam and Reservoir Project, to be located near Denison, Tex. It was entirely fitting and proper that such a celebration commemorating the outstanding achievement of all time for the town of Denison be held.

Two hundred and twenty-five miles further down Red River, in northwest Louisiana, there also was rejoicing. The people there were without display or celebration, but deep in their minds was the knowledge of what the Denison Dam meant to them. In their minds, they too realized, and attempted to fully appreciate, the true meaning of this outstanding accomplishment for the Red River Valley.

For years laborers, businessmen, farmers, engineers, and the people generally along the far reaches of the Red River Valley had been looking forward to the time when floods in this stream would be forever eliminated. They had been working, raising funds, and making plans, all to the purpose of keeping the Red River within its banks and protecting from the rushing floodwaters that fertile valley which stretches 1,000 miles through the great Southwest along Red River, as it meanders its course to the Mississippi River.

Now the hope of many years was about to be realized. The Denison Dam and Reservoir, with its possibilities of flood protection to all of the Red River Valley, was assured of being built. The people of Denison—yes, the people of the entire Red River Valley, from Denison to Angola, La., rejoiced and were entitled to celebrate this historic occasion.

I would like to say something regarding the size and scope of this monumental project. The dam itself will be built of rock toe, with its upstream face protected with riprap. At its base it will be 1,145 feet in height and at its crest 40 feet wide, and will have a length in all when complete of 21,800 feet and a height of 165 feet. An ordinary truck which carries about 1 cubic yard of dirt when loaded will have to make 15,475,000 trips in order to bear a like number of cubic yards of dirt into position to build this great earthen dam.

When built, the reservoir—below spillway crest—will contain 5,825,008 feet of water and will protect from the maximum flood 1,110,000 acres of land, both cleared and wooded. When in operation, this dam will be capable of producing 132,000 kilowatts of horsepower electric current, which may be distributed far and wide through neighboring States.

The most important feature of the dam is its return to the people of the United States, and, as nearly as can be estimated, in the language of the businessman, it will pay in actual returns to the farmer, the businessman, and the people generally of the great Southwest each year in excess of $3,000,000 in dividends.

The work on the Denison Dam project has not been a matter of days, but rather has been the work of many years. It has likewise not been the work of one single man but has required the cooperation of many people interested in flood control, navigation, and power development. It has required the cooperation of Congressmen from the States of Oklahoma, Texas, Arkansas, and Louisiana, presenting an almost united front, together with the cooperation of 3,000,000 people who dwell in this valley, to accomplish this purpose.

In the mind of one man, especially, it has been the goal toward which he has devoted his untiring and tremendous public effort. Long before it was my privilege to be a Member of this body, into the mind of our majority leader had come the realization of the possibilities of escaping the floods along the Red River by this project. He considered the values which such a project would create along the alluvial valley. He had contemplated the benefits which would result in giving homes and farms to thousands upon thousands of his fellow citizens. He had appreciated the blessing to humanity which would be derived from the building of a great dam, protecting the millions of people in the valleys from periodic overflow.

At this point, in the closing hours of this session of Congress, it is my desire to pay a tribute to the work of SAM RAYBURN, majority leader of the House of Representatives, Congressman from the Fourth Congressional District of Texas. It is not my desire to pay him a tribute in his capacity as majority leader, but, on the contrary, to remember him as an individual with the foresight and vision necessary to see the possibilities arising from the building of the Denison Dam with its beneficent influences to mankind. It is my purpose to pay high tribute to him as an individual with a steadfast purpose and the courage, who, after appreciating the value of such a project, followed it through the vicissitudes and discouragement attendant with a long-drawn-out legislative career, until it reached its final consummation in a substantial appropriation to begin the actual work of building the Denison Dam.

In the brief years during which I have served as a Member of the House of Representatives it has been my policy to

cooperate with Congressman RAYBURN in this project. While the great dam will be built in a section of Texas which is approximately 200 miles northwest of the State of Louisiana and will be far removed from the Fourth Congressional District which I represent in the House of Representatives, engineers predict that the benefits will be widespread. It is estimated that the benefits arising from the flood-control features of this dam will accrue one-fifth to Texas, one-fifth to Oklahoma, one-fifth to Arkansas, and two-fifths to the State of Louisiana. It has therefore been my privilege and pleasure to work in support of this dam and reservoir in the 3 years of my congressional service, rendering every aid and assistance within the scope of my abilities and energies and furthering this great work in the knowledge that in doing so I was benefiting the great State of Louisiana to an extent not now fully appreciated.

It is, therefore, entirely proper that the citizens of the little city of Denison, Tex., and the Red River Valley, at the conclusion of the legislative chapter of the Denison Dam, should celebrate it with bonfires and great rejoicing. Before long I hope to see the first spade of earth turned, insuring the beginning of actual construction, and before the snows fall on the plains of northeast Texas, it is my belief that construction will have begun on an extensive scale. Perhaps years may elapse before this project is finally completed. Then, too, it may not bring to all of us in the Southwest all of the advantages which some of the ardent exponents of this project have suggested, but we are sure that the advantages from the standpoint of flood control, navigation, and electric power will be such as to make the building of the project an epochal chapter in the development of the States of Oklahoma, Texas, Arkansas, and Louisiana. When the project is completed, the passing years will bring to a full fruition the work of eliminating floods on the river, the full possibilities of water commerce, and the development of power through excess water reservoirs. Then, in fact, will a true valuation be placed upon the gigantic possibilities of the Denison Dam and upon the outstanding efforts of those of our people who have devoted years of toil and effort in making this vast development possible.

Handling of Strike Situations in the State of Michigan

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

STATEMENT BY HON. FRANK MURPHY

Mr. DINGELL. Mr. Speaker, in reply to remarks by the gentleman from Michigan [Mr. HOFFMAN] regarding the handling of strikes by former Governor Murphy, now the Attorney General of the United States, I submit the following transcript of the testimony given by Mr. Murphy before the Senate Judiciary Committee when his nomination as Attorney General was submitted by the President:

STATEMENT OF HON. FRANK MURPHY

The General Motors strike which greeted me in office was not an isolated phenomenon. I inherited a general atmosphere of tense labor unrest. During 1936 there had been a number of other important strikes—some of them sit-downs—in Michigan and elsewhere and to the best of my recollection force had not been used by the public authorities to cure the situations.

Special conditions in Michigan made labor relations generally more difficult than anywhere else in the country.

Michigan industry—in the great automobile factories and parts plants—is more highly organized on a machine basis than anywhere else, and until very lately irregularity in employment was sharper there than in other parts of the Nation.

The depression had probably hit industrial labor harder in Michigan than anywhere else; I know that when I was mayor of Detroit the relief problem hit us much earlier than anywhere else.

The speed of operations in the automobile industry requires that its workers be comparatively young men. They are well educated and very conscious of what they consider their rights as American citizens. They are high-spirited and not easy to discipline. When I took office their union organizations were only a few months old, and the natural discipline problems of newly organized unions were accentuated by the fact that the employers had refused to recognize these unions.

That points up the most salient fact in the situation when I took office.

There was no operating legal machinery for settling labor disputes; the Wagner Act was at that time practically out of operation under decisions of lower Federal courts. As a Governor faced with the fact of unprecedented strikes which had to be handled, I had to devise ways and means of handling them as I went along.

Many employers, acting under advice of counsel, had refused to bargain collectively and had maintained that the Wagner Act was wholly unconstitutional, and a number of lower Federal courts had upheld their contentions. This created a keen feeling on the part of labor that the workers were being deprived of the benefits of the duly enacted National Labor Relations Act. Labor was further embittered by the feeling that their efforts at self-organization were being frustrated by industrial espionage.

In many industries organized labor was something new; it was not recognized, but was bitterly fought by the employers; in turn it had not fully acquired a sense of its own responsibility and was not readily amenable to the discipline of its more seasoned leaders. Misguided, inexperienced, and undisciplined workers were doubtlessly fascinated by the novelty of the sit-down as a new industrial weapon and seized upon it as a method of self-defense and reprisal against what they in many instances believed justifiably or unjustifiably were lawless tactics upon the part of employers.

Against this background thousands of otherwise peaceful, law-abiding, hard-working citizens went on strike in Flint, Detroit, and other cities. They had determined that their right to bargain collectively should be recognized. They were determined to occupy their employers' factories until their employers recognized their right to bargain collectively. They were not a handful of common criminals who might be dispersed by a few police. They were thousands of honest citizens.

Of course, they were guilty of violating the law. Their conduct was unlawful and unjustified. But in their own minds they believed that they were only defending their own rights against what they believed to be the lawless refusal of their employers to recognize their unions.

In that situation, with no recognized machinery to settle the dispute, I faced a condition and not a theory.

As the chief executive of the State of Michigan, it was my duty to see that the laws were faithfully executed. But I conceived it to be my duty as Governor to see that the laws are executed in the manner best calculated, in my judgment, to serve the original and the ultimate purpose of all laws—to preserve public order and insure public safety. To have executed the laws in a manner calculated to cause further breach thereof, further disorders, and even riot and bloodshed, would have been false to my own oath of office and to the law.

In the first instance, of course, law enforcement is a matter for the local authorities. If they require aid in addition to the regular police force, they may call upon the Governor for assistance or themselves swear in additional deputies.

Whenever the local authorities did call upon me for aid, not only were they authorized and directed to swear in additional deputies, but in many cases members of the State police were sent to aid them, and in one case a large detachment of the National Guard.

In only one case was I called upon by local authorities for assistance in the enforcement of a court writ. That was at Flint.

There the technical legal situation was badly complicated from the practical emotional viewpoint by the fact that counsel for General Motors obtained their first court order from a judge who was discovered to be a substantial stockholder of the company.

When this fact was disclosed the company promptly withdrew its application before that judge and sought its relief from another, and I am convinced that the company officials had no prior knowledge of the disqualifying interest of the first judge. But however innocent the mistake, it was difficult to eradicate the impression from the minds of the workers that the company had tried to secure a court order from a judge who was not disinterested.

When the writ of attachment was finally obtained, on a Friday, negotiations between the company's officials and the union representatives were progressing, and I had reason to believe that a settlement should be reached over the week end.

I did not ignore the writ of attachment. On the contrary, I warned the union representatives that I would enforce it. But I knew, as did the union representatives, and the company's officials, that the literal enforcement of the writ at that moment would not only disrupt negotiations, but could not be carried out without the gravest risk of property damage, riot, and even bloodshed which would leave bitterness and ill-feeling between the company and the men for years to come.

I realized that on the law of averages troops could not be turned loose in such a situation without taking the lives of some misguided, ordinarily peaceful citizens.

Having been a captain in the World War, I could not look upon young men of the age of these strikers against whom these troops would be sent and forget that there might come a time when we might be asking them to be troops themselves.

Consequently, when the sheriff asked for additional deputies to help execute the writ, I told him that I thought he would be wiser to delay action over the week end, as settlement appeared to be imminent.

On the one side, the company knew of my action and did not protest.

On the other side, the union representatives knew that if a settlement was not reached and the plants peacefully evacuated, the writ would be executed.

And at the plants I had a large detachment of the National Guard continuously on duty prepared to preserve order and ready for any emergency.

I believe that I did my duty to "see that the laws are faithfully executed" and to preserve the peace and dignity of the State of Michigan.

I believe that "faithful execution" by the Governor of a State includes wise administration of the law and not merely its literal instantaneous application at any cost.

I conceived it my duty as the Governor of the State not only to see that the writs of the courts were executed but also to see that peace and order were maintained.

I conceived it to be my duty as the Governor of the State not only to see that the law was enforced after it was broken but to see that the law was observed before it was broken.

To safeguard not only the enforcement of the law but its observance, I conceived it my duty to exert every effort to replace industrial strife and unrest, which would wreck the economy of my State, with industrial peace and order, which would preserve the economy of my State.

I have never condoned the sit-down strike or countenanced disobedience of a court order. From the very beginning of the labor trouble in Michigan I warned the union representatives that the sit-down strike was illegal and, further, that its use would alienate public opinion.

I believe in vigorous law enforcement. However, when there is widespread disobedience to law, it is not enough to enforce the law; it is also necessary to discover and eliminate the causes of that widespread disobedience.

So the Michigan labor situation with which I had to deal involved something more than law enforcement. I was dealing not with a few vicious lawbreakers but with thousands of self-respecting workers who felt that they had genuine grievances of long standing. It was my duty to enforce the law, but it was also my duty to hold their respect for the law. And that I could do only by making them feel that the State was not indifferent to what they honestly felt were their grievances.

When a settlement was finally reached the course I had followed was widely approved by the local press and by responsible spokesmen on either side.

In subsequent cases I pursued the same policy that had been followed with approval and wide satisfaction in the General Motors case. I think I prevented some strikes; I know I settled many. I am not saying that later developments were not sometimes disappointing to my hope that industrial peace had been permanently achieved. But I do feel sure that the sit-down strike has now been thoroughly discredited and I believe we have seen the end of it. Because it is an instrumentality that would undermine and destroy the vital right of the ownership and possession of private property, one of the main pillars upon which our form of economy and, indeed, our democracy is based.

In the meantime, what all of us in Michigan at that time—management, labor, and government—were trying to achieve by patience with each other has been achieved. The factories of Michigan are running full time, with workable relations between management and labor. Cars are coming off the assembly line, men and women are drawing down wages, investors are making profit, and orders for materials are going out through the rest of the country. In comparative terms, that is a peace which few people on the ground in Michigan in the first week of 1937 ever believed could be achieved. That is what I wanted—that is what we achieved—and that is a result of which no one who believes in the reign of law need be ashamed.

BAKER, HOSTETLER, SIDLO & PATTERSON,
Cleveland, February 12, 1937.

Hon. FRANK MURPHY,
Office of the Governor, Lansing, Mich.

MY DEAR GOVERNOR MURPHY: I beg leave to express my deep satisfaction at the result of your intervention in the so-called General Motors strike. The settlement of that tremendous controversy has afforded relief to a multitude of workers and their families who may or may not have been misled into an extra legal position about their rights, but that question can be debated and settled under circumstances involving less passion and less suffering than would have been entailed but for the happy adjustment brought about through your influence. No humane person could have desired to see the struggle harshly fought through, even though he believed, as I do believe, in the entire illegality of the sit-down strike.

But quite apart from the details of the settlement and the issues left to be worked out, I venture to rejoice that the settlement has been effected through the influence of a Governor of a great State. There was a time in our history when men resigned from the Senate, from Cabinet positions, and even from the Chief Justiceship of the Supreme Court of the United States to accept the responsible and dignified office of Governors of their States. No office could be more important. Both its influence and its authority in the maintenance of order and progress in society are impossible of exaggeration. The preservation of Michigan as an indestructible State in an indestructible Union is involved in the retention by the people of confidence in their form of local government and its efficiency to solve local and domestic problems. By your intervention and success you have heartened all of us who believe in the dignity of your office and in the necessity of preserving efficient and responsible State governments as indestructible components of a Federal Government dealing with Federal rather than local concerns.

With great respect,
Sincerely yours,

NEWTON D. BAKER.

LAW SCHOOL OF HARVARD UNIVERSITY,
Cambridge, Mass., February 12, 1937.

DEAR GOVERNOR MURPHY: I know enough about such major industrial controversies as the General Motors strike to know how little an outsider like me knows of the real complexities and difficulties that had to be resolved. But I also know enough to know what pertinacity, sagacity, and a profound sense of fairness were necessary to prevent an ugly situation from turning into open violence on a large scale, and finally to bring the parties to a peaceful adjustment. And, therefore, I express to you gratitude and admiration from the bottom of my heart.

Very sincerely yours,

FELIX FRANKFURTER.

[From the Detroit News of February 12, 1937]

THE STRIKE ENDS

Governor Murphy's wise and unrelenting insistence has brought the General Motors strike to an end without bloodshed. That is the salient fact to those who have faced in imagination what might have happened otherwise.

As for the details of the settlement, it is hard to see what has been accomplished by the 43-day tie-up of one of the country's largest industries. General Motors at long last has agreed to bargain with the United Automobile Workers on wages, hours, and conditions of work. But it has been ready to do exactly that almost from the outset of the strike.

So far as we can see the positions of the union and of the corporation remain virtually where they were 43 days ago. Nothing has been accomplished and nothing proved—unless it be that a handful of strikers can close up the largest mass-production industry as long as official forbearance allows them to remain in illegal possession of its plants. The forbearance of the corporation also has a good deal to do with the strike's "success" from that standpoint.

In saying that nothing has been accomplished by this strike, one exceedingly important exception must be noted. This is the provision in paragraph 7 of the agreement included at Governor Murphy's insistence for settlement by negotiation of future disputes. Once the corporation and union have come to terms on wages, hours, etc., they engage to exhaust "all opportunities to achieve a satisfactory settlement" of future demands or grievances before another strike is called.

The Governor's balanced handling of the strike situation and negotiations throughout has merited description as statesmanlike. His position as Governor of the State and embodiment of its legal sovereignty was far from an easy one under the circumstances. Yet he was able at the same time to refrain from recognition of the sit-down strikes and to insist that they be ended without the necessity of forcible ejection. He demanded above all that an end be reached without forfeiting in senseless violence the lives of Michigan citizens.

That was the humane and wise thing to do. But it required of the Governor a feat of balancing that scarcely can be expected of official authority every time a group of workers in the name of collective bargaining seizes possession of another's property.

[From the Detroit Free Press of February 12, 1937]

That the long-drawn-out blockade of industry in a vital field finally has reached a happy conclusion under conditions justifying such a hope, unquestionably is due in large degree to the part the Governor has played in the emergency.

Mr. Murphy made it clear at the start that he would tolerate neither violence nor disorder. Before all else, good order would be maintained and society given protection, he declared. The support of National Guard men, called out to make this stand effective, was costly; but the results have justified the expense.

There is no black tragedy to mourn over today; no bitter aftermath that will rankle.

At the same time the Governor showed neither bias nor passion. He manifested a good understanding of the situation and maintained a helpful attitude of impartiality between the parties to the controversy, which earned for him the confidence of both sides and made the good offices he tendered effective.

Governor Murphy labored hard and patiently, refusing to give up even when the prospect for success in bringing about a peaceful agreement appeared very small, and he won out. What he has done deserves recognition throughout Michigan and in the country generally.

If I Could But Speak

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

ARTICLE BY ELEANOR ANN JUDD

Mr. ANDERSON of Missouri. Mr. Speaker, the great tomb of the Unknown Soldier over in Arlington has evoked many a solemn and sublime thought, but none more inspiring than one set to words by a little 17-year-old girl, Miss Eleanor Ann Judd, whose father is a captain in the United States Army.

It is with a great sense of pride that I ask unanimous consent to extend Miss Judd's very brief but beautiful composition in the RECORD, and I commend it to the attention of every Member of Congress and to the Nation.

IF I COULD BUT SPEAK

They engraved "Known but to God" on my tomb, but, my buddies, that is not true, for I am the son, the husband, the brother who did not come back. I belong to each Gold Star mother; to each soldier's widow; to each soldier's sister, who waved a brave farewell as I marched away to the "war to end all wars," and with them I now raise my voice.

My comrades, buried alive in the hospitals, I remind you that He, too, suffered on the cross, and He will ease your pains, for to all you are a living symbol of the fallacy of unpreparedness and the unaccountable cost of war.

Oh, my buddies who returned to your loved ones, do not permit our glorious and free Nation to be lulled into a coma of false security; to neglect her trained fighting forces, or to tolerate any disloyal utterance within our fair shores.

Impress upon all that it is not necessary to go to war if our young men and young women are so well organized and trained that bigoted, unscrupulous, and greedy autocrats will not dare to even try to dismember our great country.

For you, my buddies, can vividly picture the days without food; the nights without sleep, the whine and the roar of the shells, the quaking earth, the staccato of machine guns, and the moans of the wounded.

So, do not let your children and the flower of our youth experience this, but rather insist that those elected to responsible offices prepare our Nation so efficiently that emperors and dictators will not risk sending their hordes to endeavor to disrupt this land of freedom, "and the government of the people, by the people, and for the people shall not perish from this earth."

ELEANOR ANN JUDD.

Shall We Send Our Youth to War?

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 25, 1939

ARTICLE BY HON. HERBERT HOOVER

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by ex-President Hoover:

SHALL WE SEND OUR YOUTH TO WAR?

(By Herbert Hoover)

The American people are today tense with anxiety lest they be led into another great war.

And some of our people seem to be accepting glib talk of war as if it were something more good than evil. Truly many years have already gone by since we ceased to feed boys to the cannon. It seems difficult to believe that only about one-third of the living American people are old enough to remember the World War well.

We have urgent need today to recall the realities of modern war. And we have desperate need to take into our national thinking the gigantic yet invisible forces behind war which are again moving in Europe.

I am perhaps one of the few living Americans who had full opportunity to see intimately the moving tragedy of the World War from its beginnings down through the long years which have not yet ended. I saw it not only in its visible ghastliness, but I lived with the invisible forces which moved in its causes and its consequences. I am perhaps justified in recalling that experience.

Before the war I knew Europe—Russia, Germany, France, Italy, and England—fairly intimately, not as a tourist but as a part of their workaday life.

I was drafted in 1914 to preserve the lives of 10,000,000 people in Belgium and northern France who had been overrun by the German armies. Here was a service that by common consent was a sort of semiofficial state. It covered not alone food, but the economic life of these people. It operated within the lines of a hostile army and moved through the blockade of a hostile navy. In that service I moved constantly in and out behind the trenches on both sides of the conflict. I witnessed the misery and backwash from war in their most hideous forms. My duties required that I meet constantly with high military and civil officials in England, Germany, France, and the neutral countries in contact with the invisible forces behind the war.

When America joined in the war I was asked by President Wilson to return to America to become a member of our American War Council and to administer the food supplies of our country and for our Allies.

At the armistice I was drafted back to Europe to direct activities of the allied and associated governments to defeat unparalleled famine and pestilence, to restore economic life among both the victors and the vanquished. In this service I spread an organization of thousands of American men and women over 23 nations—many of them boiling with revolution. Our job was not alone the extension of a hand of kindness. Its purpose was to secure order out of which peace could be made.

Constant dealing with those many peoples and their officials brought a flood of knowledge of the political, economic, and social currents which sprang from the war.

I did not participate in making the peace. I was daily called upon for advice and information. And I observed its disastrous course. Subsequently, during a period of 8 years in Cabinet position I dealt with the troubled seas of unceasing political and economic storms the world over.

As President, I dealt unceasingly to bring about reduction of arms, economic readjustment, and peace.

A year ago I spent some months in Europe with unique opportunity to discuss its problems with leaders in 14 nations.

That is 20 years of opportunity to observe European peoples and their leaders, with all the forces of good and evil in which they live, and to relate them to our American scene. The searchlight of this experience can well be turned upon some phases of the present scene.

First, let me say something from this experience of what war really is. Those who lived in it, and our American boys who fought in it, dislike to recall its terribleness. We dwell today upon its glories—the courage, the heroism, the greatness of spirit in men. I, myself, should like to forget all else. But today, with the world driving recklessly into it again, there is much we must not forget. Amid the afterglow of glory and legend we forget the filth, the stench, the death, of the trenches. We forget the dumb grief of mothers, wives, and children. We forget the unending blight cast upon the world by the sacrifice of the flower of every race.

I was one of but few civilians who saw something of the Battle of the Somme. In the distant view were the unending trenches filled with a million and a half men. Here and there, like ants, they advanced under the thunder and belching volcanoes from 10,000 guns. Their lives were thrown away until half a million had died. Passing close by were unending lines of men plodding along the right side of the road to the front, not with drums and bands, but with saddened resignation. Down the left side came the unending lines of wounded men, staggering among unending stretchers and ambulances. Do you think one can forget that? And it was but one battle of a hundred.

Ten million men died or were maimed for life in that war. There were millions who died unknown and unmarked. Yet there are miles of unending crosses in a thousand cemeteries. The great monument to the dead at Ypres carries the names of 150,000 Englishmen who died on but a small segment of the front. Theirs was an inspiring heroism for all time. But how much greater a world it would be today if that heroism and that character could have lived.

And there was another side no less dreadful. I hesitate to recall even to my own mind the nightmares of roads filled for long miles with old men, young women, and little children dropping of fatigue and hunger as they fled in terror from burning villages and oncoming armies. And over Europe these were not just a few thousands but over the long years that scene was enacted in millions.

And there was the ruthless killing of civilians, executed by firing squads who justified their acts not by processes of justice but on mere suspicion of transgression of the laws of war. Still worse

was the killing of men, women, and even children to project terror and cringing submission. To the winds went every sense of justice. To the winds went every sense of decency. To the winds went every sense of tolerance. To the winds went every sense of mercy. The purpose of every army is to win. They are not put together for afternoon teas. They are not made up to bring good cheer or justice or tolerance. They are made up of men sent out to kill or be killed. Whatever the theory, the act that wins is justified in war.

And there were the terrors of the air. In a score of air raids I saw the terror of women and children flocking to the cellars, frantically, to escape from an unseen enemy.

In another even more dreadful sense I saw inhuman policies of war. That was the determination on both sides to bring subjection by starvation. The food blockade by the Allied Governments on the one side, and the ruthless submarine warfare by the Central Powers on the other, had this as its major purpose. Both sides professed that it was not their purpose to starve women and children. But it is an idiot who thinks soldiers ever starve. It was women and children who died of starvation. It was they who died of the disease which came from short food supplies, not in hundreds of thousands but in millions.

And after the armistice came famine and pestilence, in which millions perished and other millions grew up stunted in mind and body. That is war. Let us not forget.

We were actually at the front in this war for only a few months, but it cost us the lives of 130,000 men. It has placed 470,000 persons on the national pension list already. It has cost us $40,000,000,000. And that represents more than just dollars. Today we have a quarter to a third of the American people below a decent standard of living. If that forty billions of wealth had remained in America these people would not be in this plight. A large segment of our people have already been impoverished for a quarter of a century. And the end is not yet.

We may need to go to war again. But that war should be on this hemisphere alone and in the defense of our firesides or our honor. For that alone should we pay the price.

The endless books tell us how the Great War originated. They do not agree. But some salient facts do stand out that are pertinent today. It began by a quarrel between three dictators—the Czar of Russia and the Emperors of Germany and Austria. They were competing for "power." France, a democracy, was dragged in because, out of fear of the dictators of Germany and Austria, she, a democracy, had made a military alliance with the Czar. The British democracy was drawn in partly out of idealism to defend liberty, but also partly to save its trade and its possessions from too great a concentration of "power" on the continent. We finally joined in the war wholly out of idealism.

I dodge no responsibility. I reluctantly joined in the almost unanimous view of our countrymen that America must go into that war. We had been directly attacked. But, more important, I believed we could bring the endless slaughter to an end. I believed that with our singleness of purpose we could impose an enlightened peace; that we could make it a war to end war. I believed we could make the world safe for the spread of human liberty. If experience has any value to nations, there are in the wrecking of these hopes a thousand reasons why we should never attempt it again.

When President Wilson arrived in Paris the common people of the world were praying for a real peace. There were good men there, and there were high aspirations. But there were also concentrated there the invisible forces of age-old hate and greed. Mr. Wilson met a determination to crush the enemy in a Carthaginian peace. He met the sinister demands for power. He met a greed for possession of world resources. Above all, he met with the pressures of populations and the unsolvable problems of European boundaries and economic life. He worked valiantly to combat the evil forces. He spread American idealism at the peace table. He argued and cried out for reason and justice—not because he felt the enemy was guilty, but because he felt that mankind must turn its face to the future and its back on the past. When Germans blame him, little do they know what Germany would have looked like had it not been for Woodrow Wilson.

To Mr. Wilson I criticized bitterly the provisions of the peace treaties before they were signed. I felt that instead of healing the wounds of the world they would spread disaster over a generation. I have before me a memorandum that I gave to Mr. Wilson 2 months before the treaties were signed, urging their lack of vision and the dangers to America. He won some victories for sanity. He helped some nations to freedom. He hoped that, with time for hate and avarice to cool, the League of Nations could reconstruct the failures of the treaty.

Americans will yet be proud of that American who fought a fight for righteousness, although he partially lost. But he proved that American idealism and American ignorance of the invisible forces in Europe can only confuse the grim necessities of European peace.

What is happening today? Europe is suffering repeated earthquake shocks from the fault of the Treaty of Versailles.

But, beyond all this which is obvious, something else is moving. Europe is again engaged in a hideous conflict for power. Stripped to its bones, today the quarrel is much the same. Dictators in Germany and Italy rise to power on opposition to communism, launched into their peoples by the dictator of Russia. Again the dictators are in conflict for power. Again France, a democracy, ties herself to the dictatorship in Russia, England becomes endangered should the dictators of Germany and Italy overwhelm France. And thus again begins this dreadful treadmill.

What is proposed? That we join to stop inevitable movements and readjustments of peoples; that we engage in ideological wars. Who will pay for it in blood and treasure? Our children.

In Europe they constantly use the word "power" in a connotation that is strange to many Americans. That is the "power" of peoples and over peoples. This "power" may be a political authority held in a man. It may be the "power" of a nation, the "power" of alliances, or the balance of "power." And they speak daily of international "power" politics. They often speak of it in terms of a game. They play power politics as sheer necessity for national defense, and they play it for national aggression.

The players change and the forces in the games shift constantly. It is a game of delicate moves. It is not a game of open covenants openly arrived at. Nor is the self-determination of nations one of the rules. Those who play with power politics, like those who play with matches, always deny that they intend to set the conflagration of war. Their moves are based not alone on bluff but on guns. When we take sides in their controversies, when we talk of using force of any kind, we are playing power politics at the European chess table.

I do not believe we should sit in that game, either in their interest or ours. Our idealism and our uncertainties of policy only befuddle the movements of expediency and delicate adjustments in which they are compelled to live. And our stakes are the lives of millions of sons of America. The stakes are another 25 years of hideous national impoverishment. The stakes are the progress of all mankind for half a century. The stakes may be the sinking of intellectual and spiritual liberty for a century to come.

The time may come when we could arbitrate the quarrels which arise in that game at some point before shooting begins. But if we sit in the game, we shall never be arbitrator, and we may be drawn into the shooting.

And let me inject that Europe plays power politics against us. There is the instance of the European war debts to us. Part of the debt was for supplies and cash to carry on the war. From one-third to one-half of that debt, however, was material and money we supplied after the Armistice to aid in reconstruction. At that time the war was won. We had no need in our own interest to loan another dollar. We settled the debts for much less than the full sum. The whole, including the reconstruction advances, has been repudiated.

The repudiation has a double sting, for over years following the Balfour note the Allies publicly and repeatedly informed the former enemies that the reason they exacted reparations and indemnities from the enemy was because they had to pay it over to the Shylock of the Western World. They stated they would reduce the indemnities by whatever the United States, in turn, would cancel to them. By such power politics they consolidated central Europe into their propaganda and pressures to cancel the debts. Moreover, their propaganda told us, and a host of Americans reechoed, that they could not pay because they could not transfer money in such great quantities from one nation to another. That is true in a depression, but let me recall that these very nations today have shipped four billions of money to this country for investment since they repudiated their debts.

I have no desire to recall these incidents.

My purpose is to stir up reason among the American people against doing it again.

The dangers of our being dragged into war lie in these directions:

1. Foreign propaganda to inflame our emotions and to mold our minds to war.

2. Preachments of our own mistaken officials and citizens which, in effect, support these propagandas.

3. Steps taken by our own Government, which, while denying that they are intended to take us into war, yet entangle us with these very controversies, the end of which may be war.

If deliberate attack were made upon women and children, which modern airplanes and modern food blockade make possible, our indignation might not be restrained from action. Remember the part indignation over Belgium played in our entry into the last war.

And here we can examine one of the methods of power politics. That is propaganda. During the World War propaganda was first developed into a national weapon no less potent than killing men. When peoples and governments believe that independence or their national survival or their possessions are at stake, they instantly justify untruth and lies as a part of national policies. When they weigh the sacrifice of their sons, then truth, honesty, tolerance, and justice are thrown to the winds if a lie will serve better.

The Great War was the first time in history when all the powerful agencies of publicity and manipulation of news were organized without moral restraint under the genius of skilled men. There were built up a skill and a technique in front of which every citizen was helpless to know the truth. And since that time the radio has become an additional weapon.

We ourselves, when we entered the war, imitated the others. We created great propaganda agencies. The managers of them have since confessed frankly that they distorted fact and created news without truth. They built hate as well as altruism as a necessary emotional foundation of modern war. And no man dared question or answer under this fierce organized condemnation.

Propaganda has three directions: Internal, to mobilize emotions; external, to influence neutral nations; and aggressive, to influence the enemy.

From the beginning of the Great War I saw the development of the propaganda directed at the United States from both sides. I was so impressed that I collected this material for years. The War Library at Stanford University holds stack after stack of this emanation from every government at war. And, in the light of what we now know really happened, it comprises the greatest collection of part lies on the face of the earth. It ought to be studied.

There are certain types of propaganda in motion today which fertilize our soil for our entry into war. For instance, one of these volleys of propaganda asserts that a great war in Europe is inevitable. That is a half truth. The set-up in Europe has made a general war inevitable every hundred years since the Romans kept the peace. And until mankind makes much greater progress it will continue to be inevitable. But the pounding in of that phrase is either sensational journalistic speculation or European propaganda of the preparatory type.

We are told that we must join in war or democracy will disappear from the earth. From the alliance of the democracies with several totalitarian states that ideological issue seems somewhat confused.

My sympathies are with the democracies. But the democracies of western Europe have the resources to defend themselves. They comprise great empires of hundreds of millions of people with all the resources needed to secure their defense. Whether they preserve their democracies is a question of their own will.

We are told that if they fall we shall be the next victim. I do not agree that they will fall. But if they do fall, the exhaustion of the dictators will be such that these countries will leave us alone for a quarter of a century at least.

It is dinned in our ears that we shall inevitably be drawn into this inevitable war whether we like it or not. That just simply depends upon our own will to keep out.

And propaganda showers upon us in other forms. I have for the past few months checked back on headline stories from Europe which have subsequently proved untrue. There are 20 such stories on the list. That is not the fault of our news services. These stories usually start as "information from a responsible source." That means a foreign government official. But they leave a trail of fear, of hate, and prejudice and help to condition our minds for war.

One of the curious happenings of these days is that our newspapers print more alarming war news than the European press.

And another form of war conditioning of the public mind is the firing of words by our Government officials at the nations we don't like. So long as we confine it to words, the dictators will fire back an equally insulting lot of words, and we wind up even. Soapbox oratory is the necessary equipment of modern dictators, and they excel. Only the really neutral nations could judge as to who wins in these jousts of billingsgate. But they build up hateful emotions both ways.

And that does not imply that we should ever neglect to express indignation at great wrong. But the terms we use are important if it is results we seek and not propaganda.

The second danger of war comes from the policies of our own Government. President Roosevelt has taken a seat at the table where power politics is being played. He has joined in the chessboard of Europe. He lines us up in the balance of power. It is said we can do this without joining in war.

It is said we will do something more than words and less than war. When we open fire on the front we are in the fight. The enemy will fire back with more than words. If the more than words fail to overcome him we have to go further. For then we have to win or be overcome on our side. Let nobody say that you can do such things without danger of war itself.

If the dictators believe we will stop short of war they will credit us with having small chips in this game. Their chips are soldiers and guns. If our partners believe our chips of more than words and less than war are valuable, it is because they believe that when we have exhausted these chips we will put our soldiers and guns into the game and they will edge us in.

And right before our eyes the game shifts. We were originally going to quarantine dictators and again save democracy. Today we have two or three dictators on our team. We have had to drop the "democracy front" and "dictators" and talk of "aggressors." That only indicates how rapidly we can move from sheer-idealism into combat.

We may think we can take part in controversies and quarrels in Europe without going to war. We may think our strong will to keep out permits us to start down this road and stop when it looks as though we are being involved in war. But, when we get to that point, our will to stay out is not only weakened, but our angers and hates are aroused to a point where our will to stay out no longer has any control.

Today the European anti-axis press is confident we intend to join in their wars if they come. If they are rudely awakened, their peoples will hate us for a generation. And they will deluge us with cries of cowardice by way of further propaganda.

Space prevents adequate discussion of another phase of this situation. The whole totalitarian structure upon which these aggressive dictators are supported is weakening. That is equally true for the Communists, the Fascists, and the National Socialists. Their concepts of brutal intolerance, of suppression of every right of free men, is raising its own opposition within them. Peoples who have known liberty will yet regain it for themselves. The vicious persecutions of Jews and other religious groups has raised the hate of the world. Their economic systems are failing to produce the standards of living they have promised. It is a sad thing that we in America have to endure the propaganda of the Communists trying to get us into war, and of the bund trying to implant nazi-ism in the United States. We endure it only because we hold to free speech. And both of them take advantage of our tolerance to tear down our liberties.

And what profit it if, by our joining in war to extinguish these systems, we also lose our own American life? It is not alone the price of war we lose. But we can never go through another great war without becoming a totalitarian state in order to effectively fight such a war. When we have finished we shall not have established peace in the world. We shall have sacrificed liberty for generations in the United States.

America can be of service to the world. We can hold up the standards of decency in the world.

We should hold that the basis of international relations should not be force, but should be law and free agreement.

The greatest immediate service that we can render is to join in economic cooperation with other nations to relieve the economic pressures which are driving the world constantly to instability. A great part of these pressures for war are economic. The greatest healing force that could come to the world is prosperity. There is a vast field for American action which is free from political entanglements. We should resume the conferences which were started under such good auspices by our country in 1932.

But, far beyond that, we can hold the light of liberty alight on this continent. That is the greatest service we can give to civilization.

We as a people can keep out of war in Europe if we have the resolute will to do so. Our will can be weakened by propaganda. It can be insidiously undermined by sitting in the game of European power politics.

We hear much of laws that will preserve our neutrality. But the question is not legalisms; it is our will to stay out. Staying out is a matter of tactics and strategy almost as difficult as the strategy and tactics of war. And, if there is not the adamant will to stay out, no amount of law can keep us out. The first thing required is vigorous, definite statement from all who have responsibility, both publicly and privately, that we are not going to war with anybody in Europe unless they attack the Western Hemisphere. The second thing is not to sit in this game of power politics.

These are the American policies that will make sure that we do not send our youth to Europe for war.

Food Production

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

ARTICLE BY F. G. R. GORDON

Mr. BRIDGES. Mr. President, I ask to have printed in the RECORD an article by F. G. R. Gordon on the subject of Food Bill and Food Production in States, published in the Haverhill (Mass.) Sunday Record of July 9, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Haverhill (Mass.) Sunday Record of July 9, 1939]

FOOD BILL AND FOOD PRODUCTION IN STATE

(By F. G. R. Gordon)

In 1935 the six New England States produced food valued at $213,000,000; we sent to other States and foreign countries the vast sum of $1,400,000,000, round numbers. This is a vast drain of the resources of the people of New England. Massachusetts is farming 1,000,000 acres less today than 29 years ago.

When I was a kid my father had a flock of 75 sheep in Landaff, N. H.; a near neighbor had 450 sheep; today I doubt if there are 400 sheep in the entire town. And on the farm where I chased sheep, when the old ram led the flock over the fence, are mostly trees 6 to 20 feet high.

A sample of what's happened to many farms and towns over New England.

We supply ourselves with potatoes, thanks to Aroostook County; we supply ourselves with cranberries, thanks to Cape Cod. We export some potatoes and cranberries net; we export some apples, but we also import apples from other States, about an even toss-up.

In 1935 we could count 8,000 sheep on the farms of Massachusetts; 50 years ago we could count 400,000 sheep on Massachusetts farms. In 1910 our people farmed 3,875,000 acres; today we farm 2,400,000, or a few less. Vermont is about the same size as Massachusetts, and she farms 4,250,000 acres. Why don't we do as well as Vermont?

In 1935 we in this State had a total of 189,000 cattle while Vermont had 409,000, and she also had 20,000 more sheep than we had. We beat Vermont on hogs, with 90,000 against the maple sugar State of only 23,000. When it comes to maple sugar and sirup, well, Vermont taps 5,600,000 trees while we tap only 236,000, and produce 700,000 pounds as against 12,000,000 in little Vermont.

Maine is the only State that raises any wheat, and very little of that. We buy our flour from Buffalo and Minneapolis mills, and the cost goes into the hundred millions.

Vermont produces 15,000,000 gallons of milk and we have around 80,000,000 annually.

Our biggest gains in the past few years is poultry, and this has increased from $1,600,000 to over $10,000,000 annually.

We have about 100,000 hogs, not counting the human kind, and ought to have 1,000,000 of the kind that gives us hams, bacon, and so on. Only one-third of our farmers raise hogs at all, and this third could increase their hog products by 1,000 percent.

By scientific, even common-sense farming, making every acre count—even wood lots—we could increase our total farm crops, including livestock, butter, eggs, milk, and so on, by $350,000,000 a year. Can you guess what this would mean to New England? Abraham Lincoln said in the campaign of 1860:

"If we send $100,000 to England and buy steel rails we get the rails and England gets our money. If we spend $100,000 for steel rails made in Pittsburgh we get the rails and we keep our money in America."

If New England increased her farm crops to the tune of $350,000,000 a year, that would mean that $350,000,000 would be spent in New England stores in place of seeing it spent a thousand miles to the west and south of us.

Since 1930 farms have increased in every New England State; in Connecticut they have increased 95 percent.

A well-to-do farmer who lived up to 2 years ago, in Ramsey County (St. Paul is in this county) sold his big stock farm and has moved to Vermont to the town of Burke, bought 1,000 acres of land and will raise beef cattle. He says there's a better opportunity to make money on his Vermont farm than in Minnesota. This means that if he has 40 cattle to ship to market we in New England will be $5,000 to the good, and our gain will be Minnesota's loss. It means an additional $5,000 will be spent in Vermont and Boston instead of in St. Paul and Minneapolis.

Almost every day Vermont receives one or more letters asking about farms for sale; and this is taking place also in Maine, New Hampshire, and to some extent in our own State.

A few years ago the head of the Boston Produce Exchange made a speech here in Haverhill. Said he: "We don't make butter enough in Massachusetts in a year to feed Boston at breakfast." He also pointed out that New England could save from $300,000 to $400,000 a year if our farmers did their best. Only about 45 percent of farm acres fit for cultivation in this State is farmed at all. If you ride some miles along the countryside you will say more than once: "Look at that big piece of land going to waste!" You will say this from end to end of New England.

The farms of Massachusetts are worth today $260,000,000; double the production and these farms would be worth $500,000,000.

We have the best market in the world for everything we can raise.

If the poultry business can show an increase of 100 percent in the past 25 years, hogs, sheep, cattle, and our natural crops can do as well.

We have enormously increased the milk production. Back in 1880 Massachusetts made 9,660,000 pounds of butter; in 1920 she made only 2,200,000 pounds, and 10 years ago she made less than 1,000,000 pounds, and probably less than half a million today. But in 1880 we had about 1,780,000 population; today we have 4,300,000 or so. We have changed from butter to milk and we don't produce enough of that. Vermont has enormously increased her milk crop, sold largely to the Boston market, but we have to buy milk from New York State and also from Canada. Vermont sells about 140,000,000 gallons of milk annually; Massachusetts a little more than half as much.

Vermont also raises 2 bushels of corn while we raise 1.

The butter and cheese business has gone west.

We have increased our green crops—lettuce, beets, string beans, and new peas—and other garden truck very largely, and yet Florida and far-off California sells us far more than we raise. There really isn't any excuse for this situation. This State eats nearly 12,000,000 bushels of potatoes annually and raises only 1,500,000 bushels.

The West has for many years sold millions upon millions of pounds of butter and dozens of eggs. When I was 14, I drove a milk-collecting route of 4 miles for the farmers and an uncle who gathered the cream from several hundred cows. It was great fun for me and some work, except when one of those western cyclones came along and tipped over 160 gallons of milk and at the same time made me recite every prayer I had ever learned. The farmer got less than 2 cents a quart for his milk, but he got back gallon for gallon of sour milk; and all those farmers had from 50 to 100 hogs all the time; they got sour milk and half-grown corn. That was the time also when I bought eggs for 6 cents a dozen down on the plains. Both eggs and butter were shipped to Boston and Lawrence by the carload.

My uncle was in the egg and butter business in Lawrence before he moved to Iowa. I was in that State during the panic of 1872–78, and it was far worse than anything I have witnessed since 1930. The folks burned fine big ears of corn for fire, both cooking and heating, for you could buy all you wanted for 10 cents a bushel, and many farmers didn't even bother to gather their corn crop.

A majority of the farmers that I gathered milk from did well; they had, most of them, paid $18 for 160 acres under the Homestead Act, and some years later they sold those farms for $150 per acre, with a fair price for stock, machinery, etc., and moved to Los Angeles County, Calif.; they retired, lived well, pitched horse shoes for amusement, went to the movies, and then along came the 1929 depression and their interest money went down and down, but they joined the Iowa association, 50,000 strong, and half of them also "jined up" for the Townsend plan and later on the "$30 every Thursday" movements.

I speak of this because I know there's a far better opportunity to make a success at farming in New England than in either Iowa or California; and as soon as this is generally known New England will become vastly more prosperous than she is at this time. Horace Greeley said, "Go West, young man; go West." And I amend that to say, "Come to New England, young man, and make a far better living and lay up money."

The New Deal

EXTENSION OF REMARKS

OF

HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM DAILY KENNEBEC JOURNAL

Mr. WHITE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Daily Kennebec Journal, published at Augusta, Maine, under date of July 18, 1939, commenting on a recent address made by the Senator from New Hampshire [Mr. BRIDGES], I believe at some point in the State of Kentucky.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Daily Kennebec Journal, Augusta, Maine, July 18, 1939]

SIZING UP NEW DEAL

In a recent address Senator STYLES BRIDGES, of New Hampshire, gave what is rapidly becoming the majority conception of the New Deal, when he said:

"I think that the plain fact is that our Washington intellectuals are not rooted in any form of government. They simply think in their arrogance that they have the answers to all questions of life and if unhampered by such annoyances as Congress and the Supreme Court and democratic processes they will be able to erect a world of happiness and delight. * * * They are all just a happy group of experimenters able to argue convincingly that when we go backward it is really a movement of progress."

The series of articles written for the Saturday Evening Post by Raymond Moley, one of the original "brain trusters," describing the organization of the New Deal confirms strikingly the interpretation of Senator BRIDGES. He believed he was helping inaugurate a new political epoch in this country and entered into the work with fine crusading zeal, in this probably representing the feelings of other members of the "brain trust." He certainly depicts the early New Dealers as a "happy group of experimenters" and the amateurism of it all is very well demonstrated in these articles themselves. In his participation in national politics Mr. Moley was a boy at his first circus, further bewildered by all that was going on in the three rings and on the big stage. Those early New Dealers took this country like children with a complicated mechanical toy and proceeded to see what made the wheels go round and the result is much the same.

That the New Dealers don't know what it's all about, as indicated by Mr. Moley's comment in his articles, is coming to be the general opinion of the country. This sort of thing, of course, has been nuts for the well-trained allen radical agitators, but it's doubtful if the conclusion of Senator BRIDGES that they have dominated the New Deal is justified. Amateur New Dealers like Mr. Moley may have been deceived by them, and there may have been some Communists, at least in intellectual theory, among them. Possibilities afforded shrewd Communist agitators, however, are obvious, and doubtless they have been trying to make the best of their opportunities. "Frantic men with such a lust for power as the country seldom sees," as Senator BRIDGES styles the New Dealers, would be putty in the hands of the experienced radical agitators. Again, Mr. Moley's articles make the Senator's characterization a just one.

According to Senator BRIDGES also, the "happy group of experimenters" in their latest effort to "erect a world of happiness and

delight" are trying to wreck A. F. of L. and have C. I. O. dominate organized labor by forcing John L. Lewis back into A. F. of L. This move, however, is dragging, as so many others have, and indications now are that A. F. of L., rather than C. I. O., will control. The "happy experimenting" with organized labor is typical of the whole New Deal work.

Senator BRIDGES' indictment of the New Deal, on the whole, is accurate and just, based on observations of many others as well as his. There are good grounds for suspecting, as he does, that these starry-eyed reformers would not hesitate to revolutionize our form of government if convinced that would advance their real purpose of reform. This makes them easy marks for the agitators who may lead them much farther than they may dream of going themselves. The practical hard sense of experienced politicians and businessmen obviously is lacking among them, so they are capable of anything. As Senator Bridges has demonstrated, we have all the makings in the New Deal and its policies for some form of modern totalitarianism, no matter how much opinion may differ as to how far we have already gone in that direction. Senator BRIDGES' belief that we are pretty close to it is being shared by more and more every day.

Block Booking and Blind Selling

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

ARTICLE BY HAROLD HEFFERNAN AND EDITORIAL FROM THE WASHINGTON EVENING STAR OF JULY 24, 1939

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Harold Heffernan entitled "Now Hollywood Trembles With Neely Bill Blues," published in the Washington (D. C.) Evening Star of July 24, 1939, and also an editorial published in the same newspaper on the same date, relative to the anti-block-booking measure recently passed by the Senate.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 24, 1939]

NOW HOLLYWOOD TREMBLES WITH NEELY BILL BLUES—AND YET SOME OPTIMISTS FORESEE AN INDUSTRY RENAISSANCE SHOULD IT BECOME LAW

(By Harold Heffernan)

HOLLYWOOD.—With the Neely bill rounding into something resembling a horrible reality, Hollywood's big brains were up to their necks in new worries today. Even plans for the industry's golden jubilee celebration went by the boards while studio chiefs discussed in disconsolate tones the "blow" from Washington—one which, with passage by the House and signature by the President, might well turn Hollywood's archaic system of production and distribution upside down.

Executives with investments at stake and those holding $200,000-a-year jobs, on whose shoulders would fall the brunt of revolutionary changes in policy and set-up, were frankly worried. On the other hand, many of those with less responsibility and yet importantly placed in the business were optimistic. They predicted a great industry renaissance should the bill become one of the laws of the land.

"You would see the greatest inspirational boom Hollywood has experienced since the talking picture came in," said one prominent producer whose name cannot be mentioned.

"Unshackled from block booking, we would be forced to get down to work. Competition among studios would be increased tenfold. Automatically, all the laggards would take to the outer gates.

"Naturally, the most important and immediate improvement would be noted in stories. The bill requires film companies to display a synopsis of the story to the exhibitor, as well as a title, before he can be asked to purchase. That means the story synopsis must stand up or the exhibitor will decide his public won't go for it. That leaves the producer holding the bag—not the exhibitor, as is the case under the present sales system of job-lotting 50 or more 'sight unseen' pictures each year. This individual and direct method of sale on merit alone would put it straight up to the studio, the author, the cast, and the director."

For many years Hollywood has been criticized for not getting the most from its high-salaried writing departments, conceded to include some of the most brilliant minds in the literary field. Instead, it has seemed content to follow the easiest route—depending on purchase of big name stage plays and published novels (many unadaptable for movies) and resorting, in too many emergencies, to old stories produced in screen form twice and even three times before.

During the past year all major plants have been "hypoing" programs with a large number of remakes, many disguised under new titles. These have angered the public and brought stormy protests from exhibitors forced to take them in their "block" purchases.

"Enactment of the Neely bill would end that, too," commented the producer. "Can you imagine a film salesman calling on an exhibitor and showing him the synopsis (as required by the act) of an old picture his company intends remaking? Unless it happened to be the revise of some sensational smash success, you could just about see the exhibitor showing the salesman to the door."

Box-office records on remakes bear out this opinion, for only a scattered few of dozens that have been turned out in recent years ever paid back much more to the exhibitor than his actual house expense. On top of that, they pile up ill will among customers.

Section 7 of the Neely bill offers the harried big brains of Hollywood their only consolation, in case of its passage. It reads, "This act shall become effective 12 months after enactment"—and it must be remembered that Hollywood whipped the talkie demon in less time than that.

[From the Washington Evening Star of July 24, 1939]

BLOCK BOOKING

A step toward success in the long fight waged for clean motion pictures by women's clubs, religious organizations, and parent-teacher associations has been taken by the Senate in passing the disputed bill which would prevent block booking and blind booking. What action will follow in the House is problematical. A year ago a similar bill from the Senate was allowed to die in the lower Chamber at adjournment.

As a means of raising the moral tone of motion pictures, particularly those available to patrons of neighborhood theaters, the bill is important. A campaign for legislation of this type has been carried on for more than 10 years, and while literal success remains to be achieved, progress has been made through modifications from within the movie industry.

Under the system of block booking theater operators were required to take a certain proportion of the pictures offered them during the contract period. Their choice was necessarily limited, and the possibility of rejecting films considered unsuitable for their communities was almost nonexistent. Closely linked with this is the practice of blind booking, by which the operator has no opportunity of seeing either the picture before he shows it nor obtaining a synopsis of the story.

Those methods have tended to shut out competition and have forced upon many honest managers the choice of showing a picture they knew to be unsuitable or endangering their investment. They have hampered direct censorship by patrons through this limitation of choice. From time to time charges have been made by independent operators that the system was used by the large companies to force the independents out of business to make way for distributor-controlled chains.

During recent years somewhat more leeway has been given operators in their choice, although this choice remains limited, and they still must take a comparatively large number of films, some good, some bad, and many indifferent, whether they want them or not, often without knowing just what they are to show.

In view of the progress which has been made in regard to the moral aspects of the motion picture, through the efforts of such organizations as the Legion of Decency, a measure which has such widespread support among those who are interested in preserving the ideals of the American home should be given serious consideration by the House. This bill should not be lightly dismissed, nor forgotten as it was last year.

Imaginary Interview Between the President and Mr. Farley

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

ARTICLE BY H. I. PHILLIPS

Mr. BRIDGES. Mr. President, I ask to have printed in the Appendix of the RECORD an imaginary interview between the President and Mr. Farley, appearing in the column The Once Over, written by H. I. Phillips, and published in the Washington Times-Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald]

THE ONCE OVER

(By H. I. Phillips)

IMAGINARY INTERVIEWS

FRANKLIN. What's the name, again?

JIM. Farley.

FRANKLIN. Oh, yes; I remember you vaguely.

JIM. I was afraid you wouldn't.

FRANKLIN. Well, Mr. Farley, what's on your chest?

JIM. What's the idea calling me "Mister." I used to be "Jim" to you.

FRANKLIN. Pardon me. It was just an error. Aren't you getting touchy?

JIM. I always was touchy on matters of friendship.

FRANKLIN. There is no question about our friendship, is there?

JIM. That's what I'd like to know.

FRANKLIN. Let's be frank. What's worrying you, Jim?

JIM. I want to know where you stand and, incidentally, where I stand.

FRANKLIN. Jim, you're all wrong. You're imagining things.

JIM. I was born and raised in Haverstraw, N. Y., where we have cold winters, and I know ice when I see it.

FRANKLIN. I insist you're wrong in this instance. You're still at the wheel of the party machine.

JIM. Don't try to kid me, please. I know Corcoran and Cohen are more than mere hitchhikers.

FRANKLIN. You've been reading the newspapers too much.

JIM. I don't have to read newspapers to know when there's a big drop in the temperature, but if you say it's unintentional, it's O. K. with me. But I think I am entitled to know how you stand on a third term.

FRANKLIN. JOE GUFFEY and Bob Jackson say I haven't even had a first or second term yet, because so many of my plans were balked.

JIM. You and I know each other too well to try to kid ourselves that way.

FRANKLIN. Do you hold that I have had two terms?

JIM. If I haven't, I've been doing a lot of letter writing on a wrong assumption. Let's run down to brass tacks. Would you run for a third term?

FRANKLIN. We haven't made up our minds.

JIM. What do you mean, "we"?

FRANKLIN. I don't like your tone, Jim.

JIM. This close to a campaign a tone don't matter. Would you take a third term?

FRANKLIN. Do you honestly think three terms as President are too many?

JIM. I remember back when we both thought if you got one term it would be a break!

Republican Administration in Wisconsin

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. GUFFEY. Mr. President, a few days ago it was my privilege to make a radio address entitled "A Preview of 1940," which was inserted in the RECORD, calling attention to the failure of the Republican administration in Pennsylvania to carry out their elaborate campaign promises. There has been sufficient time to show that what they promised they will not be able to perform.

I wish now to have inserted in the RECORD an editorial from the Milwaukee Journal which shows conclusively that Wisconsin is suffering from the same deceit which was perpetrated in Pennsylvania. This is an editorial from a newspaper which supported the present Governor, and its comments are very pertinent.

I may add that what has happened in Pennsylvania and Wisconsin is happening in Massachusetts, Connecticut, Michigan, and other States which elected Republican administrations last November.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal]

Governor Heil, signing the $67,600,000 budget, has committed Wisconsin to the most costly biennium in its entire history.

His genius for economy came to the forefront at the last moment—he cut appropriations to one-hundredth of 1 percent! So Wisconsin will spend $7,125 less than the legislature decreed.

The people, looking sadly back at his promise of a $15,000,000 cut in expenditures, are wondering what happened to the economy that was so blithely assured them.

The Governor had ways of keeping expenditures down, if he had chosen to use them—if he had talked less and studied more; if he had applied himself to the task he set himself during his campaign.

Alongside the $67,600,000 budget will go the nonbudgetary expenditures of the highway and conservation departments. The highway spendings will be even larger, by themselves, than the whole budget—running to $70,000,000. The Governor ignored the highway fund as a source of money for the budget. He listened to the road-pap seekers.

When he took his job as Governor he assumed a responsibility. That responsibility was not to sell Wisconsin cheese or to milk cows in public but to give Wisconsin an efficient, economical government.

Every man, woman, and child in Wisconsin bears new burdens because Mr. Heil and his fellow Republicans have refused to face realities.

The Necessity of Outlawing Tax-Exempt Securities

REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. O'CONNOR. Mr. Speaker and Members of the House, I sincerely regret to learn that no action will be taken during the present session of Congress on legislation designed to bring a halt to the tax exemption of interest derived from Government securities.

I introduced H. R. 5632, making income from securities issued by the United States, or any political subdivision thereof, subject to the income-tax laws because I believe that tax-exempt securities are the most obvious shortcoming in the tax structure of the United States today.

This type of legislation vitally affects the well-being of every man, woman, and child in our country, and the passage of such a measure would be of untold benefit to a class of persons suffering from the burden of unfair taxation today.

As property is exempted from taxation, it obviously follows that the assessor will be forced to write up the taxation of other property and thereby increase the load of persons unable to meet the tax bill. The general public suffers irreparably as the result of any type of tax exemption, for they are called upon to meet the expenses of our Government while the heavy investors enjoy exemption privileges and to meet the difference created by the exemption.

As early as 1921 the United States Treasury favored an amendment to the Constitution permitting the United States to tax incomes derived from securities issued by the States and their political subdivisions and at the same time permit the States to tax income from United States securities.

A resolution providing for an amendment to the Constitution along the lines above indicated passed the House in the Sixty-seventh Congress, but was not acted on by the Senate. A similar resolution was defeated in the House by 41 votes in the Sixty-eighth Congress. A number of bills have been introduced during the current session to correct an evil that has been condemned by President Roosevelt.

The 1938 report of the Secretary of the Treasury shows that we have more than $50,000,000,000 of tax-exempt securities in the United States today. The Federal Government and the State government are not collecting one cent of tax on that tremendous sum.

The Commercial and Financial Chronicle, published in New York on November 26, 1938, carried the following item on page 3248:

That John D. Rockefeller, Sr., left a net estate of $26,410,837 was disclosed November 22 with the filing of a tax appraisal in the State Office Building. Virtually the entire estate was composed of securities. United States Treasury notes alone had a market value as of May 23, 1937, the date of Mr. Rockefeller's death, of $17,837,255. State, county, and municipal bonds aggregated about $3,500,000; and corporate bonds about $1,600,000.

Stocks held in the estate consisted principally of railroad shares. Of his once vast holdings of Standard Oil shares Mr. Rockefeller retained at the time of his death only 1 common share of Standard Oil Co. of California and 1,150 shares of nonvoting preferred stock of the Ohio Oil Co.

I trust there is no doubt in the mind of any Member of Congress as to what class of persons is benefited by the tax-exempt securities. Mr. Rockefeller's holdings at the time of his death is an excellent example of the extent of the holding of tax-exempt securities by the millionaires of the country.

The tax-exempt feature of our present income-tax structure is in direct violation of the "ability" principle of our entire philosophy of taxation. It is drastically inconsistent with the progressive features of our taxation program and immunizes from taxation a class of persons best able to meet the tax bill. We are confronted with the situation that we are subsidizing private interests, interests which can best afford to share in the payment of taxes.

Tax-exempt bonds and securities result in a tremendous and serious fiscal loss to the Government each year and at the same time increases the heavy burden which must be borne by other taxpayers. John W. Hanes, Under Secretary of the Treasury, estimated in his statement before the Ways and Means Committee of the House on June 28, 1939, that "the loss to the Federal Government alone is estimated between $179,000,000 and $337,000,000 annually." In this connection it is significant to point out that the taxable income is received for the most part by persons who are hard pressed to find methods of meeting their tax payments.

Studies made in the field of tax-exempt securities indicate that the exemptions tend to decrease national income by inducing men of ability to withdraw from active enterprises and invest their funds in these securities. In many cases they are men who have contributed greatly to our national income and their retirement into the field of tax-exempt securities has a severe influence on our national life and prosperity.

When huge sums of money are tied up in tax-exempt securities, there naturally follows a scarcity of capital which handicaps private industry and depresses business in general. In my mind, the all-time high of over $50,000,000,000 in tax-exempt securities is partially responsible for the inability of business to gain a foothold on recovery today.

Under the present tax structure, the tax-exempt securities bring about an undesirable distribution of investments which are of benefit to no one except the rich holders who reap the interest. I believe that we should attempt to dislodge stagnated reserves as much as possible and thereby clear a path for the progress of business. The securities are not only economically unhealthy but entirely unfair in their present immunity to income-tax laws. The safe securities are grabbed by the big fellow, leaving the more speculative interests to the classes least able to engage in any speculative enterprise.

I wish to insert at this point a statement based on the area of agreement at the second Fortune Magazine round table dealing with taxation and recovery. The article, a reprint from the May issue of Fortune Magazine, follows:

When large incomes are encouraged to take refuge in tax-exempt securities another blow to venture capital is given. Today it is more profitable for a wealthy man liable to heavy surtaxes to accept a small rate of interest from a tax-exempt security, involving virtually no risk, than to invest in taxable enterprises holding out the hope of a far greater return. This advantage, however, does not extend to people of small means. For example, to a married man with a net income of $5,000 a 3-percent tax-exempt security will yield the equivalent of only a 3.12-percent taxed security. But to a man with an income of $500,000 a year a 3-percent municipal bond upon which he pays no taxes is equal in value to a taxable security yielding 10.7 percent. Why should a wealthy man take a risk on investments holding out the dubious hope of an 11-percent yield when he can find an equivalent net return in tax-exempt securities that involve no risk at all?

At present there are more than $19,000,000,000 worth of State and local tax-exempt securities outstanding. A large part of these securities is still held by institutions that do not profit from tax exemption but that do insist on safety, but nearly half of such securities are also held by individuals. Following the reduction of surtaxes in 1925, the ratio of tax-exempt interest to the total of millionaire incomes dropped from 8.41 percent to 2.98 percent, but following the reimposition of high surtaxes in 1932 the percentage of income from this source rose to 6.4 percent in 1933 and 18.43 percent in 1934. That these figures are not conclusive is indicated by the fact that in 1935 the percentage of income from tax-exempts fell to 6.5 percent. This may have been due to the fact that with recovery income from stocks increased, while tax-exempt income remained constant. Nevertheless, we are of the opinion that when the higher surtaxes are raised there is an inevitable tendency on the part of those subject to such surtaxes to increase their holdings of tax-exempt securities.

We all believe that these tax exemptions should be discontinued. Coupled with high surtaxes the present policy of tax exemption is a positive discouragement to risk taking on the part of those most able to afford it. The States and municipalities complain that termination of tax exemption would increase their cost of borrowing. But in the last analysis the same taxpayer foots the bills for the Federal, State, and municipal governments. He should look with favor upon a tax system that promotes rather than hinders the development of new enterprise and employment.

Although the round table is unanimous as to the desirability of ending tax-exempt securities for the future, differences arise as to the best means of bringing this about. We cannot enter upon a discussion of whether Congress has the constitutional authority to tax State securities. Nevertheless, a majority of us believe that Congress should pass a law ending the exemption of all such securities issued in the future, leaving to the Supreme Court the task of deciding whether such a statute would be valid. We favor this course because it is doubtful whether three-fourths of the State legislatures in any foreseeable period would approve an amendment authorizing Congress to tax their securities unless Congress gave something to the States in return.

Certain of our colleagues do not go along with us here. They express the view that should the Supreme Court decide that Congress by ordinary statute could tax future State securities, it would follow that Congress had the power to tax existing securities. Investors, whether individual or institutional, have bought tax-exempt securities to the amount of more than $19,000,000,000 in reliance upon tax immunity. It would be unwise for Congress to give the Court an opportunity to reverse a long-settled doctrine, affecting the value of such a vast quantity of outstanding securities. They believe that a constitutional amendment should limit the termination of tax exemption to securities issued in future.

The majority of us do not fear that simply because Congress may have the power to tax tax-exempt securities, whether outstanding or to be issued, it follows that Congress would exercise this power retroactively. Congress and the President could make it clear that they have no such intention; and even though any commitment on their part would not bind future administrations, it would have great moral weight.

Problems of tax immunity revolve around the sixteenth amendment to the Constitution of the United States. The amendment reads:

The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

The words, "incomes, from whatever source derived," fully cover the subject of taxing the interest from governmental securities. Income is defined in the dictionary as "that gain or recurrent benefit—usually measured in money—which proceeds from labor, business, or property; revenue receipts."

There is no question in my mind but what interest derived from securities, now tax exempt, is income in the full legal sense, and as such is taxable by Congress under the sixteenth amendment.

In the case of Graves and others against People of State of New York on the relation of O'Keefe, argued March 6, 1939, and decided March 27, 1939, the Supreme Court of the United States was asked to decide whether the imposition by the State of New York of any income tax on the salary of an employee of the Home Owners' Loan Corporation places an unconstitutional burden upon the Federal Government.

Delivering the opinion of the Court, Mr. Justice Stone stated:

The immunity is not one to be implied from the Constitution, because if allowed it would impose to an inadmissible extent a restriction on the taxing power which the Constitution has reserved to the State governments.

Mr. Justice Stone also stated:

Assuming, as we do, that the Home Owners' Loan Corporation is clothed with the same immunity from State taxation as the Government itself, we cannot say that the present tax on the income of its employees lays any unconstitutional burden upon it.

Regardless of the multitude of methods suggested to bring about taxation of income from the present and future tax-exempt securities, the responsibility of making the first move rests with Congress.

Congress is vested with the law-making power and as such should pass legislation which it believes necessary to meet the varied conditions and for the general improvement of our country. Whether or not it is constitutional for Congress to pass a law which will tax the income from tax-exempt securities issued in the past as well as securities to be issued in the future, is not a question for this committee or for Congress to decide. If a remedial law is necessary then Congress should pass such legislation.

The House Committee on Ways and Means heard the pleas of mayors and representatives of States against enactment of any legislation which would place a tax on the income from securities now exempt. Their main argument has been that the enactment of this legislation will place too much of a burden on the cities and States.

Paraphrasing the language of the Supreme Court in the O'Keefe case, I do not believe that the taxation of income from Federal, State, county and municipal securities would lay any "unconstitutional burden" upon the holder of the securities.

It is my contention that such a law would not only be constitutional, but it would not work such a burden on the States, counties, and municipalities issuing the securities as to interfere with the sale of the securities to any appreciable degree.

A tax on the interest from securities would be absorbed in the general tax return. The holder would still receive a fair return on the soundest investment he could possibly make.

The question in this consideration is whether or not the imposition of a tax on interest would interfere with the future sales of the tax-free securities. The answer is no. It would not interfere with the rights of the issuer.

Representatives of the rich holders of tax-exempt securities would have us believe that the lifting of the tax-immunity practice would work a bankrupting hardship on the cities and States that issue the securities.

Under Secretary Hanes has pointed out that—

The Federal Government and most State governments have progressive income tax rates which increase as the amount of taxable income increases. As a result, tax-exempt securities, of course, afford a greater tax saving to persons with large incomes than to persons with small incomes. Considering the Federal income tax alone in the case of the man with $2,000 or $3,000 of taxable income a dollar of wholly tax-exempt interest would give the same net return as $1.04 of taxable interest since the taxable interest is subject only to the 4-percent normal tax. In the hands of a taxpayer with $50,000 of taxable income, however, that same dollar of tax-exempt interest is worth $1.45 of taxable interest since the taxable interest would be subject to 4-percent normal tax and a 27-percent surtax. The value of tax exemption continues to increase with the size of the income of the person receiving it. For an individual with $100,000 of taxable income a dollar of tax-exempt interest is the equivalent of $2.44 of taxable interest. At the top of the rate scale ($5,000,000) a dollar of tax-exempt interest is the equivalent of $4.76 of taxable interest. The effect of taxes imposed by the States is to increase further the differences in tax savings.

The Treasury Department reports that the average interest rate of State, county, and municipal securities is slightly below 4 percent while the average interest rate from Federal securities is about 2.6 percent.

In order to properly analyze the effect of imposing a tax on the securities, let us take, for example, a man with a net income of $10,000. His normal income tax would amount to $400, and his surtax would total $300 for a total income tax of $700. Now, if that same man held, in addition, securities amounting to $20,000, with interest at 4 percent, his net income would amount to $10,800. In that case his normal tax would be $432, and his surtax approximately $370, for a total tax bill of $802. He would receive approximately $700 in interest from the securities, roughly 3½ percent, on the safest investment that he could possibly make. Will that work an unconstitutional burden upon such holder of securities?

The main question we must ask in our consideration of this subject is whether or not the tax would place an unconstitutional burden upon any political subdivision and whether or not the tax would interfere with the proper workings of that government whose instrumentality is taxed? Obviously neither is the case in this matter.

It is significant at this point to repeat the rule of the Supreme Court of the United States in deciding the case of Norman against Baltimore & Ohio Railroad Co., commonly referred to as the "gold clause" case. The rule of the Court follows:

This argument is in the teeth of another established principle. Contracts, however express, cannot fetter the constitutional authority of the Congress. Contracts may create rights of property, but when contracts deal with a subject matter which lies within the control of the Congress they have a congenital infirmity. Parties cannot remove their transactions from the reach of dominant constitutional power by making contracts about them.

The Supreme Court found that parties cannot remove their transactions from the reach of dominant constitutional power by contract. It therefore stands to reason that the tax-exempt securities, even though immunized from taxation by contract, cannot remain beyond the application of constitutional powers through such a contract. A heavy percentage of the tax-exempt securities now outstanding contain a contractual provision concerning tax exemption of interest. This point, however, would become ineffectual in the event Congress passes legislation taxing the future income received from bonds now tax exempt.

In fairness to not only my constituents but to the average person over the United States, I believe it is imperative to remove this tax-exemption principle and bring a stop to our subsidization of the millionaires of our land and thereby leveling off the tax burden.

The Federal Housing Administration

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. RABAUT. Mr. Speaker, I rise at this time to speak for a group of approximately seven or eight million people, nearly 500,000 of them from the State of Michigan, who each night as they gather about the family supper table offer their silent gratitude to the Government of the United States for the great service it has rendered them. I am referring to the more than two million families in this country, Alaska, and Hawaii who have been helped by the Federal Housing Administration—2,000,000 families, helped by the F. H. A. either to finance the costs of building or purchasing a home of their own, or else helped to save their homes and, in many cases, their life savings, which those homes represented, as the result of F. H. A. insured loans and mortgages.

On June 27 we marked the fifth anniversary of the final approving of the act of Congress in 1934 which established this great Federal agency. I deem it fitting, therefore, to review at this time some of the achievements of the F. H. A. and to ascertain more fully what a great need of the people it has enabled the Government to meet.

Due no doubt to the vast complexity of this undertaking, the latest figures which the Administrator of the F. H. A., Stewart McDonald, has furnished me cover only the activities

of the agency up to December 31, 1938. Nevertheless, it has impressed me tremendously that these figures reveal what a vital and necessary function the F. H. A. is performing, as I think will be realized when it is noted that in the first 4½ years of its existence 2,197,068 families in the United States, Alaska, and Hawaii borrowed $2,262,436,684 under titles I and II of the act, the sections providing for loans for mortgages, financing payments, home renovation, and modernizing.

In my State—Michigan—I am proud to report that the amount for financing of home ownership insured by F. H. A. under title II was the third largest in the country. The figures show that 22,212 Michigan families borrowed $106,637,655 under the act to enable them to finance payments for building or purchasing their homes. Only the people of the States of California and New York called upon F. H. A. for greater assistance in this respect, and thus the people of Michigan have been among the most to profit from the act, which has not only been the cause of a significant increase in home owners but which also has been an outstanding stimulus to one of our main national business enterprises, the previously lagging real-estate and building industry.

In addition to the large number of families who took out F. H. A. mortgage insurance to enable them to finance the purchase of homes 98,950 Michigan families were insured under title I of the act for the amount of $33,281,587, which was used principally to improve and repair their properties. Thus, a total of 121,162 Michigan families in all made use of F. H. A. insured loans under titles I and II for a total of $139,919,242.

Of this huge amount released for housing improvement in Michigan, about two-thirds represented the activity of F. H. A. in Wayne County. Unfortunately, records of the work done by the agency in the city of Detroit alone are not available, but it is fairly logical to assume that nearly all of the amount insured in Wayne County was used for the improvement of homes in Detroit and its suburbs. Figures submitted to me on May 25, 1939, showed that a total of 66,729 families in Wayne County had borrowed $98,881,488, of which by far the largest portion went for the financing of homes under F. H. A. mortgages, over $82,000,000 being insured for this purpose.

I think that it is also worth while to note in passing that the county in Michigan which drew the second largest volume of business was Oakland County, which borders on Wayne and contains several communities regarded as Detroit suburbs. Therefore, the $11,000,000 which F. H. A. insurance made available there not only directly helped Oakland County residents, but indirectly it helped raise property values in Detroit by improving the environment as well as attracting Detroit building firms and real-estate offices into this Oakland County work.

Now, while all the loans mentioned above are insured by the F. H. A., the money advanced for them has not come from the Government at all, but from private lenders. Further, money has been placed in the hands of local firms for construction and improvement of housing through strictly local enterprise, employing local labor, and using materials purchased locally. It becomes evident therefore that the F. H. A. is not only a tremendous factor working for economic recovery but that it also is one of the least costly of all emergency measures inasmuch as there is no provision in the act for the lending or expenditure of any Government funds except for administrative- and insurance-cost purposes. In these days when the cry of economy resounds through the air, the F. H. A. indeed can stand firmly on its record as an agency performing one of the greatest services working for a permanent recovery and yet doing so at a relatively insignificant cost to the taxpayers.

Finally, I should like to point out that the service of the F. H. A. is such that it reaches far beyond the immediate, practical benefits resulting from a raised standard of living conditions and the elimination of inadequate housing. I am thinking now of that rather indefinite and ineluctable meaning which we associate with the word "home" in its more spiritual essence. To countless thousands the function of F. H. A. has meant the saving for them of all those intimate family values which go into that "heap o' living" that "makes a house a home." Without the help of F. H. A., thousands of families who suffered through no fault of their own, more than likely at the height of the depression would have been forced to sacrifice their investments in what we Americans have been taught to regard as one of the most important foundations of democracy. F. H. A. did more than save houses; it saved what were indeed "homes" in the deepest essence, and therefore this agency has contributed, in addition to its tangible material benefits, something ever more important in its effect upon elevating the general morale of the people, instilling in them a feeling of grateful loyalty to a government who did not hesitate to protect their interests in an hour of need.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. RUTHERFORD. Mr. Speaker, the new dealers continue to fool the American farmer and workingman with their reciprocal-trade policies. Like all other experiments of the New Deal, the reciprocal-trade agreements have worked just the opposite to what was expected of them. We were led to believe that under the New Deal reciprocal-trade agreements our foreign or export trade would increase by leaps and bounds and that we were going to have great prosperity. However, the contrary is true, as will be seen by the tables hereinafter set forth.

UNITED STATES AGRICULTURAL EXPORTS AND IMPORTS, 5 MONTHS ENDED MAY 1938 AND 1939

TABLE 1.—*Exports of agricultural products*

Export items	5 months ended May—		Increase (+) or decrease (−)
	1938	1939	
Total agricultural exports	$362,936,000	$237,998,000	−$124,938,000
Cotton, unmanufactured	109,448,000	62,307,000	−47,141,000
Tobacco, unmanufactured	46,267,000	36,548,000	−9,719,000
Foodstuffs (total)	196,293,000	129,283,000	−67,010,000
Wheat	44,636,000	25,230,000	−19,406,000
Corn	56,050,000	10,211,000	−45,839,000
Wheat flour	10,613,000	9,843,000	−770,000
Oil cake and meal	4,082,000	3,719,000	−363,000
Vegetables and preparations	5,730,000	6,521,000	+791,000
Fruits:			
Fresh	17,057,000	17,240,000	+183,000
Dried and evaporated	7,312,000	7,286,000	−26,000
Canned	8,088,000	8,483,000	+395,000
Meat products	11,402,000	12,672,000	+1,270,000
Lard, including neutral	8,277,000	8,863,000	+586,000
Dairy products (except fresh milk)	2,334,000	2,587,000	+253,000
Other foodstuffs	20,712,000	16,628,000	−4,084,000
Other agricultural products	10,928,000	9,860,000	−1,068,000

Source: U. S. Department of Commerce reports.

TABLE 2.—*Imports of agricultural products*

Import items	Unit	5 months ended May—		Increase (+) or decrease (−)
		1938	1939	
Cattle (except for breeding)	Head	226,000	461,000	+235,000
Meat products (total)	Pound	61,472,000	65,112,000	+3,640,000
Canned beef	Pound	30,852,000	33,117,000	+2,265,000
Hams, shoulders, and bacon	Pound	19,327,000	20,701,000	+1,374,000
Hides and skins (total)	Pound	51,756,000	142,706,000	+90,950,000
Cattle hides	Pound	15,964,000	60,262,000	+44,298,000
Other (except) fur skins	Pound	35,792,000	82,444,000	+46,652,000
Silver fox fur skins	Number	8,776	33,205	+24,429
Wool and mohair	Pound	19,571,000	102,035,000	+82,464,000

TABLE 2.—*Imports of agricultural products*—Continued

Import items	Unit	5 months ended May—		Increase (+) or decrease (−)
		1938	1939	
Flax and hemp, unmanufactured	Ton	1,170	3,027	+1,857
Flaxseed	Bushel	6,619,000	8,962,000	+2,343,000
Tobacco, unmanufactured	Pound	26,844,000	30,452,000	+3,608,000
Cotton, unmanufactured	Pound	43,300,000	41,778,000	−1,522,000
Wheat, for milling and export	Bushel	136,000	4,458,000	+4,322,000
Wheat, byproduct feeds	Ton	5,565	146,959	+141,394
Hay	Ton	10,780	21,189	+10,409
Cottonseed cake and meal	Pound	1,957,000	6,378,000	+4,421,000
Cottonseed oil	Pound	20,680,000	23,519,000	+2,839,000
Peanut oil	Pound	354,000	2,846,000	+2,492,000
Oats	Bushel	4,977	753,255	+748,278
Cheese	Pound	20,728,000	21,501,000	+773,000
Eggs in shell	Dozen	88,304	149,424	+61,120
Molasses, inedible	Gallon	82,869,000	82,407,000	−462,000
Maple sugar and sirup	Pound	649,000	6,176,000	+5,527,000
Apples, fresh	Bushel	9	20,734	+20,725
Pineapples, canned	Pound	2,776,000	20,134,000	+17,358,000
Tomatoes, canned	Pound	20,072,000	28,801,000	+8,729,000
Potatoes, white or Irish	Pound	29,323,000	44,448,000	+16,125,000
Potato starch	Pound	2,162,000	4,200,000	+2,038,000
Tapioca	Pound	99,795,000	164,467,000	+64,672,000
Cashew nuts	Pound	8,678,000	11,735,000	+3,057,000

Source: U. S. Department of Commerce reports.

The reciprocal-trade agreements were supposed to be of great benefit to the cotton, wheat, and corn farmers, yet we see by the above tables that our cotton exports for the first 5 months of 1939 were $47,141,000 less than for the corresponding months of 1938. Our wheat exports were $19,406,000 and our corn exports were $45,839,000 less than during the first 5 months of 1938. While our export trade has fallen off, our agricultural import trade has greatly increased. We only have to read the items in table 2 to see how the American farmer is being taken for a ride. Look at the tremendous increase in the importation of hides, cattle, wool, oats, eggs, potatoes, and so forth. Why should not we allow the American farmer the privilege of raising and selling, these products that he can raise, in his own home market? I cannot for the life of me see why the new dealers continue to give the farmers of foreign countries the right and privilege of growing cattle, hogs, potatoes, eggs, wool, and so forth, and then provide them with an American market to the detriment of our own farmers. The statement of President Lincoln on the tariff is as true today as it was back in his time. He said that when we buy goods from abroad, we have the goods and the foreign seller has the money, but when we buy American-made goods or products we not only have the goods but we have the money also. I believe that the American market belongs to the American farmer and the American workingman. It is all right enough to have a neighborly feeling for the people of other countries, but "charity begins at home."

Mr. Speaker, I have here a table showing the 1933 imports and the 1937 imports:

Products	1933 imports	1937 imports	United States acres displaced in 1937
Cattle—head	74,658	494,945	2,494,725
Hogs—pounds	6,470	16,555,218	82,776
Pork products—do	2,925,517	74,830,480	575,619
Meat products—do	62,474,911	191,906,012	1,919,060
Butter—do	1,021,806	11,110,762	830,000
Cheese—do	48,396,740	60,650,000	
Corn—bushels	160,288	86,337,248	3,453,489
Wheat—do	10,286,236	17,423,837	1,340,095
Barley—do	None	10,384,108	500,000
Barley malt—pounds	109,485,885	371,243,456	627,024
Flaxseed—bushels	13,825,163	28,031,755	4,671,900
Soybeans—pounds	42,630,809	109,418,304	1,953,893
Cottonseed—do	7,004,025	194,008,241	1,340,000
Wool and mohair—do	178,927,605	326,034,700	5,000,000
Molasses—gallons	169,936,000	301,449,599	2,030,000
Eggs and products—value	$1,141,739	$5,010,824	180,000
Vegetables—do	$15,448,223	$25,175,015	750,000
Hides and skins—do	$45,675,000	$71,058,397	3,634,000

One has only to read it to see the reason why the American farmers have had such low income during the New Deal administration. Look at the tremendous increase in importation of every article during the 4 years set forth. Look at the number of acres displaced by reason of these increased importations of farm products. If these acres had been working and our farmers had been allowed to sell the products raised thereon to the American public, instead of allowing the farmers of foreign lands to have this market, the income of our farmers would have been up considerably and they would have been in a position to buy automobiles, farm machinery, clothes, and so forth, which in turn would have helped the industrial worker. However, one cannot fathom the workings of the New Deal mind, and I suppose that we will continue to experiment and experiment in the future as we have in the past, and with the same results. The New Deal has ruined the farmer and it has ruined industry. However, if I read the signs of the times correctly, I am sure that the great majority of the people of the country are sick and tired of all kinds of New Deal experimentation and are not only waiting the opportunity to do away with these senseless trade agreements but every other kind of New Deal experiments. The New Deal has put us over $20,000,000,000 in the hole since it took over the affairs of government. We still have over 10,000,000 unemployed, notwithstanding all of our "pump priming." We have used up practically all of the resources of our country and are on the road to bankruptcy.

Mr. Speaker, the new dealers have demonstrated during the past 7 years that they know absolutely nothing about running the affairs of this country. We have only had prosperity in this country under Republican administrations, and it looks as if the people were going to return the Republican Party back to power in 1940. May it come true.

A Referendum on War

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

RADIO ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., MAY 18, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent that there be printed in the RECORD a radio address by me broadcast by transcription over station WHA, Madison, Wis., on May 18, 1939, on the subject A Referendum on War.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Senate Joint Resolution 84, introduced by myself and 11 other Senators, proposing an amendment to the Constitution which would give the people the right to vote on the issue of waging an offensive war abroad, has provoked attacks against it often misinformed and in some instances sheer nonsense. Let me say at the outset that the demand by the people for the right to make the momentous decision for or against an offensive war outside of this hemisphere and not waged to defend our possessions cannot be answered by derision. This proposition is based upon faith in the democratic process. It presents the issue of permitting the voice of the people to register its will on the question of life or death for millions.

I want to emphasize that this resolution is so drawn as to leave with the Congress the right to declare war in any case where the invasion, or the threatened invasion, of this country, this hemisphere, or our possessions is involved. This means that Congress would only submit a question of war to the voters where an offensive war on foreign soil was contemplated.

There is nothing in the pending proposal which will cripple any President in his conduct of our foreign policy so long as that policy is not to be implemented in the end by involving this Nation in an offensive war overseas. I do not believe that there is validity in the proposition that there are effective measures short of war but if there are those who take an opposite view, this proposal for a referendum on foreign war will strengthen and

buttress that position. In short, this joint resolution takes at their word the spokesmen for the administration's foreign policy who maintain that it does not involve any danger or risk of war. If nothing is being done or urged upon Congress which will lead to our involvement in foreign war then it cannot be logically maintained that this joint resolution cripples the administration's foreign policy in any way.

I believe history proves that the legislative branch of our Government cannot prevent diplomatic measures from being taken which lead to war. Congress has no veto power in practical fact. Congress has only the power to write bankrupt across a foreign policy when that policy has finally culminated in a demand by the Executive that Congress vote a declaration of war. Then it writes it with cheers mixed with epithets and howls of derision against those few men who may oppose the resolution declaring a state of war.

It has been charged by opponents that this joint resolution violates our traditional form of government which they contend is purely representative in character. The same argument could have been made against woman suffrage and the direct election of United States Senators. Several States have incorporated the referendum proposal in their constitutions without impairing their traditional forms of government. The Democratic Party in convention assembled, in 1924, advocated that * * * "Our Government should secure a joint agreement with all nations for world disarmament and also for a referendum on war, except in case of actual or threatened attack. Those who furnish the blood and bear the burdens of war should, whenever possible, be consulted before this supreme sacrifice is required of them."

I venture the assertion that there is not a single Member of Congress today who has received a mandate from the people to act in his capacity as a representative to put this Nation into war in Europe, Asia, or Africa. I cannot find a single Member who raised that issue in his campaign unless he was on the negative side of it. We have no mandate from the people on this question, nor could it be fairly said that Members of Congress would ever be in possession of such a mandate unless a whole congressional campaign had been waged on that issue and that alone.

If, in the future, Congress is presented with a demand by the Executive that it vote a declaration of war—not a war of defense but a war abroad—I am certain that they will not be acting in a representative capacity for it is not conceivable to me that under any circumstances Members of Congress will be standing upon platforms pledging that if elected they will vote to plunge the United States into an offensive war on foreign soil.

Instead, if that unfortunate issue is presented, I think history will repeat itself and that rather than acting in a representative capacity Congress will approve the Executive decision and make the best of Executive failure. I fear in the future, as in the past, that the congressional function will be to vote the declaration demanded and to follow it with conscription and the necessary funds to carry on the war. This is a function, but it is a stretch of the imagination to characterize it as a representative function. No Member of Congress with whom I have discussed the subject believes that a majority of Congress would refuse a President a declaration of war if and when he asked for it. There is no instance in our history when it has been refused by the Congress. I am apprehensive that no such precedent will ever be established. The demand to stand behind the President, the pressure of party loyalty, becomes almost insuperable in such a situation. Members of Congress may justify their course in the future as they have in the past, but I do not think it can be said that they are acting in a representative capacity.

Our concern should be to establish a closer contact between the people and their Government on this vital matter of war abroad.

To preserve the democratic process we must buttress it and make it more effective. Nothing so discredits it as empty formalism. Let us not overlook the fact that the political disillusionment following the last war played its part in the undermining of faith in democracy in some other nations. In the chaotic economic and political situation prevailing in the world today no one can foresee future developments, but I unhesitatingly assert that another war, if it comes, will not give anyone what he wants. Modern war does not attain its announced objectives. Should war come and we become involved in it, the people of this country will be more deeply shocked and disillusioned by its results than they were after their tragic experience in the "war to end war" and "to make the world safe for democracy."

After another war has brought catastrophe at home and abroad we may anticipate in the United States an attack upon the democratic system of proportions never before experienced. This proposal, if submitted and ratified, would place the responsibility for the decision on war abroad in the hands of the people. If they voted for it, they would have to accept responsibility for the results and thus we would protect our system of government from an effective charge, even though, untrue, that a small group of public officials in the legislative and executive branches of the Government had made the decision for war and produced the chain of miseries which are certain to follow it.

I have no doubt that opponents of this joint resolution will attack it now as they did in the House of Representatives when it was under consideration at the last session on the ground that it will affect the present situation abroad. A year ago, when a different proposal for a referendum was before the House, it was strongly urged in the press and elsewhere that Members should "stand by the President" in order to present a united front in the far eastern struggle. Some newspapers which have been most violent in their criticism of the President on domestic issues went so far as to urge the Members of the House to stand behind him at all costs even at the sacrifice of their convictions. It was an emergency, so they said. A majority of the House took their advice. The referendum resolution was not even permitted to be taken up for consideration, but can anyone now maintain that the failure to consider that proposal checked Japan in her war in China?

The war referendum was not again taken up for consideration after January 1938, yet in March of that year there was a crisis and Germany absorbed Austria. It certainly cannot be argued that the war-referendum proposal aided in that unhappy event.

If this proposal should be submitted at this session of Congress, it could not be ratified before the end of at least 2 years. During this lapse of time there is grave possibility that there may be a succession of crises. In short, either we wait with the urgent advocacy of this measure forever or we start sometime. I believe that we should start now because anyone who raises the issue that this proposal will weaken or strengthen any group in Europe must do so upon the ground that we are to implement our foreign policy by active military support with an expeditionary force on foreign soil. To take this position is to challenge the good faith of every statement which has been made so far as I know by any responsible person speaking for the administration. In short, it cannot be claimed that this measure affects in any way the struggle for power abroad unless it is at the same time admitted that military measures on foreign soil are in contemplation.

Despite the misrepresentation, despite the powerful opposition of part of the press, and despite the opposition of the administration, every poll of public opinion has shown a large majority of the people to be in favor of this joint resolution. It is a measure to make democracy real on the supreme issue of foreign war while at the same time completely protecting the Nation, its possessions, and this hemisphere.

History of Cost-of-Production Legislation of the Seventy-sixth Congress

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. JOHNSON of Illinois. Mr. Speaker, on January 12 of this year the nonpartisan cost-of-production farm bill, S. 570, and companion House bills were introduced in the House and in the Senate. These bills were sponsored in the Senate by 18 well-known Senators from 15 farm States, and in the House by 16 equally well-known Representatives from 14 major agricultural States.

These bills provide a new approach by the Federal Government to the farm problem. It is the same principle of legislation by which the Federal Government has approached the problem of giving aid and assistance to business, industry, and labor for years.

DOUBLE FARMER'S CASH INCOME

When enacted into law, this bill would give the farmer cost of production for his products consumed within the United States. It would give him the world price for his surplus. It would give the American farmers the American market. It would provide an annual cash income to the farmers of approximately $15,000,000,000. It provides for no control of crop production, neither does it provide for an annual or a continuing burden upon the Federal Treasury to accomplish the purposes of the bill.

AGRARIAN PRINCIPLE

The sponsors of this broad but simple and direct farm legislation recognizes the soundness of the agrarian principle that national prosperity is based upon agricultural prosperity with the farmers receiving the cost of his production. It was with this principle and with this purpose in mind that this cost-of-production bill was drafted, introduced, and pushed for final enactment as rapidly as possible.

CHRONOLOGICAL HISTORY

As we now approach the close of the first session of the Seventy-sixth Congress, may I review briefly the history of

this legislation and the chronology of the major steps taken toward its enactment in this session and call to the attention of Congress and the Nation the excellency of its sponsorship in Congress and the fact of the widespread support of this bill among the farmers of the Nation over the years and now.

May I also review briefly the opposition and the methods that they used to defeat its enactment during this session of Congress?

The cost-of-production principle of legislation was first introduced in Congress more than 10 years ago. It has been before the Congress for consideration in each session since. It has been voted on by the United States Senate three times and passed the Senate once. It has been voted on in the House of Representatives twice, each time receiving a large number of votes.

This bill was introduced on January 12, as S. 570 in the Senate and H. R. 2371 in the House, and 15 other identical House bills.

From February 1 to February 17 hearings were held before the Senate Committee on Agriculture of the United States Senate.

REPORTED TO SENATE CALENDAR UNANIMOUSLY

On April 7 the Senate Agricultural Committee, by unanimous vote, reported S. 570 to the Senate and recommended the passage of the bill. The Senate committee report on S. 570 was an excellent, comprehensive endorsement of this legislation.

REASON HOUSE COMMITTEE TABLED IT

On February 21 to March 22 the House Committee on Agriculture conducted hearings before its full committee on H. R. 2371, introduced by Representative MASSINGALE, of Oklahoma.

The House Committee on Agriculture set April 25 as the day upon which to vote a favorable report on this bill which would give the farmers of the Nation cost of production for their products consumed domestically. It was the belief of the sponsors of the bill that the House committee, while not being unanimous, would at least give the measure a substantial majority in recommending its passage.

MR. THATCHER'S ABOUT FACE

On April 19, 1939, which was 6 days before the House Committee on Agriculture was to vote upon this measure, a letter was addressed to the Honorable MARVIN JONES, chairman of the House Committee on Agriculture, copies of which were sent to all members of the committee, calling upon this committee to defeat the cost-of-production bill. This letter was signed by M. W. Thatcher, who styled himself as the national legislative representative of the Northwest Farmers Union legislative committee, the Wheat Conservation Conference, and the National Federation of Grain Cooperatives. To the letter he attached a schedule of organizations and the names of their representatives whom he said have determined to oppose the bill S. 570.

Among those whom Mr. Thatcher in this letter represented as having joined him in this eleventh-hour attempt to kill the bill in committee and thus deny the Congress the opportunity to consider and vote on this measure were two officers and five directors of the National Farmers Union, three officers and four directors of the National Federation of Grain Cooperatives, eight members of the so-called Wheat Conservation Conference and Northwest Farmers Union legislative committee, and 20 sundry officers of State farm organizations and regional marketing associations.

LEADERSHIP OF JOHN A. SIMPSON

May I say here that for more than 10 years the National Farmers Union under the leadership of the Honorable John A. Simpson, of Oklahoma, who, while he lived, was recognized everywhere as the ablest farm leader of all time, and under the leadership of his successor and coworker, E. H. Everson, of South Dakota, and Edward E. Kennedy, of Illinois, were the chief sponsors and proponents of the cost-of-production principle of legislation over the years.

THE NAMES THATCHER USED

Among the officers of the National Farmers Union, whom Mr. Thatcher represented as being emphatically opposed to S. 570 and consequently H. R. 2371, are John Vesecky, of Kansas, president of the National Farmers Union; H. G. Keeney, of Nebraska, vice president of the National Farmers Union; and Emil Loriks, of South Dakota, national director of the Farmers Union; and a few of the others are as follows: Mr. Walter Moore, of Colorado, director of the National Federation of Grain Cooperatives; Mr. M. W. Thatcher, president of the National Federation of Grain Cooperatives; Mr. C. W. Fine, of North Dakota, president of the Regional Livestock Marketing Association; Mr. Alex Lind, of North Dakota, president of the Regional Cooperative Buying Association; Mr. Kenneth W. Hones, of Wisconsin, president of the Wisconsin Farmers Union; Mr. Glenn J. Talbott, of North Dakota, president of the North Dakota Farmers Union; Thomas Cheek, president of the Farmers Union of Oklahoma; Mr. C. L. Waring, of Billings, Mont.; and Thomas O'Leary, of Breckenridge, Minn.

In Mr. Thatcher's letter to Hon. MARVIN JONES of April 19, among other things, he said:

> We are emphatically opposed to the bill S. 570, because it is utterly impracticable of administration; it would render irreparable loss to the farmers' interest, the consumers' interest, and business in general.

Now, let us examine briefly the opposition. Let us see whether any of these men have completely switched from a position of having supported this principle of legislation to the present position of opposition and also to determine, if we can, why. We may discover that some of these men have completely changed their views and thus attempted to use their official farm organization position to oppose the very legislation which they at one time ardently supported.

MR. VESECKY FOR AND AGAINST

Mr. Vesecky: On October 22, 1937, at Topeka, Kans., Mr. John Vesecky appeared before the subcommittee of the Committee on Agriculture and Forestry of the United States Senate at Topeka and Dodge Center, Kans. He appeared as president of the Kansas Farmers Union. After referring favorably to the cost-of-production principle of farm legislation a number of times in his prepared statement to the committee, he said:

> The third theory is commonly known as the cost-of-production domestic allotment plan and is based upon the fixed cost-of-production price for that part of the commodity which is consumed domestically, with the provision for the retention of the excess in what you might call an ever-normal granary to be sold for export, returned back to the producer, or otherwise disposed of as might be found best. * * *
>
> I am of the opinion that cost of production is much more accurately figured than is the next year's crop on any given acreage. In figuring cost of production we have mostly facts and figures to work out, while to control production to predetermined needs is an impossibility.

MR. KEENEY DOES NOT AGREE

Mr. H. G. Keeney: When Mr. Thatcher's letter of April 19, 1939, was called to the attention of Congressmen, a Member of Congress wired Mr. Keeney whether his signature was authorized as signed to the letter to Hon. MARVIN JONES. Mr. Keeney wired back on April 25:

> Have not authorized my signature to any communication opposing all provisions of S. 570.

FROM THE RECORD

Mr. Emil Loriks was for several years president of the South Dakota Farmers Union and is now a director of the National Farmers Union.

A letter addressed to a Member of Congress under date of June 1, 1939, responding to an inquiry concerning this matter, signed by Mr. M. L. Wilson, Acting Secretary of Agriculture, had this to say:

> Receipt is acknowledged of your letter of May 20, 1939, requesting information regarding 16 persons said to be connected with the Department of Agriculture. * * *
>
> Mr. Emil Loriks was appointed on November 28, 1936, as a collaborator without compensation in the Agricultural Adjustment Administration in order that he might confer with the Secretary of

Agriculture and officials of the Agricultural Adjustment Administration with regard to the development of the 1937 program under the Agricultural Conservation and Domestic Allotment Act approved February 29, 1936. This appointment was terminated on December 12, 1936.

Mr. Walter Moore: In April 1937 an examination of the records of the Agricultural Adjustment Administration of the United States Department of Agriculture showed that Mr. Moore at that time held a formal appointment as collaborator in the Grain Division of the Agricultural Adjustment Administration, the terms of which appointment were similar to those of Mr. Loriks, mentioned above. Mr. Moore at that time was a director of the Colorado Farmers Union.

MR. THATCHER FOR AND AGAINST

Mr. M. W. Thatcher: On October 15 and 16, 1937, Mr. Thatcher appeared before the subcommittee of the Committee on Agriculture and Forestry of the United States Senate at St. Paul, Minn. In a prepared statement which he presented to the committee he said:

We recommend fixing a basic price on major agricultural commodities needed for the home market and at fair exchange values, with such protective devices as may be necessary to protect the American farmer in the domestic market.

In Mr. Thatcher's oral statement to the same committee at that same time, he said:

My answer is this: In every case where the commodity is so important that there is a futures speculators' price established for it in this country, that in every one of those cases where the agricultural commodity has become so important as that, that in every one of those cases the basic price should be fixed in every one of them. Certainly if you attempt to deal with three or four or five agricultural products only and that is all and make them attractive to producers, it will only be a question of time until that price and income will attract sufficient production from other commodities that the overproduction of those favored commodities will absolutely sink the program. So you have to take agriculture in its entirety and whatever program you have got you have got to take that and apply it to all agricultural commodities or the whole thing will sink in time. I might say in that connection that if the fiscal administration goes through with a program and limits the program to only five commodities—corn, wheat, cotton, tobacco, and rice—it is going to fall eventually because of the reasons I have given.

Again, Mr. Thatcher in his oral statement said (I quote):

That price would need to be arrived at by a board making a study of the costs of producing wheat and they would determine what a fair exchange value would be for wheat as a basic item. We will say, for illustration, that they determine in Chicago, for No. 2 hard winter wheat, the basic price would be $1.75. That would mean that the actual trading in wheat relative to the milling of the flour, or milling any particular kind of food or feed, that they would pay all over the country to the farmer for the wheat he brings in the value of it in their judgment as it relates to that basic price at Chicago, taking into account transportation costs and the commercial factors of grain quality, and so forth.

As indicated in the above statement, Mr. Thatcher fully endorsed the principles embodied in S. 570 and the devices contained in the bill to accomplish the object of the legislation. What he enthusiastically endorsed in 1937, he bitterly condemns in 1939.

In April 1937 an examination of the records of the Agricultural Adjustment Administration showed that Mr. Thatcher held a formal appointment at the Agricultural Adjustment Administration in the Information Division of the Agricultural Adjustment Administration of the United States Department of Agriculture. The terms of his appointment were similar to those of Mr. Loriks and Mr. Moore.

NOT AUTHORIZED

Mr. C. W. Fine: When, on April 22, 1939, a Member of Congress wired Mr. Fine to ascertain whether his signature was authorized to the Thatcher letter to the Honorable MARVIN JONES mentioned above, he replied by wire on April 25, 1939, as follows (I quote):

Re tel twenty-second relative bill, S. 570. Letter not signed, nor was my signature authorized by me to this letter.

Mr. Alex Lind: In April 1937 an examination of the records of the Resettlement Administration, now Farm Security Administration, showed that Mr. Lind held a formal appointment as cooperative aide in the Rural Rehabilitation Division of the Resettlement Administration of the United States Department of Agriculture. Mr. Lind at that time was vice president of the North Dakota Farmers Union.

COLLABORATOR

Mr. Kenneth W. Hones: A letter addressed to a Member of Congress dated June 1, 1939, and signed by M. L. Wilson, Acting Secretary of Agriculture, referring to this matter had this to say:

Receipt is acknowledged of your letter of May 20, 1939, requesting information regarding 16 persons said to be connected with the Department of Agriculture. * * *

Mr. Kenneth W. Hones was appointed on May 25, 1934, as collaborator without compensation in the Agricultural Adjustment Administration in order that he might attend the conference of Emergency Drought Relief Committee at Minneapolis, Minn., called by the Administrator of the Agricultural Adjustment Act, to discuss a program for dairy- and beef-cattle industries with relation to the drought situation. He was to collaborate with the Director of Emergency Drought Relief and other officers of the Agricultural Adjustment Administration and the Department of Agriculture in dealing with drought problems with particular reference to plans for purchase of cattle on farms in the distressed areas.

This appointment was terminated on June 3, 1934, and he was reappointed as regional consultant at $12.50 per diem when actually employed in order that he might act as an adviser to the regional and State directors of the Agricultural Drought Relief Service throughout the drought area. This appointment was terminated and he was reappointed as senior field officer at $12.78 per diem when actually employed on April 4, 1935, in order that he might assist and advise the Chief of the Cattle and Sheep Section on problems connected with the proposed cattle program. This appointment was terminated and he was reappointed on October 4, 1935, as collaborator, without compensation, in order that he might act in an advisory capacity as a member of the National Cattle Committee of Twenty-five with reference to agricultural adjustment programs, attend conferences and meetings where such services were necessary, and to do whatever work the Cattle and Sheep Section might require of the committee.

This appointment was terminated on December 31, 1935. On March 1, 1936, Mr. Hones was again appointed a collaborator, without compensation, in the Agricultural Adjustment Administration in order that he might confer with State directors of extension, county agents, farmers, and others in obtaining and presenting information regarding authorized activities of the Agricultural Adjustment Administration. This appointment was terminated on March 31, 1936. He again served as collaborator, without compensation, from April 22, 1939, to May 21, 1939, in order that he might confer with agricultural officials and with growers and members of industry regarding the marketing agreements in connection with the Agricultural Adjustment Administration programs.

A collaborator without compensation in the Department is reimbursed for his traveling expenses and has the privilege of using the franked envelopes of the Department for official correspondence.

The original appointment was confirmed in a letter to a Member of Congress signed by Julien N. Friant, Special Assistant to the Secretary of Agriculture, and also confirmed by an examination of the records of the Agricultural Adjustment Administration in April 1937. Mr. Hones, as is noted, is president of the Wisconsin Farmers Union.

Mr. Glenn J. Talbott: A letter addressed to a Member of Congress, dated June 1, 1939, concerning Mr. Talbott, signed by Mr. M. L. Wilson, Acting Secretary of Agriculture, had this to say concerning this matter:

Receipt is acknowledged of your letter of May 20, 1939, requesting information regarding 16 persons said to be connected with the Department of Agriculture. * * *

Mr. Glenn J. Talbott was appointed in the Federal Crop Insurance Corporation of this Department on November 23, 1938, as collaborator without compensation in order that he might attend a conference with the manager and other officials of that organization at Jamestown, N. Dak. This appointment was terminated on December 22, 1938. On March 27, 1939, he was appointed as a collaborator without compensation in the Bureau of Agricultural Economics in order that he might assemble and analyze information pertinent to local agricultural problems and transmit such information to county committees; and to analyze the recommendations of the county committees concerning the administration of the Department's programs in local land use adjustments.

MR. CHEEK FOR AND AGAINST

Mr. Tom Cheek, president of the Oklahoma Farmers Union, was represented by Mr. Thatcher in the letter of April 19, 1939, as being opposed to the cost-of-production principle of legislation. In a subsequent letter Mr. Cheek signed his name in his own handwriting to a letter calling

upon Congress to defeat cost-of-production bill S. 570. However, the same Mr. Cheek appeared before the subcommittee of the Committee on Agriculture and Forestry of the United States Senate in Oklahoma City on October 18, 1937. Mr. Cheek then favored it as president of the Oklahoma Farmers Union. In a prepared statement to the committee he said then:

The National Farmers Union of the United States in convention endorsed the Frazier-Lemke farm bill and the Thomas-Massingale cost-of-production bill, and the State convention of the Farmers Union of Oklahoma in Oklahoma City in January 1937 endorsed said bills.

Therefore, my position and the position of our organization is made clear. I recommend and request the Senate Agricultural Committee to embody the above-named bills in the present farm bill now under consideration and that they recommend the bill to pass as amended.

The identical legislation which Mr. Cheek enthusiastically endorsed in 1937, he bitterly condemns in 1939.

Mr. C. L. Waring: A letter addressed to a Member of Congress dated May 31, 1939, signed by the Honorable Henry A. Wallace, Secretary of Agriculture concerning Mr. Waring, says:

Acknowledgement is made of your letter of May 20, 1939, submitting a list of 36 names and requesting information as to whether or not these individuals were receiving salary or compensation directly or indirectly, or have been allowed expense accounts for services of some kind that they may have recently performed or are now performing for the Department of Agriculture * * *.

Mr. Waring was appointed a collaborator without compensation on January 20, 1939, to terminate not later than February 19, 1939. During this period he was actively engaged for 7¼ days for which he was allowed $36.25 for subsistence and $153.15 for transportation.

Mr. Thomas O'Leary: When on April 22 the Thatcher letter to the Honorable MARVIN JONES was made known to the Members of Congress, a Member of Congress wired Mr. Thomas O'Leary inquiring whether his signature was authorized to the Thatcher letter of April 19, 1939, addressed to MARVIN JONES. Mr. O'Leary wired back under date of April 23, 1939, as follows:

I never authorized my signature to any letter to Hon. MARVIN JONES but wish to make it clear that I am also opposed to that bill.

In a letter addressd to a Member of Congress under date of May 31, 1939, signed by the Honorable Henry A. Wallace, Secretary of Agriculture, concerning Mr. O'Leary, Mr. Wallace in this letter said:

Acknowledgment is made of your letter of May 20, 1939, submitting a list of 36 names and requesting information as to whether or not these individuals were receiving salary or compensation directly or indirectly, or have been allowed expense accounts for services of some kind that they may have recently performed or are now performing for the Department of Agriculture * * *.

Mr. O'Leary holds a formal appointment in the Agricultural Adjustment Administration, as a principal field officer, at the rate of $12.77 per diem when actually employed. In this capacity his services are utilized practically every workday during the year.

THE SECOND LETTER

Another indication of how these men who attempt to serve two masters in the dual capacity of Farmers Union officials and intermittent appointees of Secretary Wallace and the Department of Agriculture is seen in a second letter sent to the House Committee on Agriculture just prior to their consideration of the cost-of-production bill in this Congress. This second letter definitely stated that the Farmers Union was not in support of the cost-of-production bill unanimously approved by the Senate Agriculture Committee and urged its defeat by the House committee. This amazing about face was undoubtedly the principal reason the House Committee on Agriculture has not reported out the cost-of-production bill. This second letter, which completed the job of sabotaging the cost-of-production program, was signed in their own handwriting by the following officials of the Farmers Union: John Vesceky, national president; James G. Patton, Colorado; Morris Erickson, North Dakota; Emil Loriks, South Dakota; M. R. Miller, Missouri; George A. Nelson, Wisconsin, national directors; Tom Cheek, president, Oklahoma Farmers Union; Peter Loran, president, Texas Farmers Union; Glen J. Talbott, president, North Dakota Farmers Union; K. W. Hones, president, Wisconsin Farmers Union; Paul Erickson, secretary, South Dakota Farmers Union. Apparently it will be a long time before the farmers of this country receive a fair price for a full crop and cost of production for their labors and investments when their own officials join with others in condemning the only farm program set up to get them these results.

AGRICULTURE COMMITTEE MEMBER

As a member of the House Committee on Agriculture, I believe the Members of Congress are entitled to have this information so that they may assay the opposition to the cost-of-production bill, S. 570. From this unimpeachable record it appears that many of the officers of the Farmers Union organization have been placed on the pay rolls of the Department of Agriculture. It may be that this has not been done with any idea in mind, on the part of the Agricultural Department officials, of swinging the leadership of the Farmers Union away from their historical position of supporting and fighting for cost of production to a position of endorsement and support of the present agricultural program which is recognized everywhere as a failure.

Far be it from me to assume that this may have been the intent or motive back of this patronage among the leaders of the once militant and proud Farmers Union organization. However, the Members of Congress who read this RECORD will be able to judge more accurately than I possibly could judge. It is strange indeed that these men when they sign a letter addressed to the Members of Congress sign it in their official capacity as an officer of a farm organization, yet the record reveals that many of them also and at the same time hold a formal appointment as an employee of the United States Department of Agriculture. How they can serve two masters and serve them both faithfully is more than I as a Member of Congress can understand. It is perhaps even more than any reasonable prudent man can understand.

How do you farmers like 35-cent corn, 20-cent oats, 55-cent wheat, $6 hogs, and 8-cent cotton? This is what we now have. This is less than one-half the cost of production. Farmers reading this speech will learn how and why passage of the cost-of-production bill, S. 570, was thwarted in this session of Congress.

Cotton Crop Insurance

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD I want to state for the information of the Members of the House that when the Federal Crop Insurance Corporation Act was passed in 1938 authorizing the insuring of the wheat crop, those of us who were interested in cotton had every reason to believe that cotton would be contained in the bill and go along with wheat.

However, the Department of Agriculture stated that they did not have all of the necessary data on cotton, and a provision was placed in the bill authorizing the Secretary to make an investigation for the purpose of securing necessary information, statistics, and so forth, which would enable the Congress to give favorable consideration to amending the act so as to include cotton.

When this bill was up in conference it was understood and agreed that when that information was submitted to the Congress the bill would be amended so as to take care of cotton.

On May 1, 1939, I introduced House Resolution 176, as follows:

Resolved, That in order to promote the national welfare by alleviating the economic distress caused by the overproduction of cotton, and to provide for stable supplies of cotton for domestic consumption and the orderly flow thereof in interstate commerce, the Secretary of Agriculture be, and he is hereby, directed to transmit to the House of Representatives such pertinent data and information as the Department of Agriculture may have assembled relative to such crop insurance for cotton.

This information was then submitted to the Printing Committee and is contained in House Document 277, Seventy-sixth Congress, first session.

I am hoping that those of you who are interested in this very important piece of legislation will get a copy of this document from the Department of Agriculture, or if you will call on my office, we shall be very glad to furnish you with a copy.

I am inserting herewith the following from this document:

FOREWORD

More than 2,000,000 American farmers depend on cotton for the major source of their income. Many of these farmers have at one time or another faced financial difficulties because of crop failures from causes beyond their control. The need for an agricultural program which provides protection against these unavoidable production hazards has long been evident. Crop insurance is suggested in this report as the way to meet these hazards.

Crop insurance is already available to wheat growers. The Federal Crop Insurance Corporation was established in 1938 within the United States Department of Agriculture under the Federal Crop Insurance Act. Farmers in all of the major wheat-producing States have already insured or will insure their wheat crops to be harvested in 1939. Wheat-crop insurance policies provide protection against drought, flood, winter-kill, insects, disease, and other wheat-crop hazards beyond the control of farmers.

Crop failures occur practically every year in one part or another of the Cotton Belt. As a consequence, farmers who experience these crop losses have little or no income on which to live. Crop insurance would provide the cotton farmer with a better distribution of income from year to year and would alleviate some of the hardship brought about by crop failure. The fact that a very large part of the cotton crop is financed through credit means that failure of the cotton crop not only reduces the income available for farm living expenses but frequently results in a carry-over of debt that may not be paid for years. Insurance on the crop would enable many farmers to pay their debts despite crop failures.

Crop insurance is not a solution to all the cotton farmers' problems, for many are world-wide in their scope. It would, however, make a substantial contribution toward the solution for many farmers of the problems that are caused by extreme variations in crop production.

The Federal Crop Insurance Act provided not only for an insurance program for wheat but for research on other crops to determine the feasibility of extending insurance protection to them. This report by the Bureau of Agricultural Economics, suggesting a plan that might be used for insuring cotton crops, is a product of the research provided for in that act.

The bill, H. R. 6972, simply proposes various amendments to the Federal Crop Insurance Act necessary to include cotton.

In section 8 of this bill we strike out the figures "$6,000,000" and substitute in lieu thereof the figures "$12,000,000."

This is for the administrative expenses in connection with covering cotton and wheat.

May I state at this point that it was understood, and it is understood at this time, that if and when this program has been worked out successfully, the premiums will be so arranged as to take care of the administrative expenses; but until this is done, because of the real necessity of rendering this type of service to millions of wheat and cotton producers, it was agreed by everyone interested in the program that the Government should bear this expense, as above stated.

If you will take into consideration the amount of money that is being spent by the Federal Government for the relief of those who have suffered losses from hailstorms, drought, floods, and insect infestation, you will readily agree that, if we can make this program successful—and it is my firm belief that we can—the spending of this money along this line will be one of the best investments we have made.

I want to call to your attention another thing; that is, we have entered in on a program of trying to make landowners out of tenant farmers. The above program will not only protect that class of people whom we are trying to assist and thereby save money for the Government, but will be the means of many farmers being able to pay their obligations, seed loans, Production Credit loans, taxes, and so forth. In other words, it will tend to keep just lots of people off the relief rolls and W. P. A. jobs, which I believe to be good business and a sound policy.

For your information I want to quote from the hearings. I am quoting from Mr. Cecil A. Johnson, Assistant Manager and Secretary, Federal Crop Insurance Corporation, Department of Agriculture. Mr. Johnson:

In developing the crop-insurance program for wheat we have been fully conscious of the implication that the results of this program would measure the possibilities of crop-insurance protection for growers of other important crops.

* * * * * * *

The national cost of crop failure cannot be adequately measured even for one crop; however, it is indicated by the fact that drought, floods, frost, hail, insects, plant diseases, and other unavoidable hazards take an annual toll of around 300,000,000 bushels of wheat every year. This tremendous loss would not be so serious if it were distributed evenly over the entire wheat industry, but we know from recent experience that crop failure may strike one State or region several years in a row and the burden of loss, instead of being distributed evenly, falls heavily upon the unfortunate individuals whose farms are visited by crop damage.

* * * * * * *

The crop-insurance program is based on an adaptation of insurance principles which it is felt solves these problems. I believe that the first year's experience of the crop-insurance program gives a good indication of the success with which this adaptation has operated.

* * * * * * *

Mr. ANDRESEN. You referred to growers being eligible for insurance. Do you mean that all growers are eligible for insurance, or just those that have complied with the soil-conservation program?

Mr. JOHNSON. In the current program that we are just completing all growers are eligible for insurance, and in the coming program that has already been prepared all growers are entitled to have insurance.

* * * * * * *

Mr. COOLEY. Is it your thought that the insurance program could be used as a coercive measure to bring farmers into the soil-conservation program?

Mr. JOHNSON. No.

* * * * * * *

Mr. LEMKE. Is it not a fact that the indemnity is so small as compared to the expected return from the crop that very few of them are looking forward to receiving an indemnity? As a matter of fact, most farmers use it as a guaranty against a failure so they might have something to live on in the event of a failure.

* * * * * * *

Mr. JOHNSON. If an insured grower suffers a loss that brings his production below the insured amount, he is entitled to receive from that insurance reserve a sufficient amount of wheat, or the cash equivalent, to bring his yield up to the insured coverage.

* * * * * * *

The wheat-crop-insurance program now has run through a complete cycle of a year's operations, and much evidence has accumulated regarding the workability of the basic principles involved.

We believe from the experience of this first year that the wheat crop insurance program is working out successfully along the lines laid down for it. While some improvements are being made with respect to the 1940 program, they deal only with administrative details which will permit more efficient and economical operation and not with the basic principles of the insurance plan.

* * * * * * *

In the Eastern States, 5,000 growers have paid premiums; in the North Central, 97,000; in the Western, 58,500; and in the Southern, 12,500. The widespread participation and the wide variation in the amount of risk involved seems good evidence that the principle of basing crop insurance on the past experience of the individual farm and county is a sound approach and makes it possible for a wide variety of producers to come into the plan. It gives a Nation-wide spread of risks, so essential to the success of the crop-insurance program.

* * * * * * *

This ground work has been expensive. In effect, it means that during the 1939 program the yield and rate work not only for the current year but for 1940 has been accomplished. I believe that it means even more than doing and paying for 2 years' work in one. Commercial insurance firms operate on a ground work of actuarial material built up through many years of research. In 1 year of crop insurance we have established a workable actuarial foundation for wheat insurance. In addition, we have developed the technique which will apply to other crops as well.

* * * * * * *

Our experience to date indicates that it is not a difficult matter to make adjustments which are fair to the farmer and to the corporation. Once the validity of the claim for loss is established by county adjusters, settlements can be handled with dispatch in checking and making the payments. In most cases farmers who have reported losses have received their indemnities within a week or two after the adjustment of their loss.

* * * * * * *

The cotton crop is subject to many of the same hazards that damage wheat crops. Risks average as high as in wheat. Lack of moisture is the greatest hazard of the wheat crop, and insect infestation is the most damaging one with which cotton growers must contend.

As in wheat, there is a loss somewhere in the cotton-growing area every year. As the wheat grower is dependent upon his wheat crop for an income, at least in commercial wheat areas, the cotton grower is dependent in his area for an income from the production of cotton. In fact, it is the major source of income for more than 2,000,000 American farmers. Hence, the cotton farmer is in need of security which crop insurance would furnish just as the wheat farmer needs it. Many of the same problems are common to both and the loss of income on the part of either affects the other, as the loss of income on the part of both groups seriously affects the Nation.

1939 WHEAT CROP BELOW NORMAL

I would say it went very definitely below normal—I have here a map, a report which has been compiled in the last few days giving you a picture of the places where production is below normal. In a good part of Texas they are 20 percent below normal; that is also true of a good portion of Kansas; it is over 40 percent below normal.

I am sure that everyone who has had any experience in any type of insurance—life insurance, fire insurance, as well as crop insurance—knows that we have our bad years, normal years, and good years.

However, out of experience in all lines of insurance, over a period of years, the ups and downs will be leveled out and instead of having a loss it is possible to so fix premiums that there would be an actual profit.

In the meantime, as this business grows, so as to increase the number of policyholders, naturally, it will be possible to reduce the premiums.

Listen to Mr. Johnson's statement:

Mr. JOHNSON. Now if there had been a normal year this year our wheat losses would have been equaled by our premium collections. This year our loss is above normal, our crop is below normal, and therefore we contemplate using some of our capital structure to meet our indemnity payments. Now, the next year our insurance reserves will be replenished, and over a period of years these ups and downs will just level out.

* * * * * * *

Mr. COOLEY. How much was the insurance cost?

Mr. JOHNSON. The administrative cost against that amounted to $244,468, which was spent in the preceding fiscal year, and that added to which was spent in the last fiscal year would make the cost per policy about $29.90.

* * * * * * *

Mr. COOLEY. We have had statements, time and time again, that every private industry has met with dismal failure.

Mr. JOHNSON. But I refer to insurance operations that have been successful.

* * * * * * *

I believe that Chairman Jones referred to some private studies of initial rates, with reference to private industry.

It is difficult to obtain comparative costs of the establishment of other new types of insurance cost since most types of insurance have been operating so long that the original cost figures are lost. The organization of mutual windstorm insurance is sufficiently recent for some figures to be available. In a study by the Department of Agriculture made some years ago, it was found that these companies began to operate with records of costs available in the year 1885. In that year these mutual companies reported an expense of $7.78 per dollar of loss cost. The premium payment for crop insurance represents loss cost only. In other words, for every dollar collected in premiums it represented a cost of $7.78.

* * * * * * *

Now, by 1886, there was an expense of $5.36 per dollar of loss cost; and in 1887, an expense of $10.29 per dollar of loss cost.

Mr. FULMER. Is it not true, taking into consideration the figures you quoted, that your corporation, as a matter of fact, is much better off this year, even taking the cost for the 1 year, than the companies you referred?

Mr. JOHNSON. Exactly.

* * * * * * *

Mr. CUMMINGS. Is it not a fact that in most companies the cost is figured on a period of 5 years; in other words they charge up the whole 5 years against the first premium——

Mr. JOHNSON. As a matter of fact, it was not until along the end of the first 10-year period, 1894, that the average expense dropped down to $1.58.

I want to call your careful attention to the following statement taken from the hearings, which clearly indicates that a considerable amount of the expense for 1939 was incurred in collecting data, for a cotton program; also, a definite statement by Mr. Johnson that the present indications are that the Corporation can sell insurance for the coming year at less than half the cost of this past year.

Mr. Johnson also plainly states that per policy for cotton the expense would be much less, and gives a good reason why.

Mr. COOLEY. In reference to the administrative costs you have actually acquired additional data for the further program, which costs are included in that administrative cost.

Mr. JOHNSON. Yes.

Mr. COOLEY. And a large part of the money spent for the administrative costs, and the program this year was made out in collecting data with reference to cotton and possibly other products.

Mr. JOHNSON. That is right, and I would say, furthermore, that——

Mr. COOLEY. And regardless of the administrative costs of carrying on the program which you say has been very successful, a large part of that money has been expended in collecting additional data, which you must have for a cotton program.

Mr. JOHNSON. Yes. And I would say definitely that the present indications are that likely we can sell insurance for the coming year at less than half the cost of this past year.

Mr. HOPE. With reference to cotton: Would you have about the same administrative costs for the first year that you had with wheat?

Mr. JOHNSON. I would contemplate that per policy it would be much less.

Mr. HOPE. Why would it be less?

Mr. JOHNSON. Simply because we have gained a great amount of experience in how to handle the work, and likewise we have much more data on hand.

Mr. HOPE. You have more data on hand with regard to cotton than you had with regard to wheat when you started the wheat program?

Mr. JOHNSON. Yes.

Apparently, there was some fear on the part of some Members, especially those who were interested in the wheat program, that by including cotton there might be a possibility of impairing the twenty million capital.

The following statement will not only give you some valuable information in connection with the whole matter, but you will note that we have the assurance of Mr. Johnson that the twenty million capital will be sufficient.

You remember in the passage of the Cooperatives Insurance Act one hundred million was authorized. The Appropriation Committee allocated twenty million. According to statements contained in the hearing this twenty million, after paying losses for 1939, will still be intact, and, as stated by Mr. Johnson, will be sufficient to take care of the whole program without any additional money.

Mr. COOLEY. The insurance rates are based on the risk determined by the particular section.

Mr. JOHNSON. That is right; the premium rates are established with respect to each farm and vary according to the hazards involved.

Mr. COOLEY. Unless we do authorize the establishment of a cotton program, all the data you have collected on cotton will do us no good.

Mr. JOHNSON. It certainly would have to be reworked if at some later year it was decided to take on the cotton program.

Mr. FERGUSON. Do I understand it is your estimate that it would not be necessary to increase the appropriation to take care of the cost to include cotton?

Mr. JOHNSON. Well, we have made a fairly close estimate of it.

Mr. FERGUSON. Do you think the $6,000,000 included in the bill would give you enough to take care of it?

Mr. JOHNSON. I would say that it would be more than adequate for the first year.

Mr. FERGUSON. And you still stand on your proposition that $20,000,000 capital would be sufficient; that you would not need to increase that amount?

Mr. JOHNSON. Yes.

APPROXIMATE AVERAGE PREMIUM RATES AND AVERAGE COVERAGE PER ACRE FOR SAMPLE COUNTIES

TABLE 4.—*The approximate average premium rates and average coverage per acre under the 75- and 50-percent plans in specific counties* [1]

State and county	Average yield 1928–37	75-percent plan		50-percent plan	
		Average premium rate	Average coverage	Average premium rate	Average coverage
	Pounds lint	*Pounds lint*	*Pounds lint*	*Pounds lint*	*Pounds lint*
Georgia:					
Carroll	253	5	190	1	126
Cherokee	228	3	171	1	114
Early	202	7	152	1	101
Jenkins	225	9	169	1	112
South Carolina:					
Allendale	204	7	153	2	102
Anderson	247	6	185	1	124
Darlington	231	14	173	3	116
Orangeburg	244	9	183	2	122
Oklahoma:					
Beckham	140	18	105	8	70

Nueces	201	11	151	3	100

[1] A minimum premium rate would probably be established under both the 75- and 50-percent plans. The premium rate per acre illustrated in the table would be subject to increase for the plan outlined elsewhere in this report providing for an increase in indemnities and premiums so that protection against the loss of cottonseed would be included.

This statement would indicate, for instance, that according to the sample counties in Georgia the premium rate would run from 5 pounds in Carroll County to 9 pounds in Jenkins County.

At 10 cents per pound this would mean 50 cents per acre in Carroll County, and 90 cents per acre in Jenkins County.

The amount of premium will be based on risk and poundage per acre.

The premium will be payable in cotton or in cash.

Seventy-five percent of the lint and seed will be covered under the cotton-insurance program. For instance suppose the average yield would be 400 pounds lint, 300 pounds would be covered.

I now want to quote from a letter addressed to Hon. MARVIN JONES, chairman, Agricultural Committee of the House, dated July 21, 1939, signed by H. A. Wallace, Secretary, Department of Agriculture:

As a part of the research work on crop insurance provided for under subsection (h) of section 506 of the Federal Crop Insurance Act, the Department has been conducting research on cotton-crop insurance with a view to developing a plan for cotton comparable to the wheat crop insurance program. This plan is outlined in detail in House Document No. 277, Seventy-sixth Congress, first session, and H. R. 6972 appears to follow the suggestions contained therein.

This bill provides very little change with respect to the present law, the principal change being that required to make the provisions of the act which apply to wheat, applicable to cotton. There is also provision for an increase in the annual appropriation for the Federal Crop Insurance Corporation from $6,000,000 to $12,000,000 to cover operating and administrative costs.

Another change indicated refers to the special attention which has been given to problems incidental to including in the insurance plan for cotton, provision for protection against losses in yields of cottonseed. Indemnification for loss of lint cotton yields alone would provide only about five-sixths of full protection against crop losses because of the additional loss of cottonseed. Consequently the approach to include in the insurance plan a provision for loss in production of cottonseed yields by use of the actuarial data which are available only in terms of lint offers possibilities of making cotton insurance cover the complete cotton crop, namely, lint and seed.

The proposed bill provides that both premiums and indemnities for loss that are determined in lint cotton be increased and the percentage of increase would be the average relationship between seed and lint rates existing between the years used for computation of yields and premium rates. The additional premiums received would cover additional indemnities for loss.

It appears that the operating and administrative costs necessary for the inauguration of a crop-insurance program for cotton will be approximately the same as those incurred in connection with the wheat-crop-insurance program, and that, therefore, the increase in the authorized annual appropriation for the operation of the act from $6,000,000 to $12,000,000 is appropriate.

Crop insurance, while not offering a solution to all of the problems of more than 2,000,000 cotton farmers, will provide an effective means by which the financial difficulties brought about by unavoidable production hazards may be overcome. In view of the many hazards that affect the production of cotton and the large number of farmers who must face these hazards, it is believed that a program of cotton-crop insurance will meet a real need.

The amendment as provided in this bill appears to be adequate to make possible such a program for cotton-crop insurance, and the Department is in accord with the plan for extending the benefits of crop insurance to cotton.

In closing may I state that this legislation has the hearty approval of the Department of Agriculture.

A similar bill has already passed the Senate, and it is my firm belief with favorable consideration of this bill during this session of the Congress, which will enable the Department to put the cotton program into operation in 1940, we shall not only be able to render a great service to cotton farmers in dollars and cents, but, in the long run, it will be a real saving to the Treasury of the United States for reasons set forth in my remarks.

Encourage Naturalization

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. D'ALESANDRO. Mr. Speaker, on March 22 I introduced H. R. 5228, which provides that any alien is eligible for citizenship who was lawfully admitted to the United States for permanent residence prior to November 11, 1918, and who has ever since lawful entry maintained bona fide residence in the United States and has complied with the requirement of a good moral character, may be naturalized upon full and complete compliance with all the requirements of the naturalization laws, with the following exceptions:

He shall be exempt from all educational requirements, provided he has attended citizenship classes for at least 6 months, and upon proof thereof shall be exempt from all verbal or written examinations.

I introduced this bill for the real forgotten people of our Nation. Some of these people came to this great America in the 1880's and 1890's, young, honest, industrious people, who never really had the time or the opportunity to learn how to read and write. They married, had large families, and have given their best years in honest labor. Many are property owners and taxpayers. Many had sons and daughters who served our great country in the World War. The sons and daughters of others are today in the vanguard of America's progress. Yet these same clean-living people of America cannot become citizens unless they pass an examination that would probably "flunk" a high-school graduate or perhaps a college graduate. If the only requirements for citizenship were contributions to national wealth through honest labor and love for democracy, almost all of our noncitizens could easly become citizens.

There are thousands of people in the United States who have made application for their first and second papers but who failed to pass the examination. In making application they renounced allegiance to their native countries, and yet

they are not citizens of the United States. Let charity begin at home, and let us safeguard the security and happiness of the real forgotten people in America. They love America; they belong to America; they are willing to fight to defend America and keep it democratic and free, so why deny them citizenship? Let us make them free Americans.

If the House of Representatives of the United States will favorably consider and pass my resolution, we would encourage naturalization, and this resolution, in the final analysis, requires only that these people pledge allegiance to America in order to be naturalized, thus eliminating the lengthy and difficult process now required. This bill, 5228, has the approval of the Secretary of Labor, Madam Frances Perkins, and the endorsement of many World War veterans and civic organizations, and I hope it will be reported favorably by the committee and passed by the House of Representatives.

UNITED STATES DEPARTMENT OF LABOR,
IMMIGRATION AND NATURALIZATION SERVICE,
Washington, D. C., July 17, 1939.

Hon. THOMAS D'ALESANDRO, Jr.,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN D'ALESANDRO: I beg to acknowledge your letter requesting report on H. R. 5228, which you introduced on March 22, 1939. In response, I am transmitting herewith copy of report which the Secretary has addressed to the chairman of the Committee on Immigration and Naturalization.

Very truly yours,

JAMES L. HOUGHTELING,
Commissioner.

JUNE 30, 1939.

Hon. SAMUEL DICKSTEIN,
Chairman, Committee on Immigration and Naturalization, House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN DICKSTEIN: Permit me to refer to the letter of the clerk of your committee requesting comment on bill H. R. 5228.

The bill was introduced on March 22, 1939, by Mr. D'ALESANDRO, and bears the title "A bill for the admission to citizenship of aliens who came into this country prior to November 11, 1918."

It proposes a new subdivision to be included in section 4 of the Naturalization Act of June 29, 1906, as amended. That section which prescribes the naturalization procedure, contains 14 subdivisions, several of which authorize a short form of procedure as to particular classes of aliens. Bill H. R. 5228 would provide that any alien who was lawfully admitted to the United States for permanent residence prior to November 11, 1918, and has ever since said entry maintained a bona fide residence in the United States, shall be exempt from all educational requirements provided that he has attended citizenship classes for at least 6 months.

As this bill will expedite the naturalization of aliens who have resided in this country continuously for a period of 20 years and can prove good moral character and attachment to the principles of the Constitution of the United States, I believe that it has considerable merit and may well receive the favorable consideration of the Congress.

Very truly yours,

FRANCES PERKINS,
The Secretary.

GEN. JOSEPH HALLER POST, NO. 95,
AMERICAN LEGION, DEPARTMENT OF MARYLAND,
BALTIMORE, MD., *April 14, 1939.*

HERBERT L. RHODES,
Commander, American Legion, Department of Maryland, War Memorial, Baltimore, Md.

DEAR COMMANDER: The Gen. Joseph Haller Post, No. 95, at its regular meeting, Friday, April 14, 1939, adopted the following resolution:

"Whereas the Gen. Joseph Haller Post No. 95, American Legion, Department of Maryland, has always worked in the interest of Americanism in this community among the World War veterans of the United States and Allied forces; and

"Whereas now, 20 years after the conflict, we still find many veterans who are not yet naturalized due to many causes; and

"Whereas the chief one being that many of the veterans were under the impression that they were naturalized by virtue of their having served with the armed forces of the United States, from which they received an honorable discharge; and

"Whereas they found out differently when they attempted to vote or were asked to show their naturalization certificate which some firms required before giving them employment; and

"Whereas now the requirements for naturalization of a veteran are the same as for any other immigrant and too stringent for those not yet naturalized; and

"Whereas those who are not naturalized are cut off W. P. A. projects and relief rolls, and some private firms are also discharging all employees who are not American citizens; and

"Whereas by denying these men an opportunity to earn a livelihood, their families are the principal sufferers. This does not punish the man himself, but also his children who are the innocent victims of the parent's oversight or negligence. This will contribute to 'child delinquency'; and

"Whereas a bill, H. R. 5228, has been introduced in Congress by Mr. THOMAS D'ALESANDRO, Jr., which takes care of not only veterans but all aliens who came to this country prior to November 11, 1918, and since then showed themselves to be good citizens and who are able to meet all the requirements of the Immigration and Naturalization Service, with the exception as noted in the bill: Therefore be it

"Resolved by the General Joseph Haller Post No. 95, American Legion, Department of Maryland, at its regular meeting held April 14, 1939, That H. R. 5228, introduced by Hon. THOMAS D'ALESANDRO, Jr., Member of the Seventy-sixth Congress from the Third Maryland District, be unanimously endorsed for its great humanitarian content; and be it further

"Resolved, That a copy of this resolution be sent to the Honorable THOMAS D'ALESANDRO, Jr., and to the department headquarters of the American Legion to have this matter taken up at the next department executive committee meeting, urging and recommending that the committee take favorable action upon H. R. 5228, copy attached, and to pass that information on to the national legislative committee and similarly asking them for favorable action upon this bill."

JOHN W. PINKOWSKI,
Post Commander.
THOMAS F. POTOCKI,
Adjutant.

Professors and Instructors in Government Offices

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

LIST OF PROFESSORS AND INSTRUCTORS IN GOVERNMENT OFFICES AS PRINTED IN WASHINGTON TIMES-HERALD, U. S. AND US, ON MAY 21, 28, AND JUNE 4, 1939

Mr. SHORT. Mr. Speaker, the following long list of "brain trusters" accounts in some measure for the bewildering complexity and the enormous increase in cost of this New Deal government:

U. S. AND US
(By George D. Riley)
IN GOVERNMENT—PROFESSORS OR INSTRUCTORS
(Name, pedagogy, employing agency, respectively)

A

Grace Abbott, Chicago University, Children's Bureau (chief). J. F. Abel, department superintendent of schools, Nevada; chairman, board of regents, University of Nevada; Office of Education. Annette A. Adams, principal, Modoc High School, Alturas, Calif.; Department of Justice. J. W. Adams, teacher in common schools; F. T. C., United States Coal Commission, Federal Fuel Administration. J. C. Adkins, Georgetown University; Minimum Wage Board, Assistant Attorney General. Clyde B. Aitchison, American University; I. C. C. member. John Albright, American University; Census. L. R. Alderman, University of Oregon, etc.; Office of Education. Will W. Alexander, Dillard University; Resettlement, N. E. C. Arthur J. Altmeyer, American University; S. S. B., N. E. C., Central Statistical Board, Assistant Secretary of Labor, etc. Jos. S. Ames, Johns Hopkins; N. R. C., National Advisory Commission for Aeronautics. John B. Andrews, Dartmouth, Columbia, University of California, and University of Wisconsin; S. S. B., etc. Herbert E. Angel, American University; National Archives. D. A. Annan, claims to be teacher; N. R. Money-Pension-Tax Scalpel Must Replace New Deal Debt Salve

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE, JULY 15, 1939

Mr. OLIVER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered over the radio on July 15, 1939:

Citizens of the First District:

Two weeks ago, Congress enacted the Works Progress Administration work-relief bill for 1940. At that time it was obvious that several sections of this bill would react severely upon those who, through no fault of their own, are today compelled to depend upon organized society in the form of Government for work opportunities. Today, the country is troubled with the discontent and dissatisfaction being manifested against the deletion of the prevailing-wage-schedule provision which has been effective in previous Works Progress legislation. Tomorrow, additional discontent and dissatisfaction will be registered as the compulsory 30-day furlough regulation and other reactionary requirements become effective. But those of us who voted against these restrictive changes felt it mandatory upon us to vote for the bill as it was finally written, because to have done otherwise would have been to vote against work relief itself.

These new conditions which the unemployed must face are unfair, unjust, and unnecessary, and the picture which organized society; that is, you and I as the Government, are painting, is

indeed a critically vital one. For these manifestations of discontent and dissatisfaction by millions of our people, though in themselves tragic, are merely the bubbles upon the surface of a quicksand that must engulf America eventually unless the continuing nonsense and evasion upon the part of those who direct this Nation's destiny soon give way to reason, and unless the problem of mounting unemployment is faced squarely and dealt with honestly and fearlessly. The true core of the malignant growth that is tormenting our people lies far beneath these surface evidences of dissatisfaction and unrest. The present trouble and dissatisfaction among W. P. A. workers stems from policies adopted long before the present relief law was written. It comes from that mistake in judgment which impelled the American people and the leaders of the American people to believe the unemployment problem a temporary one back in 1932, to believe blindly that time alone would soon remedy matters, and that the relief of that unemployment meant the spending of Government funds for but a year, or two or three.

Years ago, when first the spending for relief began, the administration spoke of "pump priming" as though the Nation might pour a few quarts down the well and magically induce a gusher to appear. As bitter experience has taught us now, the magic was a lot of hocus-pocus. The old well was dry and all the priming in the world could only produce a sickly trickle that was the resurgence of the primer itself. We poured water into the pump and the flow began. When we stopped pouring in water, water stopped coming out. And, sad to relate, less water came out than we put in—many, many billions of dollars' worth less. But the priming went on and on, as it is still going on, despite the protests of the many who could not fail to see that the well was dry and the pump of no use at all. The magic hasn't worked. The whole idea has proven fallacious. The priming has accomplished nothing but an occasional pretense of flow and the people have come to recognize the truth. They know a lot of money has gone into the priming and they know that the well is as unproductive today as it was in 1932. They know they've been kept living on baseless hope and have been kept quiet with promises of the water that never appears from the well. And the people are getting fed up on the whole senseless business. They want the water of recovery to restore life to the American industrial system so the unemployed can find productive jobs and this sorry relief business can be forgotten. That type of water just isn't in the New Deal well. And the people are awakening to that fact.

Heaven only knows how many billions of dollars have been spent by Federal, State, and local governments for relief and work relief since 1932. But any man with eyes to see and intelligence to weigh the truth blazoned upon every side of every hamlet in America knows that relief is not the answer to our problem. You can't cure a cancer with salve. You can't make water gush from a dry well. And you can't keep self-respecting human beings on starvation wages nor even on hopeless jobs for years and years without expecting to arouse their resentment and the resentment of those from whom you take the money with which to maintain such a futile experiment. We all know that. We all know it's senseless to keep up such a practice. Yet the administration keeps it up as it has kept it up these many years, and the gentlemen in Congress talk about the folly of that practice, confess to its nonsense and its hopelessness, and go on evading the issue they know they must face, go on voting for relief instead of cure, go on seeking some way to compel the cancer to cure itself, go on sticking their heads in the sand like so many ostriches whenever some fellow more honest than diplomatic dares to suggest it would be better to do something about unemployment than to keep on following such a crackpot course as is now being pursued.

We go on year after year passing what are called emergency-relief bills. We go on appropriating billions upon billions of dollars for so-called emergency purposes. We go on establishing bureaus of Government and employing thousands upon thousands of people to man those bureaus to take care of all sorts of activities and endeavors in the name of that same emergency. We are doing it this year as we did last and as we have been doing it every year since 1932. Yet Webster tells us that an emergency is "an unforeseen occurrence." And what man honestly can consider the unemployment problem of today an unforeseen occurrence when that same problem has existed these many years and, as we all know, will continue to exist forever unless we cure the fault responsible for unemployment?

Why go on year after year pretending with a pretense that is obvious to all? The unemployment problem and the conditions it has brought about in this country are not emergencies at all, and we know they are not. They are old even now and men have come to expect them to torment us forever. There is no just excuse for any such device as that of relief in a land of abundance such as is our America, and we know it. We know there's enough wealth in the soil of America to care for all and to spare. We know our factories are idle while our people suffer from lack of the things those factories could provide. We know the banks are bursting with idle money that could be put to work if the needs of the people were supplied. And we know that the only reason the needs of the people are not met and the money and the factories not put to work is because the great mass of our people have no money with which to buy. We know the truth and that is it. And, still we go on denying it, by the very act of evading the establishment of corrective measures such as would assure our benefiting from the blessings so bountifully bestowed upon our land by the divine Creator. We go on deliberately ignoring the obvious way out of the sorry quagmire of a pseudo-relief that half keeps millions of our citizens in idleness and destitution when the hands and the brains of those millions rightfully should be engaged in the sensible development and utilization of America's natural blessings.

Let us look squarely at the American scene as it exists today, my friends. Let us try to discover wherein lies the fault that persists in transforming a natural Eden into a place of discord and destitution, of general and ever-increasing want and misery, of such lack of happiness as surely Providence never intended should be in this most abundantly blessed of all God's green pastures.

Before we look, let us remember that this is a democracy wherein is supposed to prevail a government of the people, by the people, and for the people. And let us remember that by "for the people" is meant for all the people, not for a favored few nor for a favored many. Remembering, let us look at the America of today.

We see, first of all, a people numbering in excess of 130,000,000 and composed of a blending of all the races of the earth. We see this people possessed of a great domain fabulously rich in natural resources, with land so plentiful and so fertile as to be able to produce far more food than all the peoples of the earth could consume. We see great cities crammed with human beings. We see great areas of land unoccupied and unworked, great forests, great mountains laden with ores, vast treasure awaiting the need of mankind. We see great rivers capable of spinning a million turbines for such generation of electricity as would spin countless billions of wheels in factories; illuminate countless millions of homes and bring the blessing of electricity's aid to lighten the burdens of all our people. We see vast forests proffering their lumber, vast mineral deposits proffering their store, vast areas vacant and waiting the building of decent homes for all. We see, my friends, a Garden of Eden in truth with all the blessings the designation implies.

And yet, as we look closer at that American scene, we see want and misery and destitution upon every side. In the very midst of these blessings, we see poverty and social degradation and despair eating, like the horrible cancers they are, into the hearts and the souls of uncounted millions. We see human beings housed in hovels in the cities, housed in hovels out where green acres stretch forth upon every side, hovels knowing not even the crudest of modern improvements despite the roar of the God-given rivers crying their offering of power to provide heat and light and warmth and comfort for even the lowliest. We see a great mausoleum crammed with cold and costly gold purchased from all the corners of the earth to lie in useless, sensless token of the money-lender's god. We see a second filled with dully gleaming bars of silver, likewise purchased from people who chose to exchange it for things of genuine value in the struggle for existence. We see, from coast to coast, from Canada to Mexico, great fields and small, wherein lie rotting the fruits of the farmer's labor and the farmer's hopes, vast orchards carpeted with rotting fruit, vast areas untilled because the Government has chosen to pay their owners to return the land to idleness, hordes of farm laborers and small-farm owners reduced to dependence upon relief, and millions upon millions of once self-reliant and self-supporting home owners and farm owners stripped of their every possession and forced into the thralldom of Government-controlled pauperization.

We see the hungry pleading for food and the food rotting in the fields and orchards. We see the ill-clad millions pleading for garments and the textile mills silent and dead. We see the ill-housed pleading for homes and the lumber mills without orders, their employees forced into the insatiable maw of destitution, the mechanics idle and themselves pauperized. We see some forty-five millions of people utterly dependent upon the Government for their daily bread. We see the Nation smothering beneath a public debt of more than $65,000,000,000. And we see each new-born babe inherit upon the instant of its birth a personal obligation of more than $500 because of that public debt.

There is the picture, ladies and gentlemen; the picture that for 7 long years has been growing constantly sorrier, and the picture that still bears the original designaton of "an emergency." For 7 years the New Deal has deluded the people with the false hope that that picture would correct itself. For 7 long years Congress has talked a lot and done nothing about the fundamental cause of it all. The administration and its cohorts on the Hill have tried to emulate that California scientist who claimed he could freeze human beings into a state simulating death, keep them so as long as he wished, and then bring them back to life exactly as they were at the time of freezing. The administration and its cohorts have tried to freeze the unemployed in the ice of a so-called "relief" status and hold them so until some magic could be devised to restore purchasing power with which to turn the wheels of industry and bring demand for the thawing out of that frozen labor. Blindly they tried the experiment and determinedly they refused to recognize the fact that by depriving these millions of purchasing power by preferring to keep them in destitution and want and at the same time deny them the vital prerequisite to relieve that want, they did nothing more than evade the issue and postpone the day of inevitable reckoning.

Purchasing power alone, my friends, can unlock the floodgates of plenty and start anew the wheels of industry to humming a song of recovery. Crackpot theories of relief that provide mere existence to unemployed millions and ignore the obvious truth can lead only to such sorry messes as that in which America finds itself today.

To those who scoff at the Townsend principle and monetary reform I recommend a careful study of this picture of America today

after the New Deal years of pump priming and compulsory pauperization and frozen labor and this tragic thing they call "relief." And I invite the attention of those critics and scoffers to the fact that the Townsend principle of underwriting our economy, linked with an honest and really sound money system, provide for the creation of purchasing power for all, not the mere salve of debt pump priming falsely labeled and sold to us as a cure.

The present agitation among relief workers is tragic, indeed. Yet, as time goes on, can we expect tranquillity in the ranks of those finally awake to the true nature of the hocus-pocus of those who advocate the theories of the New Deal or those who extol the virtue and blessings of the status quo? We can expect nothing more than an ever-increasing amount of discontent and dissatisfaction as a result of such policies. A scalpel is needed on our present restricted complex of distribution—a scalpel in the place of the debt salve so profusely used during the past 10 years. Pensions, debt-free money used for the benefit of all the people, and an equitable tax system based on the principle of the ability to pay, comprise the only permanent way out. Until 2 weeks from tonight, good night and good wishes.

Kings Canyon National Park

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

EDITORIAL FROM THE LOS ANGELES TIMES

Mr. GEARHART. Mr. Speaker, on the 19th day of July 1939 an editorial appeared in the Los Angeles Times which, I believe, will be of interest to those who have labored so long and well for the creation of the Kings Canyon National Park in California, the bill for the establishment of which passed the House last week.

Pursuant to the unanimous consent of the membership, I am privileged to extend this forceful expression from this influential western daily upon the pages of the CONGRESSIONAL RECORD.

With the indulgence of the membership, I read:

KINGS CANYON PARK WINS

The wishes of the great majority of Californians undoubtedly were carried out yesterday when the House passed the bill creating the Kings Canyon National Park. Approval of the Senate is a foregone conclusion. The setting aside as a wilderness playground of this 450,000-acre scenic wonderland is a victory which will mean much not only for the enjoyment of residents of this State, but for hundreds of thousands of tourists as well.

There has been a bitter fight over creation of the park, the site of which until now has been under control of the Forest Service. Final routing of the opposition was accomplished in the overwhelming rejection of an amendment to permit power development within the area's boundaries.

A road now is being pushed into the floor of the South Fork of the Kings, but for the most part the realm of John Muir's "shining mountains" will be accessible only to horsemen and hikers. This is as it should be. Nature has created few sights comparable to those in the Kings country. They should be maintained as nature made them.

The new park will assure their perpetual protection.

What P. W. A. Has Done To Create Employment

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

STATEMENT BY ISADOR LUBIN

Mr. KRAMER. Mr. Speaker, under the leave to extend my remarks I include the following testimony of Isador Lubin, Commissioner of Labor Statistics of the United States Department of Labor, before the House Committee on Banking and Currency, entitled "Estimates of the Amount of Labor Created by Federal Loans or Expenditures for Construction Projects."

It will be noted that Dr. Lubin believes the construction of public works has long been a first line of defense against unemployment. His arguments strengthen the position of those Members of the Congress who are endeavoring to secure approval of a further public-works program.

I hope the Members of the House will read this statement and the statistics presented therein.

STATEMENT BY ISADOR LUBIN, UNITED STATES DEPARTMENT OF LABOR, BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE, JULY 19, 1939

ESTIMATES OF THE AMOUNT OF LABOR CREATED BY FEDERAL LOANS OR EXPENDITURES FOR CONSTRUCTION PROJECTS

The construction of public works has long been a first line of defense against unemployment in periods of depression. In judging the effectiveness of any program of public works as a means of reemployment, several groups of workers must be considered. First, there are the men who work on the job itself. They are carpenters, bricklayers, stone masons, ditch diggers, cement finishers, and a host of other skilled, semiskilled, and unskilled men who work with them. Second, there are the men in the factories who provide the brick, cement, lumber, and steel to be used on the job. Back of them are the miners, the loggers, and others who supply the raw materials for the factories; and last, there are the men on transportation systems which carry the materials to the factories and later to the job.

Employment of these secondary groups of workers is just as important in any reemployment program as the employment of men at the site of construction. For a great many types of public works the materials, man-hours, and transportation men are numerically more important than the men working at the site of the construction projects.

The vast majority of contractors and subcontractors working on construction projects financed in whole or in part by Federal funds send monthly reports to the Bureau of Labor Statistics showing the number of employees, amounts of pay rolls, and man-hours worked at the site of each construction project. Each contractor also notifies the Bureau of the type and value of materials which he purchases for these projects as well as the source of his supplies. This provides a record of the total value of materials used in relation to the cost of the job and to the size of the site pay roll.

On the basis of the information furnished by the suppliers of these materials, the Bureau makes estimates of the number of man-hours of labor required in the manufacture and fabrication of these materials.

Beyond this labor consumed in the manufacturing of these products purchased by the contractor is other labor used in making the raw materials that went into their production. For steel, cement, lumber, brick, plumbing and heating supplies, electrical products, and sand and gravel, the Bureau has traced the record far back along the line to the original supplies of raw materials. Mines, railroads, factories, and shipping lines opened their records for the personal inspection of the agents of the Bureau so that these facts could be obtained.

The studies of the Bureau of Labor Statistics have now segregated the benefits to industry and employment arising from each major type of public-works construction. They show what happens to men and machines when various types of public-works-construction projects are undertaken.

With the material from these surveys it is possible to forecast with a reasonable degree of accuracy the results which might be expected from new construction programs. For example, for each $100,000,000 spent for non-Federal public works of the sort that were constructed under P. W. A., the Bureau estimates that there will be 34,400,000 hours of labor created at the construction site, and that 65,700,000 hours of work will be created in mines, forests, factories, and on transportation systems. See table 1.

In addition to the number of hours of employment created in fabricating the materials, the Bureau's studies also show the dollar value in orders which factories may expect from different types of programs. For example, in a $100,000,000 building construction program, iron and steel mills may expect orders valued at $15,000,000; lumber and millwork firms, orders in the amount of $5,300,000; brick and tile plants, orders in the amount of $4,200,000, etc.

For every $100,000,000 spent for self-liquidating transportation projects, approximately 47,500,000 hours will be created at the construction site and 66,900,000 hours in mines, forests, factories, and on transportation systems. (See table 2.)

A rural electrification program of $100,000,000 will create approximately 34,000,000 hours at the site and approximately 47,000,000 hours in mines, forests, factories, and on transportation systems. (See table 3.)

The program would provide for the installation of approximately 46,000 miles of line. This would involve among other things the purchase of 9,200,000 poles, 1,150,000 meters, 1,000,000 transformers,

400,000,000 pounds of copper, aluminum, and steel. The program would serve a minimum of 1,150,000 rural families.

In addition to the foregoing the construction of these new lines would, during the first 6 months they were energized, result in the installation of approximately $115,000,000 of home wiring and the purchase of over $230,000,000 of home electrical appliances purchased by the families receiving electric service for the first time. Since approximately one-half of the cost of wiring represents labor (including that of the contractor) and one-half represents the cost of wiring materials, a market will be created by this program of over $230,000,000 for appliances and approximately $57,500,000 of wiring materials such as insulated copper conductor, outlets, and switches. The figure on appliances is low; purchases during the second 6-month period would raise the total perhaps as much as 25 percent.

Included in the appliances purchased during the first 6 months of service would be approximately the following totals: 1,000,000 radios, 950,000 hand irons, 550,000 washing machines, 300,000 refrigerators, 275,000 toasters, 200,000 water pumps, 200,000 vacuum cleaners, 100,000 small motors.

So far we have been talking about the benefits the durable-goods manufacturers receive from public-works construction. The manufacturers and vendors of consumers' goods and services also benefit by public-works expenditures. From its studies of family expenditures, the Bureau has determined approximately how wage-earner families spend their earnings. It is estimated that a $100,000,000 non-Federal construction program will show expenditures by wage earners of $21,700,000 for food, $10,700,000 for housing, and $7,300,000 for clothing, etc. See table 4.

The railway-equipment program would create over 400,000,000 man-hours of employment, one-fourth of which would be in the car shops. The bulk of the employment involved in car building would be of a skilled and semiskilled nature. A rough estimate of the amounts of material involved in the program (assuming that one-fourth of the construction will be of locomotives) is 400,000,000 man-hours, in which one-fourth will be in the car plants and the remainder outside of the car plants. Over 30,000,000 tons of steel would be employed, over 10,000,000 tons of coal, 780,000 tons of lumber, 15,000 tons of paint, 60,000 tons of refractories. In addition to these, there are a large number of machine tools, small tools, and electrical equipment which would be needed.

The preliminary estimates of the Farm Security Administration indicate that about one-half of the sum allotted in this bill would be used for loans to individual tenants and to tenant purchase associations to finance the purchase and improvement of farms. The remaining $300,000,000 would be used for rehabilitation loans, minor farm improvements, and water facilities—particularly irrigation wells, small dams, ditches, pipe lines, and livestock-watering facilities.

TABLE I.—*An estimate of the effect of $100,000,000 of construction contracts awarded for P. W. A. Building Construction Projects—Nonresidential*

[Subject to revision]

Expenditures for:	
Labor at site (29.3 percent)	$29,300,000
Material (54.1 percent)	54,100,000
Other expenses and profit (16.6 percent)	16,600,000
Man-hours worked:	
At the construction site	34,400,000
In mines, forests, factories, transportation, and in administration	65,700,000
Value of material orders placed:	
All materials	54,100,000
Iron and steel products, not elsewhere classified	15,000,000
Lumber and millwork	5,300,000
Brick and hollow tile	4,200,000
Cement[1]	3,900,000
Heating and ventilating materials	3,600,000
Sand, gravel, and crushed stone[2]	3,100,000
Plumbing materials	2,800,000
Electric wiring and fixtures	2,700,000
Marble, granite, slate, and other stone products	2,200,000
Electrical machinery, apparatus, and supplies	1,400,000
Wall plaster, wallboard, and insulating board	1,100,000
Roofing materials, not elsewhere classified	900,000
Nonferrous metals and their products	800,000
Tiling, floor and wall, and terrazzo	600,000
Paints and varnishes	400,000
Other materials	6,100,000

[1] Includes cement in concrete products.
[2] Includes sand and gravel in concrete products.

TABLE II.—*An estimate of the effect of $100,000,000 of construction—Contracts awarded for a highway construction program*

Expenditures for:	
Labor at site (29.5 percent)	$29,500,000
Material (48.2 percent)	$48,200,000
Other expenses and profits (22.3 percent)	$22,300,000
Man-hours worked:	
At the construction site	47,500,000
In mines, forests, factories, transportation, and in administration	66,870,000
Value of material orders placed:	
All materials	$48,200,000
Iron and steel products	12,200,000
Sand and gravel	10,960,000
Cement	10,040,000
Paving materials and mixtures	4,800,000
Lumber and timber products	2,400,000
Stone and clay products, not elsewhere classified	1,300,000
Other materials	6,500,000

TABLE III.—*An estimate of the effect of $100,000,000 of construction contracts awarded for rural electrification projects*

Expenditures for:	
Labor at site	$18,200,000
Material	$65,500,000
Other expenses and profits	$16,300,000
Man-hours worked:	
At the site	34,019,000
In mines, forests, factories, transportation, and in administration	46,800,000
Value of material orders placed:	
All materials	$65,500,000
Poles	12,600,000
Meters	3,000,000
Transformers	12,800,000
Conductors	21,700,000
Other materials	15,400,000

TABLE IV.—*How wages received on $100,000,000 P. W. A. building-construction program will be spent*

Food	$21,726,000
Clothing	7,287,000
Housing	10,728,000
Household operation	7,759,000
Furnishings and equipment	2,969,000
Transportation	6,140,000
Recreation	3,643,000
Medical care	2,834,000
Other items	4,386,000
Total	67,472,000

TABLE V.—*An estimate of the effect of $100,000,000 of contracts for the manufacture of freight cars*

[Subject to revision]

Man-hours worked:	
In car-building plants	23,840,000
In mines, forests, factories (other than car building and transportation)	66,940,000
Number of man-hours worked in mines, forests, factories (other than car building), transportation, and in administration:	
Steel products	53,295,000
Coal	6,692,000
Journal-box waste (dry)	38,000
Lumber	6,400,000
Paint	68,000
Refractories	447,000
All materials	66,940,000

We Should Help Railroads Rebuild Their Business Before Financing Them Otherwise

---

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 24, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, I approach the study of this transportation bill with an inclination to favor it if, as I believe, it is helpful to the railroads and also to the general public. No one values more than I the work of the railroads in developing the West, in causing it to be settled and providing an outlet for its products as the railroads have done. I am thinking particularly of my own State, and I hope

I may be pardoned for taking a more narrow and local view in this matter. Two transcontinental railroads cross Arizona: The Santa Fe Railroad, which was originally called the Atlantic & Pacific, and was planned to follow approximately the thirty-fifth parallel of north latitude; and in the southern part of the State the Southern Pacific road, which followed approximately the thirty-second parallel of latitude. These two were among the first transcontinental lines to be built; and although they were designed to connect the Atlantic and the Pacific coasts, after completion their builders found an unexpected source of revenue in carrying passengers and freight into that region and in carrying its ever-increasing products from that region to our outer markets.

What a romantic history might truthfully be told about the building of these two steel highways! If time permitted, I should like to give you that entrancing story, for the building of the Atlantic & Pacific Railroad toward the west over that high mountain country is as thrilling as was the building of the Union Pacific or of the Central Pacific. Of course, the building of the Southern Pacific toward the east does not lack in interest or excitement, for it was built by the same great quartet of railroad builders who pushed the Central Pacific across the high mountains to meet the Union Pacific near the Great Salt Lake. However, it may seem that such a narrative has only an academic interest to us today.

I have so much confidence in the Interstate Commerce Commission that I believe, if we can shape this law properly, that great regulatory body, with more than 50 years' experience to guide it, will deal properly with the railroads, their employees, the stockholders, and the general public. I believe that the railroads should be granted some relief from this back-breaking burden of carrying supplies for the Government at a reduction of 50 percent in rates. The Southern Pacific has no alternate sections of land in Arizona, while the Santa Fe does have. I can well imagine that something should be done to even up the matter and give relief to both, for I assume that a railroad that has no land grants, in order to get business from the Government, must offer the same low rates as are offered by the land-grant railroads. Many years before I came to Congress I heard an official of the Santa Fe Railway say that that road's grant from the Government had been an expensive gift. With the ever-increasing amount of Government shipping across Arizona on account of these new governmental agencies, it seems to me that both of these railroads need some relief from the intolerable burden which this 50-percent reduction in rates places upon them.

Something has been said during this debate about a railroad lobby. It may be here, but not to my knowledge. I have not been approached by anyone connected with railroads, nor have I received more than a dozen letters concerning this bill, but to my mind it stands to reason that some such legislation as this for the benefit of the railroads is imperative. Of course, I do not want the long-and-short-haul clause repealed, for I do not want a return of the fatal discriminatory freight rates which would again cast a pall over the intermountain country and blight its growth. Yet I do recognize the strategic importance of the railroads in our economy, and I do recognize the fact that for great portions of the State which I represent the railroads are the chief taxpayers and the chief employers of our people, thus furnishing the money to support our schools and civic institutions. Unless this bill is emasculated by unwise amendments, I shall be glad to support it.

I was happy today to help defeat the Kitchens amendment to strike out the words "unjust" and "undue" in the statement of policy. Such an amendment, if it had carried, would have tied the Interstate Commerce Commission, which I do not wish to do. Later through the Jones amendment and the Green proposal, we aimed to improve the situation for the shippers of all farm products, including livestock products. If we can keep the bill thus favorable to the interior region, the ever-increasing volume of agricultural shipments will swell the earnings of the roads and bring back prosperity to them as well as to the regions they serve.

Importation of Meat Products Continues—Meat Imports for 1 Week at One Port of Entry, New York

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. GEARHART. Mr. Speaker, on the 17th of May of this year I called the attention of the membership of this body to the mounting increases in the importation of foreign-produced cattle, hogs, and sheep as well as of the meat products manufactured therefrom, all of which goes into direct competition with that of our domestic producers, American breeders, butchers, packers, and canners; and in accordance with the unanimous consent of the membership I then caused to be spread upon the pages of the CONGRESSIONAL RECORD a tabulation showing the various items and quantities imported into the United States through but one port of entry, the port of New York, during but 1 week of the calendar year, the week of March 10, 1939.

In order to demonstrate to the membership that the startling condition of affairs which my remarks and the tabulation thus revealed to the country did not constitute an unusual occurrence, seized upon for purposes of debate alone, but was, on the contrary, a true average example of that which is occurring from day to day, not only at the port of New York but at every other port of entry into these United States, I now ask the unanimous consent of the membership of this body for permission to spread upon the pages of the CONGRESSIONAL RECORD a similar record from the same port of entry covering a similar period more recent; that is, for the week of June 15, 1939. The figures are:

Meat products[1]

	Pounds
Argentina:	
Canned corn beef	216,635
Beef extract in tins	3,360
Roast beef in tins	252,000
Brazil: Canned corn beef	990,000
Canada:	
Fresh pork cuts	13,024
Fresh chilled calf livers	540
Fresh chilled veal livers	300
Fresh beef livers	641
Fresh frozen ham	21,867
Fresh beef cuts	1,760
Smoked bacon	3,055
Cuba: 24 quarters fresh choice beef	3,430
Denmark:	
Liver paste	275
Cooked ham in tins	5,319
Smoked sausage	1,842
Estonia:	
Cooked ham in tins	16,216
Cooked picnics in tins	2,516
Holland:	
Cooked sausage in tins	7,868
Smoked ham	1,868
Italy:	
Smoked sausage	3,264
Salami	4,967
Smoked ham	110
Smoked ham in tins	360
Latvia: Cooked pork loins	72
New Zealand:

CATTLE ON THE HOOF

When the reciprocal-trade agreement with Canada was announced some months ago we were assured by the defenders of that concord that, because of the limitations placed upon their entry, but few head of cattle would be imported under its terms. In the light of developing events it will be interesting to the membership, I feel quite confident, to note just what has occurred. In the face of the tremendous increase in the importation of meat products to which I have just called the attention of the House, the contemporaneous increase in the importation of cattle on the hoof will be found worthy of consideration, I am sure.

These are the startling figures. During the first 5 months of 1938, 47,452 head of cattle were imported from Canada. During the corresponding months of 1939, under the existing reciprocal agreement, the number of head jumped to 127,705, an increase of 80,253. So much for Canada.

Now for Mexico. Because of the insistence of the American State Department that the benefits conferred upon individual nations be extended to all other nations enjoying "most favored nation" status, a questionable right insofar as our southern neighbor is concerned, Mexico has been able to accomplish a similar increase of business in the American market. Let us look at the record of the importation of cattle from this source.

During the first 5 months of 1938 Mexico imported into the United States 178,184 head of cattle. During the corresponding months of 1939, taking full advantage of the reciprocal-trade agreement with Canada, the number of Mexican head imported into the United States jumped to the colossal figure of 332,676, a not insignificant gain of 154,492.

All of which is fine for the cattlemen of Canada and Mexico but not so good for those, Americans all, who are endeavoring to eke out a living breeding cattle in the United States and under the American flag. How long, Mr. Speaker, will the American people continue to submit to this outrageous disregard of our own?

Mr. Speaker, in view of the startling nature of the facts revealed in the foregoing statement, permit me to repeat that which I said on May 17 last. Every pound, every ounce of that which is listed above could have been produced within the territorial boundaries of the United States by, for, and to the profit of Americans. That it was not is indeed a sad commentary upon the failure of those who are presently charged with the duty of guarding our tariff walls to properly execute the trust that is theirs.

It is high time that something is done to insure the return of the American market to the American farmer and the American livestock raiser.

It Can't Be Good-Bye to All That

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

Mr. SHANLEY. Mr. Speaker, in a study of the Palestinian question in the closing days of the first session of the Seventy-fifth Congress in 1937, I said that:

No more living exposition of the hope of Israel has ever been given than by the Herculean efforts of Dr Theodore Herzl, of Vienna, to form, energize, and maintain this same Zionism—a plan which sought the mobilization of Jewish capital throughout the world for the purchase of the barren territory of Palestine from the Turkish Government.

His trials and tribulations, his far-sighted patience and enthusiasm form a picture of faith and hope welded together by a practicality that has rarely been equaled—his Zionist Congresses from 1897 to his death, his interviews with the foremost men of power in the world, the inculcation of his spirit into others, and the sublime rejection of alluring alternates place him high in the estimation of world Jewry in all pre-war efforts.

Then came the war and, with it, unthought-of possibilities for small nations, for oppressed peoples, for all the lamp of liberalism had not reached. From it came the Balfour declaration.

Dated November 2, 1917, this famous document is as follows:

"His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country."

This declaration, the most salient and paramount milestone in modern Zionism's progress, became hallowed by the approval of America, accepted by the allied and associated powers, posited in the treaty with Turkey, incorporated in the British mandate, and solemnly accepted by the high contracting treaty plenipotentiaries of Britain and American by pact on December 3, 1924. American Jewry has been wholeheartedly behind the placement of the mandate in England's hands.

The problem behind that declaration, its utterance and its endorsement by President Wilson, and our insistence that we had a right to be part and parcel of any group that sought to dispose of any former Turkish territory, is still present.

Secretary of State Bainbridge Colby uttered to the British Secretary of State a sentiment that has been repeatedly adopted by our State Department. Not only did the League of Nations recognize our interest but we actually assisted in the mandate itself. President Roosevelt has said:

Jewish achievement in Palestine since the Balfour declaration vindicates the high hope which lay behind the sponsorship of the homeland. The Jewish development in Palestine since the Balfour declaration is not only a tribute to the creative powers of the Jewish people but, by bringing great advancement into the sacred land, had promoted the well-being of all the inhabitants thereof.

I shall personally watch with deep sympathy the progress of Palestine. I extend to your organization my sincerest wishes for continued success and achievement (October 1932).

The interest which I have had and have frequently manifested in the rebuilding of the ancient Jewish homeland is, I am persuaded, an interest which is shared by all who recognize that every people has the inalienable right to life, liberty, and the pursuit of happiness. It is a source of renewed hope and courage, that by international accord and by the moral support of the peoples of the world, men and women of Jewish faith have a right to resettle the land where their faith was born and from which much of our modern civilization has emanated (July 1936).

The American pact is in treaty series No. 728, entitled "Convention Between the United States and Great Britain," proclaimed December 5, 1925. Its outstanding provisions follow:

Whereas by the treaty of peace concluded with the Allied Powers, Turkey renounces all her rights and titles over Palestine. * * *

Whereas the principal Allied Powers have agreed to entrust the mandate for Palestine to His Britannic Majesty. * * *

Whereas the principal Allied Powers have also agreed that the mandatory should be responsible for putting into effect the declaration originally made on the 2d of November 1917 by the Government of His Britannic Majesty, and adopted by the said powers, in favor of the establishment in Palestine of a national home for the Jewish people, it being clearly understood that nothing should be done which might prejudice the civil and religious rights of existing non-Jewish communities in Palestine or the rights and political status enjoyed by Jews in any other country; and

Whereas recognition has thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in this country. * * *

ARTICLE 2

The mandatory shall be responsible for placing the country under such political, administrative, and economic conditions as will secure the establishment of the Jewish national home as laid down in the preamble and the development of self-governing institutions, and also for safeguarding the civil and religious rights of all the inhabitants of Palestine, irrespective of race and religion.

ARTICLE 3

The mandatory shall, so far as circumstances permit, encourage local autonomy. * * *

ARTICLE 6

The administration of Palestine, while insuring that the rights and position of other sections of the population are not prejudiced, shall facilitate Jewish immigration under suitable conditions, and shall encourage, in cooperation with the Jewish agency referred to in article 4, close settlement by Jews on the land, including state lands and waste lands not required for public purposes.

Whereas the United States of America by participating in the war against Germany contributed to her defeat and the defeat of her allies and to the renunciation of the rights and titles of her allies in the territory transferred by them but has not ratified the covenant of the League of Nations embodied in the Treaty of Versailles. * * *

Mr. Speaker, I have incorporated in the RECORD some of the correspondence between Sir Henry Malcom and the Sherif Husseim of Mecca for the period of July 1915 to March 1, 1916. It is my proposal also to include in another extension of remarks a report that the committee set up to consider that correspondence. I ask for the liberty of doing this because I understand that there are but one or two copies of these reports in America. However, I wish to emphatically go on record as stating that all of the high officials that gave world-wide support to the Balfour declaration still enjoin upon us a militant attitude and a determination that this covenant shall not be broken.

Great men, noble figures, gave their benediction to this promise of the British Government. After all, the Balfour declaration was expressed in a letter by Lord Balfour to Lord Rothschild. It has been said that, apart from the recognition of the eternal justice of the cause, it was a great stroke of statesmanship on behalf of the British people and the Allied Powers. It played its part in the United States of America and throughout the Jewish communities in the rest of the world. The Balfour declaration was followed by an official mission. The mission was led by Dr. Weizmann and included representatives of the English, French, and Italian Jews who were later joined by American and also Palestinian Jewish representatives.

Lord Melshett, in his Thy Neighbour, said:

From the Balfour declaration to the ratification of the mandate was a long cry.

He later said something very prophetical:

The people of Christ have become the Christ of peoples. Despised and rejected of men, refined in the furnace of affliction, they have nowhere to lay their heads. God fulfills Himself in many ways. Out of the carnage and suffering of the war it was given to a Nation to redress one of the greatest wrongs and repair one of the oldest injustices in the history of mankind. The door of Palestine is once again held open to the eternal people. They stand on the threshold of their ancient heritage.

It was definitely stated in the British Government White Paper of 1922 that the promise in respect of Palestine was given "subject to a reservation in the same letter, which excluded from its scope, among other territories, the portions of Syria lying to the west of the district of Damascus. This reservation has always been regarded by His Majesty's Government as covering the vilayet of Beirut and the independent Sanjak of Jerusalem. The whole of Palestine west of the Jordan was excluded from Henry McMahon's pledge.

Quite apart from pledges made by the British Government and its Allies, there can be no evasion of the plain terms of the agreement entered into on January 3, 1919, between the Emir Feisal, on behalf of the Arab kingdom of the Hejaz, and Dr. Weizmann, on behalf of the Zionist organization. That agreement bound the parties thereto to submit to a definite delimination of the boundaries between the Arab state and Palestine, and, moreover, provided that "all necessary measures shall be taken to encourage and stimulate immigration of Jews into Palestine on a large scale, and as quickly as possible to settle Jewish immigrants upon the land." Previously, on February 6, 1919, Feisal had presented a statement before the Peace Conference in Paris pressing for the independence of all the Arabic-speaking peoples in Asia which contained the following reservation regarding Palestine:

On account of its universal character, I shall leave Palestine on one side for the mutual consideration of all parties interested. With this exception, I ask for the independence of the Arabic areas enumerated in the memorandum.

The Jerusalem National Home still stands among the greatest symbol the world has ever seen, and it must not be foreclosed by a breach of the covenant.

Auto Trays Not Tables at Beer Parlors

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

MEMORANDUM BY CORPORATION COUNSEL TO ALCOHOLIC BEVERAGE CONTROL BOARD

Mr. SHAFER of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bill, H. R. 7314, which was voted down in the House this afternoon. I also include a memorandum by the Corporation Counsel of the District of Columbia to the Alcoholic Beverage Control Board. This memorandum, written May 5, 1939, fully explains the reasons for the Board's action in abolishing the practice of serving beer and wines to persons seated in automobiles on premises of licensees in the District.

The matters referred to follow:

Be it enacted, etc., That so much of section 11, paragraph (g), of the District of Columbia Alcoholic Beverage Control Act, as amended, as reads as follows: "In the case of restaurants and passenger-carrying marine vessels and club cars or dining cars on a railroad, said spirits and wine, except light wines, shall be sold or served only to persons seated at public tables, and beer and light wines shall be sold and served only to persons seated at public tables or at bona fide lunch counters, except that spirits, wine, and beer may be sold or served to assemblages of more than six individuals in a private room when such room has been previously approved by the Board" be amended to read as follows: "In the case of restaurants and passenger-carrying marine vessels and club cars or dining cars on a railroad, said spirits and wine, except light wines, shall be sold or served only to persons seated at public tables, and beer and light wines shall be sold and served only to persons seated at public tables or at bona fide lunch counters, except that beer may be sold to persons seated in vehicles parked entirely upon the premises of the licensee, and except that spirits, wine, and beer may be sold or served to assemblages of more than six individuals in a private room when such room has been previously approved by the Board"; and that so much of section 11, paragraph (h), of such act, as amended, as reads as follows: "In the case of restaurants, taverns, and pasenger-carrying marine vessels and club cars or dining cars on a railroad said beer and light wines shall be sold or served only to persons seated at public tables or at bona fide lunch counters, except that beer and light wines may be sold or served to assemblages of more than six individuals in a private room when such room has been previously approved by the Board" be amended to read as follows: "In the case of restaurants, taverns, and passenger-carrying marine vessels and club cars or dining cars on a railroad, said beer or light wines shall be sold or served only to persons seated at public tables or at bona fide lunch counters, except that beer may be sold to persons seated in vehicles parked entirely upon the premises of the licensees, and except that beer and light wines may be sold or served to assemblages of more than six individuals in a private room when such room has been previously approved by the Board."

SEC. 2. The amendments made by this act shall take effect immediately following its enactment.

MAY 5, 1939.

MEMORANDUM TO THE ALCOHOLIC BEVERAGE CONTROL BOARD

Re: Are service trays attached to automobiles "tables" within the meaning of paragraphs (g) and (h) of section 11 of the Alcoholic Beverage Control Act?

A number of on-sale licensees have procured from the Alcoholic Beverage Control Board permission to sell beer and light wines in the so-called parking lots adjacent to the premise which is covered by the license. Of recent months increasingly large numbers of complaints have reached the Board that this privilege is being abused, more particularly by sales to intoxicated persons and to minors.

The beverages in question are served on aluminum service trays which are fastened to the sides of automobiles by means of clamps and an extension arm. These trays are adjusted to cars desiring that type of service by lot attendants or waiters, and several objections to this system arise at first consideration. For one thing, it is impossible to accurately tell either the age or the

degree of sobriety of persons seated in an automobile, particularly at night, when features are not clearly distinguishable. For another, a system of this kind on a lot capable of accommodating several hundred cars is impossible of proper supervision. Supervision must be left in the hands of individual attendants who are much more interested in the size of a prospective tip than they are in the question of a customer's age or sobriety. Last, but not least, it inevitably results in the commingling of driving and drinking, which is distinctly inadvisable, even under the closest of supervision.

Paragraphs (g) and (h) of section 11 provide for the service of spirits by class C restaurant operators, on one hand, and of beer and light wines by class D licensees on the other hand. It is provided with respect thereto that these beverages shall be served as follows: "* * * shall be sold and served only to persons seated at public tables or at bona fide lunch counters."

In determining what construction is to be put on these words, the intent of Congress as indicated in its deliberation must be considered. Immediately after the 3.2 beer law of April 5, 1933, was passed by the House of Representatives, it was rewritten by the Senate District Committee. As reported out of that committee it contained the following provision: "Such permit shall authorize the permittee to sell beverages for consumption on the premises designated in the permit. (A) In the case of restaurants, at public tables or in vehicles parked entirely on the premises designated in the permit."

Senator CAPPER, on the floor of the Senate, objected to the underscored portion of the provision for the reason that it is impossible to tell the ages of persons seated in cars, and it was stricken from the bill.

This action clearly indicates two things: (1) That Congress clearly distinguished, by the inclusion of both, as between service over a public table and service to an automobile located on a parking lot; and (2) Congress manifested a definite intention to prohibit the sale of beverages seated in parked cars on the lot adjacent to the licensed premises.

In further effectuation of this clear intent on the part of Congress, several licensees who inquired with respect thereto were advised by the then Beverage Control Board that to so serve would be considered a violation of the terms of their permits. However, the United States district attorney, whose duty it was to enforce this act, rendered an opinion under the date of October 2, 1933, apparently without consulting the Beverage Board, in which such sales were held to be legal.

With this opinion of the United States attorney, we feel constrained to take issue. We see no logic in the argument, where we have four or five people seated in a sedan and a service tray fastened to a front window that all of these people are seated at a public table. Nor do we believe that a service tray attached to a car parked on a parking lot constitutes a "public" table. Even if a tray so attached could be held to be a table, by what reason could it be held to be a "public" table? Only by considering the car to be a public vehicle could this be done, and that conclusion is not even remotely accurate.

Conclusion: For the reasons stated herein, we believe the practice of selling beverages as indicated above to be not only an exceedingly dangerous one, but also clearly illegal.

ELWOOD H. SEAL,
Corporation Counsel, District of Columbia.

Approved by the Commissioners of the District of Columbia sitting as a board, May 27, 1939.

G. M. THORNETT, *Secretary.*

The Government Spending Program

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES
Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

ARTICLE FROM THE TOLEDO (OHIO) BLADE

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Fraud on the Taxpayers," written by Harvey L. Lutz, professor of public finance, Princeton University, and published in the Toledo Blade of July 22, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Toledo (Ohio) Blade of July 22, 1939]

FRAUD ON THE TAXPAYERS

(By Harvey L. Lutz, professor of public finance, Princeton University)

The President has just proposed another huge spending program for the year 1940. Summer is advancing in Washington and the Members of Congress will be increasingly eager to get home as the heat increases and the humidity rises. It is hoped, therefore, by those who are willing to endorse this latest financial fraud, that the plan can be maneuvered through before the dog days without attracting too much attention.

The scheme is basically unsound, and it is set out in a manner that is misleading and deceptive.

This proposal is unsound because it is nothing more than a proposal to repeat once more the futile experiment of purchasing prosperity by large public expenditures. For 6 long years the country has suffered through a series of such experiments, but the foot of the rainbow where the pot of gold is buried is still as far away as ever.

Also, there is almost as much unemployment as ever, and business is about as badly off as ever. Deficit spending has not solved the problem of unemployment; it has not restored the driving force of private enterprise; it cannot solve these problems this time, any more than it has in the past, because it approaches them from the wrong end.

The new scheme is to be simply another "make work" program, for the President says that the projects are to be "of such a nature as to furnish a maximum of employment per dollar of investment."

The proposal is set out in a misleading way. The country has become increasingly suspicious of mounting deficits and inability to balance the Budget. Now the deficit is to be ended and the Budget balanced by the simple trick of putting the deficit outside of the Budget.

The idea is to authorize Federal credit agencies to issue bonds, guaranteed by the United States, and to advance the proceeds for the construction of the proposed projects.

Thus the direct debt of the Government will not be increased and it may be possible for the administration to announce, in a critical election year, that at last it has balanced the Budget.

The implication of the new borrowing scheme is that the Federal taxpayers will incur no obligation, current or future, with respect to the proposed financing. But this is not the case, for they are to be obligated, whether they realize it or not.

To call the new projects self-liquidating does not make them so. In fact, many of them will not be. Hospitals are mentioned, and sewage-disposal plants, and rural electrification, and loans to farm tenants, and a new set of loans to foreign countries.

On paper these undertakings can be shown to be self-supporting, but the hard, cold experience with them is that many of them are not. The taxpayer appears to benefit, temporarily, as he appears to benefit whenever a loan is used to pay for something extra, but his tax bill will be heavier in later years.

The uncertainty as to the self-liquidating results is increased by the character of the construction methods suggested by the President. The proposed improvements are to be built by furnishing a maximum of employment per dollar of investment. That is, pick, shovel, and wheelbarrow are to be used rather than steam shovels.

In other words, the new projects will start with an enormous loading of the costs, hence they will be greatly handicapped in earning enough to service the debt incurred.

The next step will be to keep down the charges or rates for their services, on the plea that the people cannot afford to repay the investment. The final step will be to incorporate in future budgets the charges for interest and sinking fund on this debt.

No one should be deceived by this proposal. It is a final, desperate move to create a temporary activity in consumer-goods industries before November 1940, and thus to create the basis for the fraudulent claim that deficit spending can produce prosperity.

Service and Heroism in the C. C. C.

EXTENSION OF REMARKS
OF
HON. FRANCIS H. CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

Mr. CASE of South Dakota. Mr. Speaker, the Black Hills National Forest has just suffered one of the most disastrous forest fires in its history. It burned over 18,000 acres, destroying huge quantities of timber, several homes, and some livestock. But, bad as it was, it would have been disastrous beyond measure had it not been for the efficient and heroic service given by boys in the Civilian Conservation Corps in cooperation with hundreds of ranchers, townspeople, and miners who united to battle the blaze on a wide, ragged, changing front where the flames often raced in the crowns from tree to tree or swept across the ground in a region that has been experiencing one of the driest summers on record.

Under permission granted by the House, I extend my remarks by including the following editorial from the Custer (S. Dak.) Chronicle:

A GOOD JOB—WELL DONE!

The value of the Civilian Conservation Corps was well demonstrated in the disastrous fire which swept through the Black Hills Forest last week.

Within a few minutes after the fire was first reported, the first crews arrived on the scene, equipped to fight an almost hopeless battle with the blaze and prepared to stay to the finish. And stay they did, asking no favors, asking no rest, going back from the fire line only when forced by sheer exhaustion and then returning to resume their places after a brief respite to clear aching lungs and if possible eat a hurried lunch.

That the fire burned over a large area is no discredit to the fire fighters. The natural elements having conspired in bringing high temperatures, low humidity, and high winds to the already extremely dry forest, needed only the careless hand of man to convert the quiet hillsides into a raging inferno, defying the efforts of man to stop, once started. That the fire did not destroy more homes or camps is a credit to those in charge of the fire fighting who sent crews to assist in saving homes as long as there remained a chance.

To be congratulated also are the officers and foremen of the C. C. C. camps, the W. P. A. foremen, and the forestry officials in their efficient handling of the large groups of men so that no serious injury or loss of life can be attributed to the fire itself. That fact, in itself, should prove to all the value of an organized group ready to take the lead in such emergencies. Volunteers and W. P. A. crews contributed much to the final success in stopping the flames, and the services of each and every man on the job is greatly appreciated by the people of the Black Hills whose homes and livelihood were threatened.

We hope that never again will such a fire strike the Black Hills, but we hope that if it does we will have the C. C. C. to lead the fight.

The timber, property of the United States Government, that was saved, and the possible loss of human life that was averted, will far outweigh the cost of camps in the Black Hills for many, many years, to say nothing of the constructive, productive work which they carry on through their regular projects.

And I also add the following brief comment from the same paper, giving a further picture of the spirit and service of the boys in the Civilian Conservation Corps:

The sympathy of the people of Custer goes out to the bereaved families of the three C. C. C. enrollees who met tragic accidental death in the Black Hills within a week. One was killed in line of duty when struck by lightning while fighting fire, the other two drowned while on holiday earned fighting the same fire. Of the two who drowned, one was a hero who made the supreme sacrifice for his friend. Which one will never be known, nor does it make any difference, the rare friendship those two boys felt for each other, compelling either to give his own life attempting to save the other.

Mr. Speaker, this record is further evidence that this Congress, before it adjourns at this session, should pass the bill H. R. 2990, to extend the life of the Civilian Conservation Corps. The authorized life of the corps expires the 30th of June next year. Its authority should be extended at this session so that Budget estimates and project programs can be made now.

The Courts—Umpire or Guide?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. HESS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which was delivered over the radio by the junior Senator from Ohio, Hon. ROBERT A. TAFT:

Citizens of the United States of America: The Constitution of the United States provides that the judicial power of the United States shall be vested in one Supreme Court and in such inferior courts as the Congress may from time to time ordain and establish. In clearly separating the judicial power from the executive and legislative power, the founders of the Constitution established in this country the principle of the independence of the courts, and their example has led to the incorporation of the same principle in every State constitution. In establishing three independent branches of government, they were influenced by Montesquieu, who seems to have ascribed to the English courts an independence which they did not really possess. In fact, before the Act of Settlement the courts were often a major instrument of executive tyranny.

Representative SMITH has chosen to discuss only one small feature of the Court's functions, namely, the power to declare laws unconstitutional. But the number of cases in which constitutional questions are involved is infinitesimal, and the independence and impartiality of the judiciary in all classes of cases lie at the very base of civilized government. The great bulk of litigation consists of criminal cases or cases between private individuals to settle their disputes. Many lawyers go through a lifetime without trying a constitutional case, and fewer still ever succeed in getting a court to invalidate a law. In fact, in the whole history of the United States to 1937, only 64 acts of Congress have been declared unconstitutional out of a total of approximately 58,000.

The independence of the courts is essential to the administration of justice. It lies at the very base of civilized government. As Daniel Webster said, "Justice, sir, is the great interest of man on earth." Justice cannot be left to the arbitrary whim of individual judges, and therefore we have written laws applying equally to all, and the judges' duty is to determine how those laws apply to particular cases. Without "equal justice under law" there can be no democracy, there can be no republican form of government.

The more complicated life becomes, the more necessary it is that the law tell each man definitely what he can do and what he cannot do without infringing on the rights of his neighbor. It is easy today to see what utter confusion would result in our streets if traffic laws ceased to exist and automobiles ran on both sides of the street and over crossings at will. But just as great confusion would follow in all the walks of life if we left to some political power the right to decide every case as public opinion might at the moment desire.

As Sydney Smith said, speaking of justice, "Truth is its handmaid, freedom is its child, peace is its companion, safety walks in its steps, victory follows in its train; it is the brightest emanation from the gospel; it is the attribute of God." One of the great principles of a republic is equality, and the most important aspect of equality is equality before the courts.

We are discussing here the foundations of democracy, and the chief of such foundations is the quality of our courts, their honesty, ability, independence, and impartiality. It is desirable also that the judges be good constitutional lawyers, but in the long run the other qualities are more important. They must not only be impartial but the people must believe in their impartiality. Nothing can be more discouraging to well-wishers of America than a few cases like a recent one in New York; nothing can do more to shake the underlying belief of the people in democratic government. The steps which the administration has taken to prevent the recurrence of cases of this kind can only meet with the approval of good citizens. The honesty and ability of local judges is just as important as that of Federal judges, and the wide study being given today to methods of selection of judges is the most important activity in the whole field of the law.

But Representative SMITH is only interested in attacking the Supreme Court because it has sometimes held unconstitutional laws on which the New Deal administration secured a rubber stamp from Congress. There is a strange similarity between his arguments and those which were presented in behalf of the President's bill to permit him to appoint six new judges and swamp the Court so that its decisions would be neither just nor impartial but exactly what the President might desire. These arguments were repudiated by an overwhelmingly Democratic Congress in 1937. The President set out to purge from the Democratic Party those Sentaors who dared to vote in behalf of the Supreme Court, and in every case their course was approved by the Democratic voters of their States. The elections of 1938 show that the people of this country believe in maintaining the independence and impartiality of the courts.

Because the direct attack on the Court has failed, the arguments presented tonight are more in the nature of sniping, designed to stir up prejudice without advocating any particular action. They affirm that the Supreme Court "is, under God, America's nearest approach to infallibility." It has power, it is said, over constitutional policy, the only arbitrary court recognized in the world. According to Representative SMITH, this power was not given it by the founders but is a power which the Court itself grabbed.

A more complete distortion of the real situation cannot be presented. No more infallibility is claimed for the Court than for the President or Congress. It derives its power from the people of the United States through the Constitution. If it does anything which the people do not like, they can amend the Constitution, and in many cases they have done so. The Court's independence is unique, but the American Constitution is unique, and the American Government is unique. It is a written Constitution, because the people had every intention of limiting the

powers of their Executive and their Legislature and their Government, as they had not usually been limited in other countries.

Because the founders knew that democratic governments in the history of the world had nearly always degenerated into autocracies, or tyrannies, or empires, the Constitution imposed three great limitations on the Federal Goverment: First, that its power should be confined to certain limited subjects of national importance, and that the people should retain within the States the rights of local self-government. The making of laws on local matters from a distant capital had been tyranny before the Revolution and would be tyranny afterward. Second, the Constitution divided even the limited powers of the Federal Government between the executive, legislative, and judiciary. The concentration of power in one man or group of men had destroyed democracy before and would destroy it again. Third, in the Bill of Rights they provided that no majority, no matter how great, could deprive a minority, no matter how small, of certain fundamental individual rights. Surely this is an essential of Americanism, one whose violation in Russia and Germany has destroyed the least semblance of popular government.

When Congress makes a law which violates these, or other, provisions of the Constitution, shall the Supreme Court enforce that law or shall it enforce the Constitution? Article VI of the Constitution says: "This Constitution and the laws of the United States which shall be made in pursuance thereof * * * shall be the supreme law of the land." Shall Congress be the judge of its own powers? Isn't it obvious that Congress is seldom restrained by doubts of the constitutionality of a law, no matter how reasonable those doubts? Haven't we in this very administration, and even in Representative SMITH's remarks, evidence that the New Dealers think that any law is justified which the people at the moment desire, whether it accords with the Constitution or not?

Unless the people change the Constitution, they have indicated their desire to prevent Congress from violating the three great principles which I have outlined. Surely the question whether Congress has violated those principles should be submitted to judicial examination by men whose duty it is to study in a judicial atmosphere the nature of the principles to be protected and set the terms of the law off against the terms of the Constitution.

Of course the Court may be wrong; judges are men like other men. But they are not likely to override any fundamental principles of democracy. The Court itself can correct mistakes and has done so; the people can correct mistakes by constitutional amendment and have done so.

Some of the principles of the Constitution are entirely definite. Others, like the clause which provides that no man shall be deprived of life, liberty, or property without due process of law, are very indefinite; but it is still the duty of the Court to interpret their meaning. The theory that constitutional principles are as weak as water and should yield to every crackpot proposal enacted by a rubber-stamp Congress would utterly destroy the Constitution of the United States. It would destroy democratic government and would permit the establishment of a totalitarian state, whose people would have no rights, whose local communities would have no independence.

The courts did not grab the power they have. It follows inevitably from the words of the Constitution, and no one has ever answered the argument of Chief Justice Marshall for that power in Marbury against Madison.

The Federalist, which was circulated among the people to secure a ratification of the Constitution, made clear the intention of the founders in these effective words: "The complete independence of the courts of justice is peculiarly essential in a limited constitution. By a limited constitution, I understand one which contains certain specified exceptions to the legislative authority; such, for instance, as that it shall pass no bills of attainder, no ex post facto laws, and the like. Limitations of this kind can be preserved in practice no other way than through the medium of courts of justice, whose duty it must be to declare all acts contrary to the manifest tenor of the Constitution void. Without this, all the reservations of particular rights or privileges would amount to nothing."

I note that Representative SMITH does not directly claim that the courts should not have this power. He simply criticizes them for carrying out their constitutional duty. He can't argue against the power, because it is obvious that without it there would be no Constitution.

There are several other innuendoes in his talk, notably those which present the Court as a kind of defender of big corporations and a reluctant conceder of the rights of labor. Apparently Mr. SMITH would bar corporations from the protection of the Constitution and let the Government confiscate their property without due process of law simply because they are corporations. If an individual has the right to retain his own property without confiscation, why on earth should not three or four persons, gathered together in a business enterprise as a corporation, have the same protection? Corporations are nothing but a number of stockholders banded together in the kind of business enterprise which has built up the United States. There is no argument I know of why they should not have constitutional rights in that enterprise as well as in an enterprise they may undertake as individuals or partners. The question of restraining the power of large corporations or taxing their profits is an entirely different one and one in which the Supreme Court has given every possible power to the Government. The picture of a struggle between the executive and the legislature on the one hand, protecting natural persons from corporations, against the Court allied with the corporations is a fiction of the imagination.

Representative SMITH stated that the Court had been driven to permit the organization of labor unions, after other means of restraining large corporations failed. As a matter of fact, labor unions have always been held legal by the United States Supreme Court. The Court has repeatedly reasserted their rights and has now upheld the Wagner Act, which compels the employers to recognize the rights of collective bargaining.

No; the attacks on the Court arise from the intense prejudice of the new dealers against the Court because the Court found that some of their measures violated the fundamental principles of the Constitution. The new dealers have not been hampered in any way in any efforts to protect labor or limit the power of corporations. They are indignant because the Court held laws like the N. R. A. and the A. A. A. unconstitutional, laws which would permit the National Government to go down into every community, tell the people what they should produce and what they should not produce, what price they should get for the things they make, and what price they should pay for the things they buy, laws which destroy all right of local self-government and the rights guaranteed by the Bill of Rights. The new dealers are dissatisfied because the Court has said that Congress cannot delegate its legislative power to the President, and that the President cannot remove men on independent commissions because they don't happen to agree with him. In other words, the Court has insisted that the division of powers prescribed by the Constitution should not be merged in a single all-powerful dictator.

Representative SMITH entirely misconceives the functions of the Court, which he says are twofold: First, to protect individuals under the Bill of Rights from both Federal and State encroachment, with which no one can disagree; but, second, "to cooperate at the task of making the Constitution adequate for the governance of a growing Nation." He entirely ignores the Court's duty to protect local self-government and the duty to see that the powers of government are not concentrated in one hand, and does not seem to think it very important for them to take an occasional look at the words of the Constitution itself.

In considering the constitutionality of a law, the duty of the Court is not cooperation; it is justice, usually between some individual and a government trying to take away his constitutional rights. If it finds the law to be in accord with the Constitution (and in this it gives the judgment of Congress every reasonable doubt), it should uphold the law. If the law violates fundamental principles of the Constitution, it should refuse to enforce it.

The Representative seems to think that the Court has a constant struggle to decide between what is compatible with precedent and what is desirable. That may be philosophy, but it is not constitutional law. Woodrow Wilson once said: "Justice has nothing to do with expediency. Justice has nothing to do with any temporary standard whatever. It is rooted and grounded in the fundamental instincts of humanity."

In fact, the whole trouble with the new dealers is that they believe that whatever they desire the Court should hold to be constitutional. They do not care what happens to the fundamental principles on which this Nation was founded. Most of them would be willing to abolish the States and turn over all local government to Federal control. All of them favor the delegation of legislative power to the President, and seem to forget that this was the first step in the growth of autocracy in Germany and Italy.

The high-minded Democrats who wrote the report against the President's Court-packing plan, after a long study and debate, realized that an independent Court is the very foundation of democracy. Their report said of the plan: "It would subjugate the courts to the will of Congress and the President, and thereby destroy the independence of the judiciary, the only certain shield of individual rights. * * * It stands now before the country, acknowledged by its proponents as a plan to force judicial interpretation of the Constitution, a proposal that violates every sacred tradition of American democracy. * * * Its ultimate operation would be to make this Government one of men rather than one of law, and its practical operation would be to make the Constitution what the executive or legislative branches of the Government say it is—an interpretation to be changed with every change of administration."

The patriotism, the ability, the diligence, and the impartiality of the men who have served on the Supreme Court of the United States are not equaled by those of any other group of public servants. The people of the United States know that the power of the Supreme Court is the bulwark of Americanism.

Challenge of the Skies

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

ARTICLE FROM NATIONAL AERONAUTICS

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following magazine article on the development of American aviation written by myself:

[From National Aeronautics for June 1939]

CHALLENGE OF THE SKIES

(By JENNINGS RANDOLPH, United States Representative from West Virginia)

A CONGRESSMAN LOOKS AT THE FUTURE OF AMERICAN AVIATION

In these stirring times, when the march of progress has been stimulated as never before in the history of the world, it is the high duty of a Member of Congress to keep his gaze focused steadily upon the horizon ahead. If our eyes are not kept constantly forward, the world will rush by and our constituents and our country will suffer.

In the field of aviation, more perhaps than in any other field of activity, the need is compelling that this great land should keep not only abreast, but ahead, of the rest of the world. The intimate relationship between civil aeronautics and national defense makes it the duty of self-preservation never to permit America to lag.

AIR TRAVEL MODERN MODE

As I ride the modern transports of the air in travels throughout the United States, I am constantly reminded of the splendid progress which the great air-line industry has made in the last few years, and of the fine prospects which lie ahead. Travel by air is the modern mode of travel.

The spirit of youth has left its deep imprint on the development of aviation in all of its branches. It would be difficult to single out the one individual who, though youthful in years, has contributed most outstandingly to the furtherance of flying. This article is being written on the anniversary of a day 12 years ago when Charles Lindbergh flew a frail craft for the first time across the Atlantic Ocean and thereby added a second story to the world.

I personally admire my friends, C. R. Smith and Jack Frye, who, while in their thirties, have brought to the operation of two of our greatest air lines the administrative ability which has been widely noted. I believe that the real work of building up a fine organization like that accomplished by C. R. is indicative of the impression which young men are making in this industry. Those individuals who are 50, 60, and 70 in the aviation field are also youthful in spirit and action. All working together from the group of those whom I like to call pilots of progress.

SAFETY RECORD WITHOUT PARALLEL

Rapid strides have been taken in promoting air safety. They are without parallel in the history of any other form of transportation. During the last winter alone, the safety record of scheduled air transportation was bettered by exactly 853 percent over the winter preceding—and the winter before had been the best year in our history up to that time. I believe I may be pardoned if, on behalf of my colleagues in the Congress, I suggest that efforts in securing the passage of the Civil Aeronautics Act have contributed in some small way to this phenomenal record.

With a consciousness of the place that aviation has taken in our national life, I joined with Senator PEPPER in securing the adoption of the resolution whereby the President is authorized by proclamation to set aside August 19 of each year as Aviation Day. It is the intention of this resolution that that day shall be celebrated throughout the country every year by appropriate exercises, as a reminder not only of the birthday of the great Orville Wright, but more particularly of the vast prospects which lie ahead for this vitally important aviation industry.

BUILDING FOR FUTURE GENERATIONS

We, in the Congress, have found that during recent years there was much misinformation and much misunderstanding concerning aviation and its possibilities. We have earnestly sought to dispel misconceptions. And the fruits of our labor are now being enjoyed. You may be sure that such efforts will continue unabated, and we will constantly look forward, and not backward. Future generations of American citizens must be able to make fullest use of the countless advantages which aviation offers to our national life.

The flag of this Republic must be borne high. Events which have shaken to their foundations the nations of the entire world have recently demonstrated that national power requires that we look to the air if our flag is to remain proudly supreme. Let us never forget that a hundred years ago the Yankee clipper ships sailed the seven seas far in the van of the world's commerce, but through succeeding decades our shipping fell miserably behind. This history is a warning to us. Even though we today stand in an enviable position of leadership in aviation, our leadership has already been challenged and if we do not continue to push ahead with fixed determination that we will have nothing less than the best, we may suffer in the air the same fate which we once suffered on the sea.

EXTEND AVIATION BENEFITS TO ALL

We must do everything within our power to extend the benefits of civil aviation to our people. Air mail must be brought to an increasing number of American communities. In this connection I feel the experimental Air Mail Service, using the automatic pick-up and delivery device, will be of real value toward this desired end. Dr. L. S. Adams, inventor of the apparatus which makes it possible to pick up and deliver the mail without a plane landing, has, I feel, contributed much to the possibility of the extension of air mail into the smaller communities. We must foster the extension of feeder-line service.

AN INVITATION TO GENIUS

May 12 of this year the inauguration of the service was held at Morgantown, W. Va., with approximately 8,000 persons present for the ceremonies. Under the new service 60 communities will be served. This is remarkable in view of the fact that there are only about 180 cities now on the air-mail map after years and years of work.

The air is an ocean—the greatest of all oceans. It is an invitation to the same genius which produced the early sailing clippers—an invitation to produce a new type of clipper and to maintain it forevermore as the world's best.

We must continue, unabated, our efforts toward keeping American aviation the leader of the world.

A Layman Speaks for the Townsend Plan

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

LETTER FROM A CONSTITUENT

Mr. ALEXANDER. Mr. Speaker, I have been sent a copy of an interesting letter written by a resident of Minneapolis which is in reply to an editorial carried in one of their local weekly newspapers in which the writer has taken the Republican Members of Congress to task for having supported the Townsend plan.

This letter is so well written and has so many grains of salt in it that I believe it should be brought to the attention of the Members of Congress and of the reading public. I commend it to you for study and contemplation. The letter, among other things, states:

* * * then along came this depression with its tragedy, when all of the savings of the aging, hard-working, thrifty people who have been the backbone of this great Nation, and to whom its God-given wealth belongs, were lost.

Backbones began to rasp against the parched casings of empty stomachs. Hunger is a great education.

When this threatened to destroy our Nation, God reached down and chose among the unknown common people of this Nation a leader and inspired him with a practical, common-sense idea. That leader was the country doctor, Francis E. Townsend, who never departed from a kindly dignity in face of all the indignities heaped upon him by frightened politicians. Dr. Townsend did what no politician has ever done before him, he taught the voters of a nation to think. He taught them to find the flaw in the politicians' alibi.

Dr. Townsend was inspired with an idea that will rescue this Nation from an economic condition resulting from the inventive genius of our people, which has developed a machine age. Dr. Townsend has pointed for us the way to regulate the economic system of our Nation, which will enable our people to enjoy the blessings that the machine age should bring. The writer of that editorial advertises the fact that he is ignorant concerning the Townsend plan. He has never studied a copy of the bill, he has turned deaf ears to those who would explain to him what we claim the Townsend plan will do for this Nation. He has written that editorial, basing it entirely on opinions which he has accepted ready-made from others who also knew very little about it themselves, and yet the writer of this editorial speaks as one having authority. Because he knows nothing about the plan, he has no constructive arguments to use against the plan and has resorted to the only weapon he had to use, a weapon which is usually associated with malice and an inferior intelligence, name calling and derision, based on nothing but political venom. Now, if I, like the writer of this editorial, wished to destroy a movement, I would first study the plan upon which that movement was based. I would make myself familiar with their arguments, discover its weak points, and attack it with arguments based upon facts. If this editorial writer had done that he never would have left his chin open for a straight to the jaw with the following statement: "One-third of the acccredited Republican legislators in the House of Representatives voted to bankrupt the Treasury." Now, please tell us how any plan can bankrupt the Treasury when not one cent of the funds with which it is to be financed will be drawn from the Treasury? It is a pay-as-you-go plan, and although I am not a Republican, this plan fits in nicely with their argument that this country never can spend itself back to prosperity with borrowed money.

Certainly the present system of borrowing for relief, issuing bonds that offer financiers a safe investment for their money where that money produces nothing but more taxes and unemployment will eventually lead to a bankrupt Treasury. Certainly it has not brought about recovery, although it has been tested for 7 years. As that writer would understand if he knew anything about the Townsend plan, it is to be financed by a 2-percent transaction tax, the same tax which financial leaders in 1920 advocated as a just and equitable tax, if applied in a manner which would not apply to themselves. The Townsend plan is impartial and will apply its taxes and benefits equally to all citizens. The proceeds of the proposed tax will be divided equally among those who are eligible for the annuity, up to the amount of $200, after the cost of administration has been deducted from it; $200 is a maximum, not a guaranty. The funds used to finance the Townsend plan will draw no interest. It will be unnecessary to issue any more money to support it. Our banks are overflowing with savings now. In the days of scarcity there was use for savings; bankers loaned those savings to industries, where employment was created. Today, banks invest in nonproducing relief bonds and huge piles of money lie idle, as useless to those who earned and saved it as it is to the Nation's industries. The Townsend plan will give that stack of savings a push that will spread it to every industry and worker in the Nation. It will rob the wealthy of nothing, it will guard them as it will guard all others against a destitute old age. It will cut our crime bill of $15,000,000,000 annually in half, by giving restless youth an outlet for their ambitions. It will increase the national income as well as the national wealth of the Nation. The Townsend plan includes a provision that all annuitants must pay honest bills or forfeit the annuity; that they must use 10 percent of the annuity to satisfy debts contracted previous to the time they received the annuity.

Consider your own business; if the Townsend plan were in operation, it requires little imagination to vision how it would increase your subscriptions and advertising. The Townsend plan will preserve the capitalistic system and will act as a balance wheel for it. It will not destroy competition. Merchants will strive to undersell each other and would do much advertising. It would enable you to build up a newspaper that would help to build a cleaner, better community. You would need more help and could offer some of the fine young people of your town employment at respectable wages. You could set your mind at rest concerning the future and apply your ability to improving the conditions of today. And your children will not be paying a tax to support you in idleness when you retire; they will merely be paying 2 percent of what they spend, mark that, of what they spend, not of what they save, for an insurance of up to $200 monthly, after 60; and that insurance will not be canceled if they become ill and cannot work.

The Townsend plan is not compulsory; no person need give up gainful employment against his or her will, but may continue work until such time as they desire to qualify for the annuity.

The present Nation-wide W. P. A. disturbance proves that some other system must be used to correct the present conditions in our Nation.

In closing, I hope you will get a copy of the Townsend-plan bill and also enough Townsend literature to study, so that you will understand what the Townsend plan is and what we claim it will do for the Nation; then, if you still desire to destroy the movement, you will at least know what you are talking about.

Sincerely,

MRS. LOTTIE LARSEN,
Minneapolis, Minn.

Washington—Center of the Political Whirlwind

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

ADDRESS BY FRANK C. WALDROP

Mr. HALL. Mr. Speaker, under leave to extend my own remarks by including an address by Mr. Frank C. Waldrop, editor of the Washington Times-Herald editorial page, I should like to say, in a prefatory way, that Mr. Waldrop's remarks were made at an open forum meeting of Republicans held on June 15, 1939, at Timber Point, near Islip, Suffolk County, Long Island, N. Y.

Mr. Waldrop, as a Washingtonian as well as journalist and editor, speaks most entertainingly of some of his impressions. That I am in disagreement with him on some of the facts and the interpretations to be given them does not in the main detract from the report he gives on voteless Washington, and certainly not from its interest as reading.

W. Kingsland Macy, Esq., Suffolk County Republican leader and former Republican State chairman of New York, introduced Mr. Waldrop at the meeting as follows:

We are honored by having with us this evening a distinguished editor and author. Mr. Waldrop's book Television: A Struggle for Power is an authoritative commentary upon the new and important scientific contribution of television. The paper with which he is associated is under the direction and ownership of the brilliant Mrs. Eleanor Patterson, who is also a part owner of the Chicago Tribune, published by her cousin, Col. R. R. McCormick. She is equally interested in the New York Daily News, published by her brother, Capt. J. M. Patterson. Associated with this powerful group of newspapers, situated as they are in important key centers, Mr. Waldrop brings to us a broad viewpoint on national affairs.

Mr. Waldrop's address follows:

I bring you greetings from the center of the political whirlwind. It used to be the custom in referring to whirlwinds to call the center a dead spot—the dead center of the whirlwind—but I think your experiences locally would testify against that in the case of a physical whirlwind. I am here to assure you that the center of the political whirlwind is also rather lively these days.

It is likely to become livelier before it grows deader, and that is the point of my remarks tonight. I am going to speak without reservation of any kind and be utterly frank about the political situation as I see it. I can do this with impunity as yet for I am not a voter in any political party. I have no suffrage, though I am a citizen, pay taxes, obey the law, and must serve the Nation in war. As you know, I am a professional Washingtonian. That is, administrations come and go but the people who are a permanent part of Washington City remain pretty much independent observers of the politicians' efforts. Therefore, we think we see a little more clearly than partisan strivers.

Let me get at my story of the evening by saying Washington is the finest example in the world of a city governed by a dictatorship; and the nature of Washington's city government is a forecast of what can happen in these United States, and what I firmly believe is going to happen, unless you and all the other people outside Washington adopt a realistic point of view with respect to the nature of government and its relationship to people.

Washington is a city of 627,000 people, more than there are in any one of eight States, yet it has no suffrage. We do not govern ourselves. Congress governs us. We lost our suffrage in what the Government of the moment called "an emergency." Suffrage was surrendered because at the moment it was easy to let somebody else do the thinking and solve the problems of the people who made up the population of the National Capital. That was 68 years ago.

Today, this city of 627,000 people, more than the population of any one of eight States, bitterly regrets the fact that the grandfathers of the present generation surrendered self-government in the interest of an apparent immediate security. That security was a snare and a delusion. The snare and the delusion have been most forcefully made apparent to the grandchildren of those who did the surrendering.

I will give you an example. In that surrender of self-government and suffrage, the theory was that Congress, being disinterested and not a party to local problems, would be able to render a

just and impartial judgment and give Washington the best city administration in the world. This was to be a new deal in municipal government and a new deal it was indeed. On Monday of this week the new deal for Washington involved the following: An income-tax law enacted in the House of Representatives to be effective on every penny every individual earns in the District of Columbia in excess of $2,000. There are no exemptions for marriage status, no relief for nonresidents who earn money in the District and pay taxes elsewhere. The President of the United States, his Cabinet officers, and down to the lowest clerk in the Federal Bureau of Fisheries must make out an income-tax return and pay the piper for every penny above $2,000.

This income-tax law was alleged to provide Washington with the finest and most modern type of tax legislation and be a model for the Nation's lesser political divisions. But listen. I want to point out to you a very interesting qualification—that the Members of Congress who voted this income tax upon the voteless residents of the National Capital very carefully exempted themselves from its effect.

I am not exaggerating the case when I say the House of Representatives leaped out the window when it saw the tax collector at its door. The Congressman who has been denouncing rugged individualists as selfish and designing enemies of the public welfare turned rugged protector of the taxpayers' money for the first time since I can remember—the taxpayers' money having been converted into $10,000 worth of salary, free office rent, free transportation, free mailing service, free haircuts, and a pass to the ball game all for the Congressman. Let me repeat this little story, because I think perhaps I have rambled somewhat in the telling of it.

The House of Representatives on Monday of this week, passed a bill taxing every income in the District of Columbia except the incomes of Members of Congress. Now I would like to please you by saying that this was the handiwork of the dastardly Democrats, but the truth is that this was an issue on which Democrats and Republicans saw eye to eye and an emergency in which they stood back to back against the common foe whom you and I know only too well—that evil genius of our times, the tax collector. I have read the CONGRESSIONAL RECORD of the debates on that issue of whether the Congressmen should tax themselves, with infinite amusement. It is such a bold and undeniable self-exposé of the point of view of the one who has corrupted himself, who has lost the ability of self-discipline and self-examination because he has been turned loose with no checks upon him in the domain of public power that you have to laugh no matter how deeply the facts shock you.

The District of Columbia now pays into the Federal Treasury more internal revenue than any one of 26 States, more than 11 States combined. You would think that the District of Columbia as a political subdivision would be able to defend itself against such monstrous mistreatment as this which I have just described. But the District of Columbia is in the neuter gender politically speaking. It can fume and fret, and it does all these things, but it handed over the power to do something 68 years ago to men who said they knew better than the people what the people wanted done.

I do not have to pursue this analogy any further. I think you understand me and you understand the point to which I am leading—that when people let government decide all their problems for them, those people are inviting extinction. The District of Columbia is not a model city as they said 68 years ago it would surely become. It has terrible civic problems, involving slums, ravages of the public health, faults in the school system, frightful imbalance of the tax load, a criminal and civil code of law practice which is in great need of reform. The people of the District of Columbia know what the evils in their community are and they know how they want them cured, but the people of the District of Columbia cannot move a peg. The evils which have been handed down to them by that same disinterested power which was to govern for them in a mood of judicial and abstract calm—the Congress. Those evils are preserved because those evils assist the Members of Congress to maintain their prerogatives of pomp and circumstance. I do not know when or how we will ever peacefully recover the right to govern ourselves in Washington. We have made every reasonable request of Congress to surrender its dictatorship of our community, but Congress turns a deaf ear, because surrender of the public power to the public means surrender to those pleasant and profitable emoluments of office; the right to park by a fire plug, the right to have a cop transferred to the outer darkness, the right to plant a constituent in a well-paying city job without benefit of merit, the right to trade in Washington real estate to the gain of the honorable Member. You will agree with me I think that the grandfathers in the emergency 68 years ago made a bad trade of freedom for security—which was not even secure.

In recent years we have seen the parallel to the problem of the city of Washington established in many parts of the world. The people of Russia, after Kerensky had put up for them a set of relatively free institutions, were sold the theory that an emergency was upon them and that they must surrender themselves to the dictatorship of one class of their citizenship, the proletariat. In the years since, the proletariat have been sold the principle that they must surrender their dictatorship to the Communist Party, and the Communist Party has been convinced by firing squad and torture chamber that it would be the better part of wisdom to surrender the dictatorship to the divine and all-wise Stalin.

The people of Italy were sold the idea that free institutions in their own country could not survive, except by trusting those institutions to fascism and the Fascist Party, in turn, trusted all judgment to one man. He has failed and Italy fails with him. In Germany the same thing has happened because people could not endure free institutions which had to be maintained by the effort of each individual, and Germany is today the world's most frightful example of a degenerate state.

You will note that the dictators draw closer together as time passes, just as the old royal monarchs were drawn together. The monarchs fought each other until they saw a common enemy, democracy, and then they stood together against that threat to them all. The dictators stand together against the self-sufficiency of the people today. These modern monarchs are standing together against democracy again. It does not follow that they will fall. History does not repeat itself unless man makes it do so. You cannot wish good luck into existence.

Ladies and gentlemen, it is the pastime of political writers and editorialists to indulge in prophecy. I would like to entertain you with a few enticing prophecies, but I can't bring myself to do it. I can only express an opinion that the Republican Party has better than even chances in the present state of things to carry the Presidency and the House of Representatives in the elections of 1940. You know as well as I that although it is a mathematical possibility for the Republican Party also to carry the Senate, such a thing is politically impossible, because too many of the States in which the elections will occur are solid Democratic Party subdivisions. Let us assume, then, in 1940 a Republican President and a Republican House and a Democratic Senate. What has that to do with my story of the income tax in Washington, D. C., and the state of government elsewhere in the world?

As I see it, the next President is going to have the greatest opportunity ever offered to any President since Abraham Lincoln. I think this opportunity will come in inspiring the belief of the people in the power of private individual initiative to solve their economic difficulties. I think his problem will come in the misunderstandings of the issue by the mass of people who have persuaded themselves—I do not blame anyone else—that they can pass the buck for continuing their own existence to the Government. There are many things to improve the national wealth and income which the Government ought to do, and which can be done by no other agency; but government cannot manufacture wealth. It cannot do for people what people should do for themselves. It is in driving home this truth that the next President can preserve and advance the civilization of the American Republic. He must convince the people that government is not the center, but merely the surface show, of their vitality.

But the next President cannot succeed unless first the people revive confidence in themselves as individuals and as creators of spiritual and material wealth.

I believe that the responsibility rests on you and the people like you to declare now that "economic emergency" is at an end. It has too long been the battle cry of those seeking an excuse to take power away from the people of this republic and put it with the Government.

I thank you.

Oklahoma Indian Makes Plea for House Joint Resolution 290 Before Committee on Indian Affairs

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

STATEMENT BY ALBERT ATTOCKNIE

Mr. JOHNSON of Oklahoma. Mr. Speaker, a few days ago five well-known and respected full-blood Indians, representing three tribes in the district I have the honor to represent in Congress, appeared before the House Committee on Indian Affairs in support of House Joint Resolution 290 introduced by me during the present session of Congress. They were Albert Attocknie, a Comanche from Apache; DeLos Lonewolf, a Kiowa from Mountain View; White Parker, a Comanche from Lawton; Guy Quoetone, a Kiowa from Carnegie; and Howard Soontay, an Apache from Apache, Okla.

They presented their case so well and made such a profound impression upon all members of the Committee on

Indian Affairs that the resolution in question was unanimously reported out of the committee with a recommendation that it do pass. It is hopeful that this resolution will be brought up and acted upon before this session closes, and I sincerely trust that all Members will give it fair and impartial consideration. The resolution in question merely proposes to refer the claims of the Kiowa, Comanche, and Apache Tribes to the Court of Claims. This resolution does not ask for the final adjudication of these claims, but simply calls upon the Court of Claims to investigate fully the facts with reference to the long-standing claims of these tribes of Indians against the Government of the United States and report such facts back to the Congress.

One of the most impressive speeches made to the committee was by Albert Attocknie, who has had limited educational advantages, but who has been many times recognized as a leader among his people. He has been referred to as one of the greatest Indian orators in America. The impromptu remarks of Albert Attocknie, who himself is a ward of the United States Government, before the House Committee on Indian Affairs, follow:

Mr. Chairman and distinguished members of the committee, sometimes I wonder why white man does not understand Indian better than he does, because white man has been in constant contact with the Indian ever since the *Mayflower* landed at Plymouth Rock, 319 years ago.

White man studies and understands everything he comes in contact with; white man know and appreciate animal, bird, and reptile so well, that large numbers of them are well taken care of here in the National Zoo at Washington.

Everybody seems to think the large amounts of money appropriated from year to year for upkeep of animals and birds at zoo is money well spent. But when Indian appears before Congress and asks for passage of a jurisdiction bill, like bill now before your honorable committee, some Congressmen do not seem to understand what it is all about.

If all the honorable Congressmen present only understand how hard it is for Indian to express his thoughts, we would make our case so clear that House Joint Resolution 290 would pass this committee without a minute's delay.

Some of the honorable committeemen may not have any Indians in their States, and they will not have a very good way to have right impression on American Indian. Why?

Sometimes I think it is because when a newly elected Congressman arrives at the National Capital, the first thing he sees on the east front of the Capitol is an Indian in attempt to kill white woman and innocent white child.

And in the Congressional Library an Indian is pictured in the act of killing and being killed.

I think all that puts the Indian in a wrong light before the American public.

I believe the Indian would be better understood if the Indian were shown at the Capital in statuary giving corn to their pale-face cousins, and if the Indians were pictured giving tobacco we use in peace pipes to their pale-face friends to use in cigarettes in their social functions and other places, or if the Indian maidens could be shown in Washington in statuaries and pictures giving paint to their white cousins to apply on their pretty, plump, and dimpled cheeks to make them look prettier.

But I have looked on walls of this beautiful Capitol and tried and tried in vain to find a statue or picture of the Indian girl Pocahontas that risked her own life to save the life of Capt. John Smith.

The Indian has his part and rights in the Nation, but he is slow about expressing himself, hence the Indian is the ward of the Government.

And this Indian ward is now before you pleading for a favorable report on House Joint Resolution 290, so the Congress of the Government of the people, by the people, for the people, may give us a chance to be heard on our claims for loss and damages caused by Congress ignoring the Medicine Lodge Treaty of 1867, to ratify the Jerome agreement of 1892, even though the Jerome agreement did not have the required number of signatures required by law, which was three-fourths of all the adult male Indians.

The Fifty-sixth Congress ignored the Medicine Lodge Treaty of 1867.

The Fifty-sixth Congress, to get the Indians' land, enacted a law providing the Medicine Lodge Treaty of 1867 bound the red man just like a heavy chain around his neck, but the same treaty, it seems, did not bind the other party, the United States Government.

So the Fifty-sixth Congress, to get the Indians' land, ratified the Jerome agreement when that agreement carried less than three-fourths of the male adult Indians' signatures, as required by law.

If all Members of the Fifty-sixth Congress knew and understood the Indians better, the Jerome agreement never would have been ratified, and we would not be here asking to be heard concerning certain claims of loss and damages imposed on us by the ratification of the Jerome agreement of 1892 and October 6, 1892.

First Broadcast from House of Representatives Radio Correspondents' Gallery by N. B. C.

EXTENSION OF REMARKS
OF
HON. LAWRENCE LEWIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

NEWS BROADCAST BY H. R. BAUKHAGE

Mr. LEWIS of Colorado. Mr. Speaker, at 12:45 p. m., eastern standard time, on June 26, 1939, Mr. H. R. Baukhage, Washington observer for the National Broadcasting Co., made the first news broadcast from the recently established radio correspondents' gallery of the House of Representatives. A transcript of this broadcast, marking an important historical event in news dissemination, is as follows:

ANNOUNCER. Just a few months ago the Congress of the United States approved a resolution granting radio correspondents equal rights with newspaper correspondents in covering its activities. It was the first time in 150 years that Congress had opened its galleries to a news-gathering agency other than the press.

Today the Speaker of the House, WILLIAM B. BANKHEAD, granted our request that broadcasts be permitted from the workroom of the radio correspondents.

Now, 2 hours after that request has been granted, N. B. C. presents the first broadcast from the quarters of radio correspondents covering the House of Representatives. N. B. C.'s Washington observer, Baukhage, is first to speak from the House radio room.

Mr. BAUKHAGE. Baukhage talking.

In this historic first broadcast from the radio gallery of the House of Representatives in the Capitol of the United States.

This broadcast signalizes the opening of the radio correspondents' gallery—that is, its first use by a broadcaster. The long-cherished freedom of the press is officially extended to embrace the freedom of the air.

It was on April 20 when a resolution extending to radio similar privileges accorded to the press was passed by the House—a resolution adopting the report submitted by JOHN J. DEMPSEY, Representative from New Mexico. It was Representative DEMPSEY who fought the resolution through committee.

Today the radio gallery numbers 26 official members, with a waiting list to be approved—about the same number as made up the press gallery when in 1839—a hundred years ago—seats in the Senate gallery were first set aside for newspaper correspondents.

Our colleagues of the press are just down the hall; we are here right over the main entrance to the House of Representatives, and our seats in the Chamber are in the front row of the gallery to the right of the press.

This window out of which I am looking now, looks down on the tree-covered plaza of the Capitol; across the way is the Library of Congress; at my left I can just see the top of the marble facade of the Supreme Court Building.

Underneath us is the Speaker's office—Speaker BANKHEAD—where we had our usual morning conference with him about an hour ago—he was pretty pessimistic about adjournment. And he predicted an exciting week ahead in the House—starting off with plenty of fireworks right now—in fact, it's begun. District of Columbia affairs don't interest the country at large so much, but this is a pretty big community—your Capital City—and Congress has the burden of running it. And District affairs are under debate right now.

And, of course, neutrality is hanging over our heads—the House takes that up tomorrow, but on Friday the fiscal year ends at midnight and there are several measures that must be rushed through before then if the wheels of government keep moving. The Speaker said that he expected night sessions; he wouldn't predict anything but advised us to stick around.

Our quarters here—our workshop isn't as large as the press, of course, and if all the members should want to rush in and make use of it at the same time we'd be pretty crowded, but of course the reporter's job is as much to be where the news is happening as at his typewriter or at the microphone.

On the Senate side, similar quarters and privileges have been voted but the physical equipment hasn't been completed as yet.

While it is Congress itself which regulates our activities, the rules for membership and the conduct are formulated by an executive committee—the radio now has such a committee, composed of representatives of the three Washington chains and one radio news service—William McAndrew, head of the Washington news department, represents N. B. C. These rules then are approved by the Speaker on the House side and the Senate Committee on Rules on its side. The two galleries are entirely separate.

Each gallery has its superintendent, and here in the House radio correspondents' gallery is Robert M. Menaugh, tall, red-headed Hoosier, who has been on duty down on the House floor for the last several years, maintaining contact with the press and the Members of the House. He knows his 435 House Members as few do, and when he was named for this job his appointment was unanimous. He's right here so I'm going to ask him a question: Bob, how do you like making history—you know the first superintendent of the radio gallery is going to go down in history.

Mr. MENAUGH. I realize that it is a historic event—giving radio official recognition, which of course, everybody knows it deserves. This method of getting the news out over the air will bring the Senators and Representatives still closer to the people—the people they represent.

I know from experience that that is really what the Members of Congress want—closer contact with their constituents—and I know from my several years' experience here right in the midst of things that it's what the people ought to have. I'm glad radio is here to do the job and I'm mighty glad to help.

Mr. BAUKHAGE. Thanks very much, Superintendent Bob Menaugh.

And now things are starting on the House floor, folks are already filling the corridors, and I'd better go in and see what's happening.

It's been a big thrill to me to have been able to take part in this historic broadcast as NBC Washington observer.

ANNOUNCER. This has been the first broadcast from the House of Representatives Radio Correspondents' Gallery. But there will be many more.

These additional facilities, granted radio by the Congress, will enable NBC to present even more "on the spot" broadcasts from the United States Capitol Building in Washington than we've been able to before. Baukhage, NBC's Washington observer, has been your commentator today.

This is the National Broadcasting Company.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. JOSEPH A. McARDLE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. McARDLE. Mr. Speaker, I oppose the investigation of the National Labor Relations Board by a special committee of the House because I suspect its motives.

I suspect the move is nothing more nor less than another part of the deliberate plan we have seen unfold in this Congress to besmirch the President and all his liberal program. Else why this strange effort to take the matter from the hands of the Labor Committee?

Whether the President and his liberal policies are right or not—and I think that on the whole the President's liberalism is a fine flower of our American ideal—I object to this manner of attack.

The attack is predicated upon the strategy that anything the President is for his reactionary opponents in both parties are against. Sink or swim, right or wrong, they oppose him and everything he stands for.

Their opposition takes the form of smear campaigns, sniping attacks, and flank maneuvers. Lofty words cloak ignoble intentions. The purpose of this resolution is not to investigate the Labor Board with an eye to discovering defects that they may be corrected. The purpose is not to insure to employer and employee better relations, a more harmonious existence, and a more thorough enjoyment of American life.

The purpose is to sabotage the Labor Board.

The purpose is to smear the Labor Board, to encourage strife between unions, to set Labor at Labor's throat, and restore industrial feudalism.

And by doing all this, this resolution's sponsors hope further to undermine our great President's prestige.

It is not the President's prestige but our own which the sponsors of this resolution will undermine.

Parliamentary government becomes a farce when a small minority can turn its back on the majority with which it is affiliated and join with the minority party to sabotage the Democratic program.

The Nation knows that personal spleen rather than American idealism governs this attack from the Democratic Party on its own President.

I am willing to have this House investigate anything, if the investigation is handled fairly, without ulterior motives, and in the traditional manner evolved with the growth of parliamentary government over the course of centuries. I am opposed to any prostitution of our legislative powers for reasons of spite and malice.

Railroads and Oil Companies Oppose the Florida Canal

EXTENSION OF REMARKS

OF

HON. WALTER CHANDLER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. CHANDLER. Mr. Speaker, the public demand for the completion of the Florida Canal, and the opposition to the project by certain private interests, including the railroads and the great oil companies, are clearly set forth in the report of the House Committee on Rivers and Harbors which investigated this matter. This opposition has resulted in confusing the minds of many Members of Congress. In order that the House may be fully informed as to the facts developed by the committee and as to just where this opposition is coming from, I desire to recite the following quotations from the committee report:

Opponents of the project have, by appearance or by testimony submitted in writing, presented arguments and views in opposition to those presented in the reports of the Chief of Engineers, the Department of the Navy, and the Department of Commerce favorable to the construction of the canal. Several days were occupied in taking opposition testimony, to which the committee has given careful consideration.

The opponents of the project appear to be divisible into two broad general divisions. The first of these comprise the managements of railroads, individually and collectively; the management of most of the large oil companies; and some, at least, of the ship operators. The second group comprises certain localities and interests in southern Florida. Among the former there may be listed the Association of American Railroads, the Atlantic Coast Line Railroad Co., the Florida East Coast Railway Co., the Seaboard Air Line Railway Co., the Southern Railway Co., the Standard Oil Co. of New Jersey, the Sun Oil Co., the Standard Vacuum Transportation Co., and certain steamship-operating companies. None of the oil companies or ship-operating companies were represented at the hearings, but letters introduced into the record indicate a substantial measure of opposition on their part.

The following observations seem to be pertinent:

(a) Opposition to the development of water transportation by canals and canalized rivers is the usual policy of the railroads. In this particular instance, the opposition of the railroads has been so determined as to raise a presumption, regardless of other supporting evidence, that the economies of the project and the consequent vast flow of water-borne traffic through the canal reported by the Chief of Engineers and the Department of Commerce will in fact materialize.

At the same time it should be borne in mind that all of the Atlantic-Gulf tonnage which the Chief of Engineers' report finds as potential to the canal is existing water-borne freight now moving through the Straits of Florida. Since it is moving by water at present and not by rail, it cannot be regarded as being taken from the railroads when it is diverted from the Straits and routed through the canal. Neither the representatives of the railroads nor any other person has presented any evidence tending to show that the Atlantic-Gulf commerce, which would transit the canal, would represent freight taken from the railroads, nor does it seem possible that such could be the case. In view of this fact it can only be concluded that the opposition of the railroads to this project is a part of their general policy of attempting to destroy all water transportation of freight, both the origin and destination of which lie within the continental United States.

(b) The very positive opposition of the large oil companies and certain of the ship operators is a factor which must be taken into consideration in studying their statements with regard to the project. Here again there is raised a presumption that such statements are designed to serve the policies of these corporations and are not primarily directed toward the public interest. Support to the view is afforded by the history of other great canal projects.

(c) The committee finds a considerable weight of evidence to support the view that, while there is undoubtedly a measurable body of entirely honest, if unjustified, opinion in southern Florida to the effect that the construction of the canal will adversely affect underground-water supplies, these fears have been fostered and developed by the organized efforts of the railroads and others seeking to defeat the project for reasons unconnected with the public interest. * * *

During the course of these hearings there were presented, either in person or by written communication, the views of the following proponents and opponents: Supporting the canal—The President, the Department of the Navy, the Department of War, the Department of Commerce, the Governors of Alabama, Arizona, Delaware, Florida, Georgia, Louisiana, Mississippi, Missouri, North Carolina, North Dakota, South Carolina, and Wyoming, the American Federation of Labor, the Mississippi Valley Association, the Atlantic Deeper Waterways Association, the National Rivers and Harbors Congress, and the Intracoastal Waterway Association of Louisiana and Texas.

Evidence submitted shows a widespread public support for the project. This includes the endorsements of the Governors of a large number of States, representatives of organized labor, civic and commercial bodies, and national associations, especially those located in or representing the Mississippi Valley and Gulf States and the Atlantic seaboard.

The project is actively supported by an official act of the Legislature of the State of Florida, the Governor, both Senators, and three out of the five Representatives from that State, including the Representatives from the districts through which the canal runs. The Department of Commerce states that the magnitude of the savings to be effected by the canal "undoubtedly justify its cost and emphasize the desirability of its construction." The President and the Secretary of the Navy have advised the committee that the project will be of definite aid in the national defense * * *.

In conclusion it may be said that the opposition is not well founded; that the project is of unusual merit; that its economic justification is beyond question; that its benefits will increase with time and will accrue to a larger portion of our country and its population than those of almost any other Federal public works; and that its construction is needful and in the public interest.

The 10-Cents-an-Hour Bloc

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

EDITORIAL FROM THE SAN FRANCISCO NEWS

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial published in the San Francisco News on July 18, with reference to the Fair Labor Standards Act:

THE 10-CENTS-AN-HOUR BLOC

While the leaders of organized labor have been draining their energies elsewhere—with mutual name-calling, with jurisdictional strikes, with W. P. A. walk-outs—the champions of dime-an-hour wages have been quietly at work in Washington.

As a result, the Wage Hour Act apparently is in for a pushing around from the logrollers.

It's the same old sorry system of "you scratch my back and I'll scratch yours" that has wished onto us such nightmares as the Hawley-Smoot tariff. You know how it goes:

A Congressman from a dairying district is buttonholed by creamery owners who warn that they will be ruined if they must pay 25 cents an hour and time-and-a-half for overtime after 44 hours a week. A Congressman from a lumbering district is similarly beseeched. Tears fall on the lapels of Members from tobacco-handling areas, cannery areas, meat-packing, sugar-processing, and cotton-ginning areas.

If enough exemptions from the wage-and-hour provisions are packed into a single bill, a majority of the Members of the House can do something for influential constituents.

That apparently is what has been done in Washington, and it looks as if the House will vote to exempt more than a million voters from the protections now accorded them by the Wage-Hour Act.

If such a bill becomes law, we might as well kiss the Wage-Hour Act good-bye. We might as well concede that America is too primitive and poor a nation to afford "two bits" an hour for those who stoop and sweat. And then we might as well march back to the good old "trickle theory"—the theory that as long as the upper-bracket incomes are well nourished, enough gravy will trickle down to keep the lowly from hunger.

Exemptions from the wage-hour provisions are not what we need, but some real enforcement of the law. Administrator Andrews, who has already recognized certain technical defects in the act and has proposed changes, has been handicapped by a shortage of funds for the payment of inspectors. The President has just asked Congress to vote $2,000,000 extra for this purpose.

We hope the President can obtain this appropriation and at the same time check the low-wage bloc and its so-called Barden amendments. But we doubt if he can do very much unless organized labor makes its position known promptly and loudly.

Differential Freight Rates Between the South and the Other Sections of the United States

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. JOHN L. McMILLAN. Mr. Speaker, no section of the United States has been more blessed by Nature than have the Southeastern States. No people anywhere have more courageously met with adverse marketing conditions than have the farmers of these same States. At the same time, no section and no group of our citizens have received less assistance from the Federal Government.

Over the long period of our colonial and national history the sturdy independence of our people has characterized the very life of each passing age. Our people of the Southeast, who under the inspiration of Marion and Pickens kept alive the wavering torch of independence during the American Revolution, have always unselfishly met every test of patriotism and good citizenship. Practically unaided, and even hindered, we survived the dark days following the War between the States. Today we come before the Nation fully convinced that we are entitled to—and will receive—a careful and friendly consideration of our major problem—adequate transportation at reasonable rates.

If there is any truth whatever to the charge that the No. 1 economic problem of the Nation is the Southeast, much of its force is due not to any defect in the character, resourcefulness, or industry of our people, not to any material depletion of our soil nor to any lack of water power for the development of modern industrial and manufacturing economy. We have the soil; we produce the crops; we have adequate rainfall; we have the manpower and the advantage of a relatively low cost of living, but we do not have access to the markets of the world or even of the United States. We do not have the centers of population which constitute the consuming public. To state the case bluntly and without qualification, we cannot fairly meet the conditions of modern competition so long as we are compelled to pay freight rates which are entirely out of line with those paid by the other producing sections of the Nation.

We do not criticize any other section because of the special favors they have received. We are merely asking for a fair treatment of our problems. The light-rainfall belts have received hundreds of millions in grants and loans in developing new areas of production. The agricultural West not only has received preferential treatment in the handling of its crops but its transportation lines have been constructed largely by Federal grants and subsidies.

The Nation needs our cotton, our tobacco, and our other agricultural products. If we are given even a reasonably fair opportunity to place our crops upon the market we will be in a position to purchase the manufactured goods of the North and East. We are prepared to become one of the very best consumer markets in the world, but we must have a fair

chance, as we cannot continue to pay freight rates out of line with the rest of the Nation. We will also necessarily continue to fail to play our part in bringing about industrial recovery.

The railroads themselves will pay the penalty. If we cannot profitably move our crops the railroads will not carry freight. Their boxcars will be idle. The factories of the manufacturing centers of the North and East will remain half closed while the finest of their potential markets remain undeveloped.

We are appealing to the American Congress to prove national solidarity by opening the door and permitting us to participate in the advantages due us as full partners in this great family of free States which we proudly call the United States of America.

This is a form of discrimination for which no adequate correction has heretofore been applied. This problem is the responsibility of the Federal Government. Congress has sought for nearly 50 years, through the regulations of rates, charges, and practices of railroads, to prevent discrimination which has been deemed to be unjust and unreasonable and contrary to public interest. Legislation has been passed from time to time in furtherance of this policy.

At present, the Federal law contains no provisions which directly control discrimination in the interstate freight-rate structures affecting regions or territories that are served by separate groups of railroads. This omission is possibly due to the fact that, when the original law was passed, commerce was principally local or intraterritorial in character. Profound changes have taken place, however, in the last 50 years. The tendency during this period has been toward a greater nationalization of commerce.

If discrimination of this sort is reached at all under the present law, it is only by indirect means; therefore, I am heartily in favor of this Congress correcting the unjust freight rates imposed upon the southern farmers and manufacturers.

I am sure that our part of the country can never compete with other sections of the country so long as we have unreasonably high freight rates and rates out of comparison with other sections of the United States.

I can see no reason for the other sections of the United States to object to the South having an equal freight rate as this would open up a good market for their goods and give us an opportunity to place our raw products on the large markets at an equal cost.

Mr. Speaker, I sincerely hope that I will be allowed to remain in Congress long enough to assist in having the thousands of freight rates reduced to a minimum number as I have failed to find any person who could explain why there should be so many different rates on the same product. Such a solution of the problem might be attained through the voluntary action of the carriers concerned, if all of them could reach an agreement to that effect, or, in the course of time, a regulatory policy might be developed, even without specific statutory direction, which would ultimately solve the problem. There is no present indication that either of these alternatives will be voluntarily adopted.

Mr. Speaker, I would like to state that, from the time I was a boy in high school, I have heard the farmers and businessmen of my section of the State of South Carolina complaining of the prohibitory rates which were placed on their products and which made it impossible to ship any of their surplus products to the large eastern markets. As long as I am a Member of Congress, I will continue to fight in an effort to see that we get the freight rates which we justly deserve in our section of the country and I can see the sentiment among the southern Members of Congress going in the same direction and I believe that we will have sufficient force to attain our goal within a short time.

With the solution of our freight-rate problem we will solve our own problems to the permanent benefit of every section of the Nation.

Petroleum Conservation Act of 1939

EXTENSION OF REMARKS
OF
HON. WILLIAM P. COLE, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. RAYBURN. Mr. Speaker, I ask unanimous consent that the gentleman from Maryland [Mr. COLE] may extend his own remarks in the RECORD on the subject of petroleum.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. COLE of Maryland. Mr. Speaker, under leave to extend my remarks, I desire to make the following statement in reference to the bill which I dropped into the hopper today and which is to be known as the Petroleum Conservation Act of 1939.

At a conference on July 22 with President Roosevelt, which Secretary Ickes, representatives of the Petroleum Board, Representative LEA, of California, and I attended, I was requested to introduce a bill which I dropped in the hopper today, H. R. 7372.

This bill was not prepared by me or any member of the subcommittee over which I presided as chairman in 1934 during the investigation of the petroleum industry and which has handled all legislation on the subject of petroleum referred to the Interstate and Foreign Commerce Committee since that time.

It is the idea of the President of the United States that the investigation conducted by our committee in 1934 be brought up to date during the interim between the adjournment of the present session of Congress and next January 1. After a long and hard session, the members of the subcommittee hesitate to undertake a job of this magnitude, but due to the fact it was felt we could bring the investigation to date more expeditiously than at first thought, I assured the President that after introduction of the bill by me, at his request, I would, with the consent of this Congress and after consultation with the members of the subcommittee and Chairman LEA of the full committee, undertake that study. For the information of the House, I insert herewith copy of a letter from the President to Chairman LEA, copies of which were sent to the Speaker of the House, to Majority Leader RAYBURN, and to me.

THE WHITE HOUSE,
Washington, D. C., July 22, 1939.

MY DEAR MR. LEA: On February 15, 1939, I transmitted to the Congress a report on energy resources by the National Resources Committee wherein certain recommendations were made relative to oil and gas problems in the United States.

I believe it is consistent with these recommendations to invite the attention of your committee to the desirability of the early enactment of legislation which will provide a coordinated national policy on oil conservation. To my mind the legislation should be designed to prevent avoidable waste in the production of oil and gas in the United States.

As you know, despite the progress which has been made toward oil conservation under State law and regulation, the production of petroleum is attended by waste. In view of the vital part which petroleum plays in the national defense as well as its importance in commerce and industry, the prevention of waste in petroleum production should be the subject of an enactment by the Congress.

I appreciate the thoroughness with which the Committee on Interstate and Foreign Commerce conducted the petroleum investigation in 1934 in response to House Resolution 441; but in the light of changes that have taken place, I believe the committee may wish to study developments since that time by investigation and hearings prior to the next session of Congress. To this end and with a view to the enactment of legislation in the next session, I request that the petroleum conservation bill which I today discussed with you and Representative COLE be introduced at this session.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

HON. CLARENCE F. LEA,
Chairman, Interstate and Foreign Commerce Committee, House of Representatives.

I also insert the following brief statement in explanation of the legislation which I have introduced:

The purpose of this bill is to prevent avoidable waste in oil and gas production in the fields of the United States. This purpose conforms with the policy expressed in the report on Energy Resources and National Policy, recently transmitted to the Congress by the President.

An office of petroleum conservation is to be established as a civil-service unit in the Department of the Interior, to be headed by a commissioner appointed by the President. The bill does not establish a board or a multiheaded commission. Pertinent oil activities of the Federal Government will be consolidated in the office of petroleum conservation in order to provide a coordinated national policy on oil conservation.

The commissioner is authorized to investigate and determine if oil or gas is produced wastefully in any field in the United States. If investigation develops that waste does not occur, notice to that effect will be given to State officials, operating companies, and the public. If waste is found to occur, as determined in accordance with standards established in the bill, findings to that effect will be made and regulations issued to provide for the elimination of such waste. State officials and operating companies will be properly notified of such findings and full opportunity given for correction. If waste is not found or if corrected, the commissioner will take no further action.

When waste has been found to occur and corrective measures as set forth in the regulations have not been applied, the commissioner is authorized to institute legal action to compel the prevention of waste, and, in addition, the Connally Act, act of February 22, 1935, as amended, is broadened so that transportation in interstate commerce of oil produced wastefully also is prohibited.

The bill intends to develop fullest possible cooperation between State and Federal officials and the oil industry in the prevention of waste. To this end a council on petroleum conservation is established.

The bill is designed solely as an oil and gas conservation measure and does not attempt to control supply through the establishment of production, marketing, or transportation quotas; does not affect imports or exports of petroleum; and does not provide for any coordinated industrial action in refining and marketing.

Toward Government Ownership

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

EDITORIAL FROM THE BUFFALO EVENING NEWS

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Buffalo Evening News:

TOWARD GOVERNMENT OWNERSHIP

The disappointment of Senator JAMES M. MEAD over the scuttling of his loans-to-small-business program by the Senate Banking and Currency Committee is not hard to understand, for only a few days before he had been assured at a White House conference that his proposals would have administration support. They were to have been made part of the bill providing for President Roosevelt's new $2,800,000,000 lending program.

Senator MEAD blames the defeat of his plan in committee on Federal Loan Administrator Jesse H. Jones, who told the Senate group that present loans-to-business powers of the R. F. C. are sufficient. The controversy has brought out two statements which seem to tell better than anything previously publicized just what is at issue in the Mead proposals. One is this paragraph in Senator MEAD's denunciation of Mr. Jones' action:

"Guaranteed (by Government) loans to small business will have to come. There is a continual withdrawal of capital funds from small business. * * * The time is not far distanct when progress in that direction will demand action, or small business will be wiped from the American scene.

The other highly significant statement is contained in the release of what Mr. Jones, former head of the R. F. C., told the Senate committee regarding the Mead program. Asked if the loss on present R. F. C. loans to business will run as high as 10 to 20 percent, Mr. Jones replied: "I am ashamed to tell you what I think it will be. It will be plenty." And then he added: "If anybody makes loans on a more liberal basis than we are making them now, they will be grants—they will not be loans."

In other words, it would appear that Senator MEAD wants to put Government capital into small business on a far more liberal basis than at present. And we have the expert testimony of the man who has been providing such capital for the last several years that if present regulations are liberalized, a large part of the capital so invested will be lost. What happens when an investor puts capital into a business, and that capital is consumed without profit? Sooner or later he takes over the business.

That is exactly what the Government would have to do if it furnished capital on a wholesale basis to small business. If little businesses now cannot attract private capital, as Senator MEAD says, it is largely because governmental instability has made profit possibilities extremely small. Will further Government entrance into private business change that? Hardly; if anything, it will make the situation worse. And so the Government would find itself the owner and operator of a new segment of American business, a segment it has professed to aid in the past by entrance into some of the larger economic fields such as the utilities and big-scale housing.

Thus, the situation quite apparently is this: If Government wants to help small-business men, it must remove the restrictions on profits and the economic uncertainties it has fostered. It must make the investment of private capital in new enterprises attractive. It will do no good in the long run for Government to try to furnish the capital, unless the United States is headed toward a far different economic and political system than that in which its citizens still believe.

Public-Building Program Outside the District of Columbia

EXTENSION OF REMARKS

OF

HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. MAHON. Mr. Speaker, in connection with my remarks in the House today, I insert below, for the information of Members of the House who are interested, the recommendations of the Bureau of the Budget for an additional authorization and appropriation for the public-building program outside the District of Columbia. Having about 10 towns which are eligible for consideration for post-office buildings, I have a special interest in this matter.

BUREAU OF THE BUDGET,
Washington, July 20, 1939.

The PRESIDENT,
The White House.

SIR: I have the honor to submit herewith for your consideration a supplemental estimate of appropriation for the Federal Works Agency amounting to $1,000,000, as follows:

"PUBLIC BUILDINGS ADMINISTRATION

"CONSTRUCTION OF PUBLIC BUILDINGS, ACT AUGUST 25, 1937

"Construction of public buildings outside the District of Columbia: The total amount authorized to be appropriated for the 3-year program for the acquisition of sites and construction of public buildings by the paragraph under the caption 'Emergency construction of public buildings outside the District of Columbia,' contained in the Third Deficiency Appropriation Act, fiscal year 1937, approved August 25, 1937 (50 Stat. 772), and increased by the Federal Public Buildings Appropriation Act of 1938, approved June 21, 1938, is hereby further increased from $130,000,000 to $180,000,000, and the period of said program is hereby extended to 5 years. All applicable provisions and authority contained in such authorizations shall be operative with respect to the enlarged authorization provided herein except that the Federal Works Administrator shall be substituted for the Secretary of the Treasury where mentioned therein, and that the list from which projects are to be selected by the Postmaster General and the Federal Works Administrator, acting jointly, shall be House Document No. 177, Seventy-sixth Congress, first session, dated February 20, 1939. Toward such increased program there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $1,000,000. The appropriations heretofore made under the authority of such acts, together with the appropriation contained herein, shall be consolidated into a single fund and be available toward the consummation of the entire authorized program (52 Stat. 818; 53 Stat. 672)."

The current construction program for buildings outside the District of Columbia, authorized by act approved August 25, 1937, in the amount of $70,000,000 and augmented by $60,000,000 under act approved June 21, 1938, was intended to cover a 3-year period ending with fiscal year 1940. Practically the entire amount of the $130,000,000 authorization has been allotted for approximately 760 specific projects. Sites have been selected for all but 50 of these projects; 250 are under construction or completed; and

drawings and specifications are in course of preparation for the remaining projects, 460. It is believed to be to the best interest of the Government to recommend at this time an augmentation of the $130,000,000 program to $180,000,000 and extend the period from 3 to 5 years, ending with fiscal year 1942. The additional authorization of $50,000,000 will be sufficient to permit an equitable distribution of projects throughout the country consistent with the current needs of the public service, and will permit the Public Buildings Administration to plan in advance and maintain a stable architectural and engineering force.

The appropriation of $1,000,000 is required to meet preliminary expenses in connection with the $50,000,000 authorization to provide for the cost of necessary sites, surveys, drawings, and specifications.

This estimate is required to meet contingencies which have arisen since the transmission of the Budget for the fiscal year 1940, and approval is recommended.

Very respectfully,

HAROLD D. SMITH,
Director of the Bureau of the Budget.

Some Cheese Facts

EXTENSION OF REMARKS
OF
HON. CHARLES HAWKS, JR.
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

Mr. HAWKS. Mr. Speaker, we need look no further than to scan the figures quoted below, to discover one of the greatest fallacies of the New Deal. This demonstration lies in the prices of cheese since 1920, as shown in the following table, furnished by the United States Department of Agriculture:

Cheese prices, American Twins, Wisconsin Cheese Exchange

[Cents per pound]

1920	24.9
1921	18.3
1922	19.3
1923	22.1
1924	18.2
1925	21.5
1926	20.1
1927	22.7
1928	22.1
1929	20.2
1930	16.4
1931	12.5
1932	10.0
1933	10.2
1934	11.7
1935	14.3
1936	15.3
1937	15.9
1938	12.6
1939 [1]	11.7

[1] For first 6 months (January through June, inclusive) of 1939.

PRICES OF CHEESE

Last 6 years of Republican administration (average), 17.2 cents per pound.

First 6 years of New Deal administration (average), 13.6 cents per pound.

Decrease in price of 3.6 cents per pound.

These figures show that during the last 6 Republican years, cheese averaged 17.2 cents per pound, and for the 6 years of the New Deal, the average price was 13.6 cents per pound.

Using the prices during Republican administration years as the yardstick, they were 3.6 cents or 26 percent more, under the last 6 Republican years, than during the first 6 years of the New Deal administration. Also, please note that cheese was below 12 cents per pound only 1 year during the 12 Republican years listed in the table, and has been below 12 cents per pound in 3 out of the 6 New Deal years, and only 11.7 cents the past year, or during the first 6 months of 1939.

Wisconsin produced over 2,100,000,000 pounds of cheese during the past 6 years. With an average loss of 3.6 cents per pound, this means a total loss in dollars of $72,372,740 for our cheese under the 6 years of New Deal administration, than under the 6 Republican years.

Knowing that Wisconsin has received from the New Deal Agricultural Adjustment Administration in benefits during the same 6 years only $40,365,000, we can easily discover why Wisconsin farmers are dissatisfied with the New Deal agricultural program.

Our (Wisconsin's) total dairy loss is tremendous, when we realize that only about one-third of the milk produced in Wisconsin is made into cheese.

Mr. Congressman, how many pounds of cheese, or butterfat, did your district produce in the past 6 years, and how much did your district lose?

Mr. Farmer, how many pounds of cheese, or butterfat equivalent, did you produce during the last 6 years, and how much did you lose by multiplying this by 3.6 cents per pound?

I believe you know the answer.

Let us have a fair agricultural program for all and an agricultural policy based on common sense.

Administrative Costs of W. P. A.

EXTENSION OF REMARKS
OF
HON. JOSEPH E. CASEY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 26, 1939

Mr. CASEY of Massachusetts. Mr. Speaker, under leave to extend my remarks, I herewith insert in the RECORD an editorial printed in the Boston Traveler on June 30, 1939:

WRONG TARGET

Approximately 1,000 of the 106,000 W. P. A. employees in Massachusetts get $1,200 or more a year, according to a report issued by Congressman JOSEPH W. MARTIN, Jr., of Massachusetts. The figure undoubtedly is correct, because it has been checked and cross-checked by Government offices.

The figures are for administrative positions on W. P. A.

W. P. A. in Massachusetts performs a myriad of tasks requiring good administration and engineering. Consider a private industry employing 106,000 men. Consider our own State administrative expense. How do they do?

Congressman MARTIN reports that 28 W. P. A. officials are being paid over $300 a month. Eight of these, by the way, are New England regional officers. So we have 28 executives getting more than $300 a month in an activity employing 106,000 persons.

The Commonwealth of Massachusetts, not including the judiciary, has only 21,000 employees as against the W. P. A.'s 106,000. Yet the State employs 1,010 persons at $3,000 or over a year. Of these, 419 State employees get $4,000 or over.

The significant fact is that W. P. A. administrative expense in this State right now is 2.34 percent. How does that percentage compare with private or public business?

If you owned a business employing 1,000 persons and administrative costs were comparable with W. P. A. there would be only 10 persons out of 1,000 to get over $25 a week.

Administrative costs is a poor target to aim at in criticizing W. P. A.

I want to take this opportunity to thank the Boston Traveler for taking the trouble to investigate the administrative cost of W. P. A. and compare it with the administrative expenses of the State of Massachusetts. The Boston Traveler is a Republican newspaper, but it shows in this instance an unwillingless to accept, without investigation, charges that are inaccurate even though those charges might benefit the Republican Party.

The Boston Traveler has pointed out that the W. P. A. administrative expenses in the State of Massachusetts were, on June 30, 1939, 2.34 percent and has asked the eloquent question, "How does that figure compare with private or public business?" The question answers itself. W. P. A. administrative expenses will compare very favorably with the most efficiently run private business.

Under the recently enacted W. P. A. bill, which I spoke against and voted against because of its destructive and oppressive measures, the administrative expenses of W. P. A. throughout the country are further cut 32 percent. In Massachusetts the administrative expenses of the W. P. A. are further cut 46 percent by this bill. In addition to this cut,

the recently enacted W. P. A. bill requires the performance of numerous additional administrative functions not carried on last year which will cost $6,000,000 of administrative expenses. These drastic cuts, made in an arbitrary manner, can mean but one thing, and that is that the W. P. A. is not going to be able to conduct its operations efficiently and, worse than that, that the W. P. A., because of a woeful lack of administrative funds, will fall of its own weight.

If the authors of the W. P. A. bill had for their purpose the destruction of the W. P. A. as a form of relief and the substitution of direct relief or the dole system, they could not have planned better. The failure of the bill to provide for anywhere near adequate administrative expenses is but one of several unfair features of the present W. P. A. bill, but it is of sufficient importance in itself to show that if we are to avoid inflicting great hardship and suffering upon the millions in our country who, through no fault of their own, are unable to find employment, we should amend this disastrous W. P. A. bill before we adjourn.

Confusion, Delusion, or Recovery

EXTENSION OF REMARKS
OF
HON. CHAN GURNEY
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 26 (legislative day of Tuesday, July 25), 1939

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE, JULY 15, 1939

Mr. GURNEY. Mr. President, I ask unanimous consent that there be printed in the RECORD a speech delivered by the senior Senator from New Hampshire [Mr. BRIDGES] at a banquet of the conference of Young Peoples' Republican Clubs of Kentucky, at Ashland, Ky., on the evening of July 15, 1939, his subject being, Confusion, Delusion, or Recovery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and fellow Republicans, if I appear a bit groggy before you, it is because I have just come from that land of make-believe that is Washington—where black is white and 2 and 2 make 5. I have just come from as ruthless and ambitious a crew of men as ever held power in this land. They say they are engaged in "making democracy work." God help democracy if they succeed!

Frankly, in getting away from the maelstrom, I am somewhat bewildered to find so many people making a living, or seeking to make a living in such old-fashioned ways as selling goods to other people or growing crops or rendering some service for which a man is willing to pay. This is looked upon as quite bourgeoisie in Washington, where the great industry now is high-price thinking. We pay the thinkers, or rather you pay them, from $6,000 a year up, and with the salaries go innumerable perquisites, such as power, having their thinking recorded in the public prints and the right to scoff at their fellow men who pursue other ways of earning their daily bread.

Mere support of these thinkers, however, is not the greatest problem facing this country. Ours is a wealthy nation and we can take a lot of abuse. We can stand a lot of wasted effort. We can support a lot of parasites. Inasmuch as we are spending millions for relief there is no reason why we should not have a project for impoverished thinkers.

But the trouble is that these thinkers in Washington are not content to sit and draw their pay. They insist upon enacting their thinking into law. That is what is responsible for the depressed state of our people today. The thinkers claim they will never let us have another depression. What they mean is that they won't let us get out of the one we are in.

President Roosevelt once explained in an outburst of enthusiasm that this country had a rendezvous with destiny. I think, my friends, that this country is in a race with the time limit of the New Deal.

I haven't the slightest doubt that the American people are now fully aware of the schemes which, under lofty-sounding phrases and noble protestations, are used to attack our Government and that they fully intend to clean house. The anguished screams of Honest Harold Ickes and others of the palace guards are evidence that they themselves see the handwriting on the wall. In fact, it will be more hysteria than history that you will get from the banks of the Potomac from now on.

But my concern is for the country in the brief time in which the New Deal has to run. Because we are dealing with frantic men. Make no mistake about it. It is not simply a case of a political party facing defeat. It is a case of determined, ambitious men with such a lust for power as this country seldom sees. They will not give up their fantastic dreams of making America over without the struggle of desperate men. Of that you may rest assured. Why, even the contemplation of returning to the oblivion from which they sprang puts them under a tremendous nervous strain. It was such a state of mind that produced the President's recent utterance that to give the control over the American dollar back to Congress was to give it to Wall Street.

As one experienced in the mechanics of politics, I know that a lot of license is taken with the truth. But, frankly, I think that the American people, and particularly those millions who, until a short time ago, idolized Mr. Roosevelt, have a right to expect more informative and more intelligent statements from one occupying the highest office in this Nation.

The American people are of a forgiving nature. So I suppose that when the Republicans have returned to power and our people are once again enjoying the fruits of a prosperous land, that the tendency will be to say of the new dealers: "Oh, they did the best they could."

But I for one shall never forgive them for the scars their propaganda has left on American minds and American souls.

I despise their campaign to undermine our faith and our traditions. I particularly resent the attacks upon our older men and women which they have used in their ill-conceived campaign to entice youth. This I consider the most heartless of all their strategies.

Down through the ages man has been acquiring a philosophy and respect for advancing age. Such respect has been seriously shaken by the efforts of the Washington mind debauchers in their attempt to array youth against age in the same manner as they have sought to array the employee against the employer. As vicious as was the attempt to pack the Supreme Court the propaganda about the senility and uselessness of aging men was more so.

But I am quite sure that the younger men and women do not feel flattered by these attentions. They have been the most harmed of all by the New Deal. While the propagandists have sung merrily to them of the promised land—the philosophy of regimentation, of closing the avenues of opportunity, of making existence more complicated and less competitive has moved to crush them as it has no other group.

An elderly man, tired of the conflict of life, may give some ear to a proposal for a static state which would assure him the groove he has fallen into. Not the young man. He wants the field left flexible so he can skip from employer to employer and enterprise to enterprise in order to improve his lot. The younger generation, above everybody else, is concerned lest the United States Government become the sole employer in this country!

Youth scoffs at security. It wants only an opportunity to go to work.

It is not unlikely that the boldness and the audacity of the new dealers at first impressed the younger minds. They boasted of a great adventure upon which they were embarked. But these same younger minds are the first to see the lack of genuineness, the downright quackery that is becoming more and more clear.

To follow the New Deal journalists there has never been such a galaxy of brains as those now struggling with the commonweal at Washington. And I am prepared to admit that there has never been a group so learned in all the cunning of history. Our Washington intellectuals have obtained their master's degree in the ways and means of exploiting minds.

I have had authoritatively described to me one of the many ways they have of shaping the minds of youngsters in Soviet Russia. Several hundred boys and girls in their teens are crowded into a theater, formerly a cathedral, one of the buildings seized by the state from the church. A man appears before the curtain on the stage and asks:

"Would you children like some sweets?"

You can imagine that there would be a chorus of ayes.

"Then pray to God and let's see what He will do," the man directs.

There follows the pitiful spectacle of these hundreds of youngsters praying to God to give them some sweets.

The curtain then rises to reveal an empty stage.

The man reappears with the observation that apparently God paid no attention to their prayers.

The curtain is lowered and he suggests:

"Now, let's try Stalin, let's pray to him."

When the curtain is raised again there is an ample display of sweets.

Our intellectuals, our thinkers at Washington, my friends, have played upon minds, young and old, just as ruthlessly as this.

Oh, they aren't Communists. To even suggest that they are bringing abuse from advanced thinkers all over the place, and I have no desire to set them to yelping more than is their wont. So this bowed and unlettered head will take the explanation of Mrs. Roosevelt, which, I am told, was given before 500 persons in the National Press Club at Washington. I do not purport to quote her exact words.

"I am not a Communist," she said with a laugh. "But I will say that the Communists come closer to seeking the same objectives that we are trying to attain than any other political philosophy."

I think she is right. The objectives of the Communists are to gain control over the political and economic structure of this country.

I think the plain fact is that our Washington intellectuals are not rooted in any particular form of government. They simply think in their arrogance that they have the answers to all the questions of life; and if unhampered by such annoyances as Congress and the Supreme Court and democratic processes, they will be able to erect a world of happiness and delight. That the massive minds of their European mentors have evolved naught but added grief for their people deters these big minds of ours not one whit.

Ah, the conceit of men!

And they have not the slightest hesitancy in placing Communists in responsible positions of government. They associate with them as fellow intellectuals. They admire their minds. They are all just a happy group of experimenters able to argue convincingly that when we go backward it is really a movement of progress. They would be fascinating if not in power and performed merely for entertainment, like the Dionne quintuplets, in a glass cage.

I don't see why there should be any doubt about what the new dealers are attempting to do. Mr. Roosevelt in his recent proposed $3,800,000,000 lending scheme said quite audaciously in his letter to the Senate leaders that "there seems to be no reason why there should not be adopted as a permanent policy of the Government the development and maintenance of a revolving fund fed from the earnings of these Government investments and used to finance new projects at times where there is a need of extra stimulus to employment."

But it remained for his less subtle Assistant Secretary of State, Adolph A. Berle, to explain just what this means. Appearing before the Senate Monopoly Committee, Mr. Berle said:

"The conclusion seems inevitable. Either we are on the eve of a change in our financial system or we are on the eve of a change in our social system."

Pointing out that if Government money is to be used to create wealth, it must have a broader field in which to operate, Mr. Berle said:

"Briefly, the Government will have to enter into direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitable that the Government ultimately will control and own those activities."

"Put differently"—and I as still quoting him—"if the Government undertakes to create wealth by using its own credit at the rate of about four billions or so a year, and if its work is well done, the Government will be acquiring direct productive mechanisms at the rate of four billions' worth a year, or thereabouts. Over a period of years, the Government will gradually come to own most of the productive plants in the United States."

Mr. Berle said a decision on whether this course should be pursued should be made openly. I agree with him.

Mr. Berle is apparently even more brilliant than the other brilliants and there is a noticeable tendency among the palace guards to gang up on him by such lesser brilliants as Tommy Corcoran, Benny Cohen, and Leon Henderson. But his statement is quite frank and it would be shocking if we were not already stunned.

But they are for the workingman, these experimenters in human beings are. I have never known a politician who was not for the workingman. It is a proposition that has in this sense been worked to death. And, my friends, I imagine that with 11,000,000 still unemployed and a national debt of more than forty billions under this set-up of the new dealers being for the workingman that he would prefer that they be against him. Of what use to him is the right to bargain collectively with his employer if he has no employer to bargain collectively with.

It is not for me, though, to doubt the sincerity of the lofty expressions which emanate from the New Deal propaganda mill. I suppose there is no doubt that when Napoleon scattered the blood of Frenchmen all over Europe he had convinced himself he was doing it for their own good.

Ever since shortly after the dark days of 1933 some of us have been suspicious that Mr. Roosevelt and his intellectual associates visualized a vast organized state under which every business, every activity of life, would function only at the will of and to the tune of Washington. The farmers would grow their crops by decree, the merchants would open and close their shops at the signal from the high chief of merchants in Washington.

Now with the episodes since 1936 indelibly impressed upon our minds there can be no doubt that this is the case. It is all very well to look upon John L. Lewis as a monster. But don't forget that he is part and parcel of the New Deal fabric, that the New Deal is wholly responsible for him. He is not simply a labor leader seeking to make the best of his opportunities. In the great organization plan of the new dealers he was assigned the job of bringing labor into the fold. The solid, far-seeing president of the American Federation of Labor, William Green, has been subjected to a heap of abuse from the New Deal propagandists. His unpardonable crime is that he would not turn organized labor over to the new superstate. Because he would not do this, Lewis was set up in the enterprise of wrecking the federation and putting the C. I. O. in its stead. You should know these things, my friends.

The enterprise is now virtually bankrupt and we find Mr. Roosevelt and Mme. Perkins frantically trying to get Lewis back into the federation ranks in order that he may bore from within. And even while they are doing this the effort to undermine the federation leaders goes assiduously on.

Do you suppose that the strikes in the steel and automobile industries had for their purpose the helping of the workingman? These workers had been given shorter hours and higher pay. I have no doubt that these were given in an effort to head off the C. I. O. But the fact is that they were given. No, my friends, these workers, seeing their first daylight after a darkness of several years, were the victims of the superstate architects—despoilers of toilers posing as their friends.

A most natural and understandable depression which came to the world on the old law of gravity that that which goes up must come down, has been unnecessarily prolonged in this country by selfish and vain men. You probably recall, some of you, that there was a burst of a boom in Florida a couple of years before the 1929 national collapse. But be it said for the men who gambled there and lost, none sought to take advantage of the situation to change the form of government.

The new dealers, past masters at preying upon the mass mind, seized upon the depressed state in which they found us in 1933 and they have worked with every device at their command to keep us steeped in pessimism.

No new frontiers, no opportunities for livelihood, no chance for the youngster graduating from school, utter hopelessness for the aging—will we have communism, will we have fascism, when will the war in Europe come? Oh, oh, what are we going to do. They would have us despair, my friends, and throw ourselves helplessly at their feet It is a revolutionary tactic as old as time.

But the American people are tired of singing the lament of defeat. They see dark clouds on the horizon all right. But they have come to see that that horizon is Washington. They intend, as soon as they can get to the polls again to roll these man clouds back—back into the classrooms and rear halls of the counting houses from which they emerged in 1933 to take the grand ride on Mr. Roosevelt's flight into ambition's stratosphere.

We in Washington are more exposed to the arguments of futility than you are. Mr. Roosevelt insists that he believes in democratic government but his actions contradict his words. I have no doubt that in that way of logic peculiar to him, he would call his brand of one-man government some sort of perfected democracy and make it sound convincing. But the intellectuals around him and to whom he gives the most ear, are not so subtle. Aside from Mr. Berle, there are others who say quite frankly, even provocatively, that democracy is through.

Well, it may be so, but I don't believe it. Anyway, let's throw the doubters out and give democracy another chance.

Now, fellow Republicans, there inevitably comes the question: But what will Republicans do?

The question, to my mind, is an example of how deeply the New Deal propaganda has sunk. Of far more importance at this time is not what the Republicans will do but what they won't do. The question has come to be one of what do the American people intend to do and will the Government at Washington permit them to do it. I sincerely think that when the choice is between the New Deal and the Republican Party it is a question of whether the American people can govern themselves. The new dealers, at heart, do not think so. The Republicans do!

In that light, you can rest assured that we won't use the National Labor Relations Board as an instrument to build up the C. I. O. so as to insure the American worker voting for any political party. We will see that this agency is administered to carry out the purpose for which it was intended and that is to guarantee that any worker who wants to join a union may do so.

We will see to it that the Securities Exchange Commission is not used to advance the friends of a particular political party and crush others. We shall insist that the laws governing dealings on the stock and other exchanges are enforced but that this bureaucracy is not used to prevent legitimate financial enterprise; we shall see that taxes are levied upon the ability to pay and with the sole purpose of raising revenue to carry on the legitimate functions of Government. Taxes will not be used as punitive measures or to introduce by indirection some pet political or economic policy.

We will set up a real social-security system on a pay-as-you-go basis and not use it as a guise for levying income taxes, as is now the case, on the rank and file. We will not use social-security funds for reckless Government expenditures. We will use them only for the purposes for which they are collected.

The Republicans have followed with patience the experiment of a splendid gentleman, the Secretary of State. For some 25 years he has clung to an idea that he could work out a reciprocal-tariff system which would add to the well-being of the world. Unmolested, he has had his chance, and you know and I know that it simply has not worked. So we will turn back to insuring the American farmers and the American businessmen against unfair competition from abroad. It is not very popular in our advanced thinking circles to say that we intend to preserve American markets for Americans, but that is what we intend to do.

Who knows how much of our present Government's feeling against certain European countries and its apparent itch to get at them is based on the administration's disappointment over the outcome of its reciprocal plan?

Talk to me, my friends, about the Rome-Berlin axis which parades across the front pages every day. The axis for us to worry about is Bill Bullitt in the embassy at Paris, Joe Kennedy at the Court of St. James, and F. D. R. When these three musketeers get a gay idea, Barnum becomes a piker in comparison.

There is one thing certain: We will remove definitely the fears that we may get into a European war. Just what it is about Democratic Presidents that causes them to sweep excitedly over the domestic situation and then jump to the disentanglement of European affairs I don't know, but that is our experience under Mr. Roosevelt, and it was our experience under the Democratic President who preceded him.

The Republicans when they come into office shan't deny any needy person relief. Feeding the hungry is not an accomplishment of government; it is an obligation. But like the Salvation Army, which has been dealing with unfortunates for years, we shan't require these people to vote for us.

We shall do everything within the power of a democratic government to encourage business and industry to get going and reemploy the millions now out of work. We won't be afraid to have it said that we are friends of business and businessmen. Unlike the New Deal, we look upon them as most useful citizens and by encouraging instead of browbeating them we feel that we serve the farmer, the workingman—all of our citizens, in fact.

We won't send purportedly strong notes to the Mexican Government telling her she must pay for the expropriation of American-owned properties and then tip off the Mexican Embassy at Washington that no attention need be paid to them.

Talk about the mandate, my friends, which Mr. Roosevelt claims he received in 1938. When we are elected in 1940 we will take it as a mandate to turn the Government back to the people. It is a terribly reactionary and unliberal thing to do, but it is what the American people may expect from us.

To see our people back at work again, unworried and able to sleep peacefully at night, is in the eyes of our so-called liberals wholly unintellectual, but it is the way we Republicans are—just plain people with common sense!

Wage and Hour Amendments Opposed by Labor

EXTENSION OF REMARKS

OF

HON. MICHAEL J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

EDITORIAL FROM THE LABOR CHRONICLE

Mr. MICHAEL J. KENNEDY. Mr. Speaker, under leave to extend my remarks, I wish to include therein an editorial which appeared in the Labor Chronicle, New York's official trade-union newspaper, published by the Central Trades and Labor Council of Greater New York, outlining their position in opposition to the proposed amendments to the Wages and Hours Act as provided in the Barden bill, which was referred to the House Committee on Labor. I know that this editorial will be of great interest to Members of this body, because it sets forth in a very concise manner the disastrous consequences to thousands of employees now benefiting under the present act, should these amendments be adopted.

In my opinion, the present Wages and Hours Act is one of the most effective strides made in social legislation during the last decade, and it is most unfortunate that amendments should be presented at this time which would nullify all of the gains made by its enactment in removing more than 2,000,000 workers from its scope. These employees are equally as needy and as worthy of this legislation as the millions of others now enjoying benefits under its protective cloak. I do not intend to stand idly by and see these 2,000,000 workers stripped of the protection afforded by the present Wages and Hours Act for which they have so patiently waited, and shall therefore oppose the Barden bill, should it be presented to the House for consideration.

The editorial follows:

[From the Labor Chronicle]

WAGE-HOUR AMENDMENTS OPPOSED BY LABOR

Labor looks to its representatives in Congress for vigorous and effective opposition to the vicious amendments to the wage and hour law which are now under consideration.

These proposals, which give a ride to the pet exemptions of every Congressman incapable of withstanding requests from employer constituents, were introduced in the House a few days ago and have been referred to the Labor Committee. Due to the long summer session expected, they may hit the floor at any time and be ridden through by enemies of wage and hour legislation with a whoop and a holler.

More than 1,000,000 workers would be exempted from the wage and hour provisions of the act and 1,500,000 workers exempted from the maximum-hour provisions, it is estimated.

Here are a few of the things that the bill does:

1. Emasculates the employees' suit provision of the present act by requiring suits within 6 months of the violation, irrespective of when the violation is discovered.

2. Exempts all workers receiving a guaranty of $150 a month from the statute. In addition to the hundreds of thousands of clerical workers who will be deprived of their right to overtime compensation, this provision would exempt all craft and skilled workers paid on a piece-rate or hourly scale where it would be to the employer's advantage to guarantee to pay the employees $150 a month.

3. Requires the administrator to issue rulings fostering underpaid home work in rival areas and this will bring about the spread of home work from industrial areas.

4. Exempts from both the wage and hour provisions of the act, among others, approximately:

(a) 120,000 employees engaged in packing fresh fruits and vegetables.

(b) 160,000 employees engaged in canning fresh fruits and vegetables.

(c) 13,000 pecan shellers.

(d) 68,000 tobacco stemmers and handlers.

(e) 250,000 employees engaged in the milk industry (including distribution), including the making of ice cream and cheese.

(f) 125,000 employees engaged in ginning, compressing, and storing of cotton.

(g) 70,000 employees engaged in the making of sugar, molasses, and maple sirup.

(h) 100,000 employees cutting, milling, and manufacturing timber into lumber, where the employer has 15 employees or less.

(i) 6,000 nursery employees.

(j) 30,000 employees engaged in handling, slaughtering, dressing, and refrigerating poultry.

(k) 30,000 stockyard employees engaged in handling or transporting livestock.

(l) 30,000 (approximation) employees engaged in storing and warehousing all these products.

(m) 75,000 (approximation) drivers engaged in handling and transporting meats, grains, livestock, lumber, cotton, and all other perishable foods.

5. In addition to the above, completely exempts these workers from hour provisions for 14 weeks; for these workers there will be no overtime until after 56 hours during the remainder of the year:

(a) 55,000 employees of the big grain elevators and exchanges wherever located.

(b) 100,000 employees engaged in logging and lumber operations.

(c) 10,000 employees engaged in evaporating and condensing milk.

(d) 42,000 employees engaged in the wholesale distribution, including foreign imports, of fresh fruits and vegetables.

(e) 20,000 employees handling the storage of other commodities.

(f) 125,000 employees engaged in handling and packing dried fruits, or in canning dry products, for 16 workweeks.

(g) 128,000 employees of the big meat packers for a like period. (This is an exemption for all employees of the industry.)

Admiral Harry E. Yarnell

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am delighted to support this measure to decorate Admiral Harry E. Yarnell, who has just retired as commander in chief of the United States Asiatic Fleet. In this Congress, and in the previous one as well, I introduced a resolution tendering the thanks of the American people and the Congress of the United States to Admiral Yarnell for his highly distinguished services as commander in chief of the Asiatic Fleet during the siege of Shanghai, China. The resolution also thanked

the officers and men under his command for their unwavering devotion and heroic valor, following his lofty example and wise leadership. The measure before us now is different in that it authorizes the Navy Department to present the admiral a Distinguished Service Medal. I wish that my resolution could have been passed also, for Admiral Yarnell deserves every commendation the American people can give him. Few, if any, naval officers have been confronted with such a multitude of difficult and hazardous situations as has this fine officer. Ever since the beginning of his service in the Orient in October 1936, he has encountered situations of an emergency nature which required tact, judgment, and a firmness of decision. After Admiral Yarnell's tour of duty was over and under the natural course of events he was supposed to be relieved; his services were so highly valued that he was ordered to remain in the Orient until conditions were more normal. This, I believe, is the first time such a procedure has been followed in our naval history. The most tense periods were those caused by the sinking of the U. S. gunboat *Panay* and the shelling of the *Augusta*. His excellent handling of these very serious situations reflected the highest credit not only upon himself but upon the entire naval service of the United States. His statement of policy, made a number of times, and adhered to rigidly, is worthy of repetition here:

The paramount duty of United States naval vessels is the protection of American citizens and they will go wherever it is necessary at any time to carry out that mission.

Whose Liberties? The Hatch Bill

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. PLUMLEY. Mr. Speaker, since the President is reported to have stated that the Hatch bill as enacted presented questions involving constitutionality and strictures on the right of free speech, and that he would have the measure thoroughly examined before taking any action, under leave to extend my remarks in the RECORD, I would like to include the following editorial from the Washington Daily News, setting forth, as it does in a cogent and concise manner, the views of many who voted for this measure on final passage:

WHOSE LIBERTIES?

President Roosevelt says there may be some questions of constitutionality and free speech involved in the Hatch bill. These questions are being examined, before he signs, or vetoes the measure.

Well, the Hatch bill protects every Government employee in his right to—

Say what he pleases,

Vote as he chooses, and

Keep whatever money he earns.

Those provisions possibly may cramp the style of politicians accustomed to telling Government employees what to say, how to vote, and when and how much to kick in to the campaign chest. But they don't infringe on any citizen's constitutional liberties. Quite the contrary.

The Hatch bill does more. It forbids any administrative officer of the Government, or anyone else—

To threaten, intimidate, or coerce a vote;

To deprive anyone of a W. P. A. job—or threaten to deprive—because of his politics, his race, his color, or his creed;

To take any money appropriated for relief purposes and use it for political ends.

Do those provisions infringe on any citizen's constitutional liberties? Again, quite the contrary.

Resolutions of the National Retail Hardware Association

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

PROPOSED RESOLUTIONS SPONSORED BY NATIONAL RETAIL HARDWARE ASSOCIATION BOARD OF GOVERNORS

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following proposed resolutions sponsored by National Retail Hardware Association board of governors:

GOVERNMENT AID TO COOPERATIVES

Be it resolved, That this Fortieth Congress of the National Retail Hardware Association expresses vigorous opposition to the bill which has been introduced in the Senate by Senator NORRIS (S. 2605), under the terms of which cooperatives engaged in the retail distribution of merchandise shall be granted the privileges of the Agricultural Marketing Act and thereby be enabled to obtain loans at rates which are unavailable to the retail establishments with which they are in competition; and be it further

Resolved, That the National Retail Hardware Association opposes the granting of subsidies to cooperative retail establishments through tax exemption, or through any other means which will give them an unfair advantage over the retail establishments with which they are in competition; and be it further

Resolved, That a copy of this resolution be transmitted to each member of the Committee on Agriculture and Forestry and that each affiliated association likewise transmit copies to each Member of Congress representing the State or States in which such affiliated association operates.

MILLER-TYDINGS AMENDMENT

Be it resolved, That the Fortieth Annual Congress of the National Retail Hardware Association, assembled in Cincinnati, Ohio, July 17–21, reiterates its approval of the use of fair-trade contracts where legally permissible, and urges manufacturers whose nationally advertised lines are being used as price baits by loss-leader operators to issue such contracts in the joint protection of the consumer, the retailer, and the manufacturer; and be it further

Resolved, That the National Retail Hardware Association expresses unequivocal opposition to the bills which have been introduced in the present session of Congress by Senator KING and Congressman CELLER, which are designed to repeal the Miller-Tydings enabling act; and be it further

Resolved, That copies of this resolution be sent by the National Retail Hardware Association to the committees to which the beforementioned bills have been referred, and that copies also be sent by each affiliated State or sectional association to the Senators and Congressmen representing the districts embraced by such State or sectional associations.

Aids for Education

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

RADIO ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., JUNE 1, 1939

Mr. LA FOLLETTE. Mr. President, I ask leave to have printed in the RECORD a radio address by myself, broadcast by transcription over station WHA, Madison, Wis., on June 1, 1939, on the subject Aids for Education.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to talk to you about education and the need for securing Federal aid for our schools. At a time when the present State administration in Wisconsin is preparing to cut nearly $2,000,000 out of our school budgets, I think it is absolutely necessary for us all to give the matter some very serious attention. The problem of maintaining fair and proper educational opportunities for our boys and girls in the next 2 years is going to demand some sort of outside assistance if the State government will not assume its rightful share of the responsibility.

I am a firm believer in "economy" if by economy is meant making the most of what resources we have at our disposal and eliminating waste. But I fail to see any economy in a pinch-penny policy that is willing to sacrifice the rights of our young people to a full education simply for a few paltry pieces of silver. The greatest resource America has is its people, and we owe it to ourselves as a nation to see to it that the talents and abilities of the young are developed to the highest degree possible by means of adequate educational opportunities.

To hear some people talk, one might think that we have been extravagant in the support of our schools during the last few years, but actually in the country as a whole we are spending about $350,000,000 less for education than we were in 1930, in spite of the fact that high-school enrollment, where the expense is heaviest, has been increased by over 1,575,000 students. In Wisconsin we have been more fortunate, up until the present time, than the people in other States. In 1935 Wisconsin restored its State school aids to their former levels, and in the years that followed much was done to repair the damage suffered by our educational system as a result of depression retrenchment. Now, however, as a result of the action being taken by the new State administration, we are back face to face with the old problem again.

There is a bill before Congress at the present time which would provide, if enacted, a program of Federal aid to States for the support of their schools and the equalization of educational opportunity throughout the Nation. Under the estimated apportionment of the appropriation submitted with the bill, the enactment of this program could mean as much as $1,200,000 for Wisconsin next year and still more in succeeding years.

Such a program is important to the whole Nation. One of the main foundation stones of democracy is equality of educational opportunity. That means public schools available to every man's son or daughter from kindergarten right on up through the university. If we allow a situation to develop where higher education is open only to those people of wealth who can afford to send their children to private schools, it will lead inevitably toward a class division in this country, with the educated, wealthy few on one side of the fence and a resentful, uneducated multitude on the other side. That sort of a situation is as dangerous as it is unnecessary.

Today there are between 800,000 and a million children of grade-school age who are not going to school. Most of them have no school to go to. There are approximately 3,000,000 people in the country who are totally illiterate, who can neither read nor write. And if you passed a newspaper around the Nation, you would find that as many as 15,000,000 adults couldn't read it. Those same people cannot write the simplest of letters. Believe it or not, there are more illiterates in America than there are college graduates.

An analysis of teachers' salaries shows another astounding condition. Considering the range by States, the State having the highest average salary for teachers has an average of only $2,414 per year, and on the other extreme is a State where teachers receive an average salary of only $504 per year. The average salary for teachers in rural communities is correspondingly still lower. For rural teachers the top average is only $1,337 and the bottom average is a bare $430.

When you realize how important is the teacher to whom parents entrust their children for education and guidance, it is surprising that the public has allowed such a condition to exist. If we are to secure the best kind of people to be the teachers of our children, we must be prepared to pay them enough so that they can afford to pass up opportunities in other fields and devote themselves to teaching.

The problem is worse in some States than in others. Some States are wealthy while others are poor, and unfortunately it appears that the States which are least able to maintain adequate schools have the greatest number of children in proportion to adult population. The President's Advisory Committee on Education has made a thorough study of this problem, and it reports a variation so large that the richest State in the Union has a per capita taxpaying ability to support schools which is 12 times the ability of the poorest State.

This is not the fault of the individual States. It is a question of wealth. Our modern commercial life has outgrown even State boundaries. Much of our wealth has been drained away from the producing areas of the Nation into the financial centers of the country. As a result, the per capita wealth of some eastern States, for instance, is all out of proportion to their actual physical contribution to the Nation's production.

In order to recapture this wealth for the States from which it came in the first place, the Federal Government must reach it through Federal taxes and return it to the States by means of grants-in-aid.

Senate bill 1305 now before the Congress proposes a 6-year program of Federal aids for education in the States. It authorizes an appropriation of approximately $75,000,000 for such purposes during the next fiscal year and increasing amounts for the succeeding years until an appropriation of $208,000,000 is reached for the fiscal year ending in 1945.

This money would go toward the support of public elementary and secondary schools, improved teacher preparation, construction of school buildings, administration of State departments of education, adult education, rural-library service, and educational research.

It would not involve any sort of Federal control over the schools. The bill specifically provides that all matters of school administration, curriculum, methods of instruction, personnel, and the determination of the best uses for the funds granted shall be left to the control of the States and their local subdivisions.

In order to qualify for the grants each State would simply have to establish a plan for distributing funds to the local school districts in such a way that the aim of the Federal program, the equalization of educational opportunity, would be carried out. In this way the Federal Government would be assured that the neediest communities of the State would get the greatest benefits from the funds granted.

The only other condition of importance to Wisconsin which would have to be met before the funds could be made available under the terms of this bill is the requirement that the State provide funds for these purposes in amounts at least equal to the sums provided in 1938.

The funds to be appropriated under this plan are to be divided among the States according to their respective educational loads and their respective financial abilities. The educational load of each State would be computed from estimates by the Bureau of the Census each year of the number of children of school age in the State. The financial ability of each State would be computed by the Secretary of the Treasury on the basis of certain standards prescribed in the bill. By balancing the State's school load against its financial ability, its financial need under the plan is determined, and the funds are allocated in accordance with this need.

The Senate Committee on Education and Labor has held hearings on the bill and has reported it favorably to the Senate for passage. At the hearings representatives of the leading educational organizations in this country, representing both parents and teachers, appeared and urged that the Federal Government undertake such a program.

I feel that a program of this kind should receive the unselfish support of every public-spirited citizen. Education is one of those things which we cannot postpone to suit our convenience. Every year that goes by means a certain number of boys and girls who have either passed beyond school age or have been forced by circumstances to undertake responsibilities which will prevent their ever going back to school. If their education was neglected during the years when they could have gone to school, the chances are they will carry that handicap with them all through life.

The rural areas are the hardest hit. It is an established fact that it costs more to provide proper educational facilities in the country than in the city. We know also that there are more children, in proportion to adult population, in the rural areas than in the cities. Yet in spite of that fact the best educational opportunities are being provided for children in the cities. "Equalization of educational opportunity" means not only establishing more uniformity of educational opportunities among the 48 States; it also means bringing financial aid to the rural schools so that the farmers and the people in the small communities can give their children as good an education as the children in the cities get.

If we are going to make democracy work in America, we must always have an intelligent, educated, informed citizenry. If we neglect the education of our young people now, even for a little while, we are going to pay dearly for it in the future.

In Wisconsin we have a very definite problem. The budget of the university alone is being cut over a million dollars in the face of increased enrollment and long-delayed needs for expansion. A similar cut is being imposed upon the State teachers' colleges. Unless corrected, this will result in one of two things—either fees will have to be raised and it will become that much harder for farmers and working people to send their children to school, or standards will have to be lowered and they will get just that much less for their money.

The program of Federal aid which I have outlined to you will not in any way make up for all the State's failures in this respect but it will help some. The Federal program is primarily concerned with elementary and secondary education, but, indirectly at least, it will aid by taking some of the budgetary pressure off our public institutions of higher education.

Professional Women

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

ADDRESS BY MISS EARLENE WHITE, JULY 9, 1939

Mr. HARRISON. Mr. President, I ask to have printed in the RECORD a speech delivered by Miss Earlene White, at the biennial convention of the National Federation of Business and Professional Women's Clubs, Inc., at Kansas City, Mo., on July 9, 1939, on the subject of professional women.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

It was a bright, sunny morning in the 1830's. A distinguished looking woman, traveling alone, her full skirts discreetly sweeping the ground, her corkscrew curls hanging coyly beneath her bonnet, alighted from a packet boat, having made the trip from England to America in about 40 days.

The woman was Harriet Martineau, a friend of the Carlyles, a trained observer and commentator who came to America in search of new copy. Tired, for a time, of the life in London, she realized that comparatively little was known of the new land which had once been an English colony and was now attracting English and Scotch immigrants in great numbers.

She set foot in little old New York, which was then a thriving community, without skyscrapers or bridges to connect the island of Manhattan with its neighborhood boroughs. True, the Astors had begun to make a fortune as fur traders, and Commodore Vanderbilt had found it profitable to pilot a ferry between Staten and Manhattan Islands; nevertheless, New York had little resemblance to the great present-day city of the North American Continent.

And what of the North American Continent upon which Harriet Martineau gazed? She came to America just after the Lewis and Clark expedition had blazed a trail to the Pacific and fur traders were following the Oregon Trail across the mountains.

American missionaries and farmers were quick to follow. The Northern States were clamoring for the annexation of Oregon to the Union and the South was clamoring for Texas. The advocates of annexation were so vociferous that the slogan of "Fifty-four-Forty or Fight" was to be heard everywhere, as the citizens of the new Nation, greedy for land, clamored for the extension of American territory to further latitudes. The clamor grew until it resulted in the election of James K. Polk in 1844 on that very issue.

The industrial revolution was beginning in America, and Harriet Martineau took full note of it. The spinning jenny and the power loom had been invented and were making it possible for cloth to be made in new ways. The cotton gin had been invented and there were new tools for farming, including the reaper. Women—and men, too—who had carried on small manufacturing plants with hand tools on their farms, making the family's clothing along with the family's food supply, found it necessary to change their way of life. The growth of mill towns was taken for granted, and young women who had been earning their livelihoods at just six occupations—keeping boarders, teaching young children, typesetting, bookbinding, domestic service, and needlework—found a new occupation as weavers in the mills.

The severe financial panic in 1837 threw thousands out of work, and when Harriet Martineau visited America unemployment stories were constantly printed in the daily press. The suffrage movement was being extended, and Robert Fulton's steamboat had set a new pace; the inland waterways of America were being invaded by steamboats plowing their way through the hitherto untroubled waters. The best opportunities for men lay in the fields and forests of the far West.

And as usual men and women were facing the future with uncertainty, dreading the changes but eager to get on with them. In 1836, a young girl, living and working in Lowell, Mass, penned these lines—

> "Oh, isn't it a pity that such a pretty girl as I,
> Should be sent to the factory to pine away and die?"

Thus, the working girl lamented, as she was forced out of the home and into industry.

All this and more the woman journalist from England noted and went home and reported in a lengthy volume reciting the sights she had seen and the observations she had made.

It was Mrs. Carrie Chapman Catt, our beloved leader of suffrage and world peace, who called our attention to Harriet Martineau and her writings and urged us to observe the one-hundredth anniversary of Miss Martineau's reportorial journey, and to see how many doors are still closed to women, 100 years later.

We have accepted Mrs. Catt's suggestion and our biennial convention is devoted to the theme, "One Hundred Years of Women's Progress in the United States."

Our compass is the 1930 Census, and that shows that of some 535 classifications of occupations listed, women are engaged in 501, the heavy tasks, such as mining, locomotive engineers, firemen, et cetera, being completely masculine territory. And so in 100 years, women have advanced from 7 fields to 501; doors of opportunity for women are opening wider and wider, but the end is not yet, and perhaps 100 more years will pass until the world will allow women to make their best contribution, and women will be willing to make it.

In 100 years American women have come a long way, just as our country has come a long way, but we still have a journey to make, both as women and as citizens. It is noteworthy that teachers' training schools were started 100 years ago this year.

Here and now we are observing the one-hundredth anniversary of women's progress, and I think it is a suitable time to take stock of where we have come from, where we wish to go, and how we are to get there. To help us evaluate these three points we appointed a committee of distinguished women. Mrs. Franklin D. Roosevelt is honorary chairman of the committee, and Mrs. Carrie Chapman Catt is vice chairman. The other members are Dr. Mary E. Wooley, president emeritus of Mount Holyoke College; Mrs. Ruth Finley, author and noted publicist for the Republican Party; Ruth Comfort Mitchell, novelist and one of California's best-known daughters; the Honorable Frances Perkins, Secretary of Labor; those two outstanding women in radio, Margaret Cuthbert and Helen J. Souissat; Fannie Hurst, the novelist; Miss Emma P. Hirth, general secretary of the Y. W. C. A.; President Aurelia H. Reinhardt, of Mills College, Calif.; Dr. Martha Tracy, dean of the Women's Medical College of Pennsylvania; Mrs. Mary Dillon, president of the Brooklyn Borough Gas Co.; and Mrs. Ora Snyder, manufacturer, of Chicago.

These women have had broad experience in public service and private enterprise. They represent every range of political and economic thinking, and I believe that their answers to a questionnaire which I sent them will help chart our course for the 100 years ahead.

First, I asked, "What were the chief obstacles to employment in the path of American women 100 years ago?"

Tradition seems to have been the chief stumbling block, with several important contributing causes, such as social and economic custom, lack of education, lack of training, and lack of personal initiative. I have quoted these obstacles from the considered opinion of one of the committee members, Ruth Finley, the noted writer and biographer of women of the colonial period. Mrs. Finley was formerly the editor of Guide, published by the Women's National Republican Club.

Frances Perkins has some interesting observations on that question, and I quote her:

"The lack of employment opportunities outside the home for both men and women constituted the principal obstacle to employment in 1839. This was the period, early in the industrial revolution, when women's traditional occupations were just beginning to move out of the home into factories, mills, and shops. There were few schools and most of the teachers were men, with women substituting in the summer while the men took agricultural jobs. Clerical jobs were practically nonexistent. The largest number of openings were in textile mills, where labor was scarce and wages were high. In these mills, hours were very long, and the workers were housed in dormitories under unfavorable living conditions. In 1839 there were practically no opportunities for professional women or any vocational training for women."

On the other hand, Mme. Secretary wrote: "There were certain advantages to women's employment in 1839 that are not characteristic of their job opportunities today. In the first place, there existed a very strong concept—Puritan in origin—of the social usefulness of women's work. The employment of women and children was looked upon as an unqualified good which made possible the development of the country's resources, while at the same time it made them, to quote Alexander Hamilton, 'more useful than they otherwise would be.' Work in factory or mill entailed no loss in social prestige—there existed no class distinction on the basis of 'white collar' or manual labor. All work meant a contribution to the welfare of a new nation. Factory work offered educational opportunities which were not available for women in schools of higher learning. It offered wages higher than for teaching. Horace Mann reported that women in many occupations in mills and factories earned six or seven times as much as women teachers.

"Early mill workers were militant in the protection of their rights. As the real daughters of the American Revolution, they were earnestly concerned with justice and liberty in dealing with the concrete problems of their daily work life." These are the views of Frances Perkins.

Mrs. Franklin D. Roosevelt said in response to this question. I quote: "I should say that in 1839 the chief obstacles in the path of employment for American women were, first, the attitude held by both men and women as to the proper kind of work which women should do. Secondly, the lack of educational facilities and of training which they could obtain, and thirdly the lack of opportunities even if they obtained the education and the training."

And from Ora Snyder came this opinion. I quote: "Lack of confidence in their ability and the old-fashioned opinion that women should not leave household duties or the care of the family."

Dr. Martha Tracy is of the opinion that tradition was women's main stumbling block, plus the economic necessity of doing the home chores personally, including cooking and preserving foodstuffs, cleaning, laundry work, making the husband's and children's clothes, and childbearing. Dr. Tracy says that all of these obstacles have been largely conquered, and I quote her, "largely but not entirely. Childbearing will always be a factor."

Ruth Finley thinks the obstacles have mainly been overcome, and Mrs. Roosevelt believes that "there is still some prejudice against women in certain lines of work for which they are naturally better equipped than men. The training today is fairly universally open to them though there are restrictions which make it a little difficult. Many more lines of work are open to women, but they have to excell."

Frances Perkins made the following statement in answer to this question:

"Significant progress has been made in removing the obstacles to women's wage-earning employment that existed 100 years ago, but the job is far from complete. Eleven million women are now gainfully employed and are found in practically all occupations. Prejudice against women in the professions is gradually breaking down, and they are securing an ever greater measure of vocational opportunity. Training facilities for almost every occupational field are open to women, though the resultant job opportunities still may be relatively scarce. In recent years there has been a notable increase in the number of women in important administrative jobs in both State and Federal Governments.

"However," Miss Perkins goes on to say, "because an increasing number of women must earn their livelihood and also support dependents entirely or partially, and because jobs are also scarce for men, competition is a much greater factor for women to reckon with now than it was some years ago.

"Moreover, the traditional sex discriminations are still a major obstacle women encounter in their efforts to find satisfying and profitable employment. Their ability is still far from being accepted on the same plane as that of men.

"Immense improvement has come about in the raising of wages, the lowering of hours, and the betterment of plant equipment; but the situation in this respect is still far from Utopian. The double wage standard still prevails in a number of fields."

And now we come to the third question, "What obstacle do you believe will beset women in the next 100 years?"

To this question Mrs. Finley answers, "The physical obstacle of sex, which never can be changed, and an overcrowding of the so-called economic jobs."

Dr. Tracy's answer is—and I quote: "Economic competition with men, particularly in times of unemployment. The individual women's own incompetence." She also notes: "The same applies to men, but women capitalize on the 'tradition' of sex obstruction. Child bearing cannot be outmoded."

Mrs. Snyder feels that "jealousy from the male sex" will be the chief obstacle for women.

Most of the committee declined to commit themselves on one question, which was, "In your opinion, what has been the outstanding contribution made by American women during the past 100 years?" Ruth Finley, however, answers by saying, "Dissemination of women's news," and she names Sarah Josepha Hale as the woman who has made the outstanding contribution of the past 100 years. She gives her reason for this as follows—and again I quote:

"Prior to the radio, the national woman's magazines were the only interstate link between women. Mrs. Hale, for 50 years editor of Godey's Lady's Book, the first woman's magazine approaching Nation-wide circulation, did more to correlate and unify women's thought in this country than any other person, man or woman, in the nineteenth century."

Helen Sioussat, of Columbia Broadcasting Co., said unhesitatingly, "The discovery of radium," and nominated Mme. Curie.

Margaret Cuthbert believes that the political recognition of American women has been the outstanding contribution, and she nominated Susan B. Anthony.

Frances Perkins wrote: "Because there have been so many important contributions by women in so many fields, it is difficult to evaluate them in such a general way as to make it possible to name only one woman."

Ora Snyder said, "Jane Addams is the woman, and her splendid work at Hull House, Chicago, in the settlement field proves it."

Dr. Tracy also has a candidate. She wrote, "Mary Lyon's demonstration that women can be educated, without danger to health or other damage to their nature, is of the utmost importance."

And now for my next question, for this is an inventory of women's liabilities as well as women's assets, "What have been the greatest failures of women in the past 100 years?" And again Ruth Finley out of her great wealth of research on the lives of American women answers, "Over-eagerness, evidencing a real lack of moral stamina in many cases, to throw off the frequently monotonous responsibilities of the home."

And Ruth Finley finds these failures also, "unwillingness to serve adequate apprenticeship in the economic world; lack of understanding of and consequent impatience with the slowness of the natural evolution of the now machine-made social order, and failure to assimilate experience."

Frances Perkins says, "One major failure of women in the past century relates to their neglect of the use of their hard-won right to vote. Women's failure to take a more active part in American politics, as voters and as candidates for office has been a major disappointment. Women have not participated as fully as they might in labor organization. They have a most important contribution to make in this field and should become increasingly active." And she continues, "Some women have fallen down in their responsibility as employers of other persons. For example, long hours, low wages, social isolation, and exclusion from legislative protection have been characteristic of the vocation using the services of the largest single group of women workers—household employment."

And here is one of the most important questions that I asked the women who form the committee for the commemoration of 100 years of women's progress in the United States.

"What are the greatest prejudices concerning women now held by the general public?"

Ruth Finley gave me two answers, "Overcrowding of the wage field and consequent usurpation of jobs needed by men as the natural heads of families, and falling birth rate in the middle, and especially the native-born classes."

And the First Lady of the Land answered, "It was generally thought that physically and mentally women were not equal to doing the same type of work as men."

Frances Perkins wrote thoughtfully, "Perhaps the oustanding prejudice against women 100 years ago was the general one that they were inferior beings, inferior to men physically, mentally, and economically; that it was of no importance that they be educated and granted political privileges. Under the laws of the day women were severely discriminated against in relation to property rights, in the rights of custody of children and the like. The common law, which was so often detrimental to women's interest, was accepted as the legal authority. Women were not considered experienced enough to handle any of their personal affairs, nor to participate in public affairs.

"Though important progress has been made, there are still distinct evidences of a carry-over of prejudice against women that existed a century ago. With a large segment of our people, the idea still prevails that women's place is 'in the home' and the prejudice against the employment of married women is yet very strong among some groups.

"At times men make much ado about women's artistic inferiority and as a consequence women have heavy competitive sledding to make a valid contribution in the field of arts.

"Though women's legal status has strengthened throughout the century, they are still in a far weaker position in this respect than are men in many States. In some cases their wages yet belong to their husbands; in others they do not share equally with their husbands in their children's custody, etc. A number of States do not permit women to serve on juries."

Margaret Cuthbert, famous radio authority, says, bluntly, "Women, given the same opportunity as men, are making the same mistakes and doing the same things that men are doing. With the freedom they now have in view of the money they control, they have done little that is unique, little that is original, little that is different, and not much that shows that women as a group are using their natural gifts to make their own lives and the lives of others more civilized—outside of a few exceptional women."

Mrs. Snyder thinks that men's lack of confidence in women's ability will be the chief obstacle for women in the future. Dr. Tracy concurs in this, saying: "Men's age-old prejudice that women were physically and intellectually inferior still holds, though much diluted and localized."

And now I come to the heart of my questionnaire, for, having gathered the opinions of these women, I wanted to find out what we can do about it as business and professional women. So I asked all of them, "In your opinion, what is the best way for business and professional women to educate the general public as to the fact that these prejudices are not factually founded?" Here is what some of them answered:

Dr. Tracy: "By accepting opportunities for work and giving competent performance. Not by talking about it."

Mrs. Snyder: "Instruct the public that we believe in equality, and we want a chance to demonstrate what we can do on an equal footing."

Mrs. Roosevelt: "In my opinion, the best education is the education which makes people acquainted with the facts, and the facts can be furnished today through studies made by the various people interested in labor and in woman's position."

Miss Perkins: "Probably the best educational method consists of clear demonstrations of women's ability in many fields."

Mary Dillon: "To succeed as individuals in the jobs they hold."

And Ruth Finley: "Probably the best way for the fit and capable business and professional woman to combat this general attitude (which is growing with appalling rapidity) is to recognize the inevitable weeding-out process of evolution now and back that recognition with the weight of opinion and influence. Always women have worked outside as well as in the home. In 1839 the

proportion was overbalanced in favor of the home, with many resultant personal misfits and family or group hardships.

"Now the pendulum has swung too far the other way, and in 1939 the opposite proportion of overbalance has created more personal misfits and family group hardships than ever before. History has proved that one of the primary social laws is the maintaining or restoration of balance. It seems to me that nothing could give women a more solid foundation for their future as free citizens than their voluntary and immediate recognition of this law."

"Example" is what counts most, Margaret Cuthbert feels. "Deeds more important than words," she writes, "giving proof that women are not personal and prejudiced in business; relating the complex fabric of civilization to the persons for whom, after all, it exists." She points out that "it is not through individual achievement that women are going to serve as they will serve, but in proportion as they emphasize and express cooperation. This brave new world must be a man's and woman's world."

And with these opinions behind us, I asked, "What type of education do you believe will be best suited to women in the next century?" And here are the answers: From Mrs. Snyder, "A practical education and training for a business or professional career."

Mary Dillon's answer is succinct. I quote her exactly: "Same as men, a rounded cultural background, plus specific training in the field of their vocation."

From Dr. Tracy: "Just such an education as will fit any adult to be an intelligent and tolerant citizen and a thorough performer in the lot to which circumstances and her own ability will call her."

Ruth Finley advocates: "A scholastic education to enable women to participate in and understand and enjoy modern civilization; domestic science and child care; professional or occupational training according to the talent of the individual."

Frances Perkins says, "Because of our many new means of communication, nation with nation and locality with locality, people touch each other at many more points than they used to. For this reason education needs to be broader. Education needs to be realistic, too. If women are to participate in our national life to the full they must know science and economics as well as the so-called cultural subjects. Education should produce attitudes of liberalism and democracy as well as the absorption of factual data."

"What tools for advancement do you think women need most during the next century?" I asked them. Here are some of the answers—education, individual adequacy, a change in the economic condition of the country, health maintenance, the removal of legislative restriction against women. These are the tools recommended and these are the tools we must acquire. And, of all the tools, individual adequacy was stressed the most.

When I asked, "Why are not more women holding public office after 2 decades of enfranchisement?" I found that many of the committee held decided opinions. Madame Secretary wrote as follows: "It cannot be said fairly that either men or women are to blame, rather a number of circumstances are involved. The old concept of women's inferiority in any role other than that of homemaker is doubtless responsible for the fact that very few women are elected or appointed to public office.

"However, because of lingering prejudices in respect to women's holding public positions the woman who runs for and holds such office needs to be more outstanding and better qualified than the average man with whom she competes. Where a man must be competent, a woman must be exceptional. Moreover, women themselves have not in general enlarged their concept of what constitutes women's work to have it cover public service to any considerable degree.

"A second reason, I believe, that so few women run for office has to do with the rather low regard many people in this country hold for the mechanics of politics. Women have tended to shy away from practical politics and concentrate in their organizations on nonpartisan politics. In the third place, women as yet have achieved no solidarity as women toward the end of putting those of their sex into public office."

Dr. Tracy feels that there are not more women holding public office because of, and I quote her, "lack of qualifications and very often unwillingness or inability to accept responsibility and to sacrifice personal and home obligations to the requirements of public office."

Mrs. Snyder feels that the reason lies in the fact that "men do not want women in public office, and fight their election."

Ruth Finley holds out some comfort for us. She says, "On the whole women are still unfitted and incapable with, of course, notable exceptions. Public prejudice and lack of confidence due to a long established custom have held women back. After all, what is 20 years of enfranchisement as against the more than 2,000 years of masculine training and practice in the art of governing?"

And echo answers, what indeed?

And here is Margaret Cuthbert's opinion, I quote, "It is not important that they do hold more offices. It is more important that they use their influence and power for better government. If women choose to do this, men cannot stop them."

There were just two more questions on my list, first, "In what field do you believe women will make the greatest contribution during the next century?"

The answers include, the preservation of the home as a national unit, public administration, social welfare, social sciences, human welfare, and the defense of democratic institutions.

And my final question, "What in your opinion can woman do to bring about the settlement of disputes between nations by peaceful methods?"

The answers include, first, education; second, through participation in international organizations like the Y. W. C. A., the Associated Country Women of the World, which demonstrate the value of the conference method; through emphasizing the similarities of people rather than the differences; by encouraging tolerance and the settlement of every disagreement by arbitration; by demanding peace actively and aggressively.

"War can be banished just as dueling was banished," Ruth Finley advises me. "Where women will there is always a way."

And now, delegates to the convention, you have heard the opinions of some of the members of the committee. There was not time this evening for all to be given you. You know where we stood 100 years ago, where we stand today, and what we must do in the years ahead. Throughout this week we will consider the whole subject further, and distinguished speakers will give us further and more intensive interpretations.

I noted that the names of just five women were suggested as having made the outstanding contributions of the past century—Sarah Josepha Hale, Mary Lyon, Susan B. Anthony, Jane Addams, and Mme. Curie, the latter, of course, not an American. To that list I would add two others—Dr. Anna Howard Shaw and Carrie Chapman Catt. That is the chief roll of honor of the past century as I see it.

Where we have come from we know. Where we are going is known only to Him who knows all. We do know that the future of American women is indissolubly united with the future of our country, just as the contributions of the women of the past have been entwined with the history of the progress of America.

We have made great opportunities for women and we have had great opportunities made for us. Many doors are open to us. If we fail now, we can only echo Shakespeare's words, "The fault, dear Brutus, is in ourselves, not in our stars, if we are underlings."

Issuance of Bonds to Cover Excess Spending

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

STATEMENT BY WADSWORTH W. MOUNT

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the RECORD an interesting statement by Mr. Wadsworth W. Mount, assistant director of research of the Merchants' Association of New York, on the subject Excess Government Spending Covered by Printing Government Bonds.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EXCESS GOVERNMENT SPENDING COVERED BY PRINTING GOVERNMENT BONDS

(By Wadsworth W. Mount, Assistant Director of Research, the Merchants' Association of New York)

As long as the Government can spend all the money it wants to, over and above what it takes in from taxes, merely by printing Government bonds, selling these to the banks, and then drawing checks against them, how can we ever hope to stop extravagant Government spending?

And when the Government spends these billions in such ways that private citizens do not know which way to turn to make money, and therefore have comparatively little need to borrow from the banks on safe terms, where else can banks invest your money on deposit but in Government bonds?

A banker knows that when the United States Government prints a Government bond it says in effect that the Government will tax the people of the United States to make it good. He knows, therefore, that Government bonds are the soundest security in the country, just so long as we do not issue too many of them and have inflation.

Before the Government started spending several billions more each year than it took in from taxes, the savings banks, for instance, could safely lend your money, largely to people who wanted to spend it for private or business uses, at a high enough rate of interest to cover their expenses and pay you 4 percent. Under present conditions, however, one of the few remaining safe places to

invest bank funds is in Government bonds. Therefore, as the interest rate on long-term Treasury bonds has been lowered until their average yield is now approximately 2¼ percent, at present about all the savings banks can safely get for the use of your money is enough to provide for necessary expenses and reserves and pay you only 2 percent, or even less, on your deposits.

The Treasury has just announced that to pay off some $426,000,000 of outstanding obligations which are due in September and now carry an interest rate of 1⅜ percent it will offer in exchange new "notes" due in 5 years which will pay only three-fourths of 1 percent.

A New York investment firm recently showed that Treasury obligations maturing in a little more than 2 years now afford a yield of only one one-hundredth of 1 percent. At this rate of return, it was pointed out that "an investor would have to hold more than $144,000 par value to provide an income sufficient to buy his morning newspaper each day; he would have to hold $558,000 to provide enough funds to buy a daily package of cigarettes." As the average interest rate on all Federal obligations is lowered, those having money in savings accounts and insurance policies which represent their personally saved "social security" have their interest earnings also reduced, as a large part of such funds are invested in Government bonds.

This means, therefore, that it will take you longer to pay for your life insurance, as the annual dividends will be less or the premiums will be more.

Some people think that only the taxpayers of future generations will have to pay for the present Government spending. However, if you own a savings-bank account you are paying right now for the increased national debt by getting one-half or less of the amount of interest you used to receive, and the trend is still downward.

This means then that if, for example, you were trying to put in the savings bank enough money to give you $2,000-a-year income, you will now have to save $100,000 or more, where when savings banks were able to invest your money safely and pay you 4 percent you would only have had to save $50,000 to get this same income.

Everyone in the Nation has to pay one way or another for the money our Government officials are instructed to spend. Some pay taxes directly, but everyone pays indirectly for all Government services. The Government has nothing to give to the people except what it gets from the people.

Governmental Expenditures, Taxation, and Bureaucracy

EXTENSION OF REMARKS

OF

HON. WALLACE H. WHITE, JR.

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

EDITORIALS FROM THE NATION'S BUSINESS

Mr. WHITE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD three editorials taken from The Nation's Business, which it seems to me have some significance in the present situation.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From The Nation's Business]

"Give!" says government, and its "take" exceeds the total income of the western half of the United States—and the end is not yet.

In 1938 the income of the darkened area of this map was $17,696,000,000.

But in 1938 government—Federal, State, and local—spent about $18,000,000,000.

That's more than the entire West realized from its gigantic output of gold, silver, copper, wheat, corn, milk, cheese, potatoes, beef, sugar, coal, lumber, and all other products of its year's work.

It equals nearly 30 cents of every dollar the Nation's producers earned in 1938—the biggest percentage of our income for government on record.

And what did it buy?

Well, for one thing it bought relief from distress for the needy. Everybody agrees to the rightness of doing that. But it will surprise many to learn that only one dollar out of six was spent for relief.

Most of the other increases in spending go for innovations in government service.

The last few years have seen the creation of 67 new Federal boards, commissions, administrations, and authorities—agencies to supervise every activity of business from peanut vending to steel production. Likewise open and indirect competition with all business.

The question is not whether these are desirable Government functions.

The question is whether the country wants expansion of Government, which must be paid for by increased taxes.

Or wants expansion of business, which pays in jobs and wages.

For the increased money that now goes into Government spending is the money that formerly went into new and improved products, new and enlarged factories, bigger pay rolls and dividends. There isn't enough in the earned dollar to go both ways.

Business—the production and distribution of goods—is the only thing that can create new wealth.

Less taxes; more jobs.

THIRTY CENTS FOR "INDEPENDENCE," JULY 4, 1939

Here, then, in broad strokes is the state of the Nation today.

Each of the 60 countries of the world requires around two-thirds of its productive work, its income, to pay for the necessities, food, shelter, clothing. This 65 percent is true of a country regardless of its living standards, India on the one extreme, the United States with the highest standards on the other. What of the 35 cents left after the sustenance of life? In that answer lie most of our troublesome problems today.

Consider three pictures:

Until recently the people of the United States disposed of their 35 cents in this way. Five cents, at the turn of the century, was all that was required to pay for expenses of government—State, Federal, and local. Of the remaining 30 cents, about half went into the hands of managers of business enterprises which was about equally divided by them in expanding old industries and promoting and developing new ones such as radio, rayon, automobile.

Much of this 15 cents remained in the hands of the people in the form of investment, productive wealth represented by stocks and bonds and life-insurance equities. The remaining 15 cents was used to buy the products of this increased industrial activity, thus driving upward standards of living and making one-time luxuries the conveniences and even necessities denied the rest of the world.

Second picture: What of the 35 cents which remained to the peoples of the other 59 countries? Since time immemorial around 30 cents was used for government expenses. A hazardous 5 cents was left as free capital. This gives point to the sentient statement of former President Hadley, of Yale, that the supremacy of the United States was due to the fact that it could afford to take chances upon development as no other country could afford to do. Five cents as against 30 cents as a backlog.

Why did the Old World require 30 cents of the earnings of their people for government? For policing. External policing, the fear of land-grabbing, wealth-grabbing neighbor aggressors, whose people were in constant fear of being deprived of the bare necessities.

Third picture: What is the situation in the United States today? Sixty-five cents for the necessities. Of the 35 remaining, 30 for governments (25 collected in taxes, 5 borrowed). Ten cents for investment and the lifting of living standards.

Why the great increase in government costs? Not to relieve distress and unemployment, as generally stated and believed. Only one dollar in six of Federal expenditures is for relief. The great increase in taxation and borrowing, which has brought overnight the allocation of the earned dollar to a level almost to that of other countries, is for policing. Against foreign aggressors? No. For protection against an alleged aggression and oppression on the part of business management. Internal "policing." Policing ourselves against ourselves.

Every act of those engaged in stimulating us to trade our labor, services, and products is now under surveillance, from the time a commission checks the project to the time another bureau passes upon the label to go on the package. Policing, in another form, such as protection against the private electric bulb by Government "yardstick" operation. Policing of banks, labor relations, aviation, oil, coal, lumber, telephones, retailers, stock and grain exchanges, insurance. Policing of States and communities as to the manner in which they handle their social problems. Policing in another form as exemplified in the published statistics that the Federal Government received 153,000,000 compulsory reports from business management last year. Policing as expressed in the $76,000,000—a sum equal to one-sixth of total passenger revenues—spent by Washington in travel expenses of its inspectors, regulators, investigators in 1 calendar year.

These three pictures are true pictures. They point the trend to a static society, a "planned economy," to "frontiers gone forever." We, the people, perhaps planned it that way, a road to centralized authority over, and policing of, the individual. But perhaps we did not count the cost; unemployment still with us, management, which brings dreams into being, and men and jobs together, and more conveniences and luxuries for more people, now disheartened and bewildered, unable to see 30 days down the road because of the new policing machinery we have set up, whereby 137 boards, bureaus, commissions, Federal incorporations and authorities now pass laws daily in the form of rules and regulations.

Little government, with little expense and little policing, brought the United States the highest standard of living the world has ever seen. Perhaps the founders were wrong in building that way, indignant and angry as they were against a ruler demanding more taxes and more power, who, as a famous declaration set forth, had "erected a multitude of new offices, and sent hither swarms of officers to harass our people and eat out their substance."

The Nation's future lies in the hope that the sons of those sturdy sires have not yet lost entirely the capacity to become incensed with indignation and roused to action.

MERLE THORPE.

Protection of the American Beet-Sugar Industry

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

Mr. O'CONNOR. Mr. Speaker and Members of the House, within the last 10 days the Sugar Division of the Department of Agriculture published a particularly enlightening pamphlet entitled "Sugar Beets and the Sugar Act." For all its brevity—it was only six pages long—it was probably one of the most remarkable documents ever to be published by any agency of the Federal Government.

The ostensible and only justified purpose of the pamphlet is to explain the operation of the controversial Sugar Act of 1937, the administration of which is lodged in the hands of the Sugar Division. From the purely factual discussion of the Sugar Act, the pamphlet deviates long enough to become a tear-drawing argument designed to convince sugar producers of the United States that they have had a reasonable income from sugar beets and that no further expansion of the sugar industry should, under any circumstances, be permitted. The second point seems to me to be without precedent in that it places the welfare of a foreign country, Cuba, paramount to our own farmers and our own taxpayers.

I quote the last two paragraphs of the pamphlet:

> The whole program of protection and benefits is based upon a fair division of the United States market. It would not be to the interest of either American farmers as a whole, or of American consumers, to reduce Cuba's share of this market. Cuba has long been one of our most important foreign markets for agricultural and industrial products. The Republic normally takes about 40 percent of all our agricultural exports to Latin American countries, and chief among her purchases of farm products are wheat flour, potatoes and other vegetables, lard and other meat products, rice, and fruits and nuts. The large decline in our imports of Cuban sugar from 1928 to 1932 is estimated to have been accompanied by a reduction in the Cuban market for American agricultural products from more than 800,000 acres of our land. Between 1933 and 1938, however, Cuba's purchases of all kinds of products from us rose from $22,674,000 to $75,152,000, an increase of more than 230 percent.
>
> If more sugar is used by American consumers the present program provides for a corresponding increase in the quota of the beet area. Unless the market expands, however, the quota of any one group of producers cannot be enlarged without lowering the quotas of other groups and thus destroying the balance of the whole system.

I need not repeat my continuous stand in favor of the American market for the American producer. I have done all within my power to bring about equitable sugar legislation during the current session. I filed a discharge petition to take the Ellender sugar bill out of the House Committee on Agriculture. I am speaking today, as I have in the past, in behalf of sugar-beet growers of Montana in particular, and for all beet and cane growers in the United States.

It seems to me inexcusable for any agency of the Government, an agency which was established to administer an act of Congress, to arrogate to itself, as the Sugar Division has done in this instance, the policy-making powers of the Government. What treatment is to be accorded the American farmer through control legislation, and what treatment is to be accorded foreign countries in this market, is a matter for Congress, and Congress alone, to decide. It is certainly not a topic upon which the economists of the Department of Agriculture should air their views. It appears to me that it would be better taste if they would devote themselves to the job they are hired to do, and the job the taxpayers of this country are paying them to perform, to administer the law and not to issue propaganda to influence policies of Congress.

Here's a document, if you please, printed at Government expense in defense of a program which gives unlimited concessions to a foreign country and at the same time chokes the development of one of the best agricultural crops we have today. The taxpayers of this country should not be forced to foot the bill for the publication of a pamphlet in behalf of the continuance of the present program.

It is significant to underline two sentences in the last two paragraphs of the document. It states: "The whole program of protection and benefits is based upon a fair division of the United States market. It would not be to the interest of either American farmers as a whole, or of American consumers, to reduce Cuba's share of this market."

The thought set forth means simply that it is to our interest to continue eating Cuban sugar and prohibiting our local growers from placing any amount of sugar on our table.

The domestic contribution, according to the pamphlet, would not be to our interests, either as growers or consumers.

At this point permit me to quote a few paragraphs and statistics from a document entitled "Trade of the United States With Cuba in 1938," published in March of this year by the Bureau of Foreign and Domestic Commerce, Department of Commerce.

Sugar is the leading commodity imported from Cuba. The quantity taken was reduced 10 percent in 1938, owing to the lower quota established under provisions of the Sugar Act of 1937; and with considerably lower prices, the value declined 26 percent. Nevertheless, sugar imports amounted to 3,758,000,000 pounds, valued at $76,829,000, or nearly three-fourths the total value of United States imports from Cuba in 1938.

I now quote a paragraph from a discussion of exports:

Although the value of the United States exports to Cuba declined from $92,263,000 in 1937 to $76,329,000 in 1938 (17.4 percent), the Cuban statistics indicate that our share of Cuba's imports rose from 68.6 percent in 1937 to 70.8 percent in 1938.

The Sugar Division's document states that "Cuba has long been one of our most important foreign markets for agricultural and industrial products." However, the Department of Commerce publication states that our importation of Cuban sugar alone was greater in 1938 than our entire export trade to Cuba. Moreover, our Cuban purchases in 1938 totaled $105,840,000, while our export trade to Cuba was valued at $76,329,000, according to the Department of Commerce publication. Is that to the interest of either the American farmer or the American consumer? If we, as a nation, are forced to surrender the inherent right of the American beet and cane grower, and at the same time import more than $30,000,000 above our exports in order to remain neighborly with Cuba, then I question the value of a good neighbor.

The sole defense of the present sugar program is that it continues our good-neighbor policy with Cuba and other republics. That definition is favoring the fact that our United States beet and cane growers must be penalized in order that the Nation can carry out its good-neighbor policy. The good-neighbor policy is all right until you reach the point where you have to give up your shirt. Our national obligation to Cuba, if we have any, should be met by the Federal Government in the form of a national obligation rather than to force one particular class—the beet and cane grower—to foot the bill. We are merely granting concessions to Cuba which result not only in a lower national income to our farmers but also contribute to an increase in our relief roll.

Several additional sugar factories, employing scores of additional workers, would be constructed immediately in Montana, as well as other Western States, if sugar-beet growers were allowed an increased acreage. Beet growers of Montana are fairly begging on bended knee for an increased sugar-beet acreage, and their pleas are met with such a document as the Sugar Division recently issued.

Permit me to repeat one particular case in the State of Montana. On the Sun River reclamation project in Montana the Farm Security Administration requires each unit to plant at least 12 acres of sugar beets annually, but limitations on acreage prevent compliance with this requirement. In 1938, 35 Farm Security Administration units on the project produced an average of 10½ acres of beets; in 1939 the 35 units were reduced to an average production of 9½ acres. Purchasers of 75 additional units making requests were unable to secure acreage to grow beets and comply with the requirements. Is that practice to the interest of the American farmer and the American consumer?

As a Representative from one of our largest sugar-producing States, I am taking it upon myself to serve notice on all interested parties that Congress is going to review this subject before a new sugar law is drafted. And that review will be from the standpoint of the American farmer and the restoration of purchasing power in America first, rather than from the standpoint of the welfare of a foreign country.

Before even Congress has had an opportunity to become conscious of the 1940 act, here we have a piece of literature from the Sugar Division of the Department of Agriculture, an early propaganda attempt to justify the continuance of the present act. No suggestion whatsoever is made concerning the possibility of unlocking the handcuffs which bind the hands of domestic beet and cane growers.

In platforms of both the Democratic and Republican Parties today and years previous you will find an assurance to the effect that the American market will be reserved for American farmers. In the light of our party principles, how can anyone justify the continuance of the provisions embodied in the present Sugar Act?

The Sugar Division's enlightening pamphlet also states that the quota-benefit payments are "the equivalent of an ad valorem tariff of more than 170 percent." Well, give the domestic beet and cane grower the direct benefit of that tariff and then survey the results.

Finally the document informs us that if we eat more sugar we will "increase the quota of the beet area." That is true to a very limited degree, because if we eat four extra teaspoonfuls of sugar daily we will be consuming one teaspoonful of sugar grown by our own producers and three teaspoonfuls grown on foreign soil.

Republican Success in 1940

EXTENSION OF REMARKS

OF

HON. W. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

ADDRESS BY. HON. JOHN HAMILTON

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. John Hamilton, chairman of the Republican National Committee, at the Tioga County Republican picnic on July 25, 1939, at Owego, N. Y.:

It is highly important that the attitude of the Republican Party with regard to spending and economy be made absolutely clear at this time. It will become increasingly important to restate this attitude as the campaign of 1940 approaches.

It is obvious why this is so. Already New Deal propagandists are misrepresenting Republican advocacy of economy in government and Republican efforts to check wasteful spending as a threat to the security of the vast army of the unemployed. Voluminous as it now is, this propaganda is but a mere trickle to the flood that may be expected when the campaign actually gets under way.

We cannot permit the minds of the people to be confused on this issue. We cannot permit the Republican Party, because it is pledged to sound and prudent fiscal management, to be falsely stigmatized as committed to the sacrifice of the security of a large group of citizens. To do so would be a betrayal of party trust.

The plain and simple truth is that the Republican Party always has and always will stand for adequate relief for the needy. Republicans are just as determined as the most breast-beating new dealers that no needy person shall be permitted to want. No less than the new dealers do the Republicans realize that prompt and adequate relief is primarily the responsibility of the Federal Government.

It is not on the question of present need for relief or the amount of relief that we differ fundamentally with the new dealers. It is on the matters of administration of relief and the handling of relief funds.

We are convinced that the interests of the needy will be best served by returning responsibility for the administration of relief to the States and localities where it properly belongs.

Past experience and current revelations in Louisiana confirm our deep-rooted conviction that despite the sincerest efforts to administer relief wisely and honestly from Washington, it is impossible to keep the vast centralized administrative machinery free from politics and corruption in its outer reaches.

So we differ from New Deal spoilsmen who would perpetuate the weaknesses and defects in the centralized administrative machinery for partisan purposes in that we believe relief should be administered for the needy and not for the politicians.

We differ from them in that we believe the funds should go to relieve want and not to line the pockets of political racketeers.

We differ from them in that we believe the money should alleviate distress and not build up and perpetuate such corrupt political machines as the Kelly-Nash gang in Chicago, the Pendergast buccaneers in Kansas City, the Earle crowd in Pennsylvania, the Hague autocrats in Jersey City, and the smelly remnants of the Huey Long dynasty in Louisiana.

We differ from them in that we believe relief should be a means of aiding the unfortunate and not of bulldosing and intimidating them as the Sheppard committee found was done in Kentucky.

Then, too, we differ from the New Deal leadership in that we believe that the present great need of relief is largely of the New Deal's own making.

By the same token we heartily agree that if the New Deal is continued in office and follows the only course it knows—spend and spend, tax and tax—that relief will be needed in ever-increasing amounts for a long time to come.

But we refuse to accept the New Deal defeatist philosophy. We refuse to believe that relief, although a necessary palliative, is the real cure for our unemployment problem. We refuse to believe that it is the destiny of the American people to sink to a mere subsistence level.

We believe that the real problem to be solved is unemployment. Solve that problem and there will be no problem of relief. To the solution of that problem the Republican Party is dedicated. And it would solve the problem by ending wasteful spending, restoring confidence, easing burdensome levies, and abolishing punitive taxation, and by removing hampering restrictions from business and capital to the end that there would be created more steady jobs at decent American wages.

For 6½ years the New Deal has had only one remedy for all our ills—spending and more spending. Were the Republican Party so bankrupt of ideas and in the same position as the New Deal it would of necessity have to follow the same course. It is tragically true, as President Roosevelt himself said in his first inaugural, that when those to whom the welfare of the Nation has been entrusted have no vision the people perish.

For 6½ years President Roosevelt has had a chance such as no other President ever had to rehabilitate America. His failure is complete and abject, as the roll of more than 10,000,000 unemployed and the mortgage of more than $40,000,000,000 on the future of the Nation testify. What for generations was the most prosperous Nation in the world has been held down to an existence level. He has clamped the hardships of a periodic depression upon the American people as a permanent way of living.

Is this exaggeration? Is this blind partisanship? Well, let's take a look at the report issued last week by the New Deal-dominated Monopoly Committee. That report concedes that the crying need is for the stimulation of private enterprise, and that unless it is stimulated our system of free economy cannot continue to exist. It also admits the colossal failure of the New Deal to do this. Let me quote this significant paragraph:

"The survival of the system of private property itself depends upon the restimulation of economic activity. Yet with resources of men and materials altogether adequate to attain the objectives desired by all to furnish plenty for all, the oppressive fact remains that the economic machine is stalled on dead center. Government acted, but the evidences of failure of the economic machine have not disappeared. People are still without jobs. Farmers are still without satisfactory markets. Industry is still without sufficient purchasers."

That's a New Deal appraisal of the New Deal which we Republicans can endorse 100 percent.

If, as this New Deal group says, that for all its spending the New Deal has failed to bring recovery and has merely left the economic machine stalled on dead center, where is it taking us? Where is the President heading the Nation, for when in proposing his new $3,860,000,000 spending folly he urged that this type of spending be made a permanent policy of the Government? We'll let a new dealer answer that one, too. Listen to what Assistant Secretary of State Adolf A. Berle, Jr., has to say about that—and here I quote Mr. Berle:

"If the Government undertakes to create wealth by using its own credit at the rate of four billions or so a year, and its work is well done, the Government will be acquiring direct productive mechanisms at the rate of four billions' worth a year, or thereabouts. Over a period of years the Government will gradually come to own most of the productive plants in the United States."

That's plain talk without pussyfooting; we're headed for socialism, or state capitalism, if you prefer that term. It's one and the same thing; the kind of totalitarianism in Europe which fills every real American with repugnance and disgust.

Is it any wonder that the New Deal has destroyed the confidence of the businessmen of America from coast to coast in the integrity, prudence, and fairness of the National Government?

Is it any wonder that business is distrustful, when under the guise of reform there have been placed on the statute books measures which effect no reform but are of the essence of petty spite and punitive in their objective?

Is it any wonder that the flow of capital has dried up when the New Deal has pyramided the national debt to the highest point in the Nation's history and has reduced money rates to the lowest?

Is it any wonder that the vaults of our banks are bursting with savings which the owners fear to risk in business because hampering New Deal restrictions and regulations so cut down the chances of success that the gamble is not worth the risk?

And what happens if the venture succeeds? You know the answer. The Government takes the lion's share of the profits.

The American Federation of Investors issued a report last week which showed that common-stock dividends of American industry last year were less than half the amount paid in taxes. Taxes averaged $2.73 a share. Dividends averaged only $1.33.

The report revealed that 6,500,000 persons had invested their savings in the 163 companies on which the study was based. That means that the individual investments were small and probably represented, in many cases, the result of a lifetime of saving.

But since in the eyes of the New Deal all stockholders apparently are regarded as "economic royalists," whether they are widows or thrifty folk who devoted years to saving to provide for a rainy day or old age, let's forget about the stockholders and see what this means in terms of jobs and our unemployment problem.

The report shows that the total taxes of these corporations were at the rate of $576 per employee. They had an average of 21,141 employees each in 1937. Last year the figure had dropped to 17,061.

Nothing could make clearer than this that American labor has a vital interest in the tax bill of American industry. Extravagant Government spending has a direct relation to jobs. Every American, whether employed or unemployed, should understand these vital truths:

For governments to spend recklessly is unnecessarily to increase taxes; to increase taxes is to reduce business earnings; to reduce earnings is to curtail investment in and by industry; to limit investment is to destroy jobs and to swell the ranks of the unemployed.

It is a vicious circle which the New Deal has demonstrated its inability or its unwillingness to break. There will be no resumption of investment so long as the New Deal continues to frighten business and industry. And investment will lag as long as public money is spent so prodigally that taxation absorbs nearly two-thirds of the net profits of 163 typical enterprises employing no less than 3,000,000 men. It is to labor's interest, even more than management's and stockholders' that the vicious circle be broken.

If the Republican Party were returned to office and again entrusted with the responsibility of government, the first task would be to restore business confidence and confidence in the people generally that there would be no abandonment of the reforms which social consciousness demands.

Aspirations would be translated into accomplishment. As a result of New Deal paralysis of business, there is a tremendous amount of work to be done. But there is the capital and there are the men to do it. These, intelligently brought into mesh, would create one of the greatest revivals in American history.

The energies of the country, pent up for years behind the dam of New Deal restrictions and folly, would rapidly transform depression into revival. We would forget all about our problem of so-called permanent unemployment. We would forget all about the America of the vanished frontier, and we would once again look out upon our country as the land of boundless opportunity—which it always was before fantastic experimentation began to take the place of ordinary common sense.

In this atmosphere millions of people would be transferred from some form of thinly disguised Government dole to real jobs at real wages, Government expenditure would automatically decrease without fastening hardships on our citizens, revenues from taxation would increase in amount, and the problem of the unbalanced Budget would be on the way to solution.

This is just plain common sense. It will be apparent to every thinking voter. Not so apparent, perhaps, is the shallowness of the contention of some new dealers that the muddled economic situation in this country is the result of European unrest. If you think about the thing a little while, you will logically come to the opposite conclusion, namely, that European unrest is in some measure a product of the American economic scene.

Under normal conditions America is by far the greatest single consuming market in the world. It draws on the four corners of the globe for much of what it consumes, and in doing this it contributes largely to the well-being and prosperity of other nations. Seven years of intermittent depression have reduced the demands of this ordinarily prosperous consuming market, and have thus aggravated the European distress and contributed to European political unrest.

The best contribution that the United States can make to the peace of the world is to so handle its domestic problems as to demonstrate that a capitalist economy functioning under a system of representative self-government can produce results far more satisfactory than have yet been attained under any other system. Such a revival of American prosperity would of necessity exert a powerful influence on the well-being of other nations, and would in this manner operate in the direction of reducing world-wide political tension.

This fact is clearly recognized abroad, although it has been obscured in this country by New Deal propaganda. It is recognized in London, and there are many abroad who have a clearer conception of what is wrong in the United States than all of the New Deal theorists put together.

Discussing the problem of recovery in the United States, the Economist of London recently stated editorially:

"In the past 6 years most of the recipes in the economic cook book have been tried at least once. * * * The only remedy which has not been tried is a sustained attempt to lower the costs and encourage the expansion of the capital-goods industries, whose

coma is, by common consent, the root cause of the laggardliness of recovery. It might be worth trying."

Further on in the editorial the London publication says: "It would be much easier to accept the defeatist doctrine of a permanent insufficiency of private investment in America if any convincing attempt had been made to investigate and remove the causes of its present unprofitability."

There is a forthrightness in that assertion that rings true with American tradition and ideals. On the other hand, the arguments of the new dealers before the Temporary National Economic Committee have a hollow and alien sound.

Forthright Americans are unwilling to accept the New Deal contention that the depression in durable-goods lines is assuming a permanent character and can be ended only by continuous large capital-goods spending by the Federal Government.

This country became the most prosperous nation in the world during the first century and a quarter of its history without any such Government investment. It will take more than a lot of New Deal professors to convince the American people now that the future holds nothing for them but mere subsistence in a socialist state.

Neutrality

EXTENSION OF REMARKS

OF

HON. JOHN McDOWELL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

RESOLUTIONS ADOPTED BY THE McKEESPORT COUNCIL, NO. 109, JUNIOR ORDER UNITED AMERICAN MECHANICS, McKEESPORT, PA.

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolutions adopted by the McKeesport Council, No. 109, Junior Order United American Mechanics, of McKeesport, Pa.:

Whereas war clouds hover over the world today; and

Whereas wars are raging today in both Asia and Europe; and

Whereas there is seemingly imminent danger of a general conflagration breaking out among the major counties of Europe; and

Whereas in such event there would be much pressure, from without and within, brought upon the President and the Congress of the United States to induce participation by the United States in such a conflict; and

Whereas in the World War, into which the United States entered to make the world safe for democracy, the United States spent many millions of dollars and saw the lives of thousands upon thousands of the young men sacrificed; and

Whereas whatever else may have been accomplished by the participation of the United States in the World War, it certainly did not result in making the world safe for democracy; and

Whereas the United States financed in large measure the participation of the other nations in the World War by loans to those nations, which they have refused to repay and still refuse to repay; and

Whereas the cost of the United States participation in the World War is still being paid for by the citizens of America at the rate of several billions of dollars annually and will continue to be paid for at this rate for many, many years to come; and

Whereas the best minds of this Nation are convinced that the world has not yet recovered morally or financially from the disastrous effects of the World War, and that another such war will mean the destruction of the civilization of the world; and

Whereas the experiences of the past teach us that no good but much harm can come from further participation in future foreign wars; and

Whereas the citizens of the United States are overwhelmingly opposed to the United States becoming engaged in another foreign war that will mean a sacrifice of thousands of lives of its citizens in addition to the financial cost of untold billions of dollars: Now, therefore, be it

Resolved by McKeesport Council No. 109, Jr. O. U. A. M. of McKeesport, Pa., That it is the sense of the members of this council and the people of this community that they are unalterably opposed to participation by the United States in another foreign war; and be it further

Resolved, That the members of this council and the people of this community, memorialize the Senate and the Congress of the United States to do all in their power to keep the United States out of any foreign war in case a general conflagration occurs; and be it further

Resolved, That copies of this resolution be sent by the secretary of this council, to the President of the United States, the Senate, the Congress, all churches and organizations, and to encourage the citizens to endorse this resolution and send a copy to their respective Senator and Congressman.

Money Goes Begging

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

ARTICLE BY MARK SULLIVAN

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan which appeared in the Washington Post this morning:

[From the Washington Post of July 27, 1939]

MONEY GOES BEGGING

(By Mark Sullivan)

I am going to write today about President Roosevelt's lending program. I have in my hand 31 newspaper clippings about it. I have on my desk 6 copies of the CONGRESSIONAL RECORD containing 54 arguments pro and con. And I have in my own head some ideas.

But I am going to dismiss most of that. For the most illuminating comment on the lending program I turn to the Des Moines (Iowa) Register of one day last month. The comment is not on the editorial page—though the Register editorials give exceptionally sound discussion of national questions.

But the story that most illuminates Mr. Roosevelt's lending program is on the news pages. It is a dispatch from the little town of Booneville, some 15 miles west of Des Moines. I quote and condense:

"BOONEVILLE, IOWA.—There is practically 'no sale for money' here. The Booneville Savings Bank is going out of business September 1. * * * It has $267,000 of its depositors' money, and has been asking them to come and get it since May 29. * * * The reason for the bank's going out of business is inability to use the money. The bank has been paying 2½ percent interest on deposits and can't make sufficient loans to earn it. 'We are going to pay off our depositors and quit business September 1,' says C. C. Cook, the affable gray-haired cashier who runs the bank. 'The principal reason we are quitting is that we do not know what to do with your money,' depositors were told in letters when the decision to liquidate voluntarily was made. The bank has been open every business day in 33 years except during the 1933 bank holiday."

WHY CAN'T BANK LOAN ITS MONEY?

Now, reader, ask yourself the question, If the Booneville Bank could loan its money, would it shut up shop? That question hardly needs to be answered. If you insist on an answer, it is in the words of the dispatch quoted above: "The reason for the bank's going out of business is inability to use the money." The answer is in the letter of the Booneville cashier to his depositors, "We do not know what to do with your money."

Next, ask yourself this question: Why can't the bank loan its money? The answer is obvious. It is because no one wants to borrow. That is, no prudent businessman wants to borrow, nor prudent farmer, nor prudent other person. No doubt there are plenty of willing borrowers in Booneville and thereabouts, as everywhere else. The Booneville cashier can find them on any street corner. But they are not prudent businessmen.

No one wants to borrow who is the type that won't borrow unless he can see his way clear to paying back. There is no one to borrow who sees how he can make prudent use of the money, make enough to pay interest, make a profit for himself, and pay back the principal when due.

PRUDENT BORROWERS DIFFICULT TO FIND

True, Booneville is a very small town. Conditions there may be extreme—I do not happen to know. But if the Booneville conditons are extreme, they are not unusual. On the contrary, they are common. Booneville is a microcosm of the country. Practically every bank official in the United States who reads this story of the Booneville bank will recognize that, to some degree, he is up against the same situation. His bank is overflowing with money, potential credit, for which he can't find use. He can't find borrowers. That is, he can't find prudent borrowers—he can't find borrowers of the type who won't borrow until they can see their way to pay back. Officials of big city banks tramp the streets looking for borrowers. Vice presidents of city banks nowadays have become salesmen; they ring doorbells with almost the ubiquity and pertinacity of a soap salesman.

If the banks can't find borrowers—that is, prudent borrowers—then where is the administration going to find borrowers for that two and one-half billion lending fund, after and if Congress passes it? If the Booneville bank can't find borrowers, where can the Government find them?

The administration will find borrowers all right—no need to worry about that. But will they all be prudent borrowers? That question, I imagine, the reader can answer for himself.

FEAR IS CAUSE OF CREDIT RESTRAINT

The final question, and the nub of the whole matter, is: Why do prudent borrowers not borrow the money that is already in the banks begging to be borrowed? Why do businessmen and shopkeepers and manufacturers refrain from extending their operations? Why do men not in business refrain, if they are prudent, from going into business? In short, why does business not recover and go forward?

Mainly the answer is fear. Some of the fear, such as fear of European war, is not within the administration's power to help.

But much of the fear existed before the war scares. Largely it is fear of the administration, of things the administration has done and other things it may do. Just what these things are, there is not space here to set down in detail. If the administration really wants business to recover, the true path is to remove these fears—and thus set business free to borrow the abundance of money that is already in the banks and looking desperately for prudent borrowers to borrow it.

Ill fares the land when power accumulates at Washington while the Boonevilles decay.

Deficiency Judgments

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

Mr. VOORHIS of California. Mr. Speaker, the deficiency judgment has always seemed to me unfair. If money is loaned to a farmer on a mortgage against certain property, it seems a matter of justice that that property, and it alone, be regarded as sufficient, if taken through foreclosure, to wipe out the indebtedness and leave the debtor free to make a new start. Particularly at times like this the taking of deficiency judgments becomes in thousands of cases a matter of grave injustice and hardship upon the farmers of America.

This is another case of where money and credit and those who control that money and credit become not the servants of our industry and agriculture but their definite and complete masters. It is another case where figures in a book are more highly regarded than farm land, buildings, livestock, and human life itself. It is illustrative of the fact that fluctuations in the value of the dollar in terms of real wealth inevitably lead to injustice and serious dislocations in the economic system. This is perhaps one of the most fundamental of all our problems; but until we solve it surely we should at least do what we can to protect the producers of the Nation. One way of accomplishing this would be by removing the possibility of a man being regarded as continuing in debt to his creditor even after all the property which he put up as security for his loan has been taken from him.

As a step in the direction of elimination of the deficiency judgment, I have introduced H. R. 3820, the text of which is as follows:

Be it enacted, etc., That section 80a of the act of June 16, 1933 (48 Stat. 273; U. S. C. Annotated, title 12, sec. 972), be, and it is hereby, amended to read as follows:

"Pending the making of such examination in the case of any State, the Farm Credit Administration may declare first mortgages on farm lands situated within such State ineligible as the basis for an issue of farm land loan bonds; and if said examination shall show that the laws of any such State afford insufficient protection to the holder of first mortgages of the kinds provided in this subchapter, said Farm Credit Administration may declare such first mortgages on lands situated in such State ineligible during the continuance of the laws in question: *Provided, however*, That said Farm Credit Administration shall have no power to declare first mortgages on land situated in such State ineligible for the sole reason that such State shall or may, subsequent to the effective date of this act, enact valid legislation prohibiting the holder of any obligation secured by a lien upon real property from obtaining a deficiency judgment after foreclosure of such lien and sale of the said property. In making his examination of the laws of the several States and forming his conclusions thereon said land-bank commissioner may call upon the office of the Attorney General of the United States for any needed legal advice or assistance, or may employ special counsel in any State where he considers such action necessary."

My bill will not do one of the things I would most like to see done—namely, completely eliminate the taking of deficiency judgments on Farm Credit Administration loans. But it would free such States as may desire to pass laws outlawing deficiency judgments from the fear that now hangs over them that if they pass such legislation the Farm Credit Administration will stop the making of loans through its agencies in that State.

A Fearless Patriot

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

EDITORIAL FROM THE PITTSBURGH SUN-TELEGRAPH OF JULY 25, 1939

Mr. VAN ZANDT. Mr. Speaker, for the information of my colleagues I am inserting in the CONGRESSIONAL RECORD an editorial appearing in the Pittsburgh Sun-Telegraph of July 25, 1939, concerning our colleague, the Honorable HAMILTON FISH, of New York.

[From the Pittsburgh Sun-Telegraph of July 25, 1939]

A FEARLESS PATRIOT

The Republican Party, in seeking a Presidential nominee who would be a good President if elected, will look far before finding a man better qualified in this respect than Representative HAMILTON FISH, of New York.

A good measure of this able American statesman is available in a column of editorial comment published in the Hearst newspapers February 4, 1938, which said:

"If we had a national medal for intellectual honesty and courage, it would be awarded to Congressman FISH for his fearless performance in challenging alike all the masked dark forces undermining the foundations of liberty and tolerance beneath the American system."

The occasion which inspired that comment was a meeting in New York City which Mr. FISH addressed in this manner:

"Our free institutions and republican form of government are the hope and aspiration of the struggling masses of mankind, whether they be in Fascist Italy, Nazi Germany, or Communist Russia."

Instead of being applauded for that unchallengeable expression of Americanism, Mr. FISH was hissed and booed.

He was cut off the radio in the middle of his speech.

His inclusion of communism among the enemies of America brought the wrath of the subversive communistic element in that supposedly American audience down upon him, and thus brought out the character and purposes of that alien-minded assembly.

The communistic crowd tried to intimidate him and shout him down.

But HAMILTON FISH stood up to the subversive and un-American element in his audience with magnificent courage, and went on to say:

"There is and can be no compromise with these foreign and dictatorial forms of government, whether of the right or the left, in our country.

"There is no room for such autocracies and despotisms as fascism, nazi-ism, or communism in America."

The unfaltering Americanism of HAMILTON FISH shamed that group, and earned him the respect and admiration of the entire country.

His display of courage and patriotism on that occasion was typical of the man.

As a young man, after graduating with honors from Harvard, he cut short a promising career in private law practice and public service in the New York Assembly to serve his country overseas in the World War, coming out of it with a major's commission and a record for valor and leadership unexcelled in the American Expeditionary Forces.

The war over, he continued in the service of his country, first entering the House of Representatives of the United States Congress in 1919, and so earning and holding the confidence of his district that he has remained a Member of that body continuously ever since.

His fight for Americanism has always been fearless and uncompromising.

He has said of the radicals and Communists and fellow travelers of communism who have wormed their way into influential positions in the New Deal:

"They came to write unsound, unworkable, un-American and unconstitutional experiments into the law. They imposed these upon the American people without their consent and approval."

He has said of President Roosevelt, whose administration was pledged to Government efficiency and economy:

"I condemn him for his autocratic methods, for his unsound economics, for the debt on debt he has piled up in billions and billions of dollars, unchecked, that will lead to the collapse of government.

"He has established a regime of state socialism. He has filled the Washington Government with Socialists, radicals, near-Socialists and near-Communists. He has formed an army of hundreds of propagandists of the New Deal who have been paid by the Public Treasury to uphold the New Deal and all of its socialistic experiments."

If the Republican Party is looking for a fighter, it will look long at HAMILTON FISH.

If it is looking for an American, it will find no man more deeply fixed in the affections of the people by his firm support of the vital American principles which are the foundation and structure of free American institutions.

HAMILTON FISH has a fine American record.

He has been an important American legislator for two decades.

He represents an important State.

He is an important candidate for the Presidency of the United States.

The American people want a loyal, courageous, fighting American like HAMILTON FISH for President.

The Republican Party should be glad to offer the country a Presidential candidate of his character and qualifications—and must be very sure to do so if it expects to be entrusted again with the control of national affairs.

Lending Program for Self-Liquidating Projects

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

ARTICLE BY MARK SULLIVAN

Mr. MASON. Mr. Speaker, the Congress in the closing days of this session is faced with the new spending-lending program, artfully labeled a "lending program for self-liquidating projects." The principal objection to the program is that it brings the Government into competition with private business. The argument advanced in its support is that if private business will not undertake such operations the Government must. The fact that competition by the Government invariably strangles private business is overlooked. However, the real reason for this new form of spending-lending is that under existing law the national debt may not go beyond $45,000,000,000. By the end of the present fiscal year our national debt will have reached that figure, so by means of this subterfuge the administration expects to go ahead with its spending-lending practices and yet avoid the debt-limitation obstacle. This subterfuge reminds me of the couplet:

Oh, what a tangled web we weave
When first we practice to deceive.

The following article by Mark Sullivan, Money Goes Begging, taken from this morning's Washington Post, gives a clear picture of the situation.

[From the Washington Post of July 27, 1939]

MONEY GOES BEGGING

(By Mark Sullivan)

I am going to write today about President Roosevelt's lending program. I have in my hand 31 newspaper clippings about it. I have on my desk six copies of the CONGRESSIONAL RECORD containing 54 arguments pro and con. And I have in my own head some ideas.

But I am going to dismiss most of that. For the most illuminating comment on the lending program I turn to the Des Moines (Iowa) Register of one day last month. The comment is not on the editorial page—though the Register editorials give exceptionally sound discussion of national questions.

But the story that most illuminates Mr. Roosevelt's lending program is on the news pages. It is a dispatch from the little town of Booneville, some 15 miles west of Des Moines. I quote and condense:

"BOONEVILLE, Iowa.—There is practically 'no sale for money' here. The Booneville Saving Bank is going out of business September 1. * * * It has $267,000 of its depositors' money, and has been asking them to come and get it since May 29. * * * The reason for the bank's going out of business is inability to use the money. The bank has been paying 2½ percent interest on deposits and can't make sufficient loans to earn it. 'We are going to pay off our depositors and quit business September 1,' says C. C. Cook, the affable gray-haired cashier who runs the bank. 'The principal reason we are quitting is that we do not know what to do with your money,' depositors were told in letters when the decision to liquidate voluntarily was made. The bank has been open every business day in 33 years except during the 1933 bank holiday."

WHY CAN'T BANKS LOAN ITS MONEY?

Now, reader, ask yourself the question: If the Booneville bank could loan its money, would it shut up shop? That question hardly needs to be answered. If you insist on an answer, it is in the words of the dispatch quoted above: "The reason for the bank's going out of business is inability to use the money." The answer is in the letter of the Booneville cashier to his depositors, "We do not know what to do with your money."

Next, ask yourself this question: Why can't the bank loan its money? The answer is obvious. It is because no one wants to borrow. That is, no prudent businessman wants to borrow, nor prudent farmer, nor prudent other person. No doubt there are plenty of willing borrowers in Booneville and thereabouts as everywhere else. The Booneville cashier can find them on any street corner. But they are not prudent businessmen.

No one wants to borrow who is the type that won't borrow unless he can see his way clear to paying back. There is no one to borrow who sees how he can make prudent use of the money, make enough to pay interest, make a profit for himself, and pay back the principal when due.

PRUDENT BORROWERS DIFFICULT TO FIND

True, Booneville is a very small town. Conditions there may be extreme—I do not happen to know. But if the Booneville conditions are extreme, they are not unusual. On the contrary, they are common. Booneville is a microcosm of the country. Practically every bank official in the United States who reads this story of the Booneville bank will recognize that, to some degree, he is up against the same situation. His bank is overflowing with money, potential credit, for which he can't find use. He can't find borrowers. That is, he can't find prudent borrowers—he can't find borrowers of the type who won't borrow until they can see their way to pay back. Officials of big city banks tramp the streets looking for borrowers. Vice presidents of city banks nowadays have become salesmen; they ring doorbells with almost the ubiquity and pertinacity of a soap salesman.

If the banks can't find borrowers, that is, prudent borrowers, then where is the administration going to find borrowers for that two and one-half billion lending fund, after and if Congress passes it? If the Booneville bank can't find borrowers, where can the Government find them?

The administration will find borrowers all right—no need to worry about that. But will they all be prudent borrowers? That question, I imagine, the reader can answer for himself.

FEAR IS CAUSE OF CREDIT RESTRAINT

The final question, and the nub of the whole matter, is: Why do prudent borrowers not borrow the money that is already in the banks begging to be borrowed? Why do businessmen and shopkeepers and manufacturers refrain from extending their operations? Why do men not in business refrain, if they are prudent, from going into business? In short, why does business not recover and go forward?

Mainly the answer is fear. Some of the fear, such as fear of European war, is not within the administration's power to help.

But much of the fear existed before the war scares. Largely it is the fear of the administration, of things the administration has done and other things it may do. Just what these things are, there is not space here to set down in detail. If the administration really wants business to recover, the true path is to remove these fears, and thus set business free to borrow the abundance of money that is already in the banks and looking desperately for prudent borrowers to borrow it.

Ill fares the land, when power accumulates at Washington, while the Boonevilles decay.

Time Offers the Hallowed Traditions of Milford and Guilford in Their Tercentenary Garments for the Visitors to Connecticut This Year

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

Mr. SHANLEY. Mr. Speaker, my district has within it two towns, Guilford and Milford, which are celebrating their three hundredth birthdays this summer. I call this to the attention of the Members of the House who may be planning visits to Connecticut and who are interested in the historic lore, learning, and lights of history that dot the Connecticut countryside and shore in these two towns.

Here they will find the birthplaces of famous men who have had an active part not only in the early affairs of their colony and the Connecticut settlement but in the history of this country itself. The native sons and daughters of Connecticut have chronicled their doings and findings throughout the world, but the world will ever be interested in their birthplaces, its surroundings, and its people.

Georgia claims Abraham Baldwin as United States Senator, but he was a signer of the Constitution and born in Guilford.

First Governor of Vermont, Thomas Chittenden, was a native son of Guilford, also.

The distinguished botanist William Russell Dudley was nurtured on its shores.

Probably one of the earliest and most-quoted poets even today has honored himself and his native town of Guilford by his immortal work—Fitz-Greene Halleck.

The first president of King's College—Columbia—was a Guilford resident, Samuel Johnson.

Adirondack Murray is none other than a Guilford boy, William H. H. Murray.

These are a few of the historic names in whose honor Guilford will celebrate on Labor Day week end, September 2, 3, and 4, and there you will see colonial architecture at its best. There are 150 houses standing which were constructed prior to 1810, and also we are told that there are the descendants of 15 of the heads of families who signed the covenant on shipboard in 1639.

Nothing to my mind is so typical of the spirit of Guilford as the outstanding book, Old Guilford, hand-lettered by Mr. Charles D. Hubbard, a work that has called forth the highest praise from our distinguished scholar and former Governor, Wilbur L. Cross, and, too, you will find the oldest stone house in New England, a structure that Representative JOHN RANKIN visited on his visit to Connecticut some years ago and which elicited from him the highest praise. The oldest house in New England, the Whitfield House, and the old stone house were built in 1639.

There are distinguished Connecticut names embossed in the traditions of Guilford, including the Leetes, Stowes Dudleys, Naishes, Willards, Mungers, Hoyts, Graves, Hulls, Bradleys, Nortons, Cruttendens, and Bishops.

Milford, also settled in 1639, is probably best known for its shore-resort facilities, because of which its population is doubled each summer. Official recognition of its splendid use as a cove for small craft has only recently been given by an appropriation by the Federal Government of $30,000 to deepen its harbor. Here from Long Island Sound come the thousands of small craft during the summer in this protective harbor.

The town is redolent with a colonial air, and it gave three of Connecticut's earlier Governors—Jonathan Law, Robert Treat, and Charles H. Pond—all of whom had been Lieutenant Governors.

Its celebration will be held from August 20 through to the 26th, with a water pageant depicting the arrival of the settlers, sports, a historical pageant, colonial costume ball, and a parade.

In its historic resting places there are buried Governor Treat and Roger Sherman, signer of the Declaration of Independence, most famous of the New Haven immortals and my political ancestor in the First Congress of the United States.

Proposed Amendment to Wage and Hour Law Concerning Country Newspapers

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

LETTER FROM RALPH E. OVERHOLSER

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a letter from Mr. Ralph E. Overholser, editor of the Red Oak Express, written to my colleague from Iowa the Honorable JOHN W. GWYNNE. I hope, Mr. Speaker, that this Congress will not adjourn without amending the Wage and Hour Act to exempt newspapers with a circulation up to 5,000, as provided in the Gwynne amendment. It is imperative this be done to avoid the disastrous effects which Mr. Overholser so clearly sets out in his letter, as follows:

THE EXPRESS PUBLISHING CO.,
Red Oak, Iowa, July 22, 1939.

Hon. JOHN W. GWYNNE,
House of Representatives, Washington, D. C.

DEAR MR. GWYNNE: Your remarks in the House of July 6 have just reached my desk, and I have read them with interest and admiration.

You have stated the case of the small newspaper wisely and soundly, and those of us in the Iowa country press sincerely appreciate your effort.

We are one of the 36 newspapers to which you made reference. We publish a semiweekly. Our press run now is 3,450. Our fully paid list is right at the 3,000 mark. We have been endeavoring to abide by the law, but it is a hard task.

Our shop has maintained a 44-hour week for more than 20 years, while other merchants in our town have employed workers from 48 to 60 hours a week. Our record, wages, and hours have been highly satisfactory with our employees, who have enjoyed vacation on pay and a bonus at the end of the year when we could pay one.

We are now confronted with a serious problem. In October we must go to 42 hours a week and next year 40. In the days of N. R. A. we complied with the 40-hour week, but we discovered that we could not for long continue to issue a twice-a-week newspaper on that basis and stay in business.

We will soon be faced with the problem again. At this outlook it appears that our only solution is to reduce our publication to a weekly, fire some of our help, and get along as best we can. Our first-of-the-week issue is a service newspaper and in these days it is not a money maker. We can best abolish it even at 44 hours a week and be money ahead.

Our employees are opposed to the regulation. They are content with our own 44-hour week and the conditions under which they work.

We now employ 14 people. There are no extra printers to fill in on the days that we would need help under the shorter-hour program and we cannot afford to pay additional men enough compensation to keep them. You are aware of that fact and those of us running these small plants cannot understand why Congressmen generally cannot see this point.

If we are obliged to conform to the law, we, of course, will go strictly on the hour basis and that will mean less total money in the week for each employee. We do not like to do this, and the employee does not like it, but there is nothing left for us to do but that.

It seems absurd that the Wage and Hour Act should affect the small newspaper in the first place. More than 90 percent of all our business and circulation are in our own county, of course. The meager circulation that goes beyond the State boundaries we would like to abolish anyway, but we send the home-town paper because a former resident wants it. It has no advertising or selling value for the merchant.

The Roosevelt administration has sponsored the welfare of the little fellow in deed but not in action. The wage and hour law handicaps the small newspaper but it does not cause a hardship on the metropolitan newspaper, where hourly wages prevail and where plenty of additional help is present.

Frankly we are at our wits' end, trying to run a business, maintain a pay roll, keep men employed, pay our taxes, and keep our doors open. The wage and hour law will defeat its ends in small towns. It is going to destroy service to our readers, reduce the weekly income of employees, dismiss employees now on our pay roll, and jeopardize the business of an enterprise needed in the community. Congress can write the laws but it can't meet the pay roll. It can legislate us out of business but that does not make jobs for the men who own their homes in our employ.

This is a rather long letter and I apologize for troubling you with our burden, but we have no one to present our problem other than our representatives.

We fully appreciate your effort and only hope that your efforts will be retained in behalf of our serious problem. It is serious and it is critical. Something must be done or else!

I would appreciate it if you would show this letter to Representative BEN JENSEN from our district. I know that he has a sympathetic attitude on this question.

With every good wish and high regard, we remain,

Very truly yours,

RALPH E. OVERHOLSER.

Republican Promises and Performances in Pennsylvania and Philadelphia

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

Mr. MYERS. Mr. Speaker, recently John D. M. Hamilton, Republican National Chairman, attempted to set up the proposition that various Republican Governors are saving large sums and balancing their budgets. He claims that Republican Governors of various States probably will save a total of more than $100,000,000 in the next 2 years.

The Republican Party has nothing to crow about in my own State of Pennsylvania. Pennsylvania's Republican Governor, Arthur H. James, campaigned on promises of drastic economy last year and particularly promised the elimination of certain emergency taxes for relief which were enacted during the administration of Gov. George H. Earle.

There were no ifs, ands, or buts in the speeches the present Republican Governor of Pennsylvania made during that campaign concerning those so-called Earle taxes.

He denounced them in unmeasured terms.

He said that they were political; that they were driving industry from Pennsylvania; that they were punitive taxes designed by the Democratic Party in our State to get back at "big business" because it had fought the election of Governor Earle 4 years earlier.

Judge James promised, without reservation, that he would bring about enormous economies in the State government of Pennsylvania.

And, of course, he said, because that was before the election, that all this would be accomplished without impairing relief or denying it to a single worthy person.

Well, now we have the outcome. Governor James and his Republican legislature reenacted every single one of those "Earle taxes," which Mr. James promised to wipe out as part of his program for encouraging industry in Pennsylvania. That promise had a large part in getting him elected.

But that is not all. Governor James adopted a short-changed budget. Appropriations for relief are a good $80,000,000 short of obvious requirements for the biennium, and even if that is left out of consideration the Pennsylvania budget is far out of balance. To date no economies have been made.

Sooner or later—and they admit that—the Republicans will have to call the legislature back into special session to raise the money to pay for relief and to balance the short-changed budget. They will wait to do that until after the next election, and if possible until after the Presidential election. Then, the campaign over, they will levy more taxes on the people of Pennsylvania.

That is the economy record of a Republican administration in Pennsylvania—no economy at all, an unbalanced budget, and no program except to wait until the people have voted to put more taxes on them.

Their record in that respect is about as good as their record on relief, for they passed the Pierson bill, called in our State the "work or starve" law.

This is a curious little enactment under which people on relief can be ordered to work at "prevailing wages," whether fitted for the work or not, and the definition of "prevailing wages" is left up to the county relief boards which under Governor James have been loaded down with politicians.

Governor James fired all the Earle boards, which were staffed with Republicans and Democrats not active in politics. They were men and women of high character and standing.

The Governor fired them and his appointments to fill their places were so flagrantly political that even a Republican Senator, one of Governor James' own party, denounced the kind of people he was selecting.

Yet Governor James, in his campaign, had promised that "relief would be taken out of politics."

Relief in Pennsylvania is to be squeezed down. Economy, if there be any, is to be effected at the expense of the unfortunates who cannot get employment, and who desperately need relief. That is the only kind of Republican "economy" we are getting in Pennsylvania.

Governor James must be aware that the people of Pennsylvania now look upon him as the greatest flop that ever occupied the chief executive's chair.

Last Friday night he took to the air, this man on the flying trapeze, and made an apology for the first 6 months of his administration.

It was a sorry spectacle, for he stooped to an all-time low in political skulduggery, brazenly ignored the written record, deliberately distorted the truth, hurled a few dead cats, and then resumed his seat among the forgotten men of Pennsylvania's political history. The most laughable part of that ridiculous speech was the charge that President Roosevelt and the Democrats are purging W. P. A. in Pennsylvania in order to punish W. P. A. workers because the State went Republican last fall.

The truth is that the Republicans in Congress have voted almost unanimously during this entire session for reduced W. P. A. appropriations and for amendments to the law which have compelled, and will continue to necessitate, huge lay-offs. The Republican Members of this House from Governor James' own State of Pennsylvania voted in the same manner, laughingly and gleefully voting for all amendments which have tended to cripple W. P. A. and force thousands back on the relief rolls.

During the crucial debate on the relief bill Governor James did nothing to prevent his Republican pals in Congress from voting to cut men and women from the W. P. A. rolls, and if the Governor will read the RECORD he will find that the administration and a majority of the Democratic Congressmen, which included the Pennsylvania Democrats, opposed these changes in the law which are causing lay-offs.

I deeply regret that the Governor of my own State could not at least have been honest and frank when he spoke on the subject of W. P. A. Undoubtedly his partisan frenzy has destroyed his reason.

But I am surprised that John D. M. Hamilton and Governor James, in dealing with this subject of alleged Republican "economy," did not include the Republican government of my city of Philadelphia.

There is the outstanding example for the whole country of what complete Republican control of a municipal government means. For 60 years they have run things without any hindrance. And today, as a result of their management, their extravagance, and their waste, Philadelphia is in a virtual state of bankruptcy.

Except for four county offices which in recent years have passed into the hands of Democrats, they control every branch and department of our dual city-county government. One Democrat and 21 Republicans constitute the city council. The courts are predominantly Republican. The district attorney, the sheriff, the recorder of deeds, the clerk of the courts, the county commission, as well as the mayor and council, are Republicans.

The Republican machine is boss, and it has been for 60 years. It has rolled up more than $500,000,000 of bonded debt, created the highest per capita debt of any city of comparable size in the United States, and loaded down the budget last year with interest and carrying charges exceeding $30,000,000.

Most of this debt comes from unwise, extravagant, and unproductive so-called permanent improvements. Some of it was spent on subways that were built for a few blocks and never finished. These holes in the ground are a continuing debt on which the people are paying heavy charges year after year. Another part of the underground transit system was built at enormous cost. It begins nowhere and ends nowhere.

While Philadelphia, under Republican domination, wasted these enormous sums, a badly needed sewage-disposal system was begun but was never completed. Sewers still discharge their filth into the Delaware and Schuylkill Rivers.

The water supply of Philadelphia, drawn from those rivers, has deteriorated, and the distribution system decayed through lack of maintenance.

Political neglect and mismanagement of a large hospital for mental and nervous diseases produced the most vicious scandals for years until, at last, under Governor Earle's administration, the institution was taken over by the State. The people of Philadelphia breathed a sigh of relief.

Whether it will continue to be decently operated under the present Republican administration remains to be seen.

A hundred instances of neglect, of waste, and mismanagement of ordinary city business could be cited. The police and fire bureaus have been dominated and demoralized by politicians.

And the most serious indictment of the Republican machine, which is part and parcel of the State machine that elected Governor James, is its record of financial incompetence.

For long years the Republican council has been building up deficits in order to keep overloaded pay rolls going—pay rolls created for political drones. Repeatedly civic groups, largely composed of distinguished Republicans, pleaded with the Republican organization to economize; to cut out the waste; to stop scuttling Philadelphia. But their pleas went unheaded.

Finally they came to a show-down this year. Under the law, the city council is required to adopt a budget and fix a tax rate before the beginning of every year. At this date, 7 months after the December 15 deadline, Philadelphia is still without any budget at all. With the aid of the courts the Republican city council has let the matter slide along because it had a $41,000,000 deficit to meet.

Last year they enacted a local sales tax. It was palpably ruining business so they were forced to take that off. And then they hunted around for a way out; a way to beat the financial devil they had created around the stump.

In our city council there are some Republicans of the most reactionary type that it is possible to find anywhere. Because they hated the New Deal they passed up W. P. A. and P. W. A. improvements that would eventually have saved the taxpayers of Philadelphia millions of dollars.

But now, at last, to get themselves out of the hole, they came to Washington and appealed for aid. And what do you suppose it was for? They have Philadelphia flat broke. They cannot borrow a cent by ordinary means.

So they worked up a scheme to pawn the annual rental of the city-owned gas works—a matter of about $4,200,000 a year—for the next 14 or 15 years.

They could not finance that through the bankers alone. The bankers knew better than anybody that they cannot be trusted. So they have fixed up a deal with the hated Democratic administration at Washington to borrow $20,500,000. That is the way they are clearing up their deficit and intend to balance their budget for 1939, 7 months after the lawful time fixed for that purpose.

But while all this has been going on, have they economized in the slightest degree? They have not. They are spending, and wasting, millions this year, even without a budget, keeping every single one of their drones in their unnecessary jobs and busily rolling up another deficit which by next year will exceed $15,000,000 and in some estimates is expected to reach $19,000,000.

What will they "hock" among other city assets to pay that off?

This statement of the situation in Philadelphia, under Republican control, does not stretch a single fact. Every statement made can be substantiated by the records.

It is aggravated by the fact that the Republican legislature, under this same Republican Governor James, passed laws at the behest of the Philadelphia Republican machine which add more than $800,000 to the annual cost of government in Philadelphia. Governor James signed those bills.

That is his immediate and personal share in the political looting of Philadelphia by the Republican organization of Philadelphia.

And he promised, in his campaign, to "help Philadelphia."

Nice going, for a Republican regime, do not you think?

But to add it all up, let us have this in the RECORD: Students of our local government, for a generation or more, have fought to get rid of the dual system of county and city officers which creates enormous excess costs in our local government. Democratic legislatures put through a proposal for a constitutional amendment. It had to be voted upon throughout the State. In Philadelphia the people gave it a substantial majority. Elsewhere in Pennsylvania the Republican machine killed that amendment and wiped out the majority given to it by the people of our city.

Forces of good government did not give up with that. A nonpartisan commission, including some distinguished Republicans, drafted a proposed new charter for Philadelphia. It was sent to the Republican legislature. It passed the senate under tremendous popular pressure, went to the wholly controlled Republican house of representatives, and never came out of committee.

The charter bills provided that they should not become law unless the people of Philadelphia voted favorably upon them. The Philadelphia Republican organization decreed that those bills, which would have saved millions to our taxpayers, should not even be submitted to the people of Philadelphia.

I call the attention of the Republican national chairman, John D. M. Hamilton, to this record of Republican mismanagement, waste, and rotten government, capping the climax of 60 years of uninterrupted Republican control of Philadelphia, and to the complete failure of a Republican administration at the State capital to make good on campaign promises of economy and tax reduction for the people of Pennsylvania, before he does any more "pointing with pride."

Congress Wants Peace—Japan Wants P-i-e-c-e

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 27, 1939

LETTER FROM REPRESENTATIVE OF THE SINO-KOREAN PEOPLES LEAGUE

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I include herein a letter addressed by Kilsoo K. Haan, Washington representative of the Sino-Korean Peoples League, to the House Foreign, Naval, and Military Affairs Committees. This letter is of particular interest in view of the action of the State Department in taking steps to abrogate the 1911 Treaty of Commerce and Navigation with Japan.

SINO-KOREAN PEOPLES LEAGUE,
Washington, D. C., July 25, 1939.

Honorable Members of the House Foreign, Naval, and Military Affairs Committees, the Seventy-sixth Congress, Washington, D. C.

HONORABLE GENTLEMEN: We are informed that 280 Japanese "Ronins," political assassins, have been sent by Japan during the past 2 months to Shanghai, with the objective view of creating a "reign of terror" in the International Settlement this coming September.

"Ronins," or Japan's political assassins, are employed by the militarists whenever they desire to make a strategic move. The Queen of Korea was murdered by Japan's Ronins in this manner. Our informers urgently warned that the Ronins are going to attack Occidentals in the International Settlement, creating a "reign of terror" against the white people.

I can vividly picture Japanese Consul General Fukuma, of Honolulu, calmly and seriously, with his smiling eyes, talking to me. He said:

"American Congress very smart, you know, very smart; agree not to agree with President.

"Few more years Japan clean up all American business in China. * * * You see Congress want peace, peace, all the time peace. Japan want peace, too, you know. Yes; Japan want peace."

And he then spelled the word "peace"—"p-i-e-c-e."

Gentlemen, we humbly and sincerely urge you to adopt Senator Vandenberg's resolution, abrogation of the American-Japan Treaty of Commerce and Navigation of 1911.

Such an action by the Seventy-sixth Congres will discourage the militarists and their followers while encouraging and strengthening the morale of the Chinese, Koreans, and the liberal Japanese elements in Japan.

We sincerely and justly fear, if the Seventy-sixth Congress neglects or refuses to take such step or steps to create a "moral armament" against the militarists, American rights will be flagrantly violated and eventually chased out of the Far East. America's defeat will not only tend to encourage the hatred of white race under the Japan guided "Asia for Asiatics" policy, it would also mean the end of democracy in the Pacific for many generations to come.

If you gentlemen believe American laborers will peacefully work for 10 to 75 cents a day in order to compete with the Japanese standard of living, you can ignore Japan's military conquest of Korea and China. On the contrary, if you believe that American laborers deserve the protection of Congress for a livable wage and a decent standard of living, by all means protect and maintain American influence in the Far East.

Events of the last few months in the Pacific will speak for itself.

The Hawaii Sentinel (May 25) reports, that an American citizen of Japanese ancestry was detained in Honolulu. All the propaganda materials were confiscated. It is alleged that the printed matter "advocated the formation of an outright Japanese Navy League." It also reported that startling news articles appeared in Japan, "praising the loyalty of Hawaiian-born Japanese to the mother country." It was one of these stories which told how the Japanese in Hawaii, including American citizens of Japanese ancestry "signed pledges of loyalty to Japan in their own blood."

Another report on June 25 says that the Japanese officers of the S. S. *Taiyo Maru* (a Japanese merchantship, N. Y. K. line) "refused point blank to open a mysterious safe to United States customs inspections" contrary to and violating the spirit of the commercial treaty of 1911.

The arrogant attitude of Japanese officials is not new to Hawaii; that is, to those Americans who are not afraid to talk. They will tell you many an interesting incident of Japanese display of arrogance toward Americans even in Hawaii.

During the Japanese census in 1935 the leading Japanese daily printed in the Japanese section:

"QUESTIONABLE POINTS

"This census is taken to determine the population (Japanese), and it is not connected in any way with information papers compiled for the government authorities (American Government). Hence illegal entrants need not be afraid of making out this report."

The Associated Press reports on July 20 that "The Japanese soldiers had torn down and destroyed an American flag flown over the Standard Oil Co.'s installation at Chinglingki, Yangtze River port." This account said about 100 Japanese infantrymen entered the installation, drove out the Chinese staff, and damaged the property.

The United Press reports on July 23 that, "R. A. Baker, warrant officer aboard the United States gunboat *Guam*, was beaten severely by a Japanese sentry here last night, apparently because he was walking on the wrong side of a street in the Japanese-controlled area."

While Congress talks of "peace, peace," the Japanese are taking American interests by "pieces" in China. We fear the 280 Japanese Ronins, who are reported sent to Shanghai, are there not to create peace for occidentals nor for China, but to create, as reported, a "reign of terror" against the white people for obvious reasons.

We, therefore, urgently plea that the Members of the House Foreign, Naval, and Military Affairs Committees, take immediate steps to adopt Senator VANDENBERG'S resolution to abrogate the American-Japan Commercial and Navigation Treaty of 1911 as a gesture of warning to Japan that the American Congress will not tolerate Japan's practice of nipping off American interests by "pieces" in China.

"Those who wish to get a glimpse of the trend of future events in Asia should not neglect to study that vivid object lesson, Korea." (Quotation from Willard Price.)

Respectfully submitted.

KILSOO K. HAAN,
Washington Representative of the Sino-Korean Peoples League.

"Belling the Cat"

EXTENSION OF REMARKS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 27, 1939

RADIO ADDRESS BY HON. J. WILLIAM DITTER, OF PENNSYLVANIA, ON JULY 26, 1939

Mr. DITTER. Mr. Speaker, under leave to extend my remarks, I wish to insert in the CONGRESSIONAL RECORD text of an address which I delivered over the Columbia Broadcasting System, Wednesday, July 26, 1939, from 9:30 to 9:45 eastern standard time, as follows:

As I entered the Capital a few days ago I heard one man say to another, "But who will bell the cat?" That is a trite expression. It takes many of us back to the little red schoolhouse and the old-fashioned copy book—back to the days when we copied over and over again—wrote them so often that they seemed to become a part of us—such maxims as "A penny saved is a penny earned," or "A fool and his money are soon parted," and many others which the experience of the years has proved sound and substantial.

In those "horse and buggy" days we learned to add and subtract, multiply and divide, and no amount of tomfoolery could convince the teacher that five apples taken from 20 apples would leave 30 apples, whether we tried to do it by honest arithmetic or on a self-liquidating basis. Of course, that was before the day of the New Deal.

The reading lesson brought to us tales of adventure, love of country, and the worth of such homely virtues as honesty, thrift, and common sense. We memorized the Twenty-third Psalm, Lincoln's Gettysburg Address, and goodly portions of the Bill of Rights. One of the fables that we read comes back to me tonight.

A number of mice gathered together to discuss means of defending themselves against their common enemy, a sly, stealthy cat, who seemed to come from nowhere as she pounced upon them. A young mouse, one who had never seen the cat or felt the punch of her paw, who had never been hungry or sent in search of food, who talked much but did little, announced that he had a solution for their problem. "We should tie a bell around the cat's neck so that we could hear her coming and going." Like many of the impossible and impracticable remedies that you and I have heard in recent years, the youngster's suggestion won popular approval, until a wise old mouse raised the question, "But who will bell the cat?"

What an abundance of cat-belling remedies we have had here in Washington during the last 6 years, each one more impossible, more impractical, more imaginary than the ones going before. From the day that the first N. I. R. A. blue eagle squawked, down to the latest

lending-and-spending squeak, we have had little else but cat-belling proposals as cure-alls for our ills. To repeat them in detail to you tonight would be useless. You know them only too well. They make up such a dreary and gloomy picture of futility and failure that I dislike to enlarge upon it for fear that you, and with you millions of other Americans, may lose all hope for the future, as the cold and bleak outlines become more dismal and more disheartening on closer inspection. They make up a record that I wish might be forgotten—a record that is even unpleasant to mention, a record for which no apology can be found and for which no excuse can be offered. One thing you and I can be sure of, and that is that there is not an unemployed man—and there are millions of them today—nor a struggling farmer—and there are thousands of them—who does not know only too painfully that the New Deal has failed to find a bell that will tinkle loud enough to be heard, much less gotten anywhere near tying it on the cat. They proposed the bell of planting less to harvest more, the bell of working little to earn a lot, the bell of killing pigs to make farmers rich, and many other mousy suggestions. Yet nothing has happened but a bumper crop of extravagant nonsense. In other words, they have played so fast and loose with common sense that rumor has it that Snow White deserted the Seven Dwarfs to come to Washington.

Of course, we all know that the bell which they have searched for the hardest is the spend-yourself-rich gong. My, how they've tried to make that ring. For a long time we were told that we would be pump-primed into prosperity, but the pump handle broke, and the prosperity is still at the bottom of the well. The fact is they know they have reached the legal limit of their pumping and that some other face saver must be found for the New Deal for 1940.

We have just closed the account books of the Federal Government for the year. That account is most alarming. It's a danger signal which should be seen. I hate war just as you hate war. I know that the peace of the world has been threatened in the past months. I was fearful, as were many other Americans, of our possible involvement. But as disturbing as that outlook may have been, I want to tell you in very simple words that the loose fiscal policies of the last 6 years have caused a danger greater by far than the possible aggression of any foreign foe. That account book shows that the New Deal spent nearly $10,000,000,000 last year. A part of that outrageously extravagant bill was paid by you and every other man, woman, and child in America who bought anything from a loaf of bread to an automobile. Yes, a part of it was paid by the millions of men looking for jobs; fathers with drawn faces; mothers with wearied and anxious eyes, not physically starving but hungry for some hope, plodding along under the burden of an ever-increasing tax load, unsparing in its severity and unmerciful in its demands. Then, again, $10,000,000 of debt was laid each day at the doorsteps of the citizens of tomorrow—a kill-joy and a loadstone of $10,000,000 a day—$10,000,000 of debt for every day in the year, as the New Deal's gift to your children and mine for their well-being and happiness. That's the account book for the year.

But, pump priming, as such, has been abandoned. So has budget balancing. Lending and spending by self-liquidating projects is the high-hat term for the latest spending spree. It's a pork-barrel program wrapped up in cellophane to conceal the odor. In truth, there is nothing new about the plan at all. From the beginning the New Deal has done little else but lend and spend and liquidate.

The Commodity Credit Corporation is a fine example of what we may expect of self-liquidating projects. That corporation is the concern created by the New Deal to lend money—your money—on cotton, corn, and other commodities, including peanuts, pecans, and prunes. Like any other pawn broker the concern needed capital to start business, which the New Deal shelled out of the taxpayers' pockets to the tune of $100,000,000. On March 31 of this year, that outfit took account of stock, figured up what the corn and cotton and other commodities on which it had made loans were worth, when it discovered that it was more than $119,000,000 worse off than when it started. To put it another way, this self-liquidating concern was broke, and you and the other taxpayers of the country were touched for $119,000,000 more to keep its head above water. And by the way, had the peanuts, pecans, and prunes been figured in on the stock taking—and they were not—the bankruptcy would have been even worse. That's liquidating yourself to the poorhouse. That's the New Deal road to recovery. That's cat belling with a vengeance. And that's the latest proposal for prosperity.

It seems plain to me that we simply cannot continue on this course. These stop-gaps won't work. The prodigal son took the same course and wound up feeding the hogs. And every other threadbare and tattered prodigal since then has landed in the selfsame place. Pigs is pigs—no matter how you get there—whether it be by straight spending or by a self-liquidating process. The tragedy of it is, as you can plainly see, that the administration cannot change its policy. It has nothing else. Without spending it would be left bare as a bone, as naked as a cherub. There is, as you and I know, only one hope—the repudiation by the American people of a leadership which has carried us so dangerously near to the brink of disaster.

I believe that it's high time to get rid of cat-belling ideas. What we need is fewer mice and more men, more matter-of-fact men; men with a reasonable amount of common sense; men with a fair degree of frankness; men with the courage to face facts as they are; men with a will, a dogged persistence to do what they promise to set out to do; men who are bold enough to adventure but cautious enough to be safe. I believe, and I think you believe, that we need men who have a faith in America's future; in a future built upon a genuine and passionate regard for its past; in a future of hopefulness, not a future of futility; in a future that can start right now if we are willing to get going.

You and I know such men. They are here in America today. They are not necessarily reactionaries, tories, nor economic royalists. They are liberal enough to accept advice and progressive enough to be tolerant. They declare that the businessmen of America want neither soft soap nor subsidies, but only a reasonable chance to earn a decent living, pay standard wages, and make a fair profit. They insist that the American workmen should not be made the victim of political paternalism or of industrial exploitation. One is as dangerous as the other. The one should be rooted out as an evil, the other punished as a crime. The one condemns a man to the hopeless misery of a subsistence security; the other brands him an unpitied slave of a machine age. They contend that a loafer is not entitled to the same reward as the worker and that loyalty has its place in business just as well as in politics. They believe that there is neither safety nor security in the hands of peddlers, whose only ambitions are industrial plunder and whose only standards are political greed. They regard relief as a charge upon the conscience of men, rather than an opportunity for a political auction. They know that as long as there are human needs, as long as there are men and women and children in America who hope for happiness and hunger for contentment, there will be frontiers to conquer, and that these frontiers can put idle men, idle money, and idle machines to work. These are the men who must save America.

The Salmon Industry on the Columbia River

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of July 20, 1939:

[From the Christian Science Monitor of July 20, 1939]

SALMON HAVE OWN CHAUFFEURS, PRIVATE CARS, AND ELEVATORS

WENATCHEE, WASH.—Teaching salmon to climb ladders, ride elevators, and tour the artificial fishways of the Columbia River is only one task the United States Government has attempted. To all of these feats the salmon applied themselves diligently. But when the great Bonneville Dam began to shape up it was clear something else must be done—that is, if Washington's $10,000,000-a-year salmon industy was to be salvaged.

Now the Government is taking the salmon for a ride. Yes—an automobile ride. That would be much better, so Government experts thought, than to have the silvery, vigorous fish knock their heads into the solid wall of the Grand Coulee Dam.

At a cost of about $60,000, eight specially designed tank trucks were built. A special trap, consisting of a collecting pool and an elevator, was built onto each of the three fish ladders at Rock Island Dam downstream.

From their own private tank elevators the salmon can now swim into their own trucks for that 5-mile ride to Nason Creek, a tributary of the Wenatchee River, itself a tributary to the Columbia. During the summer other streams will receive visitors. At the peak of the salmon run all eight trucks will be operating continuously.

Trapping and hauling the fish is done under thorough and detailed supervision. Every elevator of salmon is tested for acidity, alkalinity, oxygen, carbon dioxide, and temperature. The number of fish passengers for the 1,000-gallon tank truck varies from 70 to 200, depending upon size.

Temperature of the water on the truck is controlled. Since the temperature at Rock Island Dam is about 55 degrees Fahrenheit, during the 65-mile trip the water is lowered gradually to 43 degrees, the Nason Creek temperature. An automatic aerating system provides a constant supply of oxygen in the tank during the free ride. During the course of the 2-hour run to the present spawning stream, two more analyses are made.

The present trucking trip to other streams will continue until the $1,000,000 fish hatchery is built at Leavenworth on the Wenatchee, 24 miles above this city. Salmon will then be hauled from Rock Island, or taken at the hatchery site, and placed in holding ponds for spawning. The spawn will be cared for in the hatchery and the fry, fingerlings, and larger fish will then be planted in various streams. Substations will be built along

several rivers to hold quantities of the fry from the Leavenworth hatchery.

The cost of the entire salmon conservation project for the upper Columbia River has been estimated at nearly $3,000,000.

The States—Sovereign or Subsidiary?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 26, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of the junior Senator from Ohio, Hon. ROBERT A. TAFT:

Citizens of the United States of America, the tenth amendment to the Constitution of the United States, adopted almost simultaneously with the Constitution itself, says: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Before the adoption of the Constitution, the States were sovereign States. There is no doubt whatever that the drafters of the Constitution intended that after its adoption they should remain sovereign States. On the other hand, the Constitution was not a contract between the States, and the Federal Government was not the creation of the States. The Preamble of the Constitution made it clear that the Federal Government derived its authority direct from the people, just as the State governments derived their authority direct from the people of the respective States. "We, the people of the United States, in order to form a more perfect Union * * * do ordain and establish this Constitution for the United States of America." The Constitution divides the field between the Federal Government and the States, but each one remains sovereign in the field assigned to it and is not subject to any laws of the other in its sovereign field.

This was a unique conception in government, and of course many conflicts have arisen, giving rise to a great volume of law defining the two fields of power. But no one has ever questioned the sovereignty of the States, much as some reformers have questioned the wisdom of the policy.

In colonial days each colony was independent of every other one and subordinate only to England. The people regarded themselves more as citizens of the State where they lived than of the United Colonies. It would have been impossible to adopt a constitution in which the States did not remain sovereign, and the experience of the Colonies with England only made that sovereignty more important to the newly independent States. From actual experience they had learned that government from a distant capital is necessarily tyrannical. The English people of the eighteenth century had democratic ideals. They had no serious intention of trampling on the rights of the Colonies, but they were many miles away, and few people in London knew enough about the situation in the Colonies to govern correctly even when they desired to do so. The colonists had no intention of substituting a tyrannical government in Washington for a tyrannical government in London, and they did not do so.

On the other hand, they realized that in national affairs their action must be unified or their independence would be destroyed, and, roughly speaking, the principle underlying the drafting of the Constitution was to assign to the Federal Government those matters which were a national concern, and to retain in the States those matters which were a local concern.

Since the days of the Revolution there has undoubtedly been a tremendous change in the whole nature of the United States. California and Maine are closer together today than Virginia and Massachusetts were in 1789. Our cities are more alike than they were in the eighteenth century. We receive our news and our movies and our radio broadcasts uniformly throughout the United States. The growing complexity of life has removed to the field of national concern many matters which were purely local in the days of Washington. State boundaries have become more artificial. There is not the intense loyalty to States that there once was. But the sovereignty of the States is still essential to democratic government, and local self-government is still the greatest safeguard against the growth of an autocratic state.

Today local self-government for counties and cities and schools is more important than State government itself; but if the sovereignty of the States were abolished, it would be a short time before every city and every school district and every county would be directed by some Washington bureaucrat, with little care for the wishes of the individual district. And yet the independence of State government itself is still of vital importance. There is a wide difference in the methods which the people desire for the selection of their officials. In some States they prefer a direct primary; in other States a convention form. In some States the Governor is elected for 2 years; in others for 4. In some States the legislatures are elected every 2 years; in others the senate is continuous. Nebraska is attempting the interesting experiment of a unicameral legislature. It can be tried out without every State being committed to an experiment that may or may not be successful.

In most States they prefer to have their judges elected; in Massachusetts an appointive system has worked where it might not work elsewhere. In some States there are great private universities; in others the State itself supports universities because the private endowments have not covered the field. In one State one tax system fits; in others such a system would be utterly unpopular. The different States have made experiments with new laws in every field. Some States have struck out new lines of prison reform. Successful experiments have gradually spread to other States where conditions were similar. Unsuccessful experiments have died without the expense and unfortunate results which occur from a Nation-wide and half-baked experiment, such as we have seen in some national fields in the last 5 years.

But the greatest advantage is seen in the field of local self-government. Different methods of administration exist in our various cities. Different forms of government are found effective to deal with the particular situation. Experiments with street lighting and street cleaning and hospital administration and park development distinguish this city or that, and have led, particularly in the last 20 years, to a steady improvement in municipal administration, far healthier than one directed from Washington under a great Federal bureaucracy.

There is no field in which the people have more interest than in the administration of their schools. Parent-teacher associations are scattered throughout every State. The people want to have a voice in the way their schools are run and the kind of education their children ought to have. We have seen in education various theories, from the simplest form of the three R's to the most extreme of the so-called progressive educations. Surely it is better that those interested in education be compelled to sell the latest theory to the people of each district rather than change overnight the system of education throughout the United States by the change of some Commissioner of Education in Washington.

When I started out in politics I was strong for centralization on the theory that it would produce greater efficiency. The longer I have been in politics the more I have come to doubt the premise of this conclusion. I doubt if centralized government is more efficient, certainly when it is centralized on a unit even as large as a State. I doubt whether efficiency is as important as an activity approved by the people who are being governed. The people can have a voice in the way their board of education conducts its affairs; they can have a voice in the way their cities and their city councils run their business. Their protests are listened to with consideration and care, and they have an opportunity within a reasonable time to replace those officials who do not give that consideration.

How different conditions are in Washington. If you have ever come to Washington with a delegation on any subject, you must have felt that you came as suppliants, begging for action as a favor. There are ways to influence the action of the Washington Government through great national associations claiming to represent manufacturers or farmers or laborers, but within these organizations the individual members again have little influence. The officers and secretaries are chosen for long terms and are even more difficult to change than the Federal officers. The people themselves have a difficult time to obtain a hearing in Washington.

The truth is that the United States is so tremendous, the conditions are so varied in different States, that no man can sit in Washington and make laws affecting the activities of the people which will fit the conditions in more than a very limited number of communities. He may come from New England and make laws which fit New England but of which the people thoroughly disapprove in Iowa and have a different reason for disagreement in California. The law which may be accepted in the North is simple tyranny in the South. We see centralized governments in England and France and Sweden but those countries are not much larger than some of our States and there is nothing like the variety of conditions which exist here.

The founders of the Constitution insisted on local self-government because they knew also that under a centralized government democracy would never be permanent. In case of violent revolution of course it is much easier to overturn a centralized government than a Federal Government. This may be a remote contingency but under conditions in the world today, nothing is too remote to be guarded against.

One of the forces making a Federal form of government more certain to remain democratic is the fact that through frequent elections the general tenor of the government is kept in accord with the wishes of a majority of the people, whether those wishes are wise or unwise. Most people come in touch more with their local affairs than with national affairs. Their schools and roads and city services affect their everyday life. It is vitally important that they be able to change the administration of their local affairs from year to year as they see fit, and that there be no swelling resentment against the necessarily arbitrary action of Federal bureaus.

On the other hand, the growing complexity of modern life, and particularly of commerce between the States, is such that Fed-

eral activity must be constantly expanded. More and more matters have moved into the field beyond the powers of the States and into the field where they must be regulated, if at all, by the Federal Government. Nothing any State can do can affect the prices or control of basic commodities moving in interstate commerce. Nothing the States can do can control business organizations or public utilities operating on an interstate basis throughout the United States. Nothing the States can do can affect the control of money and banking or the distribution and marketing of securities. Much of the opposition to the extension of Federal power comes from people who know that they are beyond the powers of the States and do not wish to be subjected to any Government power whatsoever.

Because private organizations were able to monopolize certain markets and destroy competition, the Federal Government was forced to step in, through the Sherman Act, the Clayton Act, and other legislation, to control this field. Because of abuses in the sale of securities, the Federal Government was forced to set up the Securities and Exchange Commission. Interference with interstate commerce produced by labor disputes in this national field led to the enactment of the National Labor Relations Act. The courts have found difficult problems in determining what is properly for national control and what is properly within the State or local field. They have had to steer a careful course. They may have erred this way or that way. Every local matter may have a remote effect on national interests, but the court must be guided in part by a determination to preserve the fundamental right of each locality to run its own business unless it interferes substantially with the welfare of the entire country.

One great field of Federal activity has been recently developed. As government expands its activities into fields in which no government has previously moved, it has increased the tax burden in proportion to total income. Where individuals used to pay 5 percent of their income for government, today they pay 20 percent of their income for government. Much of this expansion falls properly within the State field, like old-age pensions and relief. But the States are very limited in their power of taxation. They cannot reach wealthy persons, because such persons can move their residence to States where the taxation is lower. They cannot impose a complete taxation on industry without encouraging the development of industry in other States where taxation may be lower. Consequently, it has been necessary for the Federal Government to finance various local activities.

From some of these fields, like the Public Works Administration, the Federal Government should retire. In others, like old-age pensions, mothers' pensions, relief, Federal assistance, will probably always be necessary. There is always a tendency, when the Federal Government puts up the money, to tell the cities and school districts and States how they shall run their affairs. If this is permitted to go on, it means the indirect elimination of State sovereignty and local self-government. A stimulation of wise Government activity by States and localities is desirable in some fields, but Federal legislation should always make it definitely clear that Federal Government has no interest in the method of administration except for certain simple fundamental ideals of honesty and good intention. Possibly it would be a better system to have the Federal Government act simply as a tax collector for the States and turn back to each State a lump sum to supplement its general tax resources, without any further strings on the manner in which those moneys are used.

Local self-government is the key to democracy. In every little community in the United States today the people take a vital interest in their local elections. They do so because they know that their voice is final. Young men and women in any walk of life are able to run for local office; and when they attain that office, they have a feeling of responsibility, not to some high mogul in Washington, not even usually to a party organization, but to the people of their community.

There is hardly a man in public life who has not come up from the people through his interest in local government. There is hardly a man who has not served his State before he served his Nation. Most people take an intelligent interest in national affairs only after they have been drawn into the field of politics through a vital interest in some local problem. There is everything to be said in favor of career men in Government bureaus, but if the whole Government is to consist of career men, picked out by the National Government from school and college, it will be a short time before the National Government is completely beyond the control of the people back home. A government by bureaucrats and experts may do very well in Germany, but it is a long way from Americanism.

The people would be reduced more and more to the right of deciding by a plebiscite once in 4 years who is going to be their dictator for the next 4 years. It is only a step from that position to a dictator for 8 years, and 12 years, and for life. Democracy can only succeed if all the people take an intelligent interest in public affairs. If States are mere subsidiaries of the Federal Government, and local governments are directed from Washington, it will be a short time before all public interest vanishes and a small group controls the destinies of the Nation. Undoubtedly there will be a gradual expansion of Federal power, but in permitting that expansion Congress and the courts must be inspired with the determination and necessity of preserving local self-government and the sovereignty of the States as great ends in themselves, and bulwarks of the Republic.

Former High Commissioner McNutt Endorses H. R. 7096

REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 27, 1939

Mr. LUDLOW. Mr. Speaker, I have asked for this time in order that I may direct attention to H. R. 7096, a bill of urgent importance affecting the future relations between the United States and the Philippines. It would seem most unfortunate if this bill should be caught in the log jam and sacrificed in the urge for speedy adjournment. The Committee on Insular Affairs, of which the distinguished gentleman from Illinois [Mr. KOCIALKOWSKI] is chairman, is asking that this bill be enacted immediately, so that those directly interested, as well as the world at large, may know the attitude of the United States Government toward those phases of United States-Philippine relationships which are dealt with in the bill, and so that the Filipinos themselves may be in position to make those readjustments in their economy which are essential to a constructive preparation for independence.

Perhaps no other person in the United States is more conversant with the affairs of the Philippines or better qualified to pass judgment on the merits of this measure than the former High Commissioner, Hon. Paul V. McNutt, now the Administrator of the Federal Security Agency. For the information of the House, I ask permission to read a letter I have received from Mr. McNutt, which expresses his opinion of this legislation and explains the necessity for early action in reference thereto. He feels that the problems dealt with in the bill are of an emergency nature, and that there is a pressing need for enactment of the bill at this session. In view of the great importance of this measure, may we not hope that it will soon get the green light? The letter is as follows:

THE FEDERAL SECURITY AGENCY,
Washington, July 26, 1939.

Hon. LOUIS LUDLOW,
House of Representatives, Washington, D. C.

DEAR LOUIS: In response to the inquiry contained in your letter of July 24, 1939, concerning my views on the Philippine bill (H. R. 7096), I wish to say that the bill has my endorsement.

The primary purpose of this bill is to modify certain provisions of the Tydings-McDuffie Act so as to prevent serious and unnecessary injury to the Philippine cigar, tobacco, coconut oil, embroidery, and pearl-button industries. Such injury would adversely affect not only Americans and Filipinos actually engaged in these industries but also United States-Philippine trade generally. The bill also contains certain very desirable provisions relating to the bonded indebtedness of the Philippines and the excise-tax proceeds on Philippine coconut oil and sugar which are remitted to the Philippines.

The time element in connecton with this bill is extremely important and it would, in my opinion, be extremely unfortunate if the bill is not passed during the present session of Congress.

Sincerely yours,

PAUL V. MCNUTT.

[Applause.]

Our Present Economic Status

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, July 27 (legislative day of Tuesday, July 25), 1939

STATEMENT BY ROBERT M. HARRISS

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD

a statement on the subject Our Present Economic Status, by Mr. Robert M. Harriss, of New York City.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OUR PRESENT ECONOMIC STATUS

(By Robert M. Harriss, New York City)

Bills S. 2759 and H. R. 7120, at the best can prove of very little and but temporary benefit and will later only add to the already overwhelming economic, financial, and tax difficulties of our country. These uneconomic, crushing, and destructive taxes of all kinds block and make sound recovery impossible. These taxes extract or take from the people $16,000,000,000 annually. This is 25 cents out of every dollar of an already impaired national income, and still the governmental debts and taxes mount higher and higher. These ever-increasing taxes are now 200 percent more than the entire farm or agricultural income. In other words, the tax burden is so great it requires 2 years' work and the total income of the 40,000,000 of our people who live and work on farms to pay the Nation's tax burden for 1 year. Another way to look at the picture is that the agricultural group who are feeding and clothing the Nation and who represent approximately 35 percent of our population, are receiving only 12 cents out of every dollar of national income, whereas the tax gatherers are collecting 25 cents out of every dollar. This unjust and inequitable condition cannot continue much longer.

No wonder not only agriculture but business, industry, and labor are in such a depressed if not chaotic state. These destructive and crushing taxes naturally destroy purchasing power, curtail consumption and production, lead to unemployment, then relief, more debts and taxes, and thus the vicious circle continues. Also many taxes are so uneconomic and punitive that they destroy incentive for capital, business, and industry to go to work and continue the progress and development heretofore going on in our wonderful country.

The Nation's tax burden is now more than $8,000,000,000 larger than it should be, based upon an economic and equitable system of taxation and efficient and businesslike Government. Imagine what such saving in taxes would mean to increased purchasing power, employment, and prosperity. It would be equivalent to a saving or increase of purchasing power of more than $300 yearly to every family in the United States. As we know, a large percent of present taxes go to pay interest on Government debts, relief, W. P. A., nonproductive Government projects, and to pay salaries to an ever-increasing army of Government bureaucrats and political parasites.

As we know, in the final analysis, these impossible governmental debts and crushing taxes must largely be paid, if paid, through the sweat and toil of our farmers, laborers, and workers. Therefore, it is self-evident that we can have no semblance of sound recovery, and conditions will continue to grow basically worse until our people are given relief from these strangulating and cancerous taxes which are undermining the principles and the very foundation of our constitutional and representative Government.

The underlying cause or the cancer of this unbelievable situation is the old inflated war debts of the Federal Government. These war debts have extracted more than $20,000,000,000 in taxes from the people to pay the interest. Despite all this, the Federal debt has not been lowered but has now mounted to the staggering sum of more than $40,000,000,000.

These inflated war debts were incurred when the price of cotton, other commodities, and agricultural products, labor, farms, and realty were 50 to 200 percent higher than they are today. In other words, when the farmer's and laborer's income was 50 to 200 percent more than today. Therefore, it is neither equitable nor possible for these debts to be paid and the Budget balanced until the price of commodities and agriculture's income are restored to the approximate level where these debts were incurred.

For the past 10 years no administration has had the vision or courage to face our fundamental economic trouble, which is simply a debt, tax, or money problem. During these 10 long years we have tried many uneconomic, if not destructive programs, attempting to restore prosperity. Among them have been the A. A. A., curtailment and regimentation, the N. R. A., Government interference and competition in business, the P. W. A., the W. P. A., sterilization or hoarding of gold, Government borrowing and spending, etc. During 1933 and 1934 I testified before congressional committees and stated such programs could not solve our economic trouble, but if continued would make matters worse and end in disaster; that the only solution was constructive monetary action. Many of the so-called self-liquidating features under these latest proposed spending bills H. R. 7120 and S. 2759 are bound later to increase the interest or tax burden of our people, a people who are now being bled white under crushing and impossible taxes.

Let me here introduce a front-page editorial on taxes from the New York Journal and American of July 17, 1939:

[From the Evening Journal and New York American of July 17, 1939]

"TAXES

"Taxes are impoverishing the people of America.

"Taxes are impairing the people's purchasing power.

"Taxes are closing shops and factories and putting people out of work.

"Taxes are increasing prices and lowering the American standard of living.

"Taxes taken from the industrious and thrifty are wasted on the lax and lazy.

"Taxes are plundering useful industry.

"Taxes are robbing productive labor.

"Taxes are subsidizing nonproductive politicians.

"Taxes are supporting politicians' entire families.

"Taxes are supporting politicians' sycophantic friends.

"Taxes are supporting politicians' obedient henchmen.

"Taxes are building a dangerous parasitic bureaucracy.

"Taxes are undermining democracy.

"Taxes are creating despotism.

"Taxes are promoting militarism.

"Taxes are projecting America into foreign wars.

"Taxes are financing foreign conflicts.

"Taxes are involving America in alien political, social, and racial disputes.

"Taxes are destroying faith in the practicability of self-government.

"Taxes are weakening faith in the elemental wisdom of the people.

"Taxes are on everything you eat.

"Taxes are on everything you wear.

"Taxes are on everything you use.

"Taxes are on everything you see.

"Taxes are destroying prosperity.

"Taxes are destroying liberty.

"Taxes are destroying opportunity.

"Taxes are destroying the land you live in.

"Taxes are destroying the things you live by and the people you live with.

"Taxes! Taxes! What are you going to do about them?

"Taxes! Taxes! Taxes! Are you going to be a shorn sheep and endure them, or an independent American and end them?

"Undesirable taxes—unendurable taxes—unnecessary taxes—unjust taxes—un-American taxes—are bearing us down—breaking us down.

"Your forefathers knew what to do about such taxes. Why do you not know what to do?

"Taxes once wrote a great declaration of independence which set men free.

"Taxes today should write another if we are of the same mettle as our fathers."

What has been the result of these futile, uneconomic, if not destructive programs over this period of years:

Agriculture: Our greatest and basic industry upon which not only the livelihood but prosperity of the Nation depends is in a deplorable condition. Despite crop reduction, control, and regimentation, the price of agricultural commodities in terms of gold is almost the lowest in history. We have lost many of our great foreign and export markets for these commodities and have actually been paying our farmers not to produce. Despite all this, the agricultural income is only 12 percent of an impaired national income and it might be well to bear in mind that the farmers and rural population immediately dependent upon the farmer represents more than one-third of our people.

Business and industry: It is needless to elaborate on the most unsatisfactory conditions existing in business and industry. Generally speaking, they are not operating at a profit nor is there incentive for business and industry to go forward with the existing Government interference and uneconomic and punitive taxes.

Labor: After all these years we have just about as many millions unemployed as when the depression started. Besides this we have millions directly or indirectly on Government relief or pay roll, thus increasing the Government debts and taxes.

Finance: Our Budget has not been balanced in more than 9 years. During the past 6 years the Federal debt has more than doubled and now stands at the almost unbelievable sum of more than $40,000,000,000. Yet all these put together are not our greatest loss. They are small and infinitesimal in comparison with the losses suffered by our people in morale, in courage, self-reliance, respect for Government, spiritual, together with class, religious, and racial hatreds and the spread of communism and other subversive, alien doctrines. These moral or spiritual losses are beyond computation to our country.

In my opinion, if our constitutional Government is to be preserved, it is essential that we have the courage to face our basic or fundamental trouble—the debt, tax, or money problem—and that we adopt the following program:

1. Restore to Congress the greatest economic privilege of all—"the right to coin and regulate the value of money" where it belongs, according to the Constitution. This is to be followed by a sound monetary program, free of either private or political control, with a constructive expansion of the currency instead of bonds issued against the billions of dollars of sterile or hoarded gold until the commodity and general price level is restored to where the people can pay their interest, debts, and taxes, the country made solvent, and Budget balanced.

2. The prompt lowering and revision of taxes, including tariff barriers, with the outright repeal of certain punitive and uneconomic taxes.

3. Businesslike and practical economy in Government.

A representative constitutional government cannot support and care for the people. This can only go with dictatorships, or the totalitarian state. A constitutional government can only be

expected to make fair and equitable laws and enforce them. Therefore, our form of government cannot survive if the citizens look to the Government to support and take care of them. If our constitutional Government is to last, the citizens must instead support and take care of their Government.

As we are the world's great creditor Nation, with more than 60 percent of the world's gold, naturally foreign nations must look to us for economic and financial leadership. During recent years we have not been giving them such leadership, but deflation to our people and them. Gold is the only recognized medium of exchange throughout the world. Therefore, the sterilization or hoarding by us of this more than $16,000,000,000 of gold is bound to have a depressing or deflationary effect not only on our country but the world. Undoubtedly this is one of the basic causes of the break-down of economic conditions, world trade, tariff barriers, radical nationalism, hatreds, heavy armaments, and unrest existing throughout the world.

Therefore, if we adopt a sound constructive monetary, tax, and economic program along the lines mentioned, it will not only end the depression in our Nation but it will enable our Nation and the world to go forward into a great era of commercial development, prosperity, and peace.

In conclusion, we have the choice of two roads ahead. One road is the road we are traveling, the wrong road—the road of Government borrowing, spending, crop reduction, regimentation, interference, and competition with agriculture, industry, labor, business, banking, increasing governmental debts, and unecomonic, punitive, and strangulating taxes. The end of this road is inflation, repudiation, and disaster.

The other road is the right road, the constitutional road. It will require courage, and fortitude to take the constitutional road because we must have the strength of mind and justice to face and equitably adjust the tax, debt, or money question and adopt a sound, constructive, economic, and financial program. Delay may mean the loss to us and our children of that wonderful God-given form of constitutional government we inherited from the founding fathers. Therefore, before it is too late, whether we be Democrat, Republican, or independent, let us all unite in this most serious crisis in the history of our country and demand that Congress take the right road, the patriotic road, the constitutional road. "The price of liberty is eternal vigilance."

Prevention of Pernicious Political Activities

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE FORT WORTH STAR-TELEGRAM OF JULY 25, 1939

Mr. GUFFEY. Mr. President, I ask unanimous consent to insert in the RECORD an editorial from the Fort Worth Star-Telegram of July 25, 1939. This editorial was forwarded to me today by air mail with the request that it be inserted in the RECORD. The title of the editorial is Hatch Bill Motive.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Fort Worth Star-Telegram]

HATCH BILL MOTIVE

Whatever virtues may be possessed by the Hatch bill, which started life as a more or less well-intentioned effort to forestall possible utilization of the W. P. A. as a political machine, the section of the bill which attempts to dictate membership of the 1940 Democratic nominating convention is a dead giveaway of the real purpose of the bill.

Most Members of Congress who voted for this section did not deceive themselves that it is constitutional. It was not intended to stand past 1940, and those who voted for it were comfortably certain that either the courts would knock it out after the 1940 convention afforded a test, or that, in any event, it would be repealed before another convention.

The key to the whole suprising performance, in which a large number of Democrats in Congress joined with a solid block of Republicans to enact a bill which strikes at the very heart of democratic government, and in which there was an astonishing letdown of resistance by accredited leaders of the Democratic majority, is hate and fear of Roosevelt.

The bill obviously was intended to affect only the Democratic convention, and at any time would affect only the convention of the party in power. Attaching this provision to a bill which was aimed at prevention of corruption in relief administration constituted an attempt to trap the President.

But Mr. Roosevelt will be fully justified in vetoing the Hatch bill because of the party convention section. An informed public will place the blame for loss of the other sections where that blame belongs—upon the Roosevelt haters in Congress who overreached themselves in their eagerness to destroy his influence in the party's next convention.

Prevention of Pernicious Political Activities

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

NEWSPAPER ARTICLE AND EDITORIALS

Mr. HATCH. Mr. President, the Senator from Pennsylvania [Mr. GUFFEY] called my attention today to the editorial which he has just had inserted in the RECORD. Very courteously he did that, and said he was going to have it inserted at a time when I was present in the Chamber.

It also happened, exactly at the same time that the Senator from Pennsylvania told me about the editorial in the Fort Worth newspaper, which I have read, and with which I do not at all agree, that the Senator from Georgia [Mr. RUSSELL] had placed on my desk a newspaper from his State, the Atlanta Constitution, calling my attention to another editorial concerning this bill, which I ask unanimous consent to have printed in the RECORD.

Also, Mr. President, it happened that today there appeared in the Washington Daily News a statement on this bill by that great liberal Member of this body, the Senator from Nebraska [Mr. NORRIS], which I ask to have printed in the RECORD.

Also, I ask that the editorial on the statement of the Senator from Nebraska [Mr. NORRIS] which appeared in today's Washington Daily News be printed in the RECORD at this point.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Atlanta Constitution]

THE HATCH BILL

The Hatch bill, which prohibits Federal employees, of any capacity, from taking part in politics, either in elections or nominations, has been passed by Congress. All that remains for it to become the law of the land is the signature of President Roosevelt.

It is doubtful if any measure in a decade was as important as this. Its contribution to the improvement and better working of democracy should be historic and all factions, New Deal and anti-New Deal, Democrat and Republican, radical and conservative alike, should rejoice in its enactment.

The Hatch bill provides that no one receiving salary or wages from the Federal Government may take part in either party nominations or elections of President, Vice President, or Members of Congress. It thus debars all such Federal employees in Georgia, for instance, from active roles or from the use of influence in State primaries for these offices, or in the elections that follow.

Aimed originally at the W. P. A., following disclosures in 1938 that, in some States, W. P. A. workers had been told how they should vote by higher-up officials, the measure was broadened, during its progress through the two Houses of Congress, to its present sweeping scope.

No one should welcome this bill more sincerely than the New Dealers. They have been the chief targets for criticism of office-holders' activity in politics.

And, of all the New Dealers, no man should approve the Hatch measure more heartily than President Roosevelt himself. For it has been charged, maybe maliciously, that a large portion of his third-term hopes hinge upon the convention support next year of office-holding delegates to the Democrat gathering. Men who would nominate him simply because they would hope thereby to hang onto their jobs for another 4 years at least.

No man of ethical standards at all would wish the nomination for such an office as the Presidency, whether it be for first or third term, upon such conditions. The office itself carries such dignity that any man fit for consideration for the Presidency would surely decline the honor unless he felt he was the true

choice, uninfluenced by money, of a majority of the voters and the electors of the Nation.

For an office secured through the influence of Federal-salaried officials is an office bought with the people's money, no matter how it may be considered.

The Hatch bill, properly enforced, removes this danger from national politics for all time. It not only lifts the onus of suspicion from all candidates, including the President if he seeks a third term, but it purifies the American system and thus adds to the strength of American democracy itself.

[From the Washington Daily News]

(By Charles T. Lucey)

Reports that pressure is being applied to bring a veto of the Hatch bill were met today by Senator GEORGE NORRIS, Nebraska progressive, with a statement that approval of the legislation offers President Roosevelt a "great opportunity."

Senator NORRIS said he had done everything he could to help pass the Hatch bill, and termed it a "great step in advance—a step that I have often tried to take, and have just as often failed, because of the opposition of politicians.

"The people of the country will applaud him (the President) again and again when he signs this bill, as I am confident he will," Senator NORRIS added.

The veteran leader in Government reform, a consistent supporter of the New Deal, has been close to Mr. Roosevelt. It is known his opinion is valued highly at the White House.

Passed by Congress last week, the Hatch bill lifts politics out of relief and bans political activity by Federal employees. It would keep jobholders from devoting part of their time to building political fences, and would prohibit their attendance as delegates at political conventions.

[From the Washington Daily News]

NORRIS ON THE HATCH BILL

Some commentators have superficially interpreted Congress' passage of the Hatch bill as a slap at President Roosevelt. They might do well to read the interview with Senator GEORGE W. NORRIS, on page 1 of The News.

The President has no firmer friend than the rugged old warrior from Nebraska. And the Hatch bill, to divorce politics from relief and from the Government administrative service and to guarantee to every voter complete freedom of the ballot is legislation of the type which Senator NORRIS has advocated for years. As he points out, such legislation has always been favored by lawmakers of the minority, and always resisted by the politicians of the party in power. But this time—perhaps because a series of scandals had dramatized the issue—the precedent was broken and a group of Democrats took the initiative in the drive against corrupt political practices. The Republican minority merely followed along.

Senator NORRIS, an independent, beholden only to the people, has fought the party bosses on this issue through one administration after another. President Roosevelt also has championed clean government, in season and out, says Senator NORRIS, and therefore can be counted upon to approve the Hatch bill.

We think Senator NORRIS knows what he is talking about; and that he knows more about what is in the President's mind than do all the dopesters who are predicting a veto. For if any one theme runs through the Roosevelt administration more consistently than all others, it has been F. D. R.'s happy practice of making Senator NORRIS' dreams come true.

The Spending Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE JOURNAL-EVERY EVENING, WILMINGTON, DEL.

Mr. TOWNSEND. Mr. President, I ask leave to have inserted in the RECORD an editorial from the Journal-Every Evening, Wilmington, Del., of July 26, 1939, on the subject of the ineffectiveness of the administration's spending program as a cure-all or even a palliative for the Nation's economic languishing.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wilmington, (Del.) Journal-Every Evening, of July 26, 1939]

"DOCTOR" BARKLEY

It is curious logic which Senator BARKLEY uses to explain his insistence that Congress pass the President's $3,000,000,000 lending-spending bill. The program should be given a chance, says the majority leader, because previous New Deal efforts have failed to solve the unemployment problem.

Put in somewhat homelier phrases, the Barkley reasoning amounts to this: If a sick patient takes a certain kind of medicine for years and fails to get well, the way to cure him is to give him more of the same and in larger doses. Any physician who prescribed in conformity with this rule would not only lose his business but might even run the risk of being charged with malpractice.

However, it is clear enough that this kind of argument has an appeal for the New Dealers. Ever since 1933 they have been committed to spending as the right remedy for our economic disease. In that time they have distributed more money than all of the rest of the world put together, and they have secured the poorest results. All of which is one reason for the growing demand that the Nation get a new doctor, one who has the willingness and the temperament to profit by experience.

There is some solid basis for Senator BARKLEY's further demand that the spending measure be permitted to come to a vote in Congress. Although the reluctance of the Banking and Currency Committee to report out the bill reflects the popular opposition, a definite decision by either the House or the Senate would put the stamp of finality upon it. The Senate, declares Mr. BARKLEY, must act "one way or the other." We trust it will be "the other," and by so thumping a majority that Government hand-outs will lose their caste as measures of American statesmanship.

Discharge of Relief Workers in West Virginia

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

LETTER FROM HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD a copy of a letter written by me, under date of July 27, 1939, in regard to the discharge of W. P. A. workers in West Virginia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 27, 1939.

DEAR FRIENDS: Relief workers have been fired because the administration claims there is not enough money. In West Virginia, between ten and fifteen thousand workers have been discharged. My battle has always been to see these workers get a fair deal. Here is one incident:

Forty-five West Virginia W. P. A. project bosses who receive $200 or more per month had salary raises since the November election. These are charged to the projects, not to administration.

Eighteen of the forty-five were receiving $200 or more before the raises were given. Twenty-seven were boosted into the select $200 or more class.

These 45 favorites had received at the rate of $97,240 a year in November. They were boosted to a rate of $115,560 a year in May.

The raise of these 45 would pay the salaries of 44 W. P. A. workers for an entire year. Every one of the 45 bosses could still be employed at their former salary and the salary raise would have paid the wages of 44 workers for a year.

Forty-five W. P. A. project workers received $18,900 a year for a year's work (without any loss for any cause). They continued to get $18,900 a year. No raise with them.

My other letters have shown the rise of W. P. A. rolls before election and a decline afterward. The cause given to many workers was "lack of funds," yet, money was available to raise the salary of those in the $200 class.

Who has been the real friend of the W. P. A. workers? I say salaries should not be raised when thousands are begging for work to feed their families. Five hundred W. P. A. workers in West Virginia could receive their next monthly check if the salary raises had not been given. Could these raises have been caused by work in the November election? You be the judge.

Sincerely,

RUSH D. HOLT.

The Du Pont Co.

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. GUFFEY. Mr. President, I offer for the RECORD an editorial from a recent edition of the Philadelphia Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Philadelphia Record]

E. I. DU PONT AND THE GOVERNMENT

We have just read an open letter in which Mr. Lammot du Pont, president of E. I. du Pont de Nemours & Co., attacks the New Deal.

Mr. Du Pont declares that the New Deal has created "paralysis and fear" in business, that it is levying a "heavy burden of taxes," and that it is delaying recovery.

These are serious charges. To see what they were based upon, we turned to the earnings reports of E. I. du Pont de Nemours & Co.

At this point we must confess curselves puzzled. Here is what we found:

Net income of the du Pont Co.

HOOVER YEARS	
1929	$78,171,730
1930	55,962,009
1931	53,190,059
1932	26,234,778
ROOSEVELT YEARS	
1933	38,895,330
1934	46,701,465
1935	62,335,410
1936	89,884,449
1937	88,031,943
1938	50,190,827

We may be wrong, but this does not seem to us to be the picture of a corporation which is noticeably paralyzed. We would say it is in very good health; in fact, quite vigorous.

The amazing thing is that under Roosevelt the net income for 2 years topped the figure for the boom year of 1929 by $10,000,000.

This "paralyzed and fearful" corporation sold $235,000,000 of goods last year, almost double the $123,000,000 of sales in the last year under Mr. Hoover, of beloved memory.

The annual net income of Du Pont during the 4 years of Mr. Hoover averaged only $53,000,000—and that includes one of the biggest boom years in our history, 1929.

And the annual net income of Du Pont during the 6 years under Mr. Roosevelt has averaged $62,000,000—during a period of "no confidence" and "paralysis."

We don't understand the reason for all the gloom.

Mr. Lammot du Pont talks of the "heavy burden of taxes." Possibly that is where the shoe pinches.

We can't see it. During 1932 Du Pont was very "lucky" as regards taxes. It paid the Federal Government only $997,235.

And in 1937 Du Pont had to pay the Federal Government $11,210,000—more than 11 times as much.

But in 1932 Du Pont earned only $26,000,000, while in 1937 it earned $88,000,000. Its tax bill went up about $10,000,000, but its income went up $62,000,000.

Which year was really better for Du Pont? Which year would you pick for yourself, gentle reader?

If $11,000,000 seems like a husky tax bill, remember this: It was at least partly because of Federal taxes and spending, which Mr. Du Pont denounces, that Du Pont made such huge profits. They stimulated business volume; Du Pont received its share.

That spending policy was cut down late in 1937. That should have given Du Pont & Co. more "confidence." It didn't. It led to the recession which is reflected in Du Pont's lower earnings for 1938.

We are not too disturbed by Mr. Du Pont's attack on the New Deal. We remember something. We remember that at Christmas, 1933, after Mr. Roosevelt came in, Du Pont cut an $8,375,000 extra-dividend melon for its stockholders.

Right after that Mr. Lammot du Pont issued a statement announcing that he foresaw "a future charged with considerable uncertainty." His company then went on to a steadily increasing prosperity for 4 long years, including 2 years in which earnings rose $10,000,000 above 1929. What price pessimism!

Mr. Du Pont is a great businessman. He is head of a company which is the archtype of the best in American business, vigorous, enterprising. His firm has contributed hugely to the wealth, the comforts, the number of jobs in this country.

We believe, however, that he errs in not recognizing that the New Deal is contributing much to his organization, in stimulating business volume, ending fear of bank panic, preventing sudden catastrophic decline, giving confidence to the plain people on whom all business ultimately depends.

Block Booking and Blind Selling in Motion-Picture Films

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 27 (legislative day of Tuesday, July 25), 1939

EDITORIAL FROM THE SEATTLE STAR OF JULY 21, 1939

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Seattle Star on July 21, 1939, entitled "Antidote for Box-Office Poison." I commend the editorial to those Senators who voted against the block-booking and blind-selling bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Seattle Star of July 21, 1939]

ANTIDOTE FOR BOX-OFFICE POISON

A year or so ago motion-picture exhibitors were moaning over a slump in spite of general business recovery, and were muttering darkly of "poison at the box office."

The Senate now has concocted an antidote for that poison, which is happy news for both the public and the local film exhibitors.

The Senate's aid to better pictures is a law which would forbid block booking of pictures, which means that the Hollywood moguls cannot force an exhibitor to take practically all the product.

Such a law, if the House follows the Senate in passing it, will make your local exhibitor, who knows local tastes far better than the Hollywood barons, the judge of what pictures he will and will not show.

This will not only eliminate many flops now forced on the local exhibitor and so on the public but will also put the whole film industry on its toes to turn out a better product.

In no other industry that we can think of is the local merchant forced to accept an inferior and unseen product from his manufacturer. The film makers say they cannot afford to take the loss in scrapping poor pictures; but should the public be forced to take that loss?

The making of better pictures probably will mean the making of fewer pictures, and that in turn may eliminate the annoying double feature, and bring back a shorter program of one fine feature and a really good short subject (plus, we'll always hope, a Mickey Mouse).

Many persons stay away from shows today because even if they get there as early as 7 o'clock, they often can't see the whole show before 11 p. m.—and then must take a B picture along with the good one.

The Senate, having found a happy solution to the block-booking evil, now perhaps can figure out some way to get our four favorite actresses—Hedy LaMarr, Virginia Bruce, Sonja Heinie, and Shirley Temple—into every picture that's made.

Taps for the Profiteer

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 28 (legislative day of Tuesday, July 25), 1939

ARTICLE BY HON. HOMER T. BONE, OF WASHINGTON

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the June 1939

issue of Foreign Service, an outstanding veterans' magazine, entitled "Taps for the Profiteer," by the able Senator from Washington [Mr. BONE].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Foreign Service]

TAPS FOR THE PROFITEER—V. F. W. PLAN TO TAX WAR PROFITS IS SAFEGUARD FOR ENDURING DEMOCRACY

(By Hon. HOMER T. BONE, United States Senator)

Another world war involving great modern nations would probably shatter modern civilization. The mounting cost of preparation for such a war is appalling. Two years ago Chamberlain of Great Britain publicly declared that if something were not done to reduce the terrible burden of armaments, it would become unbearable and pull down the standard of living for generations to come. The cost of preparation for war is coming to be regarded as the incredible folly of a civilization.

But terrible as these preparatory financial burdens are, they are but a small part of that which would be imposed upon civilized nations who participate in a new world war. The cost of such a war if reflected in bonded debt would, in my judgment, render impossible the further payment of pensions to veterans; it would also wash up the last hope of the aged in this country for any kind of old-age pensions; America would face complete economic and fiscal collapse. However grim these forebodings, they are the considered opinion of some of the wisest men in public life. It is with the realization that the onerous and oppressing economic problems of our time could never find solution if war was our lot, that the V. F. W., and millions of other patriotic Americans, have earnestly set themselves to the task of keeping America out of another such international horror.

On Americanization Day, April 27, 1938, the V. F. W. presented to the Congress of the United States petitions bearing the names of 4,000,000 citizens, which carried an earnest plea to keep this country out of war. While few realize how completely the scientific achievements of this age are being marshalled in deadly preparation for the mass murder we know as war, there is a general recognition that this is being done. The fear of war reflected in the petitions I have mentioned rests upon a very substantial basis.

It is a happy omen for America that as the present crisis in Europe deepens we are not contemplating it as we did in 1914. Millions of Americans are altogether too familiar with the terrible burden the last war imposed upon us to have any illusions regarding another one. They know that for a thousand years European nations have engaged in murderous wars, none of which has solved their problems. The World War will impose an ultimate burden of $100,000,000,000 on the United States and that frightful outpouring of money, with the attendant loss of life and health of those who participated, has brought nothing but disillusionment and a feeling of frustration and futility. If our contribution had enthroned democracy and made life happier and safer for the peoples of the earth, the sacrifice would have been justified. The ghastly aftermath of the World War ought to be sufficient answer to those who would thrust us into a new conflict with the hope that we might do a better job than we did 20 years ago.

Veterans, and all other patriotic Americans who place peace as the first objective in their program, are mindful of the fact that careless and thoughtless acts may again involve America in another conflict. Because of this, they have set themselves to the task of attempting to eliminate, in advance, one of the most vicious and unholy practices that characterized our part in the World War. That unnatural and un-American thing was war profiteering. It has no defenders and yet efforts to get at it by legislation have so far proven futile. It is difficult to understand why this should be so, since both the Democratic and the Republican Parties have bitterly assailed this abuse, and ever since the war ended, some veterans' groups throughout the country have been insistent in their demands that during another war property should be drafted along with men.

Let me set forth two typical platform declarations so that there may be a clear understanding of how far our major parties have gone in this respect. In 1924, the Democratic Party in its national platform said:

"War is a relic of barbarism, and is justifiable only as a measure of defense. In the event of war in which the manpower of the Nation is drafted, all the resources should likewise be drafted. This will tend to discourage war by depriving it of its profits. Those who must furnish the blood and bear the burdens imposed by war should, whenever possible, be consulted before this supreme sacrifice is required of them."

In the same year, the Republican national platform contained this language:

"We believe that in time of war the Nation should draft for its defense not only its citizens but also every resource which may contribute to success. The country demands that should the United States ever again be called upon to defend itself by arms, the President be empowered to draft such material resources and such services as may be required."

At the outset let us have a clear understanding of this language. When our major parties bluntly called upon the country to "draft" property—every resource—as we draft men, this plain language should mean exactly what it says, or it is a monstrous fake and fraud. When we pass the inevitable selective-service act, which will be our first act in a new war, we will not draft 80 percent of your boy's body. We will draft 100 percent of him, and we will use up 100 percent of his body if necessary. We will not guarantee to him any part of his pre-war earnings. If he has been receiving $5,000 a year, he will be compelled to take the wage of a soldier—$30 a month if he is a buck private.

A lot of folks think that we had very high income taxes during the last war, but the tax laws were so drawn that men piled up monstrous war-profit fortunes which the Government was not able to capture by the tax levels then in force. The percentage of profits left after the tax was applied left a margin so great that the inevitable and frightful rise in prices made actual dollar profits rise to scandalous levels. Prominent newspapers have pointed out many times that during the World War we created thousands of new millionaire incomes in America, besides which we added inordinately to the size of the vast private fortunes then in existence. The whole wretched business became a national disgrace that smelled to high heaven. This unholy scramble for profits explains why there was such a revolt against the practice of war profiteering and why the great political parties place in their platforms the demand that property be drafted in another war exactly as we draft men.

Students of our Constitution, however, know very well that you may not lawfully draft property—that is, take it without paying "just compensation." Therefore, those who would try to make the pledges of our great parties actually mean something are compelled to apply the only really available remedy under our Constitution. That remedy is taxation applied against net profits.

That tax should be high enough to make it utterly impossible for a human being to profit inordinately out of war. There is and can be no question of the constitutionality of such a tax and it is the one effective way to make a so-called draft which will achieve the end sought by veterans and other patriotic citizens. That is why the V. F. W. has sponsored the introduction of S. 1885, which bears the names of 50 Senators. Companion bills were introduced by 14 Members of the House about the same time.

This particular legislative proposal has been before Congress since 1935 and has had the attention of committees. Members of Congress have had ample opportunity to examine its terms. I would not undertake to state the precise attitude of the Veterans of Foreign Wars with respect to all the tax levels prescribed by this bill. There is honest divergence of opinion as to whether a corporation should be allowed to retain a profit of 5 percent or more than 5 percent. There may be an honest difference of opinion as to whether individuals should be allowed to keep more net income than the amount prescribed in the bill. I think I correctly state the attitude of the Veterans of Foreign Wars in saying that this organization approves the general principles of the bill, because it is the first fundamental approach to the problem of war profiteering, and it is the first genuine legislative effort to take the profit out of war. Veterans, and the authors of the bill, are not going to quarrel with anyone over details or over matters that can be easily ironed out in committee. They want to make party pledges mean something, and above all they want to keep faith with the American people and with those who made the supreme sacrifice of life and health in the last war. All of us can surely agree with the declaration of one great party in 1932 that:

"A party platform is a covenant with the people to be faithfully kept by the party when entrusted with power, and that the people are entitled to know in plain words the terms of the contract to which they are asked to subscribe."

When we lay such a declaration alongside the pledges of both of our major parties to draft property like we draft men, it will be difficult for anyone honestly to quarrel with the fundamental principles embodied in the war-tax bill.

A few publicists have criticized the bill as being too drastic. It is not nearly so drastic as seizing the body of your boy and using it up in the hell of modern war—and let it be always remembered that the boys who make such a sacrifice are helping preserve the property and the lives of those who remain at home in safety and security. I doubt if a single economist can be found bold enough to assert that the financial cost of another war would not in itself completely upset our economic system. More the reason why we should pay for the war as we fight it, if we are ever forced into another war. This would, in my judgment, be the only course that would prevent financial ruin for America.

At the very outset of the World War, 250 of the leading economists of the United States sent a petition to Congress urging the adoption of the principles embodied in S. 1885, and they pointed out that unless we paid for the war out of current net income through a war-profits tax, we would leave a hideous burden of debt and deflation and depression after the war. That is exactly what happened. One need not be a student of economy to know that this country would have been infinitely better off had we been able to complete the war without the frightful debt that it left. Financing a war by going into debt always leads to inflation during the war, followed by deflation and depression after the war. It is this universal experience which was so clearly pointed out by the great body of economists I have mentioned. On this list of names, you will find some of the leading, and certainly some of the most conservative, economists in America.

It may be of interest to readers to know that studies covering national income during the war indicate that the provisions of this bill, had they been in effect during that time, would have raised sufficient money to pay for our part of the cost of the war. Modern wars are not fought by rather small bodies of professional soldiers. They involve mobilization of entire populations in one vast cooperative effort. The day is past when we can shirk the responsibility

of equalizing the burdens of war and bringing every resource of the Nation into the struggle.

In view of the inevitable consequences of another world war participated in by America, the capture of the larger part of the profits stay-at-home Americans make during war would be a comparatively slight contribution to preserve America and keep it safe and solvent in such a mad world. Paying as nearly as possible for the war while we fight it would be common horse sense and good social insurance, in view of the fact that our whole economic structure might and probably would collapse under the impact of another frightful war debt added to the present debt burden.

These are some of the reasons why the war-tax bill seems to so many of us to be grounded on fundamental morality and financial sense.

One final consideration: It would be the supreme tragedy of all time for us to engage in a war for democracy abroad when the price might be the destruction of democracy in America. It is my honest opinion that that is the price we would probably pay for participation in another world war. Bills have been prepared by the War Department for introduction the moment war is declared. I know of seven of these legislative proposals; and if they are passed, as undoubtedly they would be in the hysteria that accompanies a declaration of war, they would clamp down upon this country a complete dictatorship. They are so drawn that they would give the President of the United States the autocratic powers now enjoyed only by the heads of dictatorships in Europe. No one knows how long they might remain on the books. The least they would do would be to transform America from a democracy into a dictatorship.

It is the certainty that democracy would perish in America during war—that the cost of war would smash our system unless it was financed from war profits—and the great fear of so many men in Congress that war might utterly destroy the Republic, which explains why so many Members of Congress are now engaged in an attempt to keep this country free from any and all entanglements that might involve us.

Equal Sacrifices for All

EXTENSION OF REMARKS
OF
HON. HOMER T. BONE
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, July 28 (legislative day of Tuesday, July 25), 1939

ARTICLE BY MILLARD W. RICE

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief article appearing in the April 1939 issue of Foreign Service, the official organ of the Veterans of Foreign Wars, by Millard W. Rice, legislative representative of the Veterans of Foreign Wars, under the caption "Equal Sacrifices for All."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EQUAL SACRIFICES FOR ALL—50 SENATORS SIGN V. F. W. BILL TO TAX EXCESS WAR PROFITS

(By Millard W. Rice, legislative representative, V. F. W.)

Bills to tax the profits out of war by steeply graduated income and other taxes, in order to provide for an effective national defense, to promote peace, to encourage actual neutrality, to discourage war profiteering, to distribute the burdens of war, and to keep democracy alive, and for other purposes, were introduced on March 21, 1939, under the sponsorship of the Veterans of Foreign Wars of the United States, by 50 joint authors in the Senate and by 4 authors in the House.

The joint authors in the Senate were Senators HOMER T. BONE, BENNETT CHAMP CLARK, GERALD P. NYE, ARTHUR H. VANDENBERG, MATTHEW M. NEELY, LYNN J. FRAZIER, ERNEST LUNDEEN, HENRIK SHIPSTEAD, ARTHUR CAPPER, ROBERT M. LA FOLLETTE, JR., ROBERT R. REYNOLDS, WILLIAM J. BULOW, CARL A. HATCH, JOSH LEE, EDWIN C. JOHNSON, PAT MCCARRAN, ELMER THOMAS, JAMES E. MURRAY, WILLIAM H. SMATHERS, VIC DONAHEY, RUSH D. HOLT, GUY GILLETTE, H. H. SCWARTZ, JAMES H. HUGHES, CLAUDE PEPPER, HENRY ASHURST, CHARLES W. TOBEY, BURTON K. WHEELER, RUFUS C. HOLMAN, D. WORTH CLARK, PRENTISS M. BROWN, CLYDE M. REED, ALEXANDER WILEY, FREDERICK VAN NUYS, WALTER F. GEORGE, THEODORE G. BILBO, DENNIS CHAVEZ, CHAN GURNEY, JOSEPH C. O'MAHONEY, FRANCIS T. MALONEY, ERNEST W. GIBSON, LISTER HILL, HARRY S. TRUMAN, CHARLES O. ANDREWS, W. WARREN BARBOUR, TOM STEWART, CLYDE L. HERRING, SHERIDAN DOWNEY, ROBERT F. WAGNER, and RICHARD B. RUSSELL, JR.

The separate authors in the House were Congressmen JERRY VOORHIS, FRANCIS H. CASE, JOE STARNES, and JAMES E. VAN ZANDT, past commander in chief of the V. F. W., whose bills, respectively, are H. R. 5184, H. R. 5176, H. R. 5183, and H. R. 5177.

The Senate bill, S. 1885, has been referred to the Senate Committee on Finance, whereas the House bills have been referred to the Ways and Means Committee.

It will be remembered that the V. F. W. sponsored the introduction of similar bills late in the Seventy-fifth Congress. Last year S. 3912 had 27 joint authors, a greater number than on any bill ever introduced in the Senate, except the so-called cancer clinic bill, which, about 2 years ago, had all 96 Senators as joint authors. Introduced by 50 joint authors in the Senate, S. 1885 would seem to have strong support toward enactment.

Detailed tax schedules, to go into effect whenever Congress shall declare the United States to be in a state of war, are provided for in this proposed War Profits Taxation Act. Taxing the profits out of war, by steeply graduated personal income and corporation profits taxes, is the primary objective of this taxation measure.

As to individuals, there would be a normal tax of 6 percent on all incomes above a personal exemption of $500, plus $500 for a spouse, plus $100 for each dependent, together with superimposed surtax rates ranging from 10 up to 93 percent on net incomes in excess of $20,000.

As to corporations, there would be a tax of 15 percent on net incomes not in excess of 2 percent of their adjusted declared value, 25 percent of net incomes not in excess of 6 percent of such value, and 100 percent of net incomes in excess thereof.

The only honest and effective way to take the profits out of war is by steeply graduated personal-income and corporation-profits taxes—not by any regimented control of prices of commodities, quotas of production, or by any semblance of fascism, communism, state socialism, or any other form of dictatorship—which would be very difficult, if not impossible, to discontinue after the termination of war.

Drafting income by imposing the drastic profits taxes here proposed would make it possible to pay for the costs of war on a pay-as-you-fight basis. The profits of war would be made to pay for the burdens of war by this taxation method, which in turn would tend to equalize the profits and burdens of war. Everyone would thus be made to realize in advance that paying for the costs of war out of income received would leave less net income than during time of peace. This realization would encourage a universal desire for perpetual peace.

By making profiteering impossible through this taxation method during time of war the necessity for any dictatorship control to accomplish the same end would be avoided. No control of prices, priorities, quotas, finance expansion, conscription of industry or labor, control over securities, commodities, or capital is provided for in this bill.

This proposed legislation would honestly strive to accomplish what its title indicates—tax the profits out of war.

Its enactment would cause residents of this country to realize that any future war would result, not only in the sacrifices of the lives and bodies of young men, but would also result in the sacrifice of nearly all profits, above those needed to pay for living expenses, on the part of all those behind the lines. The burdens of war would thereby be more evenly distributed. Potential profiteers of any possible future war, realizing that net profits, after payment of war taxes, would be less during time of war than during time of peace, would very probably be instilled with a strong desire for a policy by our country of actual neutrality. This bill would take the "pay" out of "pay-triotism."

A more effective national defense would be promoted by this legislation because all citizens would be required to contribute toward the costs of war, and none would be permitted to profit abnormally by reason of the Nation's emergency in war. Such a policy would help to arouse the enthusiastic cooperation and determined patriotism of all citizens to win any such war as speedily and as successfully as possible.

The Hatch Bill

REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, July 28, 1939

Mr. PLUMLEY. Mr. Speaker, in common, I take it, with many Members of the House, I have received requests for information with respect to the practical effects of the Hatch bill.

I have obtained from what I consider an authoritative source an analysis of the bill, if and when it becomes a law, which analysis I have studied, amended, and for the substantial accuracy and correctness of which I vouch.

The statement referred to follows:

WHAT THE HATCH BILL ACTUALLY DOES

Just now the discussion relative to the Hatch bill pertains to the possibility of a veto, even of a pocket veto, in which connection it

will be recalled that the Constitution provides that: "If any bill shall not be returned by the President within 10 days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless Congress by their adjournment prevent its return; in which case it shall not be a law." Thus, it is obvious that Congress will not adjourn until, or after, the expiration of the 10 days; that is, not until after Wednesday next.

In the *Pocket Veto case* (279 U. S. 655) it was held that: "A bill which is passed by both Houses of Congress and presented to the President less than 10 days (Sundays excepted) before the adjournment of that session, but is neither signed by the President, nor returned by him to the House in which it originated, does not become a law."

However, if and when it becomes the law its practical application would appear to be that the law does not affect nor change the status of any official or employee of the Federal Government. It does not induct anyone into the classified civil service, nor remove anyone from it. It does, however, place those in the unclassified civil service under many of the political prohibitions and affords them much of the protection against political exploitation that civil-service regulations provide for those in the classified civil service.

The following are declared to be unlawful by this legislation:

For any person, no matter who it may be, including employers, to "intimidate, threaten, or coerce" anyone to vote other than as the voter pleases in any election where Federal officials are elected.

For any official or employee in the executive branch of the Government to use his or her official authority to influence or affect the nomination or election of any Federal official or take any active part in political management or political campaigns. (Excepted from this prohibition are the President, Vice President, heads and assistant heads of executive departments, and Presidential appointees who determine foreign policies and those policies that affect Nation-wide administration of Federal laws.)

For any person to promise, directly or indirectly, any employment work, compensation, or other benefit, provided for or made possible by an act of Congress, to anyone as a reward or consideration for any political activity, including a vote.

For any person to deprive, or threaten to or attempt to deprive anyone of such Federal employment, compensation or benefit on account of political activity, race, creed, or color.

For any person to solicit, or receive—without solicitation—any subscription or contribution from anyone receiving compensation or employment benefits from any Federal relief appropriation.

For any person to provide for political purposes to anyone a list of the names of those receiving employment or compensation under relief appropriations.

The measure provides also that no part of any appropriations made for relief purposes shall be used for the purpose of interfering with, restraining, or coercing any individual in the exercise of his right to vote at any election.

The law covers primary as well as general elections, where Federal officials are to be elected, and nominating conventions. It bans from public employment, where Federal funds are paid, any person who advocates the overthrow of constitutional government in the United States.

It will be seen, therefore, that the bill as it went to the President for his signature protects every Government employee to say what he pleases, to vote as he pleases, to keep whatever money he earns. It does not infringe anyone's constitutionally guaranteed liberty, but, on the contrary, it cramps the style of those who would undertake to tell Government employees what to say, how to vote, or how much they must pay in cash, "on the line" or by promissory note, to campaign chest or for "dinner" tickets. It is true it forbids any administrative official of the Government to threaten, intimidate, or coerce a voter, or to deprive anyone of a W. P. A. job, or to threaten directly or by indirection to deprive anyone of a job because of their politics, their race, their color, or their creed.

It provides, moreover, that money appropriated for relief purposes cannot and shall not be taken or solicited for use for political purposes or ends. The solution of the problem is found in the statement that if there is anything unconstitutional in saving, conserving, protecting, and defending the constitutional rights of the people, then the act is, to be sure, unconstitutional; otherwise not.

United States Housing Authority Program Popular Throughout the Nation—The Cities Contribute Their Share to Public Housing

---

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

Mr. LEAVY. Mr. Speaker, in considering the expansion of the U. S. H. A. low-rent housing program definitely misleading statements have been made concerning the amounts contributed by local housing authorities to get rents down. I want to correct these misunderstandings and to give the House the facts. The housing program has been pushed forward with such speed in recent months that ample evidence now exists to show that every year the localities are actually contributing half as much as the Federal Government contributes annually. I submit that it is a very remarkable and encouraging thing when localities are so enthusiastic in their sponsorship of a program.

It is the more remarkable when you consider that the act which we passed 2 years ago requires that the community contribute only one-fifth of the Federal subsidy. If now the cities are contributing annual amounts equal to not one-fifth but to one-half of the Federal subsidy, we can only conclude that our cities want public housing, want it badly, and know that they gain far more than what they seem to be spending for it.

The fact that this local contribution has in many cases taken the form of exempting low-rent housing projects from local taxation does not alter the case in any particular. There is the project; it is worth so much; it is to be taxed so much. When the city has determined to exempt these new homes from local taxation in order that rents may be brought down low enough to rehouse those families of low income now living in slums it is precisely the same thing as the city contributing exactly the same amount of money in cash. It has the exact same effect in lowering rents. And that is the object of the low-rent housing program: to get rents down so that those families desperately in need of housing can get it.

REAL DEMAND FOR UNITED STATES HOUSING AUTHORITY

When this Congress created the United States Housing Authority, it did so in response to a clear-cut demand that low-income groups be housed. We had seen experiments in low-cost housing, so-called, that had failed in this primary purpose. We wanted a program that would achieve its purpose, that would reach the really low-income families of the Nation. We wanted a program that would get into income brackets that private builders have never reached and probably will never reach; we wanted a truly noncompetitive program. We now have that program. It has been made possible with practically no substantial drain on the Treasury because of the system of annual contributions shared by the Federal Government and the cities.

PLAN HAS BEEN A GREAT SUCCESS

In the face of the brilliant success of this program in the past year, and the whole-hearted cooperation given by cities wherever this program is in operation, I believe it is malicious that this great Nation-wide effort should be belittled. In these days, when we are everywhere striving to get cities to shoulder their own burdens or at least to share them fairly with the Federal Government, it seems to me that we should at least have the common sense to recognize that here is a program—I might say a unique program—in which the cities are willingly doing just that. When a city comes forward with its contribution to get rents down, when it pays far more than anything in the Housing Authority Act requires, and far more than any Member of this Congress ever dreamed cities would when we passed this act 2 brief years ago, I say that we should hail this fact with glad cheers instead of perverting the facts and refusing to recognize the local enterprise and initiative represented by it.

I am glad to be able to stand here and say that the cities of America are doing their share in the war against slums. I am glad that this Congress has finally created a sound and workable low-rent housing program to remove forever the menace of the slum. But I am proud that such willingness to tackle their own problems has been shown by our cities in this tangible way. When the Housing Act specifies that the cities shall put up one-fifth of the annual contribution, and 2 years later we find from actual experience that they are putting up one-half—I say that is news that every Member of this House should be able to understand and should be eager to hear.

COMMITMENTS MADE AND REQUESTS PENDING

In order that we may have the figures showing allocations to States that have enabling legislation and requests now pending, which are contingent upon the passage of the present housing bill, I include as a part of my remarks, complete lists. Every Member can readily see what this means to the less fortunate and ill-housed constituents in his district. I am sure, if he will examine these tables, he will never vote against this bill.

The complete list of commitments by the United States Housing Authority (including earmarkings outstanding and loan contracts approved) for 161 local housing authorities in 29 States, the District of Columbia, the Territory of Hawaii, and Puerto Rico is as follows:

State and city	Earmarkings outstanding	Loan contracts approved	Total commitments for the State
Alabama:			
Anniston		$550,000	
Birmingham		9,705,000	
Gadsden	$900,000		
Mobile		1,649,000	
Phenix City		702,000	$13,506,000
California:			
Los Angeles City	22,507,000	2,493,000	
Los Angeles County		5,682,000	
Oakland	2,409,000	2,591,000	
San Francisco	3,628,000	11,372,000	50,682,000
Colorado:			
Denver		3,132,000	
Pueblo	1,000,000		4,132,000
Connecticut:			
Bridgeport	767,000	5,733,000	
Hartford	4,500,000		
New Britain	1,500,000		
New Haven	1,964,000	3,536,000	
Norwalk		578,000	
Waterbury	1,000,000		19,578,000
Delaware: Wilmington	2,100,000		2,100,000
District of Columbia: Washington	4,142,000	10,858,000	15,000,000
Florida:			
Daytona Beach		458,000	
Fort Lauderdale		439,000	
Jacksonville		3,537,000	
Miami		3,281,000	
Orlando		548,000	
Pensacola		1,055,000	
St. Petersburg		959,000	
Sarasota	87,000	183,000	
Tampa		3,916,000	
West Palm Beach	19,000	731,000	15,213,000
Georgia:			
Athens		625,000	
Atlanta		15,011,000	
Augusta		2,357,000	
Columbus		3,459,000	
Macon	108,000	1,642,000	
Rome		829,000	
Savannah		3,791,000	27,822,000
Hawaii	547,000	2,853,000	3,400,000
Illinois:			
Chicago	7,326,000	8,674,000	
St. Clair County	1,500,000		
Peoria		4,227,000	21,727,000
Indiana:			
Anderson		880,000	
Delaware County		427,000	
East Chicago	1,000,000		
Fort Wayne	1,500,000		
Gary	1,787,000	1,013,000	
Hammond	1,800,000		
Kokomo		634,000	
Marion	500,000		
Muncie		1,141,000	
New Albany	450,000		
Richmond	600,000		
Vincennes		317,000	12,049,000
Kentucky:			
Covington	753,000	1,947,000	
Frankfort	102,000	348,000	
Lexington	159,000	1,191,000	
Louisville	5,060,000	8,446,000	
Newport	750,000		
Paducah		906,000	19,602,000
Louisiana: New Orleans		25,311,000	25,311,000
Maryland:			
Annapolis		478,000	
Baltimore	1,409,000	21,591,000	
Frederick	1,000	449,000	23,928,000
Massachusetts:			
Boston	555,000	28,445,000	
Cambridge	2,685,000	1,815,000	
Chicopee	1,000,000

LIST OF UNFILLED REQUESTS FOR HOUSING LOANS FROM U. S. H. A.

NOTE.—The following is merely a list of the requests already received for housing loans and more requests are being received each day. These requests do not include any applications from the many local public-housing agencies which will be created in the States which have recently enacted enabling legislation, nor does it reflect the needs of many communities throughout the country which are disinclined to make requests until there is some prospect of additional funds being available.

Credit for Small Business

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 28 (legislative day of Tuesday, July 25), 1939

RADIO ADDRESS BY HON. ROBERT M. LA FOLLETTE, JR., ON JUNE 15, 1939

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address delivered by me and broadcast by transcription over station WHA, Madison, Wis., on June 15, 1939, on the subject Credit for Small Business.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last year the United States Department of Commerce called a Nation-wide conference of businessmen for the purpose of discussing the problems confronting small, independent business. Out of that conference came an almost unanimous appeal for legislation which would provide adequate credit to small business on reasonable terms.

There is no doubt about the fact that our smaller businesses have not shared as much as they should in what measure of economic recovery we have achieved, and the lack of credit suitable to their purposes has certainly been a primary factor in holding them back. The conference called by the Department of Commerce served to focus public attention upon the problem, and there is legislation now pending in the Senate which I want to call to the attention of the businessmen of Wisconsin.

The average independent businessman needs long-term credit these days. Our economy has had to weather some bad years since 1929, and most businesses, especially the small ones, have had to live off their capital more or less. Those which did not have sufficiently large cash reserves to keep them going have had to take it out of their capital resources by way of delaying repairs, neglecting to provide for depreciation of equipment, postponing improvements vital to the continued success of the business, and reducing personnel to the point where it is inadequate to make the most efficient use of capital resources.

In other words, business has been forced in many instances to practice the kind of false economy which is being urged upon the State and Nation as a whole by some short-sighted individuals.

These businesses have reached a point now where the long-delayed repairs must be made in their capital resources if they are to survive competitively. They need capital for new and more efficient machinery, new buildings, improved sales methods, more complete lines of goods, and many other similar forms of expansion and improvement.

These requirements cannot be financed on 60- or 90-day notes. They require credit extending over a period of years and terms which will not overburden the fixed obligations of the business in the meantime.

Unfortunately the interests of the depositors in the ordinary commercial banks require a high measure of liquidity. As a result the banks are unwilling to tie their funds up in obligations which will require a long period of time to yield the expected return.

It is customary to assume that business can secure its long-term credit from the investment bankers who underwrite stock and bond issues, but the present organization of this investment market is of little use to the smaller businesses. Any stock or bond issue aggregating less than $1,000,000 is considered small, and the underwriting costs run as high as 20 percent. Anything less than $100,000 is considered so small that it is exempt from the requirements of the Securities and Exchange Commission. That kind of a set-up obviously offers little to the businessman who wants to borrow $25,000 or $50,000.

As a consequence of this state of affairs the average businessman has no place to go to secure the kind of credit he needs.

We cannot afford to let this situation continue. Our national economy in 1929 produced a national income of over $80,000,000,000; by this time it should be able to produce well over $100,000,000,000. Yet even after 6 years of partial recovery, it is

operating far below capacity. Increased governmental activity and public works have taken up some of the slack, but the bulk of our economic enterprise is in private hands. To get our economy functioning efficiently again near capacity, we must stimulate this great segment of private enterprise to full production. This cannot be done without adequate credit provided for capital expansion.

Generally speaking, there are two ways of attacking that problem and stimulating credit expansion. One way is to pave the way for the established local banks to make additional loans by relaxing the requirements they are obliged to observe and by taking other steps which are designed to reduce the risk. The other method is more direct. It is to supplement the activities of present banking institutions by the extension of credit directly to business by the Government or some of its agencies.

Congress has tried measures of both kinds. The Federal Reserve System was modified to allow liberalization of reserve requirements and free local banks to extend additional credit. And then both the Federal Reserve banks and the Reconstruction Finance Corporation have been empowered to extend loans directly to business enterprises which are unable to secure necessary credit from their own local banks.

The results of these efforts have been disappointing on the whole. The trouble with most of them has been the rigidity of the conventional banking standards which have governed the administration of these programs. The efforts of Congress have been victims of a conflict of purposes. Congress has undoubtedly aimed to provide ways through which credit could be expanded where needed. The banks, however, by their very nature, cannot be expected to work on that basis. Their motive in lending money is to make money on the loans. And this purpose, ingrained in the practice of commercial bankers, has colored the administration of the Government's loan programs. Trying to stimulate credit expansion by supplying credit only on short-term loans where there is little risk is like pulling yourself up by your bootstraps.

There is legislation now before the Senate Committee on Banking and Currency which proposes a further effort to utilize existing financial institutions and to encourage them to extend the credit needed by minimizing the risk involved in such loans. The proposal is to authorize the R. F. C. to insure small-business loans up to 90 percent of their face value for periods extending from 1 to 10 years.

I am strongly in favor of the bill, for I think it represents a possible aid which can be made available at once. However, I do not think it will solve the problem completely.

Under present economic conditions it is difficult to make long-term loans attractive to commercial banks. The soundness of the individual loan will depend upon the extent of our general recovery. That, in turn, will depend upon a large-scale stimulation of business activity. The individual bank has no appreciable control over the general economic situation and cannot take recovery for granted in its decisions. Consequently it must necessarily for its own interests be extremely cautious in its lending policies, relying more upon past earning records of its borrowers than upon their future earning prospects as a criterion in judging loan applications.

Credit is a social instrument. It is money, just as much as are the bills of currency issued by the Federal Government. So far the Government has been willing to delegate the powers of credit creation to commercial banks, just as it once allowed them to create paper currency and circulate it. We have been unwilling to disturb that delegated authority so long as it served the purposes of the Nation's business, and every possible effort is being made to work through existing banking facilities in extending aid to business at the present time.

The question is, Will such efforts do the job? They will help, of course, but I am convinced that more thoroughgoing methods are needed.

Since the expansion of credit to private business is essential if the Nation is to prosper, and since credit is a social instrument properly placed under the authority of the Federal Government by the Constitution, there can be no valid objection to the Government's use of its credit powers for the purpose of stimulating private enterprise.

I believe in giving our existing financial machinery every encouragement and opportunity to solve the problem in its own way. If it can meet business needs, there is no need for making any changes. I do not believe in change simply for the sake of keeping things stirred up. However, the limitations of the commercial banks in meeting a national need on a national scale are obvious, and we need not replace the existing institutions to do the job, but instead simply supplement them by extending credit of a kind which they cannot and will not extend themselves.

If the Federal Government would assume the responsibility for extending credit to business on a large scale, where it is needed and could be used to advantage, the program could be its own protection. The loans would be extended on a basis of social need and worth. Past earning records could be largely disregarded as a basis for judging the loan and attention could be focused upon future prospects. Interest charges might be put upon a contingent basis; it would be paid out of the profits of the business. Such a program of expansion would not need to involve any increase in the national bonded debt. The aim of the program would be to stimulate private enterprise and the production of real wealth. It would be paid for out of the dividends of recovery. In such a program the lending agencies could protect their investments by means of their comprehensive control over the recovery process.

There are plenty of businesses in Wisconsin that want and need credit. I know that from first-hand knowledge. Practically every day I receive letters from business friends who are struggling to keep their businesses above water. In many cases their troubles are directly traceable to a lack of immediate funds. Many have applied for aid from the R. F. C. or the Federal Reserve bank and have discovered that the security requirements there are about as stringent as at their local banks.

I hope that we can secure the immediate aid offered in the proposal to insure small-business loans, and I hope we can then go ahead and work out a system of Government credit agencies whose purpose and function will be to supply long-term credit for capital expansion of our business enterprise where such credit cannot be secured from the local banks. Such a program would not only help business and solve many of the businessman's problems, but it would also be of great benefit to the whole country. The welfare of the entire Nation depends upon our ability to put our productive capacity to work producing more real wealth each year.

Railroad Legislation Lags

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, July 28 (legislative day of Tuesday, July 25), 1939

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Rail Legislation Lags," which was published in the Christian Science Monitor of July 26, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, July 26, 1939]

RAIL LEGISLATION LAGS

Already far behind time and now in danger of being sidetracked, the Wheeler-Truman transportation bill, passed in May by the Senate, could stand as one of the important actions of the present session of Congress if the House of Representatives would pass it before the rush for adjournment gets too strong.

This is strikingly emphasized by the round-table report on national transportation policy just published in the August issue of Fortune. Briefly, the report recommends adoption of six major principles to aid in increasing railroad earnings "without doing an injustice to any form of transport or imposing a heavier transportation cost on the country as a whole."

That a group which includes two railroad presidents, leaders of two railroad labor organizations, and the head of the I. C. C., has agreed on a broad basic approach to questions relating to rates, costs, labor, and centralized regulation of competing transportation systems is an important step toward the solution of this serious national problem. Their finding of an "area of agreement" should help to hasten action on the transportation measure now before Congress.

The Wheeler-Truman bill represents the consensus at this time of much thought brought to bear on the critical problem of the railroads in the United States, and while some may oppose it as unduly favorable to the railroads, it seems on balance to have much more in its favor than against it. Primarily the bill would bring inland-waterway carriers under the jurisdiction of the Interstate Commerce Commission, which now exercises regulation over railroads, motor carriers, and pipe lines. It would call for an investigation by the I. C. C. of freight-rate differentials complained of by the South and Southwest. A companion measure would establish a special court for railroad reorganizations.

But of paramount significance in the long view of the transportation problem is the provision contained in the bill for appointment of an independent board of three members to investigate "the relative economy and fitness of rail carriers, water carriers, and motor carriers" to determine in what fields each may excel and where each should be encouraged, and to investigate the degree of subsidies or other advantages at public expense enjoyed by the various forms of transportation. This is the great subject on which the public needs reliable, objective information in order to equalize the terms of competition among rail, water, motor, and possibly air carriers. That is the long-run need of the transportation business.

It should not be assumed because railroads are the chief petitioners for relief that either the Interstate Commerce Commission or the proposed investigative committee is to operate merely or chiefly as a protector for the railroads. Competition needs to be kept fluid in the transportation field, as in any other. Restrictions on motor trucking should not be made arbitrarily at the caprice

of a State or the behest of a railroad. It is gratifying to note, for instance, that the Associated Motor Carriers of Oklahoma have won in that State a repeal of the statute which set up "ports of entry" at the State line and of a license tax on out-of-State trucks, which had brought down retaliations from neighboring States on Oklahoma truckers.

But every one of the competing forms of transportation ought to be paying as nearly as possible its own way, each then to carry such business as it can obtain on its efficiency and rates under those conditions. The most likely way of bringing about this condition of fair competition appears to be through unified regulation by the Interstate Commerce Commission plus such effect on State and National laws as might come from an authentic, impartial study of the three principal forms of transportation.

Electrified Farms in Louisiana

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

Mr. BROOKS. Mr. Speaker, sometimes I believe that the last 4 years will be known in history as the age of the electric development of the American farm. With all of the other plans benefiting the farmer, I doubt that within the last 4 years any single one has been as uniformly successful in providing help and comfort to the people of our land who do not live in cities as has rural electrification.

The amount of money which has been spent nationally on this development has been great and yet additional funds are necessary. We who believe in this program of giving the farmer the advantage of electricity are even now fighting to obtain $500,000,000 more money for this purpose. The past is merely a beginning and a prophecy of what the future holds in rural electrification.

With all of this money being spent, it is interesting to know that the finest part of the program is the guaranty of the Government against the loss of one single penny in this work. Groups of farmers locally organize their rural-electrification unit, and when a number of them agree to take monthly a minimum amount of electricity, the Government will then lend to the unit money sufficient to build the lines and bring the electric current to the front door of the farm home. All that remains for the farmer to do is to have the wires actually installed in his home and to turn the switch, giving him light and power for his use, convenience, and comfort. Surely the last 4 years should be known by our farmers as the golden age of electric development.

Someone may ask, "What does this mean to our farmer?" It means cheap electricity. It means electricity cheap enough to permit him to have lights in his home in the evening, giving to himself and his wife and children the advantages of study and reading at night. It means electric current cheap enough to operate his radio and to obtain from it the news of the day from the metropolitan cities of the country and amusement from the finest and most talented artists. It means electricity cheap enough to operate electric fans, electric irons, and water pumps for his home and an infinite number of machines for reducing labor on his farm. In some communities where natural gas is not obtainable, it may even mean the use of electricity for cooking and heating purposes, reducing the labor of his wife and adding to the convenience and pleasure of living.

I will not attempt at this time to indicate the vast development in this respect which has occurred in all of the States of the United States. So much has occurred in Louisiana in the last few years in fact, that for the present I will confine myself to this local field. Several years ago two large rural-electrification projects were authorized by the Federal Government, one being the Teche Electric Membership Corporation in south Louisiana, and the other being the Valley Electric Membership Corporation in north Louisiana.

The first mentioned at that time had 343 members who were cooperative users of electricity and 104 miles of line. Shortly after the project was authorized, because of the unusual demand it was extended some 34 miles and added some 80 new members. It is certainly worthy of mention that the field representative of the R. E. A., in visiting this project recently, reported to Washington:

> This is one project that started in the black and has more than met its obligations every month since the lines were energized.

The Valley Electric Membership Corporation has grown since it started its operations until it operates over 345 miles of line in Grant and the seven neighboring parishes, and serves more than 1,200 members. It is this project that has been extended from time to time by the demand of the farmers until it has reached up to Red River and De Soto Parishes, and has for the first time provided cheap electricity for many little towns and hundreds of stores and farmhouses.

One member-user of the Southwest Louisiana Electric Membership Corporation is the county agricultural agent. In his home the kitchen is completely electrified, and he is developing an entirely electrified farm. It has been well said by an expert on home electrification that:

> The farm agent living there is a living example of using electricity to advantage in agriculture.

In Panola County, Tex., a large rural-electrification project was started several years ago. Shortly after it began its operations the people of De Soto and Caddo Parishes clamored that these lines be extended into Louisiana and they be given the same cheap electricity that east Texas was receiving. The Rural Electrification Administration made an investigation as to whether or not a project could legally cross the lines from one State to another, and I compliment the Administration on its ruling, which established a precedent, and for the first time permitted the power lines of Rural Electrification to cross the State boundaries. As a result of this fact the farmers and people living in the small towns in parts of Caddo and De Soto Parishes are now receiving electric current.

About 60 days ago two history-making projects were authorized in northwest Louisiana—one being assigned the territory included in Claiborne and parts of Webster and Bienville Parishes and the other being assigned to the Parish of Bossier, parts of Webster, and parts of Bienville Parishes. The two projects were allotted the sum of $279,000 and are designed to serve approximately 1,000 farms with some 344 miles of electric line. The building of these power lines is now going forward and within a very short time electric current will be brought to the front door of every farmer in this area. In the next 12 months, as a result of this great work, many towns in north Louisiana will for the first time be lighted with electricity and many a fond parent will thank Rural Electrification as he watches his children nightly study their school lessons for the next day.

In a special report recently received from the Rural Electrification Administration offices at Washington, it is stated that Louisiana possesses approximately 170,000 farms and that at the beginning of our work in 1935 only 3,000 farms had access to electric service. In contrast with this, at the present time approximately 10,000 Louisiana farms are using cheap electricity resulting from actual service by sponsored Rural Electrification units or as a result of extensions of private utilities under the guidance and planning of Rural Electrification. To date a total of two and one-half million dollars has been allotted to the State of Louisiana for this purpose, which will bring the electrified farms to the number of some 16,000 in our State.

It has been my privilege to work diligently in the development of all of these projects located in north Louisiana. Sometimes as I have worked upon them I have grown impatient, feeling that our people who have been denied the advantages of cheap electricity for so many years should not longer be prevented from having access to it. At times the work has progressed more rapidly and we who are interested so much in this development have felt pleased. But whether slow or rapid, the work of electrifying the farms of the Nation, and of Louisiana especially, must go on. It remains unfinished work, commanding the attention of Congress and

of our people until every person, whether he lives in the great cities along the palaced boulevards of the rich, or whether he lives in the humble cottage of the poor farmer in the cotton-producing States of the Nation, shall have the advantages coming from the use of cheap electric current.

Railroad Reorganization Act of 1939

EXTENSION OF REMARKS
OF
HON. BURTON K. WHEELER
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, July 27 (legislative day of Tuesday, July 25), 1939

EDITORIAL NOTE IN COLUMBIA LAW REVIEW FOR JUNE 1939

Mr. WHEELER. Mr. President, I ask unanimous consent that there be inserted in the Appendix of the RECORD an editorial note in the June 1939 issue of the Columbia Law Review entitled "The Railroad Reorganization Act of 1939," together with captions and footnotes. The note is published in Thirty-ninth Columbia Law Review, pages 971–986. The Columbia Law Review is among the most distinguished of the American legal periodicals. This note is a most excellent discussion of Senate bill 1869, which passed the Senate during this session and which is now pending before the House Committee on the Judiciary, where hearings thereon have been concluded.

I wish to call special attention to the conclusion of that editorial note, which reads as follows:

While the bill is likely to emerge from Congress in some altered form, it is to be hoped that its major features will be preserved. For it has been recognized for some time that the continued efficient operation of the railroads in private hands depends in large measure upon a thorough overhauling of the reorganization process and of the capital structures which emerge from it.

There being no objection, the editorial note was ordered to be printed in the RECORD with captions and footnotes, as follows:

THE RAILROAD REORGANIZATION ACT OF 1939 *

A critical aspect of the general railroad problem [1] is reflected by the roads representing about one-third of the Nation's mileage now in receivership and reorganization proceedings.[2] That this is a special problem involving more than the general conditions of depression and competition [3] is indicated by the fact that from the beginning of the century, if not earlier, railroad reorganization and receivership has been a persisting phenomenon of large proportions.[4] The financial history of many roads supports the conclusion that their present difficulties are in large measure traceable to financial abuses, mismanagement, and emergence from prior reorganizations with unsound capital structures.[5] Although the need for reorganization may thus stem in part from causes other than depression and competition, railroad insolvency intensifies an already existing crisis in the entire industry and retards rehabilitation.[6] As a result, major policies suggested as means for bettering the situation, such as consolidation [7] and Government loans [8] cannot be fully effective while a large proportion of the roads are in unsound financial condition.

From the beginnings of railroad finance until the enactment of section 77 of the Bankruptcy Act [9] in 1933, the only available procedure for coping with the problem of railroad reorganization has been the equity receivership. The suggestion that this expensive and cumbersome procedure be supplanted had been made as early as 1895.[10] The hastily enacted section 77 did not indeed provide an alternative, a reorganization procedure in bankruptcy.[11] And the 1935 amendments made some much-needed improvements in the procedure of formulating and ratifying a plan, and introduced a measure of control over administration of the debtor's estate and the activities of reorganization committees.[12] However, both acts failed to displace the equity receivership which remained as an alternative procedure, wholly unregulated.[13] Both the original section 77 and the 1935 amendments gave undue prominence to the debtor company.[14] The 1935 amendments were also subject to a number of ambiguities, notably in the provisions relating to sale at not less than a fair upset price,[15] valuation of the properties,[16] and treatment of priorities.[17]

The proposed Wheeler-Truman Act introduces two far-reaching innovations in the jurisdictional aspects of railroad reorganization, the assimilation of equity receiverships into its amended section 77,[18] and the creation of a new tribunal, the Railroad Reorganization Court, to exercise exclusive jurisdiction in all equity receivership and section 77 proceedings.[19] The bill seeks also to clarify and expedite procedure under section 77; to afford closer regulation of the administration of the debtor's estate and the activities and compensation of committees; and to prescribe standards for insuring the soundness of the financial structures which will emerge from the reorganization.[20]

For a long while there has been recognition of the desirability of a single body for handling the railroad-reorganization problem.[21]

---

* S. 1869, 76th Cong., 1st sess. (1939). The bill was introduced in the Senate on March 20 (legislative day, March 16) by Senator WHEELER for himself and Senator TRUMAN. It was passed, with amendments, by the Senate on May 27, and referred to the House of Representatives Committee on the Judiciary on May 29.

[21] Taft, supra note 4, at 264; see Hough, J., in *Guaranty Trust Co.* v. *International Typesetting Co.* (S. D. N. Y. Feb. 19, 1916) (unreported), cited in Rosenberg, A New Scheme of Reorganization

In coping with so large and complex a question, the ordinary Federal court is placed under such disadvantages as the press of other business, unfamiliarity with the problem, lack of consistent policy, and disinclination to subject reorganization plans to a thorough scrutiny.[22] An informed tribunal having as its sole business this intricate problem should conduce toward the formulation of uniform principles and the prompt dispatch of business.[23]

The creation of the Railroad Reorganization Court and assimilation of equity receiverships into its jurisdiction will not, under the bill, result in the sacrifice of any progress already made in pending receivership or section 77 proceedings. The bill provides that any action hitherto taken under section 77 or in receivership proceedings is not invalidated; [24] that pending actions and appeals are to be transferred to the new court at its discretion and shall continue as if begun in the Railroad Reorganization Court; [25] that matters submitted for final decision in other courts are to be disposed of in those courts; [26] and that independent trustees and counsel may be substituted in pending reorganizations in the discretion of the court.[27] Plans approved and certified by the I. C. C. prior to this act or within a period of 9 months after its passage may be made effective without meeting the standards required by the bill as prerequisites for I. C. C. approval of pending or future plans.[28] The large volume of cases now pending and already partially disposed of make these provisions of special significance.

I. PROVISIONS FOR ADMINISTRATION OF THE DEBTOR'S ESTATE

In providing for an independent trustee and counsel, although permitting the employment of ex-employees by the trustee,[29] the present bill is enacting for section 77 what the Chandler Act purports to do for reorganizations generally.[30] For many reasons it may be undesirable to retain the old management during reorganization proceedings. The necessity for reorganization, possibly indicating a certain inadequacy in the old management, would seem to demand a change of control in order to continue operations efficiently.[31] And it has been suggested that the removal of executives from salaried positions during and after the reorganization proceedings might well induce greater care in the handling of affairs before the corporation is brought into court.[32] The objection that a new trustee, presumably being unfamiliar with the organization, will not be as efficient as the old management [33] is partially overcome by the provision allowing him to choose his staff from among the ex-employees. Moreover, since, unlike section 77B, section 77 will be administered by a special court, peculiarly experienced for its task,[34] it is more probable that a well-qualified trustee will be chosen than is the case in a Federal district court. The potential inefficiency of an independent trustee in continuing the operation of the debtor may be of less detriment than the potential laxity of a trustee recruited from the old management.[35]

Insofar as a trustee's duties include the payment of interest on charges and payment of compensation to the debtor, it is desirable that he be impartial.[36] This is more easily secured by creating an independent trustee than by continuing the old management in office or by appointing a "friendly" trustee. The function of evaluating the worth of the old executives [37] and prosecuting causes of action against them for fraud or mismanagement [38] can only be carried out effectively by an independent trustee and counsel. Not only will an independent trustee not assist the debtor in composing a plan of reorganization partial to the debtor,[39] but he should have the effect of discouraging manipulation designed to secure control of the enterprise for various groups,[40] and he will tend to bring the proceedings to a close more rapidly than has been the case in the past.[41]

In view of the reluctance with which investigation of and prosecution for prior irregularities has been conducted,[42] the statutory requirement of prompt action by the trustee [43] should aid in the recovery and preservation of the debtor's assets. The power to obtain files, papers, and records which the bill gives to the trustee gives him a potential effectiveness for this work greater than that of any of the bondholders' committees.[44] Further protection is afforded by the provision which prohibits persons whom the court has probable cause to believe to be guilty of misconduct from holding office in the reorganized company.[45]

Since it is necessary that the corporate organization of the debtor be maintained during reorganization proceedings, the bill provides, as does the present law, for compensation to the debtor from the income of the estate during the pendency of proceedings.[46] However, the bill seeks to eliminate the advantage possessed by interests in control of the debtor company under the existing law, which places the debtor company under a duty to formulate a plan,[47] and which permits compensation to the debtor even though the plan may have been primarily for the benefit of those in control of the debtor company.[48] Thus the bill requires that the compensation to the debtor be for services rendered in the interest of the entire estate and not merely for the benefit of a particular class.[49] The preservation of the estate's assets is also furthered by the provision that the court may allow compensation to committees rendering services to particular classes, to be paid by the class benefited and not from the assets of the estate.[50]

The value of the provision for the payment of interest to bondholders or on other fixed charges during reorganization proceedings,[51] like many other provisions of this bill, depend almost entirely on the diligence with which the court and trustee will supervise these dispursals. Although there can be no objection to payment of legitimate interest,[52] payment at the expense of operating or financial efficiency, or on charges which are of dubious value to the estate,[53] is undesirable.

Designed to obviate the injustice sometimes done to interested parties by narrow dispensation of the privilege of intervention in the Federal district courts [54] is the provision that "intervention

shall be liberally allowed." [55] Like the Chandler Act,[56] the bill permits representatives of employees "to intervene and be heard on all matters affecting the interests of the employees."[57]

II. PROCEDURAL CHANGES TO FACILITATE FORMULATION AND RATIFICATION OF A PLAN

The proposed changes in the procedure of submission and approval of a plan would seem to further the end of reducing delay. A recognized source of delay, occurring at the very outset of the proceedings, has been the reluctance of the debtor to offer a plan promptly.[58] Court consideration of a plan is now accelerated by relieving the debtor of the duty of initially submitting a plan; for, while other parties in interest could submit plans prior to this bill, their examination would be deferred until the debtor put forward its plan.[59] This change also tends to eliminate the inequitable and dilatory consequences of permitting the debtor to draw upon the resources of the estate to prepare a plan probably favorable to the equity interests.[60]

Another measure designed to bring about the early formulation of an acceptable plan is afforded by the provision that the court may request the I. C. C. to designate a member of its staff to act as mediator between interested parties.[61] This mediator's prestige, informed judgment, and access to information [62] should aid in the resolution of conflicting interests.[63]

As soon as the court has fixed the time for the filing of plans the I. C. C. is directed to make prompt determination of the size of the new company's maximum financial burden which could be safely imposed on the properties consistently with the public interest.[64] The I. C. C. may make this finding before any plan is submitted, or may defer it until its study of a proposed plan for the purpose of the issuance of a certificate of approval.[65] If this determination is forthcoming before the formulation of any plan, it should undoubtedly facilitate the preparation of plans. Even if deferred until the certification of a plan, the early initiation of the investigation should render it possible for the I. C. C. to make prompt disposition of a plan when presented.

The inflexibility of the present section 77 in denying the court all power to modify a plan after its certification by the I. C. C.[66] is sought to be remedied by the proposed bill. The court is to be permitted to modify a plan without resubmission to the I. C. C. when it is satisfied that the plan as modified conforms to the policy and standards laid down by the act or when the plan is one which has been certified by the I. C. C. before the effective date of the act or within the 9-month period following its enactment.[67]

While these innovations bring about closer interaction between the court and the I. C. C. from the very outset of the proceedings, there is a clear segregation of the duties and functions of court and Commission.[68] Thus the I. C. C. is confined to arriving at a sound capital structure in the public interest without regard to the questions of participation of interests and distribution of securities under a plan.[69] And it is the exclusive province of the court to pass upon the fairness of the plan in its treatment of the various creditor and stockholder interests.[70] The clear separation of these functions should go far toward removing one of the most potent causes of unsound reorganizations, the expansion of capital structure beyond safe limits in according concessions to various interests during the bargaining process.[71]

The bill purports to offer guidance to the court in its task of appraising the fairness of the allocation of securities to the various claimants under a plan by explicitly adopting the Boyd [72] rule of equity receiverships.[73] The broad language at present in section 77 [74] seems to have held out undue hope to tenuous equity interests, on whose behalf it has been argued that section 77 is essentially a composition statute under which the Boyd rule, barring the equity from participation until creditor claims are as fully satisfied as is reasonably possible, is not applicable.[75] Although this doubt would now be dispelled, all the difficulties involved in the Boyd rule itself would be left for the new court.[76]

The hold-up value of securities of little or no value may well have been enhanced by the ambiguities concerning the right to a sale at not less than a fair up-set price left by the 1935 amendments to section 77.[77] The original section 77 explicitly provided that nonassenting minorities might be dealt with only by way of either appraisal of their claims, or valuation, or sale at not less than a fair up-set price.[78] In 1935, however, these provisions were eliminated, and in their stead the court was given power to confirm a plan, even though not accepted by two-thirds of each class of creditors and stockholders voting on the plan, upon a finding that the plan accorded fair and equitable treatment to the interests or claims rejecting it.[79] Insurance companies and other creditor interests, doubtful as to the constitutionality of this provision, were reluctant to rely on this section to make a good title to the propery in the reorganized company, and sought rather to provide for a sale.[80] The I. C. C., however, until very recently has interpreted the 1935 amendment to deprive the creditors of their right to a sale.[81] The present bill now explicitly vests in the court the power to order such sale.[82] In providing that the minority of a class shall be bound if sale is made pursuant to a plan approved by two-thirds of the members of that class voting on the plan,[83] the bill also eliminates any justification for the undesirable practice of fixing the up-set price at a low figure to coerce dissenters into approval of the plan.[84] If the arbitrary method hitherto utilized to fix the up-set price [85] is thus rendered obsolete, it would now be possible for the up-set price to reflect the "value" of the property in some significant manner.

The provision for valuation of the property by the I. C. C. for the purpose of sale at not less than a fair upset price or for any other purposes of a plan does, indeed, seek to achieve this end by making earning power the major determinant.[86] The 1935 amendment, which sought to place a like stress upon earning power, failed to express this with sufficient clarity.[87] The bill is now so worded as to

[83] Id. at 45, ff. 19–25, 46, ff. 1–5.

[84] See Eastman, Commissioner, dissenting in Chicago, Milwaukee & St. Paul reorganization, 131 I. C. C. 673, 703 (1928); Moulton, the American Transportation Problem (1933) 323; Lowenthal, the Investor Pays (1933), 349. Lawyers for the reorganization managers in the *St. Paul case* warned the court against requiring "a price for the property which would make the cash part of the bondholder's option approach too nearly the market value of the bonds" for then there could "never be a reorganization." Ibid.

[85] The fair up-set price has frequently been arrived at by a formula which fixes the cash payment to dissenters at a fraction of the lowest market value of the bonds during the reorganization proceedings. See note 84, supra.

[86] Some objection has been raised against the utilization of earning power to fix total capitalization for all purposes (Bonbright, Earning Power as a Basis of Corporate Capitalization (1921), 25 Quarterly Journal of Economics 482). But the propriety of its use in determining fair value for the purpose of issuing securities in a railroad reorganization has been acknowledged (Bonbright, Railroad Capitalization (1920) 70).

[87] 49 Stat. 920 (1935), 11 U. S. C. A., sec. 205 (e) (1937): "The value of any property used in railroad operation shall be determined on a basis which will give due consideration to the earning power of the property—past, present, and prospective—and all other relevant facts. In determining such value only such effect shall be given to the present cost of reproduction new, and less depreciation and original cost of the property and actual investment therein, as may be required under the law of the land, in light of its earning power and all other relevant facts."

make consideration of such factors as original cost, reproduction cost, or actual investment, obligatory only if required by the Constitution in fixing value for the purposes of a reorganization.[88] There is at present ample authority that the principles of valuation for rate-making purposes are not applicable to determinations of value in reorganization cases.[89] The precise technique of valuation provided for in the instant bill, that of capitalizing at a reasonable rate the expectable future average earnings of the property, has already received the approval of the Supreme Court in a railroad reorganization proceeding.[90]

Another potent means for releasing the stranglehold of worthless securities might be a definition of insolvency by some such formula as is employed here for valuation.[91] The definition of insolvency afforded by the bankruptcy act[92] seems to have little meaning for railroads[93] and apparently involves the prohibitively expensive and interminable process of physical valuation.[94] A workable definition of insolvency which could enable the court to deprive worthless securities of any vote on a plan might profitably have been embodied in this bill.[95]

III. STANDARDS WHICH REORGANIZATION PLANS MUST MEET

One of the most significant reasons for unsound reorganizations in the past has been the lack of effective supervision of plans by the courts and the I. C. C. The courts, unequipped to deal with technical problems of railroad financing, have rested content to give effect to the bargain struck by the various interests without regard to the kind of capital structure which it engendered.[96] The modicum of supervision over railroad reorganization which the I. C. C. had under section 20a of the Interstate Commerce Act[97] was, in equity receivership proceedings, exercised by it only after interested parties had accepted a plan and secured court confirmation.[98] Apparently disinclined to upset the agreement already reached after prolonged proceedings and to cause the tedious process to begin anew, the I. C. C. rarely disapproved or substantially modified a plan even though admittedly unsound.[99] This negative policy[100] of choosing what was apparently the "lesser evil"[101] in the belief that the public interest was better served by the consummation of any reorganization at all than by delay to reach a sound one,[102] has in fact been one of the major factors contributory to the cycle of recurrent insolvencies and reorganizations.[103]

Section 20a prescribed no standard more definite than that the proposed security issue be in the "public interest."[104] The need for some positive and firm policy on the part of the I. C. C., which would guide the parties in their negotiations and further the public interest in the achievement of a sound result, has been expressed by Commissioner Eastman,[105] who on more than one occasion sought to formulate such a policy.[106] Nevertheless the present section 77, except for a provision that the fixed charges provided for under a plan be adequately covered by the probable prospective earnings,[107] sets up only the vague public interest formula as the criterion of I. C. C. approval.[108] The instant bill seeks to enunciate standards for a sound financial structure which would bar from future reorganizations the shortcomings fatal to so many of them in the past.[109]

The provision that a plan is not to be approved if there is substantial evidence that fixed charges will not at all times be adequately covered by the probable earnings[110] expresses what is, perhaps, the most elementary condition for achieving a sound reorganization.[111] Yet, a plan had been approved under which the ability of the company to meet its fixed charges and yet maintain adequate operation was admitted by the I. C. C. to be highly doubtful.[112]

While the section insuring that the plan have adequate means for necessary and possible future financing[113] is formulated in somewhat general terms, there can be little doubt that it is primarily designed to reach what is perhaps the most pervasive defect of railroad capital structures—too high a ratio of fixed indebtedness to total capitalization.[114] Inability to meet the inflexible fixed charges on bond indebtedness in times of restricted earnings is generally the occasion for insolvency.[115] And when the fixed-charge requirements threaten to absorb the earnings, successful financing by stock is rendered unlikely.[116] Thus, when a road emerges from reorganization with a relatively high ratio of fixed indebtedness, a vicious cycle ensues.[117] A sorry attempt to avoid this impasse is represented by extensive use of the income bond.[118]

---

[88] S. 1869, May 29, 1939, p. 46, ff. 13–23: "The Commission shall determine the value of any operating railroad property by capitalizing at a reasonable rate the expectable future average annual net railway operating income of the property, as determined by the Commission under subsection (d), and giving only such effect, if any, to the present cost of reproduction, either new or less depreciation, or the original cost of the property, or to the actual investment therein and other factors as may be required by the Constitution of the United States in the determination of value for the particular purpose involved."

[102] Id., majority opinion at 699.

[103] See note 101, supra.

[104] See note 97, supra.

[105] See dissents in Missouri-Kansas-Texas Reorganization, 76 I. C. C. 84, 108 (1924); Denver and Rio Grande Western Reorganization, 90 I. C. C. 141, 158 (1924); Chicago, Milwaukee, and St. Paul Reorganization, 131 I. C. C. 673, 713 (1938); cf. Spaeth and Windle, Valuation of Railroads, under section 77 of the Bankruptcy Act (1938), 32 Ill. L. Rev. 517, 521 (that I. C. C. is at fault for delay in reorganizations because "it has failed to enunciate standards by which it is prepared to judge the plans submitted").

[106] See the policy outlined in the Missouri-Kansas-Texas Reorganization, 76 I. C. C. 84, 108 (1924), that (1) the reorganized company should have a capitalization which will enable it not only to keep clear of bankruptcy but also to attract the capital necessary for future development, (2) I. C. C. should not approve an issue of bonds in excess of one-half of the property investment unless it is clearly shown that such limitation of the funded debt is impracticable, and (3) capitalization should not be in excess of I. C. C.'s best estimate of the original investment in the property, and in most cases should be lower.

[107] 49 Stat. 913 (1935), 11 U. S. C. A. § 205 (b) (4) (1937). In Denver and Rio Grande Western Reorganization, 90 I. C. C. 141, 158 (1924), Commissioner Eastman summarized the policy of the I. C. C. as one of approving the new financial structure "if it seems better than the old structure and if there is reason to believe that earnings will be sufficient to cover the new fixed charges," characterized it as "negative and inadequate."

[108] 49 Stat. 917 (1935), 11 U. S. C. A. § 205 (d) (1937): " * * * The Commission shall approve a plan * * * that will in its opinion * * * be compatible with the public interest." See note (1937) 47 Yale L. J. 247, 260.

[112] Reorganization of Georgia & Florida Railway, 117 I. C. C. 473 (1926). The Commission stated: "In the case now before us, the ability of the new company to carry its proposed indebtedness and to maintain adequate operation must be considered more than usually problematical." Id. at 489.

[113] S. 1869, May 29, 1939, p. 67, ff. 1–7: "No plan shall be made effective * * * if it appears upon substantial evidence—that the plan leaves inadequate means for such future financing as may be requisite and possible, or that the effect of any future financing, or of the exercise of any options, warrants, or other rights for which provision is made in the plan will be to create a capital structure not in conformity with the policy and standards set forth in this subsection. * * *"

[114] See Bonbright, Railroad Capitalization (1920) 147; Moulton, American Transportation Problem (1933) xli. While in the four major British railway systems bond indebtedness represents 28.7 percent of capital, in the American Class I roads it amounts to 62 percent. Bussing, Railroad Debt Reduction (1937) 8.

[115] Hearings on S. 1869, supra, note 5, at 273.

[116] See Denver & Rio Grande Western Reorganization, 90 I. C. C. 141, 157 (1924); Chicago, Milwaukee & St. Paul Reorganization, 131 I. C. C. 673, 694 (1928).

[117] See Foster, Conflicting Ideals for Reorganization (1935) 44 Yale L. J. 923, 953; Sen. Rep. No. 25, part 1, 76th Cong., 1st sess. (1939) 24.

[118] The income bond pays interest only if earned. It may be wholly contingent, or may be cumulative, sometimes to become a fixed charge at a future date. Its use has been widely criticized by legal and financial writers. Bonbright, Railroad Capitalization (1920) 49; Rosenberg, Reorganization—The Next Step (922) 22 Columbia Law Rev. 1; Rosenberg, Corporate Reorganization and the Federal Court (1924) 75 ("* * * the worst form of security ever devised * * *"); Foster, supra note 117 at 945 ("nebulous securities"); Chicago, Milwaukee and St. Paul Reorganization, 131

These obligations, present as bonds in the debt structure, cut down the margin for sale of stock and themselves afford no possibilities for future financing.[119] When the charges are cumulative, to become fixed charges at some future date not too distant, the prospect of another insolvency is rendered less than speculative.[120] Since future financing must be by stock issue if the railroads are to continue in private hands with adequate maintenance and improvements,[121] curtailment of the use of income bonds and conversion of the obligations which formerly emerged in this form into stock would seem to be results which the instant requirement dictates.

The requirement that probable earnings be sufficient to provide some earnings applicable to every class of securities under the plan[122] is apparently designed to eliminate securities of doubtful value which are included for purposes of control, or out of sheer optimism. It is believed by some that there is no danger in retaining stock as "rain checks" since they represent no charge on earnings.[123] But to the extent that little or no dividends are earned on the outstanding stock, future stock financing is made unattractive to the public, which will invest only where there is an expectation of dividends, making the latter, if not a legal, at least a "psychological" fixed charge against the earnings.[124]

The valuation method utilized to determine a fair upset price seems also to be prescribed as a major determinant of the maximum allowable total capitalization of a new company.[125] The objection is suggested that by the use of depression earnings in the base, undercapitalization will result and the company will thereby be prejudiced in seeking a fair return in rate proceedings.[126] The decisions of the I. C. C., however, leave no legitimate ground for such fear, since they clearly distinguish between actual capitalization and value for rate-making purposes.[127] But even more strongly is it urged that the utilization of some fixed period as a basis for predicting probable future income, such as that embodied in the 12-year rebuttable presumption,[128] will result in an automatic cutting off of equity or junior creditor interests from participation in a plan when taking into account future prospects might justify their retention.[129] But the terms of the bill, in providing for the consideration of "such changes as may reasonably be expected," [130] would not seem to require any such mechanical use of the capitalization figure arrived at on the basis of past earnings in passing upon the conformability of a plan to the standards of the statute.

Somewhat as an omnibus clause, there is a provision that no plan is to be approved if the new company will probably become insolvent or in need of reorganization "in the reasonably foreseeable future." [131] In more than one past reorganization the prospect of future insolvency was not a remote one.[132] Such devices as cumulative income bonds and practices like calculating fixed charges on the basis of a peak period carry with them the threat of probable insolvency.

In the requirement that the plan shall make equitable provisions with respect to voting rights, control of the company, and selection of officers,[133] the Interstate Commerce Commission is endowed with powers of wide import. The perpetuation of control by groups retaining little or no interest in the new company by the utilization of such means as the voting trust or retention of residual stock of little value could be prevented.[134] Where a bond obligation represents an interest in the company hardly distinguishable from stock participation, a vote in the affairs of the company might properly be accorded it.[135]

CONCLUSION

While the bill is likely to emerge from Congress in some altered form, it is to be hoped that its major features will be preserved. For it has been recognized for some time that the continued efficient operation of the railroads in private hands depends in large measure upon a thorough overhauling of the reorganization process and of the capital structures which emerge from it.[136]

I. C. C. 673, 694 (1928) ("* * * securities of this sort are hybrid things and have no place in a thoroughly sound financial structure * * *").

[119] The piling up of unpaid charges before the stock eliminates sale of stock as a means of raising new capital. Income bonds have never been offered on the market as new issues. It is unlikely that the public would be attracted to junior securities carrying contingent interest. See Sen. Rep. No. 25, part 1, supra, note 117, 9–12.

The American Way of Life

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 27, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which was delivered over the radio by the junior Senator from Ohio, Hon. ROBERT A. TAFT:

It is a pleasure and a privilege for me to join in this series of broadcasts on the foundations of democracy with Representative T. V. SMITH. In the theoretical field I cannot hope to compete with one who is a full-fledged professor of philosophy at the University of Chicago, and even in the practical field it will not be easy to compete with a professor who has been able to translate his theoretical knowledge into political success in a great State like Illinois. This series is intended to be not so much a debate as a development of two points of view regarding present-day conditions in the United States. Perhaps it is the same point of view with merely a difference in emphasis.

What is the American way of life? To determine that, we must look back over the 160 years of this Nation's existence. In that period it has grown from a small community of 4,000,000 people along the Atlantic seaboard to the greatest and most prosperous nation in the world today, with 30 times that population. This success has been achieved under an economic and constitutional system which was unique when established, and formed the basis of an American way of life which has remained, certainly until today, peculiarly American.

The basis of the American business and constitutional system is political and economic liberty. The basis of the American way of life has been equal opportunity to improve one's condition by one's own effort. The Declaration of Independence declared that all men are created equal, that they are endowed by their Creator with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness. It is somewhat significant that the right endowed is not one of happiness but merely of its pursuit.

The rights asserted by the Declaration of Independence and conferred by the Constitution are individual rights. They are conferred in each individual, not on any class of people or on society in general. The whole history of America reveals a system based on individual opportunity, individual initiative, individual freedom to earn one's own living in one's own way, and to conduct manufacture, commerce, agriculture, or other business; on rugged individualism, if you please, which it has become so fashionable to deride.

The American way of life has attempted to reward, by increase in material welfare, those individual qualities of intelligence, ability, industry, genius, and daring which have played such a great part in building up the Nation as we see it today. The basis of the system has been opportunity for all. The motive power has been the incentive to effort provided in material reward; that is, a better standard of living, a better education for one's children, a better provision for one's family after death.

I, too, believe that the American way of life is not synonymous with its governmental or constitutional system, but unquestionably Government and Constitution have protected the conditions which make it possible. The American way of life is a flexible, living, breathing philosophy, which is continually adjusting itself to meet the changing needs of a growing nation. The Government was designed to fit that philosophy and be controlled by it, and not to regulate and control that philosophy. Government has been generally conceived to be a keeper of the peace, a referee of controversies, and an adjuster of abuses, not a regulator of the people or their way of life or their business and personal activities. Throughout a large part of our history the maxim was accepted that that government was best which governs least. Life has become so complex that we feel today that more positive Government action is necessary to preserve the American way of life; but the statement of President Garfield is still true: "It is a safe and wise rule to follow in all legislation, that whatever the people can do without legislation will be better done than by the intervention of the State and Nation.

The ideal of opportunity characterizing the American way of life led very quickly to universal free education. Obviously a child who is not taught to read and write does not have the same opportunity to succeed in life. The public school became the typical American institution. Obviously this does not mean the same education for every child. If it did, we would have to send every boy and girl through college and add perhaps 3 years of training in some professional or vocational school. It does mean a good foundation in reading, writing, arithmetic, and other fundamentals, and access to the books on which an education can be built. Abraham Lincoln had a most elementary education, and yet that education gave him the opportunity to rise to the greatest position which any American has ever occupied. The American way of life certainly does not guarantee equality in mental power or in character or in energy. It has only guaranteed that a man who had the necessary qualities might rise in public life and acquire a greater influence, a greater fame, a greater power than his fellows; that he might rise in material wealth and acquire a greater comfort and luxury, if he desires it, for himself and his family; that he might earn a simple living on which he could base the development of true happiness for himself and his family without either wealth or power.

It is no reflection on the present plans for social security to point out that security has not been an important factor in the American way of life. Perhaps it should have been. In a country of great natural resources and the ability to begin life over again in a new field, there has perhaps been too much of the spirit of the gambler in America. But even today, while social security may be a desirable adjunct, it is no American ideal. The slaves of good masters in the South, before the Civil War, enjoyed social security. So did the lotus-eaters. If American progress is to continue, the greater rewards must still be for industry for intelligence, for ability. Opportunity, and not security, is still the goal of young America, and even of middle-aged and old America. The burden of security for those who cannot work must not be so heavy as to destroy or seriously reduce opportunity for those who can work.

No system is perfect. The American way of life has not proceeded without injustice to some, but in general it has worked. The names of the Presidents of the United States, together with all those who have succeeded in public life, reveal a long list of men who rose from nothing, men who were no better off when they began than millions of their fellow countrymen. And this is true today. Not long ago I attended a dinner of the Gridiron Club, where were gathered leaders in every field of activity in the United States—politics, journalism, industry, agriculture, the professions. I checked over that list as far as I was able. Four-fifths of those men, even today when the system does not work quite so satisfactorily as in a simpler age, were men who had no privileges when they began, men whose families were not different from four-fifths of the families in the United States. They have succeeded through their own individual efforts, not because they belonged to any class or any family. The system has even worked to permit the success of men handicapped by wealthy and privileged parents; witness the present President of the United States. And that is not intended to be humorous; even the Christian philosophy makes it almost impossible for a rich man to enter the kingdom of heaven, but the true American way of life recognizes no distinction of origin.

But it is said today that we are not preserving the American way of life and that we must engage in unlimited Government interference and regulation in order to preserve it. It is said that wealth has acquired privileges, and that it has caused one-third of the people to be underprivileged and has deprived them of the opportunity to improve their position; and therefore we must redistribute wealth. Fundamentally, I do not think that the American way of life has changed, though unquestionably the long depression and particularly the serious unemployment conditions have interfered with opportunity to a very considerable group of families and their children. I would estimate that loss of opportunity as affecting rather one-sixth of the people than one-third, but even then it presents a serious challenge to the American ideal of opportunity. The increase of industrialization makes the problem much greater in urban industrial districts than it is in rural America. Last year I traveled through every county in the State of Ohio, and it is interesting to see that in most of the small towns and country districts the American system is still more popular than in the cities. The people realize that the leaders of their communities, whether they like them or not, have usually succeeded by reason of their own ability, character, and intelligence; that those who have failed have failed because they lack those qualities.

Nevertheless, a condition of poverty in city and country alike does interfere with opportunity. The Government, therefore, must and has undertaken to relieve this condition, to provide a minimum through relief, old-age pensions, unemployment insurance, or otherwise, which will enable a family to live, and the children to go to school and pursue their education. The Government has undertaken to provide housing for the poorer people.

I doubt whether the condition has been brought about by excessive accumulation of wealth, but certainly the Government should see that wealth is not improperly acquired through monopolistic or other unfair practices. The policies of inheritance taxation are rapidly cutting down the larger fortunes, and I think that in America there is plenty of evidence that the old maxim still prevails, "From shirt sleeves to shirt sleeves in three generations." Certainly the arbitrary redistribution of wealth would not assist in restoring the American way of life, because it would absolutely destroy all the incentive and initiative through which our success has been created.

There is one other mistake which economic planners are too likely to make. People cannot be made happy by opportunity and education alone. We cannot legislate them into leadership and equality. They can only secure happiness through their own individual effort. We cannot make their work pleasant and agreeable, because nine-tenths of all work in this world is drudgery and can only be made agreeable by the person who is doing it—teaching himself to enjoy the accomplishment of a task—no matter how uninteresting that task may appear to others.

We cannot accomplish the American ideal by education alone. There has never been a time when people have had so many means of education—public schools, the movies, the radio, libraries with books of every type. We have made it exceedingly easy to acquire knowledge, but we have fallen down in our job of teaching men to think. No man ever succeeded or progressed until he acquired the ability to do his own thinking.

What the Government must do is to provide the conditions under which it is possible for the people to achieve individual progress, and much of the increased Government activity in recent years is justified on that ground. But Government help cannot even produce the increased standard of living which we would all like to see, and there is one danger in it which threatens the very foundation of the American way of life. It must be administered so that the people generally are not taught to lean on the Government and let other people think for them. It must be administered with the determination to retain and not destroy the rewards which heretofore we have always given for industry, thrift, and intelligence. In improving the condition of one-third of the people, we must not drag down the other two-thirds to a lower standard of living and a lower incentive to intelligent, directed effort. In the tendency to rely on Government to cure every ill, we stand in danger of depriving the people of initiative, of thinking power, and ultimately of happiness itself. The Government certainly must assure every family of conditions on which opportunity may be based. It must prevent interference with individual and commercial liberty wherever it is threatened by the power of wealth, but it must be certain that it does not substitute for this threat from the power of wealth the threat from the power of arbitrary government itself. The American way of life is still substantially with us. If we pursue the proper policies, it can be preserved.

Why I Like President Roosevelt

EXTENSION OF REMARKS

OF

HON. ANTHONY J. DIMOND

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

STATEMENT OF JACK MARTIN, AN AVERAGE CITIZEN

Mr. DIMOND. Mr. Speaker, under permission granted by the House, I offer for insertion in the RECORD the following

illuminating statement concerning the President written by Mr. Jack Martin, of Unalaska, Alaska:

WHY I LIKE PRESIDENT ROOSEVELT

He, consciously or unconsciously, puts across with me the feeling that in him is exemplified the typical American father as I conceive him to be.

Although firm and sometimes austere, he is ever sympathetic and admittedly humane. I am conscious of his interest in me—not as an unseen entity in an organized group of persons, but interested in me personally as an individual.

I have a childlike belief that he is sincerely trying to understand me, my problems, my point of view, and my conduct which is their natural outgrowth—not with any idea of pampering or coddling me; but to direct the way for me to help myself into a more abundant life at a time when I am actually puzzled over my present problems and confused and worried as to whether I may enjoy any degree of economic security in old age.

I believe that he knows and understands the horrors of war, the anguish of mothers of uniformed boys striken in its inferno. I believe that he is fully cognizant, in the event of war, that the folks at home are no more safe than their boys "at the front," and that the distress and desolation which is certain to follow among them is limited only to the capacity and ingenuity of fiendish enemy minds.

Because of what he knows and understands, I believe that he will never approve of our country going to war, except where there is involved an indisputable principle which challenges our national honor, threatens our national safety, or our constitutional form of government and which is the bulwark of a free people.

And, lastly, should we be drawn into such a conflict, I shall feel more secure, for my family, my country, and myself, with him in the White House, in the role of Commander in Chief of our Army and our Navy. Whether the struggle be short or long, under his calm, wise leadership I shall entertain no doubts as to the ultimate outcome. And in the final negotiations I shall know that he can be relied upon to fully safeguard our rights and deal fairly and justly with the enemy as he may deserve, having a consecrated devotion to a single purpose; this time—a lasting, permanent world peace.

God bless President Roosevelt. Long may he live.

JACK MARTIN,
(An average citizen.)

UNALASKA, ALASKA, *July 4, 1939.*

Light in the Darkness

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 28, 1939

EDITORIAL BY RAYMOND E. WILLIS

Mr. GILLIE. Mr. Speaker, in the Senate the other day the junior Senator from Indiana [Mr. MINTON] made certain uncomplimentary remarks about the section of Indiana which I represent. He also referred to Raymond E. Willis, the Republican candidate for Senator in my State last year, as "a Republican editor up in the dark corner of Indiana." I replied to the Senator's remarks at some length in the RECORD of July 24. Mr. Willis also has replied to the Senator in the following editorial from the Steuben Republican, of Angola, Ind.:

[From Steuben (Ind.) Republican of July 27, 1939]

LIGHT IN THE DARKNESS

"I have in mind one Republican Representative from my State who inserted in the RECORD some figures which had been tabulated by a Republican editor up in the dark corner of Indiana."

Junior Senator SHERMAN MINTON, a man who introduced in Congress a bill to compel the newspapers to print the truth, doesn't like it because this newspaper way up in the corner of the State—"the dark corner," he describes it—printed figures compiled by the Bureau of Agricultural Economics showing that the annual farm income for the past 6 years, under the New Deal, was less by a billion and a half dollars than it was during the last 6 years of the Republican administration. The junior Senator apparently isn't willing to accept the truth of the New Deal statistics bureau, and he attempts to divert attention from the embarrassing truth to discrediting the portion of his native State where the figures were compiled.

We feel that it is more important to defend the slur on the good name of northeast Indiana than it is to enter a contest in juggling statistics. This newspaper is printed in the northeast corner of Indiana, and presumably to the junior Senator, the darkest corner.

Yet, in this humble county, we find that there is only one-half of 1 percent of foreign-born population. It has the lowest rate of illiteracy of any county in the State of Indiana. Its sons have gone out volunteering their services in three wars as freely as they have from any county in the whole Nation.

From out of this county have gone many splendid men and women to serve in all the avenues of life. It has furnished a Representative in Congress more of the last 50 years than any other small county in the State of Indiana.

Last week it laid to rest a distinguished citizen who had been Vice Governor of the Philippine Islands.

Out of this county came a gracious lady who became the wife of Vice President Marshall, and who today still likes to call this her home community.

In this county is located Tri-State College, into whose halls come each year young people from a score of foreign countries and from every State in the Union, to go out and spread through the rest of the world the enlightenment of science and letters.

Steuben County's rolling fields are teeming with fattened cattle, and it is a top-notch sheep-breeding county of Indiana.

Within its borders are located 100 beautiful lakes, whose sparkling waves and laughing waters smile a welcome to weary men and women who come here for rest. The thousands of happy children who play on their beaches are caressed by the lapping waves, and the beautiful trees of the forest waft cooling breezes over them.

Why, Steuben County is the paradise on earth! The people up here are not in darkness; neither are they dumb. Their intelligence tells them that the New Deal has failed in its experiments and that further travel in the wilderness of confusion will lead the country into ruin.

They are not dumb enough to want to limit the freedom of the press, but they believe that the truth will continue to make a people free.

They are not dumb enough to want to eat the Constitution, but they are smart enough to know that one can live and prosper under a compact which assures freedom of opportunity.

They are not even dumb enough to mail letters to General St. Clair, who a century and a half ago retrieved this region from the Indians.

The junior Senator looks this way through the darkened glasses of gloom and despair. The New Deal eclipse was almost total here last November, and its shadow is growing darker.

Oh, boy, how he will shiver when in 1940 he looks up this way at the black clouds of disapproval of his senatorial record.

Taxes and Depression

EXTENSION OF REMARKS
OF
HON. ARTHUR B. JENKS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, July 28, 1939

EDITORIAL FROM THE CHICAGO DAILY NEWS OF JULY 25, 1939

Mr. JENKS of New Hampshire. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 25 edition of the Chicago Daily News:

[From the Chicago Daily News of July 25, 1939]

TAXES AND DEPRESSION

This has been the longest depression we have ever known.

Why has it been so long?

Because, under a Republican administration, we tried to maintain a prosperity price and wage level in the face of a disastrous depression that reduced national income from $80,000,000,000 to $40,000,000,000. The Democrats continued this mistake.

Because, under a Democratic administration we tried to spend ourselves into prosperity, and, in so doing, incurred twenty billions of debts and raised taxes to unprecedented heights.

In earlier editorials we have dealt with prices and their relation to depression. In this we propose to dwell upon taxes.

President Roosevelt's stock answer to those who cry out against high taxes is a question. He asks: "If you want taxes reduced, what would you cut first?" The implication is that whoever wants taxes cut is a flint-hearted wretch who cares nothing for those who are unemployed, or destitute, or aged, or unfortunate.

The answer to the President's question is that reduction should be made in every department of Government, most emphatically including relief, where waste, extravagance, political graft, and favoritism have been more notorious than in almost any other field of expenditures. There is not a single department of the Federal Government under the New Deal that is free from the charge of

reckless, wholesale extravagance. Indeed, this charge is usually answered not by denial but rather by asserting that the distribution of large sums by the Government helps to fill the void in purchasing power created by the disappearance of private capital for investment. This childish reasoning completely ignores the fact that one of the chief reasons for the disappearance of "venture" capital is the high taxes and the huge deficits, made necessary by Government spending.

But we are not concerned here with a discussion of past mistakes.

What demands our attention is such revision of the taxing system as will restore business confidence, coax out of hiding the available billions of private capital for industrial expansion, and the launching of new enterprises, and thus provide employment for the jobless by putting the free enterprise system back on the rails with a clear track ahead.

Production creates wealth.

One of the prime purposes of organized society is the more equitable distribution of wealth. To divide up equally the present amount of wealth would get us nowhere. You cannot provide for a more equitable distribution of wealth unless more wealth is constantly created.

The creation of new wealth through increased production means more employment. It is through increased employment, not through increased taxation, that fairer distribution of wealth can be accomplished.

It is the part of wisdom, then, to relieve the wealth-producing agencies as much as possible of their tax burden and transfer these taxes to the individual incomes of those who share in the greater dividends thus made possible. This means the elimination of all corporation taxes and a proportionate increase of individual income taxes upon incomes, made larger by increased dividends.

This would do two things—release the wealth-producing corporation from a tax that has become destructive of all expansion and enterprise, and more firmly base the personal income-tax structure on the sound principle of "ability to pay."

It may be urged that elimination of corporation taxes would invite withholding of some corporate earnings from distribution. It probably would, but, up to a certain point, this is sound business practice, for this would mean, in most cases, reinvestment of such earnings in the business, with consequent reduction in unit costs, increased volume, and inevitably icreased employment.

When hoardings of earnings by a corporation, in order to avoid increased personal income taxes of some large stockholders, become evident, this evil can readily be reached by a specific penalty for such practices.

Under the present hodgepodge system of taxes, nearly one-half of the Federal taxes levied are so-called hidden taxes. These include nuisance taxes, excise taxes, production taxes of one sort or another.

The total of such hidden taxes has now reached a point where a workingman, earning $80 a month, is compelled to pay $123 a year in taxes, or 13½ percent of his income.

Both fair play and sound taxing methods demand the repeal of all these hidden taxes, and the substitution of a straight personal income tax for everyone earning $1,000 a year, or more.

Under such a system, no man earning $80 a month would be required to pay anything like the $123 he pays now in hidden taxes.

This broadening of the base of the income-tax structure must be accompanied by a graduated increase in the tax on incomes up to, say, $50,000 a year, in order to make up for the revenues lost by the repeal of the hidden taxes. This would mean less taxes for those least able to pay, and more income taxes for the great middle group, but not more in taxes than is exacted from them now by the various nuisance, indirect, and hidden taxes, plus their present income tax.

And all this would have a great advantage. It would make everybody, from the poorest to the richest, tax-conscious, and consequently make everybody interested in economy in government.

We cannot hope to preserve our democratic form of government unless we can banish the fallacy that only the rich pay taxes.

Another change essential to recovery is tax relief for venture capital—those excess earnings from businesses that are willing to take risks on the chance of making a profit. The present excessively high tax rates for large incomes, and especially the tax imposed on capital gains, have driven this "risk" money into hiding. It can be coaxed out only by a sharp reduction of the tax rates in the high brackets, and the repeal of the tax on capital gains.

This does not mean taking less money for the support of the Government from the rich. Present rates in the upper brackets have already gone far beyond the point of diminishing returns. Lower rates for large incomes will actually produce more revenue from this source. But what is far more important, lower rates for large incomes will release billions of dollars of "risk" capital for investment in new enterprises. This means reemployment for the jobless.

Finally, since increased production, and through it, increased employment, is our goal, it is obvious that all forms of pay-roll taxes must be done away with. A tax on a pay roll is a serious depressant on employment. It puts a premium on fewer instead of more employees.

Taxes for a reserve against unemployment should be paid in part by the beneficiary, that is, the insured worker, and the rest paid out of the general Federal funds.

A tax on a pay roll is a tax at the expense of the unemployed.

The objectives of such a program would be:

To relieve the tax burden of business engaged in producing a new wealth, and thus increase employment.

To substitute a simple direct income tax for the multiplication of hidden taxes from which Government now derives a large part of its revenue.

To make every citizen tax-conscious and hence interested in economy in Government.

To repeal the capital-gains tax, and to reduce the rates in the upper brackets of the income tax, in order to bring venture, or "risk" money into investment in new enterprises.

It is from new enterprise that we can hope to reduce unemployment and bring back prosperity.

The Amendment Mood

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

Mr. PATRICK. Mr. Speaker and fellow Members of Congress, it does not appear that we shall be here such a great while longer this session, and perhaps it is well enough. We have gotten into the amendment mood. No bill can hope to walk peacefully down the shady lane of procedure and into the green pasture of passage unmolested—not when Congress is in its amendment mood. Why? Because the Members of Congress must sick on the dogs of amendment.

In the main, Congress is composed of three classes of amenders. There you may find the nouner. We shall place him as No. 1. He amends by adding or striking out the word "wheat" or "railroad" or by striking at some other definite object of the bill. As it is clear precisely what such amendment will probably do, it is usually rejected with fair ease.

You may then see No. 2, the verber. He strikes at the enacting clause or comes forward with a "shall be," a "must consider," or even a "this is to annul." Since all he intends is quite clear and apparent, he is likewise fairly easy to disperse.

But deliver us from Mr. Amender No. 3. He is the adjectivor. Beware of the lawmaker who comes onto the floor with an amendment under his arm and an adjective in it. He approaches the bill with a pleasant smile and disarming manner, and before you realize what has happened he has deftly turned loose his adjective. Men who talk grammar insist that an adjective is a little chap that modifies a noun. Brother, how it can moderate, modify, and stultify a noun. Not only that, but it will modify a whole clause, a sentence, a paragraph, or a bill, and may throw a court or commission into cold chills on a hot day. Oh, an adjective can be as deceitful as a chameleon, fickle, changeable, indefinite, and uncertain, and can make one judiciary see him as one thing and another see him as quite something else. He meets opposition with change of color. Nothing has come along that I know of that can be quite as innocent looking and still as surreptitious and mischievous as an adjective.

Why are adjectives created? Ask any intelligent noun and he will tell you they are born into the world to annoy, injure, restrict, circumscribe, torment, hamstring, and sometimes actually destroy nouns. Did you ever notice how a healthy noun will tremble when a particular adjective gets around? Well, oblige me by noticing it. Thank you. I have seen a strong, live, capable noun standing erect in purpose and flushed with promise until it found itself stalked by a vicious adjective. I have seen that stalking adjective approach, strike, miss, go away, and come again. I have seen it draw near from this side, that side, front, rear. Some adjectives, like those old Greek mythological creatures you know about, have the distracting ability to change form and to move from one disguise to another. Then I have watched that adjective, when it was apparent the appointed time had come, his eyes flashing fire, his fangs dripping venom—you understand this is an adjective of the most dangerous and

violent type—until he finally drove home his writhing blows to a critical spot. Pity then, the poor noun, and the bill that rested upon it for succor, force, and strength!

To be sure, there are gentle, kind-hearted adjectives who have no malicious intent and display no ill will, and who would not intentionally do bodily harm to any noun that ever lived. Such an adjective delights to go along with the poet, the promoter, the salesman, the minister in the pulpit, and even with the politician on the stump, and how it cavorts in the mellow moonlight where young-eyed love abides. But on the floor of Congress one meets the adjective whose inspiration is iniquity and whose baptism was hell fire. He is here today, and in the clever hands of the expert amender whose presence, strongly reflected in this Congress, is bound to do some harm, or something.

Therefore, if you agree with the Representative of the Ninth District of Alabama that we have reached the amendment mood in this the hot season of the year, and if you further agree that the able adjectivor is active and alert in our midst, you should further agree that it is a good time to wind up our necessary business and go home, where amendments, especially amendments by the adjective route, do not arise to haunt our very dreams at night.

I thank you.

Republican State Administrations Save Millions for Taxpayers Throughout Nation

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

Mr. BENDER. Mr. Speaker, in the face of a new drive in Washington to spend-lend the Nation's way out of the second Roosevelt recession, Republican State administrations throughout the land have been waging a stern battle to cut down the cost of government. The elimination of needless services, the removal of unnecessary employees, the close scrutiny of pay rolls have replaced the slipshod practices of Democratic administrations with a resultant saving amounting to $100,000,000 in the next biennium.

Perhaps the most notable economies effected have been registered in New York. There, in spite of the presence of a Democratic Governor, the Republican-controlled State legislature cut the budget submitted by the Governor to the tune of $24,000,000 and balanced it for the year 1940 with a surplus to replace the deficit contemplated by the Governor's office. The achievement was rendered all the more notable because of the bitter opposition of entrenched Democrats.

In Ohio Gov. John W. Bricker and the completely Republican State assembly reversed the trend of State expenditures by presenting for the first time a biennial budget which listed all the expenditures anticipated for the 2-year period, including relief, old-age contributions, school subsidies, as well as normal governmental costs. In the words of the Governor, the purpose of his administration was "to restore efficiency and economy in government." He declared that—

> More than $13,000,000 has been cut from maintenance cost. Three thousand employees have been removed from the public pay roll. Payment and refunding of a $20,000,000 debt have been provided for. No new taxes have been levied. When too great a portion of the investor's capital, the laborer's pay, and the businessman's profit are taken for the cost of government people flee from that government and turn to other forms. The best assurance for the perpetuation of our beneficent form of government is to lessen the burden and encourage business and labor. Then money will flow into the channels of business and industry. We have here the resources, the people, the will to do, and the desire to live better. Confidence alone is needed. That confidence will flow from the recognition by public officials of the will of the people as expressed last November.

In Connecticut, Republican Gov. Raymond E. Baldwin has balanced the budget of his State without new taxes for the first time in the last 10 years. Estimates indicate a surplus of $200,000, in spite of the fact that included in the general-fund expenditures are $3,250,000 toward the liquidation of a $13,000,000 deficit run up during 8 years of Democratic State administrations.

Gov. Arthur H. James, of Pennsylvania, faces a $42,000,000 deficit left by former Governor Earle, an ardent disciple of the New Deal. Yet, despite this tremendous obstacle to sound economy, Republican Governor James will save his State at least $13,000,000 even if relief costs remain on exactly the same level as they were in the 2 years preceding his election.

In Massachusetts, Gov. Leverett Saltonstall took office with just $15,000 left in the State treasury. His Democratic predecessor had gone through over $4,275,000 in State funds. No less than $10,000,000 of the 1939 budget was directly traceable to the extravagance of the Democratic State administration which was repudiated at the November elections.

Government costs in South Dakota under Gov. Harlan Bushfield were slashed by almost $1,000,000 and a property tax was eliminated with a saving of more than $1,400,000 to real-estate owners.

Gov. Payne Ratner, of Kansas, and Gov. C. A. Bottolfsen, of Idaho, have affected savings of more than a million dollars between them for their respective States. Governors William H. Vanderbilt, of Rhode Island; George A. Wilson, of Iowa; and Lauren Dickinson, of Michigan, have succeeded in reducing expenditures by millions for the fiscal year of 1940 through rigid adherence to an economy program.

Reporting these substantial economies to the Nation, Republican National Committee Chairman John Hamilton pointed out that—

> The importance of the savings made this year lies in the fact that at a time when President Roosevelt and the New Deal are encouraging reckless and extravagant public spending, there are men with the courage to wrestle with this problem. The important thing, after all, is that the trend toward ever-mounting Government costs has been reversed in some States. Few people really know the thorny problem with which the Republican Governors have been forced to struggle this year. In practically every instance they inherited from their Democratic predecessors unbalanced budgets, policies which called for increase spending, and commitments requiring appropriations to be made. But despite these obstacles in the way of orderly State finances, many of our Governors have succeeded in restoring sanity to their budgets.

The difficulties which confront Republican State administrations in their efforts to check the spending orgy are clearly illustrated by the New York experience. When Democratic Gov. Herbert Lehman submitted the largest budget in the history of the State, the action of the Republican legislature in cutting it down was followed by an outburst of unrestrained fury. The heads of every State department affected by the savings shrieked in protest. The commissioner of correction declared to the press that the cuts were "inconceivable." Highway bosses said that their work would be crippled. Howls from organized teachers' groups, backed by a $6,000 protest march on Albany, filled the city of New York. But the legislature stood by its guns. In spite of the outcry, its members, who had been elected on an economy platform, maintained their position.

Those who believe that economy can be simply won are due for a rude awakening. The clamor of the States will be as nothing by contrast with the fury which will rise when the Republican Party insists upon paring down Federal expenditures. No surgeon enjoys the thought of an impending operation. Yet he must do his duty as he sees it. The Republican Party does not relish the job of pruning which lies ahead. Yet we shall undertake it in the conviction that it alone offers prospect for the ultimate restoration of the Nation's economic wealth.

Spending-Lending Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

COMMENTS BY FRANK E. GANNETT, OF ROCHESTER, N. Y.

Mr. O'BRIEN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following comments by the distinguished New York publisher Frank E. Gannett, of Rochester, N. Y.:

GANNETT SEES RECOVERY STIMULUS IF CONGRESS DEFEATS LENDING PLAN

Defeat by Congress before adjourning "of the spending-lending bill, lock, stock, and barrel, will give the strongest possible stimulus to Nation-wide recovery," Frank Gannett said in a statement here last night.

The statement was wired to the members of the Rules Committee and the Banking and Currency Committee of the House of Representatives.

Speaking as chairman of the National Committee to Uphold Constitutional Government, Gannett continued:

"Business leaders and investors will know that a nightmare of Government competition and business uncertainty is ending. Private enterprise will know once more that the elected representatives of the people are in control of national policy, and the country will be grateful to Congress.

"This committee's detailed reports from every State indicate that public opinion is swinging rapidly against the spending-lending policy.

"Too long, the inexperienced young men of the White House "brain trust," applying a British economist's rejected-at-home remedy for the depression, have usurped the direction of this Nation's policy. Ignorant of the principles on which private enterprise has been built, or preferring a collectivist economy, they have interfered with legislation and as a result America lags far behind other nations in recovery.

"After J. Maynard Keynes, the British economist, sold his formula to the White House, he is reported, on his American lecture tour, to have said: 'I envy the young men around the President their opportunity to experiment on a whole Nation.' But what about the guinea pigs? One-half of the unemployed of the world here in America, huge debts and taxes stifling new enterprise, the most efficient and most productive machine in the world's history stalled at two-thirds capacity.

"Members of Congress should throw the Keynes spending-lending theory into the Capital ash can, then go home and watch recovery.

"Wire to your Senators and Members of Congress urging them to kill this spending-lending bill and adjourn so that business can go ahead."

Puerto Rico's Day at the New York World's Fair

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

ADDRESS BY HON. SANTIAGO IGLESIAS, RESIDENT COMMISSIONER FROM PUERTO RICO, ON JULY 25, 1939

Mr. IGLESIAS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech delivered by me commemorating Puerto Rico's day at the New York World's Fair:

The authorities of the New York World's Fair set this as Puerto Rico's day, commemorating the date of the change of our sovereignty and the beginning of a new course in the life of our working masses and the freedom of our people.

We are beholding one of the most magnificent spectacles in the heart of this wonderful fair to honor the people of Puerto Rico. We should sincerely like that all the people of the island might be here to enjoy this pleasant moment and thus contribute to exalt the name of our beloved island and its people.

The building which represents Puerto Rico is modest. The diversity of industries exhibited in it constitute a praiseworthy task that renders tribute to our country at this moment when it is being honored by officials who represent the World's Fair—Mayor La-Guardia, Mr. Grover Whalen, our Governor Winship, and Admiral Leahy, the latter of whom will shortly direct the destiny of our country.

We congratulate the Legislature and the authorities of Puerto Rico who carried out the arrangements in order that this work might make known among the nations of the world and the States of the American Union, the place of honor which Puerto Rico occupies.

The satisfaction that I feel is great. The ideals which we and other leaders of our country have maintained for so long to unite permanently with the United States and defend the democratic principles which President Roosevelt has set forth during the years of his fruitful administration of social justice assume at this moment the most emphatic indication that we, the American citizens of Puerto Rico, are not mistaken in fostering the great idea of becoming definitely and permanently an integral part of the American Nation.

History has proclaimed that the landing of Gen. Nelson A. Miles' United States Army troops in Puerto Rico July 25, 1898, was a happy event for the people of the island, who rejoiced when they saw that the reactionary and unjust domination had been terminated. The people at large felt that they were to be free under the new republican regime.

After 40 years of wonderful progress in government, civil liberties, social legislation, culture, sanitation, agriculture, and industry, some invisible forces directed by individuals from the island and the mainland have tried to initiate a campaign of sinister propaganda against the peaceful life of Puerto Rico, with the purpose of creating discord and hatred against our people and American institutions in the island but failed.

Puerto Rico is an organized Territory of the United States, founded on a democratic constitution formulated by the Congress of the United States. Civil liberties have prevailed. In the 1936 elections a coalition, which includes Unionist, Republican, and Labor Parties, cast 298,059 votes for the Resident Commissioner; the Liberal Party polled 254,470, thus giving the Resident Commissioner a majority of 46,563. The legislature of the island was elected by the people and entrusted to maintain our loyalty and preserve our American institutions of the United States.

As soon as the island became a part of the United States in 1898, and particularly since the Puerto Rican people became citizens of the United States, unprecedented progress has been made along almost every conceivable line. To believe that statement, one must have lived on the island in the old days. Humble as their circumstances may seem today, the people in general and the working classes now are immeasurably better off in every way.

Wages for agricultural laborers are relatively low, but they are higher than those prevailing in many of the independent countries in the Caribbean area and in Central America. In short, we have made many advances that we rightly can be proud of.

When Puerto Rico first became a part of the United States there was only one building on the island which had been built to serve as a government school; today there are more than 2,000 school buildings, many of them made from concrete and fine enough to do credit to any rural community in the States. In 1898 fewer than 23,000 children were in school, the total budget for education was only $130,000, and the investment in school property was negligible. At the present time, however, we have more than $12,000,000 invested in school buildings and equipment, more than 265,000 children attend school, and the insular and municipal governments spend in excess of $6,000,000 annually on public education.

The Farmers Not Afforded Fair Hearing

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 28, 1939

Mr. SHEPPARD. Mr. Speaker, I wish to call attention to the Members of the House of Representatives of the hearings on the wage and hour amendments before the House Committee on Labor that took place yesterday and which shows that the farmers and their representatives were not afforded a fair and reasonable opportunity to appear before the committee.

Wires were received by four of the national farm organizations from Chairman MARY T. NORTON, of the House Labor Committee, at varying times between 9 a. m. and 9:51 a. m., July 27, 1939. The National Cooperative Council never did receive an invitation to appear.

A telegram sent by the lady from New Jersey [Mrs. NORTON] to these four organizations was as follows:

WASHINGTON, D. C., *July 26, 1939.*

Today I requested Mr. BARDEN to name a representative from the five agricultural groups who were responsible for preventing consideration of amendments to wage and hour bill to appear before the Labor Committee tomorrow morning at 10 o'clock in the caucus room, old House Office Building, to present their reasons for opposing these amendments. Mr. BARDEN declined to accept responsibility of naming spokesmen for the groups. I am therefore suggesting to each of the five organizations represented that you name one representative to speak in your behalf.

MARY T. NORTON,
Chairman, Committee on Labor.

Obviously, with less than an hour's notice, and in one instance but 9 minutes' notice, it was impossible for these groups to meet and select one spokesman to represent their diverse interests before the committee, which convened at 10 a. m.

Each of the farm organizations sent a statement to the lady from New Jersey [Mrs. NORTON], explaining the reason why they could not appear, but she failed to make known the contents of these statements during the public hearing, even though repeatedly requested to do so. I think the House should be advised of these wires.

On April 5 and 6, 1939, these groups requested the House Labor Committee to hold public hearings and allow them time to appear and present their views on proposed amendments to the wage-and-hour law. The chairman of the Labor Committee, in a written communication, advised that such permission would not be allowed and that the committee had agreed not to hold public hearings on the proposal.

The attempt yesterday to force these farm groups to explain their position in the 15 minutes allotted to them did not offer a fair and reasonable opportunity for them to present their position.

The statements sent to Chairman MARY T. NORTON in answer to her wire were as follows:

JULY 27, 1939.

Your wire requesting us to join in the selection of a representative to speak for agriculture before your committee at 10 a. m. today was first seen by me when I arrived at the office this morning. It is obviously impossible for me to call or attend a conference for this purpose in the time allowed. Also, it is impossible for any one representative to present all the various problems involved in agriculture. On April 5 this organization requested a hearing before your committee, and this was refused. In view of the lateness of the session, it is apparent that you could not afford us ample time to properly present our views.

FRED BRENCKMAN,
Representative, National Grange, Washington, D. C.

WASHINGTON, D. C., *July 27, 1939.*

Mrs. MARY T. NORTON,
Chairman, House Labor Committee,
House Office Building, Caucus Room, Washington, D. C.:

Your telegram addressed to President O'Neal, requesting that the farm organizations join in designating a spokesman to appear at a hearing at 10 o'clock this morning was received in his absence from the city at 9 a. m. today. Your telegram states that the purpose of this hearing is to hear the objections of the farm organizations to your proposed amendment to the Fair Labor Standards Act. We requested of you an opportunity to be heard before your committee in April. This request was refused. Our reasons for opposing your amendments have already been set forth in joint letters to all Members of Congress on previous occasions when consideration of your bill was sought. As to the Barden bill, we reiterate it is but a clarification of the exemption provisions of the existing act affecting agriculture, which the Administrator has so narrowly construed. At this late date in the session we feel that further delay would be unfortunate. We therefore respectfully urge that the subject be placed before the House of Representatives without further delay.

AMERICAN FARM BUREAU FEDERATION,
By W. R. OGG.

Mrs. MARY T. NORTON, JULY 27, 1939.
Chairman, Committee on Labor,
House Office Building, Washington, D. C.

MY DEAR MRS. NORTON: At 9:51 o'clock this morning your telegram of July 26 was delivered, requesting that the five major agricultural groups, of which our organization is one, choose a representative to speak for all agriculture this morning with respect to proposed amendments to the wage-hour bill.

Manifestly it would be impossible for the representatives of these groups, even if they had the power which they do not without consultation with their respective boards, to get together and agree upon a single individual who would be competent to discuss the technical labor problems of all of the agricultural trades in time to present evidence at this morning's hearing of the Committee on Labor. Furthermore, the leaders of our federation, being responsible for direct employer relationships with thousands of dairy workers, would not be willing to entrust to any person outside of the dairy cooperative field, the task of such representation.

May I further remind you that this organization on April 6, in writing, requested a public hearing, and an opportunity to be heard upon these proposals. On April 7 you replied with the statement that "The committee has agreed not to hold hearings on this matter." Subsequently, it became necessary for us to join with other agricultural groups and take our case to the Members of the House of Representatives in an attempt to protect our people from the injury which would have been done to them by the bill (H. R. 5435) sponsored by you and which you attempted to get through the House without recourse to the normal legislative procedure of amendment on the floor.

Under the circumstances, this late hearing, following as it does the conferences between you and your colleagues and the Rules Committee, appears to us to be purely a device to prevent the Barden amendments from reaching the floor for action in this session.

I regret, Mrs. NORTON, that we cannot allow our organization to be put in the position of being parties to delay with respect to necessary and urgent legislative action. The present wage and hour law, and the administration of it, are most unpopular among farmers at the present time. There is need of both amendatory legislation and reform of administration.

Sincerely yours,
THE NATIONAL COOPERATIVE MILK PRODUCERS' FEDERATION.
CHAS. W. HOLMAN, *Secretary.*

JULY 27, 1939.

Mrs. MARY T. NORTON,
Chairman, House Committee on Labor,
House Office Building, Washington, D. C.

DEAR MADAM: We learned at 10 o'clock this morning that you had invited certain national farm organizations to send a single representative to appear before your committee this morning at 10 o'clock as a spokesman for the entire agricultural industry with reference to wage-hour legislation. This council, representing over 4,000 farmer cooperative marketing and purchasing associations, with a total farmer membership of 1,700,000, received no invitation to participate. Obviously, this council will not be represented.

May we remind you, however, of our request of April 6 this year for hearings on amendments to the wage-hour law. This request was denied. The official delegates and officers of this council have stated their position with reference to the needed agricultural amendments as embodied in those introduced by Congressman BARDEN. We reaffirm our position in support of the Barden amendments.

Sincerely yours,

EZRA T. BENSON,
Secretary-Treasurer, National Cooperative Council.

WASHINGTON, D. C., *July 27, 1939.*

Mrs. MARY T. NORTON,
House Office Building, Washington, D. C.:

Your telegram requesting the agricultural producers labor committee to participate in naming a spokesman to present the view of agriculture on the wage-hour bill at a 10 o'clock hearing today was received at 9 o'clock today. No one person could be expected to present agriculture's views in all their particulars. About April 1 I had several conversations with you asking for a hearing before the Labor Committee but had evasive replies. On April 5 I requested a hearing by letter to which you replied on April 6 politely refusing a hearing. This is indeed a late hour for a change of mind and it should be apparent that an adequate presentation of our viewpoint cannot be made in the time appointed. Our reasons for opposing your bill have been explained in joint letters to the House Members. Our reasons for supporting the Barden bill have been briefly outlined in similar letters. Your tardy request for testimony has every appearance of being a dilatory move to delay action by the Rules Committee. On the heels of your various misrepresentations of the farmers' position and your abuse of their spokesmen and in the light of the very apparent prejudice of some members of the committee against farmers we regard the present occasion as one in which cooperation with you is impossible under existing circumstances.

IVAN G. MCDANIEL.

Now, Mr. Speaker, I want to call to the attention of the House that I was one of the signers on the discharge petition to bring out the wage and hour bill for enactment in the Seventy-fifth Congress, and I am in sympathy and still supporting wage and hour legislation, but I do not feel that the interpretations of the act—area production—has been

fairly administered in its application to the farmers of this Nation, and I feel that the committee handling this legislation should at least give the agriculture representatives an opportunity to present their side of the picture in order that they have necessary consideration and exemption under the wage and hour law.

Referendum on War

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, July 28 (legislative day of Tuesday, July 25), 1939

LETTER FROM MAJ. GEN. WILLIAM C. RIVERS

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a communication which appeared in the New York Times on Tuesday, July 25, 1939, from Maj. Gen. William C. Rivers, United States Army, retired, on the subject of War Referendum.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

[From the New York Times of July 25, 1939]

WAR REFERENDUM DISCUSSED—IN SUPPORT OF THE BILL

TO THE EDITOR OF THE NEW YORK TIMES:

Maj. Gen. John F. O'Ryan states his conviction that the war referendum bill pending in Congress is an impracticable and dangerous measure.

I would like to commend the above proposal; it appears to me to be a wise step for our people to take. Practically, it would call for a national referendum only when it is intended to send an American army to engage in a foreign or overseas war. It would not prevent sending our forces to fight in a foreign war, if the people so desired and so voted.

I have had opportunity for considerable service in wars and active field operations—in the later Indian troubles in our West, Santiago in Cuba, the Philippines, and in France, where I had a line-of-battle command in all our major combats. Years of study by able historians have failed to develop agreement as to the principal causes for our entry into the last two wars. It does seem clear, however, that we drifted into both our last wars—and at the very time we were declaring that we had no desire to go to war.

WILLIAM C. RIVERS,
Major General, U. S. A. (retired).

NEW YORK, *July 23, 1939.*

Salem (Ill.) Soldiers and Sailors Reunion

EXTENSION OF REMARKS

OF

HON. CLYDE L. HERRING

OF IOWA

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

ADDRESS BY HON. JAMES M. SLATTERY, OF ILLINOIS

Mr. HERRING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Illinois [Mr. SLATTERY] at the Salem (Ill.) soldiers and sailors reunion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, and friends, an invitation to speak on this occasion—Democratic Day at Salem's Soldiers' and Sailors' Reunion—is an honor so complimentary to its recipient that I accepted, even though the closing days of a congressional session are ones filled with major responsibilities.

On my way here I stopped in Springfield for a brief visit with our beloved Governor. You will rejoice with me in knowing that he is rapidly regaining that health which he sacrificed by his devotion to this State. I bring to you his most cordial greetings; his best wishes. He asked me to express his deep regret at his inability to be here today. This event is one near to his heart, as he has been your guest and speaker on many similar occasions.

Mingled with our rejoicing for the return to health of Governor Horner is a deep note of sorrow at the absence from this meeting of my distinguished predecessor, James Hamilton Lewis. His death has taken from us that inspired eloquence and wisdom which has so often delighted those attending this reunion.

I know you will pardon a personal note if I digress for but a moment. I feel a deep obligation in the position I now hold. Appointed to the Senate, as I was, by a Governor whose unfailing integrity and devotion to the public good is common knowledge in every Illinois household, I was called upon to succeed a Senator whose scholarly attainments and knowledge of public affairs were international in scope.

In the position I now hold I am ever conscious of the fact that Governor Horner demonstrated great confidence in me by my appointment. I am ever conscious of the fact that I am endeavoring to fill the role so ably played by the late Senator Lewis. Accordingly, I feel that if I chart my course by those high ideals of government as exemplified by Henry Horner and as portrayed by James Hamilton Lewis I will best serve my State.

Fortunate, indeed, was I upon entering the Senate to have there as my friend and counselor SCOTT W. LUCAS, senior Senator from Illinois.

Senator LUCAS has more than met the responsibilities of his office. As Illinoisans, you and I both can rejoice in the knowledge that he is high in the councils of our Government; that he was designated as spokesman of those Senators coming from the great agricultural Midwest.

Firm in the fundamental principles of our great party, Senator LUCAS possesses wide knowledge of our present-day problems, and, unhesitatingly, I say that he, as your Senator, brings added luster to our great State.

I would not miss the opportunity that this occasion presents to pay my compliments to my good friend, your neighbor, JOHN C. MARTIN, who, as Congressman at large, represents this entire State in the National House of Representatives. He and your district Congressman, LAURENCE ARNOLD, both command positions of influence in the National Capital; both are esteemed in the high councils of our party, and I am happy to say that I delight in their friendship and that I have profited immeasurably by their advice.

As I drove into Salem today I was happy to see the many evidences of the new-found prosperity which has come to this community.

This huge oil development—already one of the largest in our country—has proved a boon not only to your locality but to our entire State. The prosperity of one part of Illinois is reflected, you know, in all others; even as is the prosperity of one State, or the lack of it, reflected throughout our entire Nation.

As a Senator I have been called upon, in the brief time I have held office, to vote on many measures affecting the welfare of our Nation. I have sought to do so on the principle that whatever aided a part of our people any place in our Nation was also an aid to the people of Illinois.

My senatorial experience—brief as it has been—afforded me an ideal opportunity to compare the programs of the Democratic and Republican Parties. You know of the many great and constructive measures which the Democratic administration has advanced for the welfare of our people.

Since 1933 the Democratic Party, headed by that matchless leader, Franklin D. Roosevelt, has been in control of the administration at Washington.

When our party came into power our Nation was well nigh desolate. Banks were closed; crops sold only at ruinous prices; millions walked the streets in fruitless search of jobs; fear and misery gripped our entire Nation.

With superb and matchless leadership, Franklin D. Roosevelt, aided by a Democratic Congress, drove from our midst the specter of fear. Despite the opposition of reactionaries; despite the criticism of those timid souls who said it should not be done because it had never been done; despite the wailing of those whom he deprived of special privileges, Franklin D. Roosevelt, firm in the belief that in this Nation there is plenty for all, drove relentlessly forward to the achievement of a great program of social justice.

My friends, only Monday, in the city of Chicago, there was presented the first unemployment-compensation check drawn in the State of Illinois. Now that great program is in full operation in our State. Great as it is, far reaching as will be its consequences, it is but one of many humanitarian and beneficial measures which have been enacted at the insistence of our far-sighted President, whose only concern is the welfare of our people.

Roosevelt and Americanism have become synonymous. This Nation was founded upon the principle of equal justice and equal opportunity for all. That, my friends—equal justice and equal opportunity for all—is the very essence of what Roosevelt has sought to accomplish since 1933.

He and the Democratic Party have given to America old-age pensions; they have given to America the Federal guaranty of bank deposits; they have given to America opportunity for the unemployed to engage, at a living wage, in gainful employment until such a time as private industry can absorb them; they have given to America many beneficent and far-reaching measures—so many that I cannot take the time to enumerate them all.

Suffice it to say that Roosevelt and the Democratic Party have sought to give America back to Americans; that they have sought to make America a land of equal justice and equal opportunity for all.

And, my friends, despite the opposition of the reactionaries; despite the inertia of the timid, we have gone a long way since 1933.

Now that we are on the verge of complete fulfillment of this great humanitarian progress of Americanism, the opposition, from their remaining citadels of privilege, are engaging in a desperate and frantic, albeit futile, struggle.

During my occupancy of a Senate seat—and I am told that the same was true prior to my incumbency—there was not heard from the Republican Party or from any of its spokesmen a single constructive proposal for the advancement of the welfare of the common people.

All the Republican Party has to offer, all that it has ever offered, whether it be in the United States Senate or elsewhere, is a program of carping criticism. As an opposition party it is as befuddled as it is reactionary. It has long since ceased to have any plan or purpose other than to slander and libel the Democratic administrations. As a substitute for democratic action and progress it offers nothing save a return to the reaction of Herbert Hoover and the inactivity in behalf of the people that is traditional of the Republican Party. The American people will never forget the Hoover depression and the utter impotence of the Republican Party in meeting the problems arising from it.

The Republican Party promises but the Republican Party does not perform.

All that the Republican Party can think of is "on to '40." The Republican Party is not interested in your problems of 1939.

No! "On to '40." That is their only purpose. Assassinate characters. Vilify reputations. Hurl reckless charges with abandon. Anything! Everything! Just so it helps "on to '40."

The Republican Party in both State and Nation has demonstrated it is not interested in the empty stomachs of 1939; it has no interest in the farm crops or farm prices of 1939; it is not concerned with the jobless man of 1939.

None of these pressing problems of 1939 mean anything to a hungry mob of politicians who are hell-bent "on to '40."

Well, my friends, "on to '40" it is. But let the people of Illinois and the Nation beware lest "on to '40" takes them back, by the election of the Republican Party, to the dark days of 1929, of 1930, of 1931, and of 1932.

When Republican orators promise next spring and again in the fall of 1940; when they promise you the solution for all the problems besetting us; when they promise every jobless man a job; when they promise the farmer a bumper crop and new highs in prices; when they promise all this—and heaven, too—recall their utter impotence of 1929, 1930, 1931, and 1932, and recall their utter inability to present a constructive solution for our present-day problems.

The Republican Party, as I have said, promises but it does not perform. The promissory note of the Republican Party is not worth the paper on which it is written.

In Illinois we expect promises to be redeemed. Governor Horner has accustomed the Illinois voters to that. So if we, as a Democratic Party, continue to redeem our pledges; if we continue to work for the common good of all our people; if we remain, as we now are, a united harmonious democracy those Republicans who now are lustily chanting the "On to '40" refrain will, when '40 has come and gone, awaken from their daydreams and say:

"There was no difference between 1940 and 1932, or 1934, or 1936, or 1938."

We of Illinois are ready. Under the matchless leadership of Governor Horner, inspired by the knowledge that, as Democrats, we have diligently sought to do the right, as God has given us to see the right, we say:

"On to '40; a united and harmonious democracy. On to '40 and another great victory for the rank and file of our people by the election of the entire Democratic ticket."

Moral Rearmament Program

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

RADIO ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, JULY 22, 1939

Mr. TRUMAN. Mr. President, the junior Senator from Utah [Mr. THOMAS] has for a number of years been preparing and sending weekly radio messages to the various stations in Utah. On July 22 he took for his theme sentiments and ideals in connection with the Moral Rearmament movement. I ask to have printed in the Appendix of the RECORD one of these messages.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I hold in my files a brief communication from London, in which it is stated to me in full: "Those members of the House of Lords who sent a message to the meeting for moral and spiritual rearmament in Washington desire to thank you for your kind response. We feel with you that such an interchange of messages is, to use Senator TRUMAN'S words, a sure means of 'strengthening those spiritual qualities which are the common heritage of our peoples and the strongest bond between us.'" Senator TRUMAN is Senator from Missouri and had the honor to represent the President in the moral rearmament conference. It was held in Constitution Hall on June 4. I had the honor to be listed and to take part as a sponsor.

The words Senator TRUMAN carried from President Roosevelt are, it will be remembered, as follows: "The underlying strength of the world must consist in the moral fiber of her citizens. A program of moral rearmament for the world cannot fail, therefore, to lessen the danger of armed conflict. Such moral rearmament, to be highly effective, must receive support on a world-wide basis." General Pershing was quoted, in part, as stating: "Today, confronted by conditions so threatening to world peace, we must rededicate ourselves to the faith of our forefathers if we are to be worthy of our heritage."

All this is rather vague, if we are looking for vagaries. Morality in a person is an indefinite quality. In a nation it is so also. But we all know morality when we are brought face to face with it. At no other time have nations been so greatly menaced through the suspected disappearance of this quality among some nations than now. We may not direct the affairs of other nations, but we may set our own house in order.

I believe the Moral Rearmament Conference was given good coverage in the newspapers, so I shall not take the time here to describe it. It was conducted at the time the King and Queen were among us.

A few days afterward it was my pleasure and honor to address the Third Conference on Canadian-American Affairs on the subject of Defense and External Obligations. This was at the request of Secretary Hull, of the State Department. The event was celebrated in an eastern Canadian-American border city. There I repeated the four great freedoms in relation to person, to mind, to soul, and to property, and said that it was and is our obligation nationally and internationally to see that no act of ours shall ever deprive others of the attainment of these political and social rights. Nor may one be on the side of a wrongdoer without contributing to the wrong.

I make these general statements and recall these thoughts tonight because we soon are to adjourn Congress without a significant foreign policy and without adequate domestic neutrality legislation.

Men in Washington are making statements, and I am making mine. We do so not because we fear an international war before Congress may meet again but because we fear the possibility, perhaps even the likelihood of one. I do not want to become dramatic, but, for the record, I am unhappy about our national unconcern over things international, and over the refusal of Members of the United States Senate as much as to give the time to talk about it.

If an ounce of prevention is worth a pound of cure, it will be best that consideration of our foreign policy be taken up not after such an outside conflagration but before. Our debates should be held while we are yet unimpassioned and as nearly unprejudiced as a nation with free thought and an ample news coverage of foreign events could be expected to be.

For the record, let me say that the subject of American neutrality has been passed off too lightly in 1939 and in many other years, but notably in 1939. We have domestic ills which have occupied too much of our time, relatively. While we have been watching them to the exclusion of the larger picture, a changing world has left us with only a laboratory record of meager and poor experiments based on our own history, no text on the experiments of others outside, and no particular desire for learning. I think it would be better for those of us who believe that world morality is part of our national code to go onto the floor of two houses and have the stuffing beaten out of us, as we probably would have, and thus at least serve notice to other nations where we stand than to let them get so many and so conflicting impressions on American relations, American peace and American neutrality. America today is something like a man under mild intoxication, she wants to be everybody's friend but does not know why or how.

I thank you.

Appointment of Paul V. McNutt and the Hatch Bill

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Christian Science Monitor, in the column headed "Intimate Message From Washington."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor]

INTIMATE MESSAGE FROM WASHINGTON—MCNUTT'S APPOINTMENT AND THE HATCH BILL RAISE QUESTIONS OF THE FINANCING OF AMERICAN POLITICAL PARTIES

WASHINGTON.

Sooner or later Americans must do some hard thinking about the organization of political parties. It is one of the most fundamental problems in the United States. We are in the main proud of the party system and committed to its perpetuation, though it finds no mention in the Constitution. But how should these parties be organized and, above all, how financed? This question is raised by two recent news events: The national attention given to Paul V. McNutt, who, as Governor of Indiana, organized the "Two Per Cent Club," which was a frank salary assessment on State officeholders, and the passage of the Hatch bill, which forbids political activity by an army of Federal workers.

Few writers have written more ardently than this one in support of civil-service reform and the merit system. That Government business should be done on a nonpolitical basis goes without saying. But a mere statement does not end the matter. We also believe in the party system. Are these two ideas in conflict? Theoretically there is no clash. Parties should be the grouping of men of like views, held together by common ideals. As a matter of fact, everyone knows that this is only part of it. Parties have to have money to win elections. How shall they get it?

Reformers have been unrealistic about this whole matter. Many of them have preferred not to look behind the scenes. We know that one way of keeping parties together is by patronage. Most of us agree it is a bad way. The Hatch bill may do a good deal to end it, if (and it is quite an if) it can be enforced. Another way is by party war chests raised by gifts. Is this a good way? Reformers decry the McNutt scheme of making every employee pay 2 percent of his salary. This writer believes it is a vicious system. But there is danger of being smug about it; after all the McNutt scheme was brutally frank, it was relatively open and above board, it dragged the forbidden subject into the air. Is it worse to have a party financed and held together by that method, or by secret political contributions of special interests in return for favors made after the election?

QUESTION REQUIRES REPLY

This is an uncomfortable but a very real question, and it demands reply. We are just approaching a great new presidential election. Recall for a minute what such an election costs. The 1928 campaign cost Hoover headquarters $10,000,000 and Smith $7,500,000. In 1932, in the depression, Republicans spent $2,900,052 and Democrats $2,245,775 (ending the fight with deficits of $195,100 and $769,056 respectively). In 1936 the Lonergan Committee estimated the Republican National Committee spent $8,892,971, State committees $4,969,129, and miscellaneous Republican organizations $336,102, or a total of $14,198,202; while Democrats spent in the same categories $5,651,118; $2,757,236; and $820,052 or a total of $9,228,406. Even this only begins to tell the story, for when other parties and State contests are taken into account, the total may have reached the astonishing figure of $48,000,000!

How shall parties be made effective? There is not any bigger domestic subject than the Government of the United States, and this question of party financing and patronage goes to the heart of the matter. It is high time some thought was given to it. Politics abhor a vacuum. If the Hatch bill destroys one form of party support, some other will be created. It is not sufficient in carrying out a reform simply to destroy; something must be created to take its place. What should it be in this case?

MONEY HAS TO BE RAISED

This writer simply does not know. European parties are financed in large part by the dues of members. Campaign chests are small. Furthermore, compact, single-issue parties like the Socialists, Communists, or, let us say, Prohibitionists, are simpler to manage and get mass contributions more easily. Nobody can deny that at present money has to be raised. The question is, Shall it be by "2 percent clubs," by contributions from the wealthy, by patronage, or by some other means as yet unexplored in America?

The Hatch bill raises other urgent problems. With commendatory zeal it would divorce Federal officeholders from politics. This strikes a blow at the New Deal's control of the 1940 convention. It was largely to achieve this highly political end that the nonpolitical measure was passed. But it does nothing to halt State machines. Obviously, similar measures should be passed in the States. But until they are passed the whole political balance is (theoretically at least) upset, and power shifts from Federal patronage to State patronage. The Governors win and the Senators lose. Local bosses get power at the expense of Federal bosses.

The workings of the Hatch bill, it must be said, are still viewed here with considerable skepticism. Worthy as are the motives, the Hatch bill must still prove in actual practice that it is a real remedy for the problems it seeks to handle. But provided enforcement is fully effective, the public must realize it leaves two major problems unsolved, (a) political coercion of State officeholders, and (b) the much bigger and intrinsically more difficult subject, how to run political parties without patronage and without selfish dividends.

RICHARD L. STROUT.

Silver Purchase Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

EDITORIALS FROM THE BANGOR (MAINE) NEWS, HARTFORD (CONN.) COURANT, AND THE NEW YORK SUN

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the Bangor (Maine) News entitled "Silver Farce and Tragedy," an editorial from the Hartford (Conn.) Courant entitled "Foreign Silver Purchases," and an editorial from the New York Sun entitled "Silver."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

The Bangor (Maine) News in an editorial of June 27, 1939, discussed the question of our silver policy and Japan as follows:

"SILVER FARCE AND TRAGEDY

"Hard pressed by the Japanese and having faith in the might of the British Navy, the Chinese Government some time ago stored most of what remained of its once huge silver hoard in the British concession at Tientsin. The amount now lodged there is reported to be approximately $25,000,000 at the price the United States Treasury pays for foreign silver. That is not a great deal, as war costs go, but Japan feels the financial pinch and could use that much money in its effort to exterminate Chinese and close more tightly the Chinese trade doors against American and other foreign exports.

"Demand has been made on the British to deliver that silver to the puppet government set up by the Japanese, and this is said to be at the bottom of the Tientsin dispute. To turn over the silver would be tantamount to British relinquishment of all claim to territorial sovereignty in China, and it probably would merely hasten the time for a fresh "incident." It happens that Senator TOWNSEND has introduced a bill in Congress to repeal the Silver Purchase Act, under which the Treasury feels obligated to buy all the foreign silver offered to it. The opportunity is an excellent one for abandoning the anomalous position this country now holds of lending money to the Chinese Government to fight the Japanese and giving gold to the Japanese in exchange for the silver they seize in China. The Tientsin silver is worth nothing to anybody except Uncle Sam, who at the same time he refuses to buy it might also cease to subsidize the Mexican Government with monthly gold payments for silver to fill the West Point storage vaults."

The Hartford (Conn.) Courant on July 10, 1939, published an editorial entitled "Foreign Silver Purchases," a portion of which reads as follows:

"Next week Secretary Hull will attempt publicly to justify the silver purchases abroad on the ground that they implement the

State Department's foreign policy by enabling this country to confer favors on the silver producers. If, for the sake of argument, it be granted that the Executive ought to have such powers, there are more effective and more honest ways of carrying them out then by debasing the currency to maintain the international price. Under the present set-up, Japan—which the State Department is apparently not anxious to favor—is one of the principal benefactors, for it enjoys a better market for the Chinese silver it has taken over than it would if it had to throw the metal on the open market for what it would bring. Even were it desirable to pay Mexico an inflated price for its silver—which it is not—there is no practical means of paying more for Mexican metal than for that of any other country."

The New York Sun of May 3, 1939, printed an editorial, Silver, which is now of interest because of the attention being given to Japanese relations. The editorial, which points out that all along we have been financing both sides in the Sino-Japanese conflict, reads as follows:

"Having moved a huge pile of silver stored in the old assay office to West Point, the Coast Guardsmen who were using the building for a barracks have now gone to other parts, but the old building is filling up again as the Treasury continues to take silver from all senders, having it delivered to the Wall Street address. One of the interesting sidelights of the silver movement lately has been the arrival of several million ounces from Japan, which probably seized the metal from the Chinese. By buying it, the United States Treasury is generously helping the Japanese to pay for the conquest of China, while giving the Chinese credits in gold, against shipments of silver, in order to provide money to fight Japan. It may not be unique in modern history for one government to finance both sides of the same conflict. Japanese silver shipments were 650,000 ounces in January, 1,500,000 ounces in February and 1,200,000 in March. In April shipments fell off, presumably because the pickings were not so good. During 1938 Japan sent here, and the Treasury bought, 6,900,000 ounces of white metal. Mexico continues to send large amounts averaging 3,500,000 ounces monthly. Mexican shipments here in 1938 were 76,800,000 ounces, exclusive of silver ore."

Paul V. McNutt

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

EDITORIALS FROM THE WASHINGTON EVENING STAR AND WASHINGTON POST

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Evening Star of yesterday entitled "McNutt Wants No Federal Cash Promoting Him" and an article from the Washington Post of this morning entitled "McNutt Disallows Expense of Magazine Praising Him." The other day in this body I raised the point that a publication of an agency of the Social Security Board was promoting Mr. McNutt's candidacy at the expense of Federal funds. I am very glad that Mr. McNutt has had this change of heart and that he is disallowing the expense of the publication. I hope this change of heart will be consistent in the months ahead.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of July 28, 1939]

M'NUTT WANTS NO FEDERAL CASH PROMOTING HIM

"The overenthusiasm of friends sometimes rises to embarrass," Paul V. McNutt, Federal Security Administrator, said in commenting on a recent bulletin issued by the Indiana Unemployment Compensation Commission.

The pamphlet carried Mr. McNutt's picture on the cover page with the caption "Again, 'the Boss.'" Beneath was a chart showing in chronological order positions Mr. McNutt has occupied and a picture of the National Capitol over the date, 1941.

Earlier in the week, Senator BRIDGES, Republican, of New Hampshire called the pamphlet to the attention of the Senate, saying the commission which published it was financed wholly or partly by Federal funds administered by Mr. McNutt. He added, "Mr. McNutt is to be congratulated on starting his campaign as soon as he has."

Mr. McNutt said he believed the pamphlet had been prepared before he took office as Security Administrator, adding, "I don't want any Federal money spent in promoting me personally."

[From the Washington Post of July 29, 1939]

M'NUTT DISALLOWS EXPENSE OF MAGAZINE PRAISING HIM—INDIANA HOUSE ORGAN CARRIED HIS PICTURE ON COVER PAGE; SECURITY CHIEF WRITES: "I HAVE BEEN EMBARRASSED"

Paul V. McNutt, in his first major decision yesterday as Federal Security Administrator, directed the Social Security Board to disallow publication costs of the June-July issue of the Indiana Unemployment Compensation Adviser, which carried his picture on the cover page and an editorial praising him.

It was McNutt's answer to criticism provoked by the fact that he was featured in the pamphlet. The cost of putting out the issue, it is understood, was about $128. As a result of McNutt's order the Indiana unemployment compensation division will be "docked" this amount. Who will be out the money, or how it will be made up, was not clear.

Clarence A. Jackson, State unemployment compensation director, is author of the editorial, and presumably was responsible for the cover-page picture, underneath which appeared a graph showing McNutt's upward climb, step by step, toward the Presidency in 1941. Jackson put into operation the gross-income-tax law enacted by the Indiana Legislature when McNutt was Governor.

In a memorandum to Oscar Powell, executive director of the Social Security Board, McNutt said that, "Although this publication is nothing but a house organ, I have been embarrassed by the cover page of this particular issue, evidently the result of thoughtless action of overenthusiastic friends."

"I am anxious," he said, "to avoid anything which could possibly be construed as promoting partisan or political interests in connection with the work of this agency.

"Therefore, it is my desire that the Social Security Board disallow a sum equal to the cost of this particular issue, and that instructions be issued that the policy outlined above be followed in connection with any partisan activity."

McNutt has been assigned offices in the old National Institute of Health administration building at Twenty-fifth and E Streets NW.

Shall We Send Our Youth to War?

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Saturday, July 29 (legislative day of Tuesday, July 25), 1939

ARTICLE BY HON. HERBERT HOOVER

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very splendid article appearing in the current number of the American Magazine entitled "Shall We Send Our Youth to War?" by the Honorable Herbert Hoover.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From American Magazine for August 1939]

SHALL WE SEND OUR YOUTH TO WAR?

(By Herbert Hoover)

The American people are today tense with anxiety lest they be led into another great war.

And some of our people seem to be accepting glib talk of war as if it were something more good than evil. Truly many years have already gone by since we ceased to feed boys to the cannon. It seems difficult to believe that only about one-third of the living American people are old enough to remember the World War well.

We have urgent need today to recall the realities of modern war. And we have desperate need to take into our national thinking the gigantic yet invisible forces behind war which are again moving in Europe.

I am perhaps one of the few living Americans who had full opportunity to see intimately the moving tragedy of the World War from its beginnings down through the long years which have not yet ended. I saw it not only in its visible ghastliness, but I lived with the invisible forces which moved in its causes and its consequences. I am perhaps justified in recalling that experience.

Before the war I knew Europe—Russia, Germany, France, Italy, and England—fairly intimately, not as a tourist but as a part of their workaday life.

I was drafted in 1914 to preserve the lives of 10,000,000 people in Belgium and northern France who had been overrun by the German armies. Here was a service that by common consent was a sort of semiofficial state. It covered not alone food, but the economic life of these people. It operated within the lines of a hostile army and moved through the blockade of a hostile navy. In that service I moved constantly in and out behind the trenches on both sides of the conflict. I witnessed the misery and backwash from war in their most hideous forms. My duties required

that I meet constantly with high military and civil officials in England, Germany, France, and the neutral countries in contact with the invisible forces behind the war.

When America joined in the war I was asked by President Wilson to return to America to become a member of our American War Council and to administer the food supplies of our country and for our Allies.

At the armistice I was drafted back to Europe to direct activities of the allied and associated governments to defeat unparalleled famine and pestilence, to restore economic life among both the victors and the vanquished. In this service I spread an organization of thousands of American men and women over 23 nations—many of them boiling with revolution. Our job was not alone the extension of a hand of kindness. Its purpose was to secure order out of which peace could be made.

Constant dealing with those many peoples and their officials brought a flood of knowledge of the political, economic, and social currents which sprang from the war.

I did not participate in making the peace. I was daily called upon for advice and information. And I observed its disastrous course. Subsequently, during a period of 8 years in Cabinet position I dealt with the troubled seas of unceasing political and economic storms the world over.

As President, I dealt unceasingly to bring about reduction of arms, economic readjustment, and peace.

A year ago I spent some months in Europe with unique opportunity to discuss its problems with leaders in 14 nations.

That is 20 years of opportunity to observe European peoples and their leaders, with all the forces of good and evil in which they live, and to relate them to our American scene. The searchlight of this experience can well be turned upon some phases of the present scene.

First, let me say something from this experience of what war really is. Those who lived in it, and our American boys who fought in it, dislike to recall its terribleness. We dwell today upon its glories—the courage, the heroism, the greatness of spirit in men. I, myself, should like to forget all else. But today, with the world driving recklessly into it again, there is much we must not forget. Amid the afterglow of glory and legend we forget the filth, the stench, the death, of the trenches. We forget the dumb grief of mothers, wives, and children. We forget the unending blight cast upon the world by the sacrifice of the flower of every race.

I was one of but few civilians who saw something of the Battle of the Somme. In the distant view were the unending trenches filled with a million and a half men. Here and there, like ants, they advanced under the thunder and belching volcanoes from 10,000 guns. Their lives were thrown away until half a million had died. Passing close by were unending lines of men plodding along the right side of the road to the front, not with drums and bands, but with saddened resignation. Down the left side came the unending lines of wounded men, staggering among unending stretchers and ambulances. Do you think one can forget that? And it was but one battle of a hundred.

Ten million men died or were maimed for life in that war. There were millions who died unknown and unmarked. Yet there are miles of unending crosses in a thousand cemeteries. The great monument to the dead at Ypres carries the names of 150,000 Englishmen who died on but a small segment of the front. Theirs was an inspiring heroism for all time. But how much greater a world it would be today if that heroism and that character could have lived.

And there was another side no less dreadful. I hesitate to recall even to my own mind the nightmares of roads filled for long miles with old men, young women, and little children dropping of fatigue and hunger as they fled in terror from burning villages and oncoming armies. And over Europe these were not just a few thousands but over the long years that scene was enacted in millions.

And there was the ruthless killing of civilians, executed by firing squads who justified their acts not by processes of justice but on mere suspicion of transgression of the laws of war. Still worse was the killing of men, women, and even children to project terror and cringing submission. To the winds went every sense of justice. To the winds went every sense of decency. To the winds went every sense of tolerance. To the winds went every sense of mercy. The purpose of every army is to win. They are not put together for afternoon teas. They are not made up to bring good cheer or justice or tolerance. They are made up of men sent out to kill or be killed. Whatever the theory, the act that wins is justified in war.

And there were the terrors of the air. In a score of air raids I saw the terror of women and children flocking to the cellars, frantically, to escape from an unseen enemy.

In another even more dreadful sense I saw inhuman policies of war. That was the determination on both sides to bring subjection by starvation. The food blockade by the Allied Governments on the one side, and the ruthless submarine warfare by the Central Powers on the other, had this as its major purpose. Both sides professed that it was not their purpose to starve women and children. But it is an idiot who thinks soldiers ever starve. It was women and children who died of starvation. It was they who died of the disease which came from short food supplies, not in hundreds of thousands but in millions.

And after the armistice came famine and pestilence, in which millions perished and other millions grew up stunted in mind and body. That is war. Let us not forget.

We were actually at the front in this war for only a few months, but it cost us the lives of 130,000 men. It has placed 470,000 persons on the national pension list already. It has cost us $40,000,000,000. And that represents more than just dollars. Today we have a quarter to a third of the American people below a decent standard of living. If that forty billions of wealth had remained in America these people would not be in this plight. A large segment of our people have already been impoverished for a quarter of a century. And the end is not yet.

We may need to go to war again. But that war should be on this hemisphere alone and in the defense of our firesides or our honor. For that alone should we pay the price.

The endless books tell us how the Great War originated. They do not agree. But some salient facts do stand out that are pertinent today. It began by a quarrel between three dictators—the Czar of Russia and the Emperors of Germany and Austria. They were competing for "power." France, a democracy, was dragged in because, out of fear of the dictators of Germany and Austria, she, a democracy, had made a military alliance with the Czar. The British democracy was drawn in partly out of idealism to defend liberty, but also partly to save its trade and its possessions from too great a concentration of "power" on the Continent. We finally joined in the war wholly out of idealism.

I dodge no responsibility. I reluctantly joined in the almost unanimous view of our countrymen that America must go into that war. We had been directly attacked. But, more important, I believed we could bring the endless slaughter to an end. I believed that with our singleness of purpose we could impose an enlightened peace; that we could make it a war to end war. I believed we could make the world safe for the spread of human liberty. If experience has any value to nations, there are in the wrecking of these hopes a thousand reasons why we should never attempt it again.

When President Wilson arrived in Paris the common people of the world were praying for a real peace. There were good men there, and there were high aspirations. But there were also concentrated there the invisible forces of age-old hate and greed. Mr. Wilson met a determination to crush the enemy in a Carthaginian peace. He met the sinister demands for power. He met a greed for possession of world resources. Above all, he met with the pressures of populations and the unsolvable problems of European boundaries and economic life. He worked valiantly to combat the evil forces. He spread American idealism at the peace table. He argued and cried out for reason and justice—not because he felt the enemy was guilty, but because he felt that mankind must turn its face to the future and its back on the past. When Germans blame him, little do they know what Germany would have looked like had it not been for Woodrow Wilson.

To Mr. Wilson I criticized bitterly the provisions of the peace treaties before they were signed. I felt that instead of healing the wounds of the world they would spread disaster over a generation. I have before me a memorandum that I gave to Mr. Wilson 2 months before the treaties were signed, urging their lack of vision and the dangers to America. He won some victories for sanity. He helped some nations to freedom. He hoped that, with time for hate and avarice to cool, the League of Nations could reconstruct the failures of the treaty.

Americans will yet be proud of that American who fought a fight for righteousness, although he partially lost. But he proved that American idealism and American ignorance of the invisible forces in Europe can only confuse the grim necessities of European peace.

What is happening today? Europe is suffering repeated earthquake shocks from the fault of the Treaty of Versailles.

But, beyond all this which is obvious, something else is moving. Europe is again engaged in a hideous conflict for power. Stripped to its bones, today the quarrel is much the same. Dictators in Germany and Italy rise to power on opposition to communism, launched into their peoples by the dictator of Russia. Again the dictators are in conflict for power. Again France, a democracy, ties herself to the dictatorship in Russia, England becomes endangered should the dictators of Germany and Italy overwhelm France. And thus again begins this dreadful treadmill.

What is proposed? That we join to stop inevitable movements and readjustments of peoples; that we engage in ideological wars. Who will pay for it in blood and treasure? Our children.

In Europe they constantly use the word "power" in a connotation that is strange to many Americans. That is the "power" of peoples and over peoples. This "power" may be a political authority held in a man. It may be the "power" of a nation, the "power" of alliances, or the balance of "power." And they speak daily of international "power" politics. They often speak of it in terms of a game. They play power politics as sheer necessity for national defense, and they play it for national aggression.

The players change and the forces in the games shift constantly. It is a game of delicate moves. It is not a game of open covenants openly arrived at. Nor is the self-determination of nations one of the rules. Those who play with power politics, like those who play with matches, always deny that they intend to set the conflagration of war. Their moves are based not alone on bluff but on guns. When we take sides in their controversies, when we talk of using force of any kind, we are playing power politics at the European chess table.

I do not believe we should sit in that game, either in their interest or ours. Our idealism and our uncertainties of policy only befuddle the movements of expediency and delicate adjustments in which they are compelled to live. And our stakes are the lives of

millions of sons of America. The stakes are another 25 years of hideous national impoverishment. The stakes are the progress of all mankind for half a century. The stakes may be the sinking of intellectual and spiritual liberty for a century to come.

The time may come when we could arbitrate the quarrels which arise in that game at some point before shooting begins. But if we sit in the game, we shall never be arbitrator, and we may be drawn into the shooting.

And let me inject that Europe plays power politics against us. There is the instance of the European war debts to us. Part of the debt was for supplies and cash to carry on the war. From one-third to one-half of that debt, however, was material and money we supplied after the armistice to aid in reconstruction. At that time the war was won. We had no need in our own interest to loan another dollar. We settled the debts for much less than the full sum. The whole, including the reconstruction advances, has been repudiated.

The repudiation has a double sting, for over years following the Balfour note the Allies publicly and repeatedly informed the former enemies that the reason they exacted reparations and indemnities from the enemy was because they had to pay it over to the Shylock of the Western World. They stated they would reduce the indemnities by whatever the United States, in turn, would cancel to them. By such power politics they consolidated central Europe into their propaganda and pressures to cancel the debts. Moreover, their propaganda told us, and a host of Americans re-echoed, that they could not pay because they could not transfer money in such great quantities from one nation to another. That is true in a depression, but let me recall that these very nations today have shipped four billions of money to this country for investment since they repudiated their debts.

I have no desire to recall these incidents.

My purpose is to stir up reason among the American people against doing it again.

The dangers of our being dragged into war lie in these directions:

1. Foreign propaganda to inflame our emotions and to mold our minds to war.

2. Preachments of our own mistaken officials and citizens which, in effect, support these propagandas.

3. Steps taken by our own Government, which, while denying that they are intended to take us into war, yet entangle us with these very controversies, the end of which may be war.

If deliberate attack were made upon women and children, which modern airplanes and modern food blockade make possible, our indignation might not be restrained from action. Remember the part indignation over Belgium played in our entry into the last war.

And here we can examine one of the methods of power politics. That is propaganda. During the World War propaganda was first developed into a national weapon no less potent than killing men. When peoples and governments believe that independence or their national survival or their possessions are at stake, they instantly justify untruth and lies as a part of national policies. When they weigh the sacrifice of their sons, then truth, honesty, tolerance, and justice are thrown to the winds if a lie will serve better.

The Great War was the first time in history when all the powerful agencies of publicity and manipulation of news were organized without moral restraint under the genius of skilled men. There were built up a skill and a technique in front of which every citizen was helpless to know the truth. And since that time the radio has become an additional weapon.

We, ourselves, when we entered the war imitated the others. We created great propaganda agencies. The managers of them have since confessed frankly that they distorted fact and created news without truth. They built hate as well as altruism as a necessary emotional foundation of modern war. And no man dared question or answer under this fierce organized condemnation.

Propaganda has three directions: Internal, to mobilize emotions; external, to influence neutral nations; and aggressive, to influence the enemy.

From the beginning of the Great War I saw the development of the propaganda directed at the United States from both sides. I was so impressed that I collected this material for years. The War Library at Stanford University holds stack after stack of this emanation from every government at war. And, in the light of what we now know really happened, it comprises the greatest collection of part lies on the face of the earth. It ought to be studied.

There are certain types of propaganda in motion today which fertilize our soil for our entry into war. For instance, one of these volleys of propaganda asserts that a great war in Europe is inevitable. That is a half truth. The set-up in Europe has made a general war inevitable every hundred years since the Romans kept the peace. And until mankind makes much greater progress it will continue to be inevitable. But the pounding in of that phrase is either sensational journalistic speculation or European propaganda of the preparatory type.

We are told that we must join in war or democracy will disappear from the earth. From the alliance of the democracies with several totalitarian states that ideological issue seems somewhat confused.

My sympathies are with the democracies. But the democracies of western Europe have the resources to defend themselves. They comprise great empires of hundreds of millions of people with all the resources needed to secure their defense. Whether they preserve their democracies is a question of their own will.

We are told that if they fall we shall be the next victim. I do not agree that they will fall. But if they do fall, the exhaustion of the dictators will be such that these countries will leave us alone for a quarter of a century at least.

It is dinned in our ears that we shall inevitably be drawn into this inevitable war whether we like it or not. That just simply depends upon our own will to keep out.

And propaganda showers upon us in other forms. I have for the past few months checked back on headline stories from Europe which have subsequently proved untrue. There are 20 such stories on the list. That is not the fault of our news services. These stories usually start as "information from a responsible source." That means a foreign government official. But they leave a trail of fear, of hate, and prejudice and help to condition our minds for war.

One of the curious happenings of these days is that our newspapers print more alarming war news than the European press.

And another form of war conditioning of the public mind is the firing of words by our Government officials at the nations we don't like. So long as we confine it to words, the dictators will fire back an equally insulting lot of words, and we wind up even. Soapbox oratory is the necessary equipment of modern dictators, and they excel. Only the really neutral nations could judge as to who wins in these jousts of billingsgate. But they build up hateful emotions both ways.

And that does not imply that we should ever neglect to express indignation at great wrong. But the terms we use are important if it is results we seek and not propaganda.

The second danger of war comes from the policies of our own Government. President Roosevelt has taken a seat at the table where power politics is being played. He has joined in the chessboard of Europe. He lines us up in the balance of power. It is said we can do this without joining in war.

It is said we will do something more than words and less than war. When we open fire on the front we are in the fight. The enemy will fire back with more than words. If the more than words fail to overcome him we have to go further. For then we have to win or be overcome on our side. Let nobody say that you can do such things without danger of war itself.

If the dictators believe we will stop short of war they will credit us with having small chips in this game. Their chips are soldiers and guns. If our partners believe our chips of more than words and less than war are valuable, it is because they believe that when we have exhausted these chips we will put our soldiers and guns into the game and they will edge us in.

And right before our eyes the game shifts. We were originally going to quarantine dictators and again save democracy. Today we have two or three dictators on our team. We have had to drop the "democracy front" and "dictators" and talk of "aggressors." That only indicates how rapidly we can move from sheer idealism into combat.

We may think we can take part in controversies and quarrels in Europe without going to war. We may think our strong will to keep out permits us to start down this road and stop when it looks as though we are being involved in war. But when we get to that point our will to stay out is not only weakened but our angers and hates are aroused to a point where our will to stay out no longer has any control.

Today the European antiaxis press is confident we intend to join in their wars if they come. If they are rudely awakened, their peoples will hate us for a generation. And they will deluge us with cries of cowardice by way of further propaganda.

Space prevents adequate discussion of another phase of this situation. The whole totalitarian structure upon which these aggressive dictators are supported is weakening. That is equally true for the Communists, the Fascists, and the National Socialists. Their concepts of brutal intolerance, of suppression of every right of free men, is raising its own opposition within them. Peoples who have known liberty will yet regain it for themselves. The vicious persecutions of Jews and other religious groups has raised the hate of the world. Their economic systems are failing to produce the standards of living they have promised. It is a sad thing that we in America have to endure the propaganda of the Communists trying to get us into war, and of the Bund trying to implant nazi-ism in the United States. We endure it only because we hold to free speech. And both of them take advantage of our tolerance to tear down our liberties.

And what profit it if, by our joining in war to extinguish these systems, we also lose our own American life? It is not alone the price of war we lose. But we can never go through another great war without becoming a totalitarian state in order to effectively fight such a war. When we have finished we shall not have established peace in the world. We shall have sacrificed liberty for generations in the United States.

America can be of service to the world. We can hold up the standards of decency in the world.

We should hold that the basis of international relations should not be force, but should be law and free agreement.

The greatest immediate service that we can render is to join in economic cooperation with other nations to relieve the economic pressures which are driving the world constantly to instability. A great part of these pressures for war are economic. The greatest healing force that could come to the world is prosperity. There is a vast field for American action which is free from political entanglements. We should resume the conferences which were started under such good auspices by our country in 1932.

But, far beyond that, we can hold the light of liberty alight on this continent. That is the greatest service we can give to civilization.
